Europe and Beyond: Boundaries, Barriers and Belonging

In encouraging presenters and other conference participants to think Beyond Europe we wish to consider contemporary developments, processes, practices and subjectivities not only through the lens of Europe and European sociology, but also as central to the development of sociology, or sociologies, for the present and the future. We cannot and should not ignore the factors which are re-shaping Europe from within, such as the effects of globalisation, nationalism, populism and migration and, of course, 'Brexit'. However, it is also crucial that we continue to look towards the possibilities of a global sociology which also takes account of the local without being parochial. Boundaries and boundary making spans the sociological spectrum, from how we create and reinforce the markers of distance and difference in social interaction, through the ways in which communities and groups are divided from each other by ethnicity, class, gender, sexual orientation and other dimensions of inequality. Boundaries are underlined through the extreme divisions of our living conditions: homelessness, ghettos and gated communities. Divisions are being reinforced between citizens and non-citizens as well as between Europe and the rest of the world. Social, symbolic and material boundaries affect us all.

We will also explore the Barriers which reinforce these boundaries: barriers to movement, whether for asylum, migration, work or education; barriers to reflection and understanding; barriers to better living conditions; barriers to cooperation and empathy; barriers created through politics and policy – intended and unintended.

Belonging is an increasingly contested idea, reinforced as nationality through populism and the far right, disrupted by war, violence, racism and other forms of rejection. It is also created and re-created in communities of necessity and choice and through intimacies, transformations of the self, and our understandings of home. New types of belonging are emerging through virtual networks and communities which challenge both traditional and sociological thinking.

The 14th ESA conference will offer opportunities to engage not only with the content of sociological research and theorising, but also with the ways in which our discipline has been and is being shaped, both in and beyond Europe. Where are the boundaries of the discipline? How can we address barriers to its development both inside and outside of academia? What does it mean to belong to the community of sociologists?

We are sure that the conference will give a wide range of sociologists, other academics, practitioners and fellow travellers, an excellent opportunity to present and engage with research and scholarship and also to explore the potential influence of sociology in the public sphere. The conference theme calls for thinking in new ways about persistent inequalities, for challenging dominant discourses and for taking a fresh look at abstract concepts in order to better understand how sociology can contribute, both in theory and practice, to the unmaking and rethinking of 'boundaries' and 'barriers' and to understanding 'belonging'.

Types of Sessions

While Research Network and Research Stream sessions cover the immense variety of sociological inquiry, Plenary, Semi-Plenary and Midday sessions offer the opportunity to engage in core debates.

Plenaries (P) address the main conference theme.

Semi-Plenaries (SPs) discuss the main conference theme from the viewpoint of different fields of research. They promote discussion between speakers, next to that with participants. SPs are based on proposals made by the ESA Research Networks. This time, four of them were open for abstract submission.

Midday (MD) sessions cover topics which are relevant for sociology as a discipline and/or for the day-to-day work of sociologists.

Research Network (RN) sessions feature research papers submitted in response to the Call for Papers. The majority of sessions is organised by ESA's 37 Research Networks.

RNs are open to all ESA members. Note that many RNs organise Joint Sessions (JS).

Research Stream (RS) sessions are made by sociologists from several European countries who come together to organise sessions on specific sociological topics. RSs are self-organised bodies with a loose structure which is determined by the researchers who join the stream. While some RSs are regularly organising sessions at ESA conferences, other RSs offer ad hoc sessions around spur-of-the-moment topics.

Session codes:

Regular sessions are sorted by the number of Research Network (RN01 to RN37), Joint Session (JS_RN01_RN13 to JS_RN35_RN37) and Research Stream (RS01 to RS20).

Numbers after the underline character indicate in which timeslot the session took place:

- _01 Wednesday 21 Aug 2019 11:00-12:30
- _02 Wednesday 21 Aug 2019 14:00-15:30
- _03 Wednesday 21 Aug 2019 16:00-17:30
- _04 Wednesday 21 Aug 2019 18:00-19:30
- _05 Thursday 22 Aug 2019 11:00-12:30
- _06 Thursday 22 Aug 2019 14:00-15:30

- _08 Thursday 22 Aug 2019 18:00-19:30
- _09 Friday 23 Aug 2019 11:00-12:30
- _10 Friday 23 Aug 2019 14:00-15:30

Plenary 1

Chaired by ESA President Scott, Sue

Europe Otherwise. On Decolonization, Creolization, and Inter-Imperiality

Boatcă, Manuela

Institute for Sociology University of Freiburg, Germany

Social theory has long operated with universal categories extrapolated from a sanitized and sublimated version of European history that ignores both the experience of the East and the South of Europe, as well as the West's colonial and imperial history. In order to contest the definition power of ahistorical universals – from the nation-state through citizenship rights and up to modernity – it is imperative to productively complicate the very notion of 'Europe'. I therefore suggest that conceiving of Europe as a creolized space, or as Europe Otherwise, is one way to do so. The approach of Europe Otherwise takes into account the regional entanglements to which European colonialism and imperialism have given rise since the sixteenth century and makes it possible to rethink Europe as a political, cultural, and economic formation from its forgotten borders in the Atlantic and the Caribbean Sea today. I argue that focusing on Europe's current colonial possessions in the Caribbean and their corresponding geographical referent, Caribbean Europe, is a way to challenge, i.e., effectively creolize established understandings of Europe's colonial history as a thing of the past, of a white European identity as the norm, and of the borders and scope of the European Union as confined to continental Europe. Mapping the theoretical and political implications of Europe Otherwise thus offers as a way out of systematically producing exceptions to a singular European norm by revealing them as rules when seen from multiple and unequal Europes instead.

Biography

Manuela Boatcă is Professor of Sociology with a focus on macrosociology at the Albert-Ludwigs-University Freiburg, Germany. She was Visiting Professor at IUPERJ, Rio de Janeiro in 2007/08 and Professor of Sociology of Global Inequalities at the Latin American Institute of the Freie Universität Berlin from 2012 to 2015. Her work on world-systems analysis, postcolonial and decolonial perspectives, gender in modernity/coloniality and the geopolitics of knowledge in Eastern Europe and Latin America has appeared in the *Journal of World-Systems Research*, *Cultural Studies*, *South Atlantic Quarterly*, *Political Power and Social Theory*, *Social Identities*, *Berliner Journal für Soziologie*, *Österreichische Zeitschrift für Soziologie*, *Zeitschrift für Weltgeschichte*, and *Theory, Culture and Society*. She is author of *Global Inequalities beyond Occidentalism*, Routledge 2016 and co-editor (with E. Gutiérrez Rodríguez and S. Costa) of *Decolonizing European Sociology. Transdisciplinary Approaches*, Ashgate 2010 and of *Global Inequalities in World-Systems Perspective* (with A. Komlosy and H.-H. Nolte), Routledge 2017.

Democracy, Populism and After

Wieviorka, Michel

École des Hautes Études en Sciences Sociales, Fondation
Maison des Sciences de l'Homme, France

In the late 80s, democracy was not really challenged in Western intellectual and political spheres – it was mainly considered as the opposite of dictatorship and totalitarianism. It was possible, therefore, for Francis Fukuyama to state, in 1989, that there was no alternative to it and that we were entering the "end of History". Markets and democracy had triumphed. In 2019, only 30 years on, we know that even if democracy hasn't entirely failed, it is being subjected to major challenges. In this plenary address I will deal with the contemporary perspectives on, and limits to, democracy in Europe, including an analysis of populism. I will argue that 'Populism' is a mythical political formula, which resolves, via an imaginary discourse, all kinds of contradictions, up to the point that it becomes impossible. Then the myth explodes, opening the way to extremism, authoritarianism, nationalism, boundaries, barriers and awful belongings or identities. The main problem then is what comes AFTER POPULISM.

Biography

Michel Wieviorka, Professor at the Ecole des Hautes Etudes en Sciences Sociales, is the President of the Fondation Maison des Sciences de l'Homme (FMSH). From 2006 to 2010, he was President of the International Association of Sociology AIS / ISA, where he created the encyclopedia online Sociopedia, and has been a member of the ERC (European Research Council) Scientific Council since 2014. He heads SOCIO (with Laetitia Atlani-Duault), which he launched in 2013. His research has focused on conflict, terrorism and violence, racism, anti-Semitism, social movements, democracy and the phenomena of cultural difference. His more recent books include *Evil* (Polity Press), *Retour au sens* (éd. Robert Laffont), *Antiracistes* (éd. Robert Laffont), *Face au mal* (éd. Textuel). He is currently leading an international and multidisciplinary scientific program on violence and exiting violence.

Plenary 2

Chaired by ESA Conference Committee Co-chair & Vice-President Soler-Gallart, Marta

Cities of Fears, Cities of Hopes, and the 'Refugee Crisis'

Meer, Nasar

University of Edinburgh, United Kingdom

There is a pressing intellectual challenge to re-think two coterminous concerns: the rediscovery of the 'local' and the city in particular, and an understanding of the experience of displaced migration in European cities. Drawing on Bauman's (2003) distinction between 'cities of fears' and 'cities of hopes', this keynote will ask what a focus on the 'local' can tell us about recent developments in the governance of displaced migrants and refugees. Taking a multi-sited approach spanning cases in the south and north of Europe, it will discuss the challenge of housing and accommodation in particular, to consider how local and city level approaches may reproduce, negotiate and sometimes significantly diverge from national level policy and rhetoric, and what these means for our understanding of cities and migration today.

Biography

Nasar Meer is Professor of Race, Identity and Citizenship in the School of Social and Political Sciences at the University of Edinburgh. He is the Principle Investigator of the JPI ERA Net / Horizon 2020 GLIMER project, examining the governance and local integration of migrants and Europe's refugees, and Editor in Chief of the *Identities: Global Studies in Culture and Power*. His publications include: *Islam and Modernity (4 Volumes)* (ed, 2017); *Interculturalism and multiculturalism: Debating the dividing lines* (co-ed, 2016); *Citizenship, Identity and the Politics of Multiculturalism: The rise of Muslim consciousness* (2015, 2nd Edition); *Racialization and religion* (ed, 2014), *Race and Ethnicity* (2014) and *European Multiculturalism(s)* (co-edited, 2012). In 2016 he was awarded the Royal Society of Edinburgh (RSE) Thomas Reid Medal for excellence in the social sciences, and in 2017 he was elected as a Fellow of the Academy of Social Sciences.

Narratives of Hope: Self-Worth and the Current Crisis in American Society and Beyond

Lamont, Michèle

Harvard University, United States of America

With growing inequality, the American Dream, and its equivalents elsewhere in the world, is becoming less effective as a collective myth. With its focus on material success, competition and self-reliance, neoliberalism is leading the upper-middle class toward a mental health crisis while the working class and low-income groups do not have the resources needed to live the dream. It also generates a hardening of symbolic boundaries toward various groups. One possible way forward is broadening cultural inclusion by promoting new narratives of hope. I will discuss approaches to achieving this goal. I will go on to discuss the role of culture and belonging in the promotion of collective well-being and conclude with an exploration of the implications of my analysis for Europe and other advanced industrial societies.

Biography

Michèle Lamont is Professor of Sociology and of African and African American Studies and the Robert I. Goldman Professor of European Studies at Harvard University. She served as the 108th President of the American Sociological Association in 2016-2017 and she chaired the Council for European Studies from 2006-2009. She is also the recipient of the 2017 Erasmus prize for her contributions to the social sciences in Europe and the rest of the world. A cultural and comparative sociologist, Lamont is the author of a dozen books and edited volumes and over one hundred articles and chapters on a range of topics including culture and inequality, racism and stigma, academia and knowledge, social change and successful societies, and qualitative methods. Lamont is Director of the Weatherhead Center for International Affairs, Harvard University; and Co-director of the Successful Societies Program, Canadian Institute for Advanced Research.

Chaired by LOC Chair Pollock, Gary

Migration and Refugees in a Global World: The Case of the Mediterranean

Hanafi, Sari

American University of Beirut, Lebanon

The world is witnessing unprecedented movements of refugees and labor workers all across the globe. In 2018, there were 68.5 million refugees, a 50% increase from the previous year. 80% of refugees come from Arab region. There are 20 million displaced people in the Arab world, a number that rises to 54 million when including economic migrants. The number of stateless people is also witnessing an increase, amounting to 15 million in 2018. In this paper I will unfold some features of the current migrants and refugees mobility in the Mediterranean, then I will point out three societal implications in relation to politics, religion and identity. First, the politics of disinformation about refugees/migrants and their scapegoating has encouraged totalitarian trend and politics of agnotology; second, the very presence of refugees/migrants has transformed the religion landscape in host societies and their will have major effect in the politics of (non-)integration in Mediterranean states, and finally identity politics is the dark side of pluralism, a concept dear to Peter Berger. Pluralism needs the management of cultural relativism and universalism. How would they be reconciled?

Biography

Sari Hanafi is currently a Professor of Sociology at the American University of Beirut and editor of *Idafat: the Arab Journal of Sociology*. He is the President of the International Sociological Association. Recently he created the "Portal for Social impact of scientific research in/on the Arab World" (*Athar*). He has also served as a visiting professor at the University of Poitiers and Migrintern, University of Bologna and Ravenna, and CMI (Bergen). He is the author of numerous journal articles and book chapters on the sociology of religion, sociology of (forced) migration; politics of scientific research; civil society, elite formation and transitional justice. Among his recent books are: *Knowledge Production in the Arab World: The Impossible Promise* (with R. Arvanitis); *From Relief and Works to Human Development: UNRWA and Palestinian Refugees after 60 Years* (co-edited); *The Power of Inclusive Exclusion: Anatomy of Israeli Rule in The Occupied Palestinian Territories* (edited with A. Ophir & M. Givoni, 2009).

SP01 | Urban Futures

Organised by LOC Members Pieri, Elisa & Walker, Catherine

The Metropolis and Contemporary Life: The Times and Spaces of the Interdisciplinary in the Cities of Tomorrow

Keith, Michael

University of Oxford, United Kingdom
centre.director[at]compas.ox.ac.uk

The call for research that is interdisciplinary can at times both obscure the challenges and mask the opportunities of academic work across different disciplinary foundations, paradigms, ethical challenges and normative analysis of 21st century city life. In this talk, Michael Keith considers how emergent cities might reconfigure both the foundations of conventional professional expertise in city contexts and open up new ways of seeing, thinking and organising academic research and engaged practice in the contemporary city.

Biography

Michael Keith is Director of the Centre on Migration, Policy and Society (COMPAS) at the University of Oxford, co-ordinator of Urban Transformations (the UK Economic and Social Research Council's portfolio of investments and research on cities), co-Director of the Oxford Programme for the Future of Cities and the Director of the PEAK Urban Research programme. Michael's research focuses on migration related processes of urban change. His most recent work is the monograph *China Constructing Capitalism: Economic Life and Urban Change* (2014). He is currently completing (with Les Back and John Solomos) a book entitled *Power, Identity and Representation: Race, Governance and Mobilisation in British Society*. Michael also has substantial experience working on racism and the criminal justice system in the community and voluntary sector and as a politician. He is a co-founder and chair of the Rich Mix Cultural Foundation, a major cross cultural arts centre in East London, and has served as leader of the London Borough of Tower Hamlets, chair of the Thames Gateway London Partnership and a commissioner on the UK Government's Commission on Integration and Cohesion.

SP02 | Populism, Racism and Everyday Life in Europe

Organised by ESA Executive Committee

Towards a Critical Theory of Nationalism and Contemporary Authoritarian Capitalism

Fuchs, Christian

University of Westminster, United Kingdom
c.fuchs[at]westminster.ac.uk

This presentation asks: How can we critically theorise nationalism and right-wing authoritarianism today? In the first part, a criticism of using the notion of “populism” for characterising contemporary far right movements is given and a criticism of the two most-cited books on nationalism is presented: Ernest Gellner’s “Nations and Nationalism” and Benedict Anderson’s “Imagined Communities”. In the second part, an alternative theoretical approach is presented that focuses on foundations of a critical theory of authoritarianism, nationalism and authoritarian capitalism. It advances a critical concept of nationalism grounded in the works of Karl Marx, Rosa Luxemburg, and Eric J. Hobsbawm. The approach of Rosa Luxemburg as critical theorist of nationalism is discussed in relation to the approaches of Otto Bauer and Lenin. In the third part, a typology of how nationalist ideology is communicated in the public sphere is presented. The fourth part presents an analysis of the communication of nationalism in four case studies: 1) Donald Trump’s use of Twitter in the US Presidential Election 2016; 2) user-comments on Boris Johnson and Nigel Farage’s Facebook-pages in the 2016 Brexit Referendum; 3) the use of Twitter, Facebook, and YouTube in the German Bundestags-election 2017 by the Alternative für Deutschland (AfD) and its supporters; 4) user-comments on Facebook posting made by the leaders of the Freedom Party (FPÖ: Heinz Christian Strache) and the Conservative Party (ÖVP: Sebastian Kurz) during the 2017 Austrian general election. The analysis shows the inherent connection of nationalism, hierarchic leadership, the friend/enemy-scheme, militarism, and patriarchy in contemporary authoritarian ideology.

Biography

Christian Fuchs is a Professor at the University of Westminster. He is the Co-Director of the Communication and Media Research Institute (CAMRI) and co-editor of the open access journal tripleC: Communication, Capitalism & Critique (<http://www.triple-c.at>). He is a former chair and current board member of ESA RN18 – Sociology of Communications and Media Research and was a member of the ESA Executive Committee from 2015-2017, where he was the chair of conference committee planning the 2017 Athens conference. His research focuses on critical sociology and the political economy and critical theory of communication. He is author of books such as *Critical Theory of Communication* (2016), *Reading Marx in the Information Age* (2016), *Social Media: A Critical Introduction* (2nd edition 2017), *Digital Demagogue: Authoritarian Capitalism in the Age of Trump and Twitter* (2018), and *Rereading Marx in the Age of Digital Capitalism* (2019, forthcoming).

The Appropriation of 'Difference' by the Extreme Right

Christou, Miranda

University of Cyprus, Cyprus
miranda.christou[at]ucy.ac.cy

In this paper, I argue that the growing success of the extreme right in mainstreaming its ideology is based on upending the meaning of 'racism' in ways that produce a differend (Lyotard, 1983). More specifically, I examine how extreme right-wing rhetoric appropriates the use of 'difference', 'freedom' and 'oppression' in order to turn accusations of racism into an incommensurable language game. This rhetorical method allows them to position themselves as the champions of pluralistic democratic ideals while pushing for policies that directly undermine these values. The paper is based on a study of the right-wing, nationalist party ELAM in Cyprus. ELAM is closely associated with Golden Dawn in Greece and has gained parliamentary presence for the first time in 2016. The study is located within larger debates about citizenship, the rise of ethno-nationalism and its appeal to youth (Pilkington, 2016; Miller-Idriss, 2018). Data collection took place between September 2016 and December 2017 and includes: a) 48 interviews (ELAM leadership, 'Youth Front' members and 'Women's Front' members); b) observations of public events and demonstrations and, c) data from internet sources (website, social media). Analysis was conducted with the use of the Discourse-Historical Approach (Wodak, 2001; Reisigl & Wodak 2005). The paper ties these data to examples from other extreme right-wing parties that belong to the Alliance for Peace and Freedom (e.g. Golden Dawn and Forza Nuova) and the Movement for a Europe of Nations and Freedom (e.g. FPÖ and RN). The paper points out how the language of 'diversity' has been colonized by the extreme right and concludes that the differend of 'difference' exposed the vulnerabilities of postmodern discourse which celebrated 'diversity' over 'equality' (Flecha 1999).

Biography

Miranda Christou is an Assistant Professor in Sociology of Education at the University of Cyprus. Her research interests focus on questions of nationalism, globalization and the expansion of youth extreme right-wing movements. She has worked on multiple European projects such as: "INCLUD-ed: Strategies for Inclusion and Social Cohesion in Europe from Education" (FP6, IP, Integrated Project, 2006-2011) and "SOLIDUS: Solidarity in European Societies: Empowerment, Social Justice and Citizenship" (Horizon2020-Euro-Society-2014, Euro 3-European societies after the crisis, 2015-2018). She has published her work in various journals including *Current Sociology*, *Qualitative Inquiry* and *British Journal of Sociology of Education*. She was co-editor (with Spyros Spyrou) of the book *Children and Borders* (2014, Palgrave Macmillan).

Generation 9/11: British Muslim Girls Talk About Their Past, Present And Future Lives

Shain, Farzana

Keele University, United Kingdom
f.shain[at]keele.ac.uk

Media and policy attention surrounding Muslim girls and young women in Britain has been heavily dominated since 9/11, by a focus on 'extremism' and 'security' at the expense of other factors that may shape their lives. The literature on the perceived radicalisation of young Muslims (Field, 2011, ISD, 2015) has grown exponentially in the last decade, as has critical terrorism research (Brown, 2008, Spalek and Lambert 2008, McGhee, 2008, Jackson 2009, Lynch 2013). Yet, there are many and varied issues facing young British Muslims from questions of cultural belonging to schooling and employment/unemployment. For example, despite high rates of participation in further and higher education, 71% of Muslim women are not in employment and according to the British Social Mobility Commission (2016), Muslim Pakistani and Bangladeshi women who do work, earn less than their counterparts from other ethnic minority groups. This paper reports the findings of Leverhulme Trust funded research (2017-2019) exploring British Muslim girls' accounts of growing up and being educated in the shadow of 9/11. Drawing empirically on in-depth interviews and focus groups and theoretically on feminist and postcolonial approaches (Brah and Phoenix 2004, Mirza 2012), the paper explores the strategies that the young women draw on to navigate a range of competing pressures. The analysis offers insights into the cultural, political and economic factors that underpin the interaction of gender/race/religion/class and education in the era in which Muslims are identified primarily through the lens of the 'war on terror'.

Biography

Farzana Shain is Professor of Sociology of Education at Keele University, England. Her research includes work on education policy and politics, inequalities, education and the 'war on terror' and children and young people's political engagement and activism. Her books include *The Schooling and Identity of Asian Girls* and *The New Folk Devils: Muslim Boys and Education in England*. She is one of the Executive Editors of the *British Journal of Sociology of Education* and is currently a Leverhulme Research Fellow (2017-2019), researching 'Muslim girls' accounts of their past, present and future lives'.

SP03 | Boundaries, Barriers and Belonging in Digital Labour Capitalism

Organised by RN06 & RN18

Artificial Intelligence and Humans as Resource

Moore, Phoebe

Leicester University, United Kingdom
pm358[at]leicester.ac.uk

Interest in artificial intelligence (AI) has reached hyped levels simultaneous to concern for human intelligence, as we face seeming intractable social issues caused by decades of technological developments in human resources and algorithmic and surveillant management practices with accelerated integration of the role of technology into workplaces, accompanied by shifts and experimentation in modes and relations of production. From the 1950s, humans have asked to what extent humans should or can compare our minds to machines. Earlier views on AI, so-called 'GOFAI', were representationalist, where researchers considered domains of experience to be fixed and context-free, where principles that determine behaviour are systematic. However, this line of reasoning relies on a transcendentalist ontology. This paper argues that the flaws in AI research have been ontological, where human's bodies and affective labour have not been considered relevant for intelligence and work. How affective resources will be acknowledged within AI practices is yet to be seen.

Biography

Phoebe V Moore is an Associate Professor in Political Economy and Technology at the University of Leicester School of Business, Division of Management and Organisation. Her research looks at the impact of technology on work from a critical perspective. Moore's most recent book *The Quantified Self in Precarity* looks at quantification through wearable tracking and algorithmic decision-making as a set of management techniques, with evidence of creative new controls of affective labour and various forms of worker resistance to corporeal capitalism arising. In 2018-19, Moore published one report for the International Labour Organisation (ILO) workers' bureau, ACTRAV, and will publish one further paper for the European Union agency for Safety and Health (EU-OSHA) on the risks that digitalization and artificial intelligence pose for workers. Previously, she was funded by the British Academy / Leverhulme (2015-2017) to carry out a research project looking at digital tracking in office work in the Netherlands. Alongside her Associate Professorship, in Autumn 2018, Moore is carrying out a research fellowship at the WZB in Berlin working closely with two research groups on artificial intelligence and quantification at the Weizenbaum Institute.

Digital Workerism: Tracing the Recomposition of Workers' Struggle in Digital Labour Capitalism

Woodcock, Jamie

University of Oxford, United Kingdom
jamie.woodcock[at]oii.ox.ac.uk

The rise of digital labour capitalism has become a key part of contemporary debates on how work is changing, the future of work/ers, resistance, and organising. Workerism took up many of these questions in the context of the factory – particularly through the Italian Operaismo – connecting the experience of the workplace with a broader struggle against capitalism. There are, of course, many differences between those factories and the new digital workplaces in which many workers find themselves today. However, the methods of workers' inquiry and the theories of class composition remain a useful legacy from Operaismo, providing tools and a framework to make sense of and intervene within work today. However, these require sharpening and updating in a digital context. This talk discusses the challenges and opportunities for a "digital workerism", understood as both a method of research and organising. It takes the case study of Uber to discuss how technology can be used against workers, as well as repurposed for their struggles. By developing an analysis of the technical, social, and political recomposition taking place on the platform, it is possible to move beyond determinist readings of technology, to place different technologies within the social relations that are emerging. In particular, the talk focuses on how these new forms of workers' struggles can be circulated. Through this, the talk argues for a "digital workerism" that develops a critical understanding of how the workplace is becoming a key site for the struggles of digital labour capitalism.

Biography

Dr Jamie Woodcock is a researcher at the Oxford Internet Institute, University of Oxford. He is the author of *Marx at the Arcade* (Haymarket, 2019) about videogames, and *Working The Phones* (Pluto, 2017), a study of a call centre in the UK – both inspired by the workers' inquiry. His research focuses on labour, work, the gig economy, platforms, resistance, organising, and videogames. He is on the editorial board of *Notes from Below* and *Historical Materialism*.

SP04 | Sociology, Feminisms and the Future of Global Gender Research

Organised by RN33

Millennial Feminisms Between Eastern and Western Cultures. The Case of Iran

Ruspini, Elisabetta; Ghaffari, Rassa

University of Milano-Bicocca, Italy
elisabetta.ruspini[at]unimib.it, r.ghaffari[at]campus.unimib.it

The paper aims to analyse the relationship between Millennials and Feminism today, with a specific focus on the Iranian case. The paper will have two parts. The first one will explain who the Millennials are and their standpoints about feminism and gender equality. This will be done through a scientific literature review and a secondary analysis of existing data. On the one hand, Millennials are generally regarded as the most open-minded and interconnected generation in history, and the most supportive of gender equality and LGBT rights (Taylor, Keeter, 2010; Rainer, Rainer, 2011). The Internet has facilitated the creation of transnational, multicultural and multireligious networks (Messina-Dysert, Radford Ruether, 2014; Llewellyn, 2015; Ruspini, Bonifacio, Corradi, 2018). On the other hand, progress in gender equality seems to have led some Millennials to dismiss the feminist movement, supporting women's rights and gender equality but not identifying themselves as feminists (GenForward, 2018). The second part will explore the development of feminism discourses and practices in Iran, a challenging example of the tension between Eastern and Western cultures. The analysis is based on a thoughtful examination of the scientific literature and in-depth interviews with Millennials men and women, activists and scholars in Iran. The internal debate between secular and Islamic feminisms is a key point not only for the Iranian society but also for the Muslim ones, more generally, and offers a unique opportunity to discuss the development of the concept and its multiple meanings, stances and effects (Vanzan, 2005; Tohidi, 2016).

Biography

Elisabetta Ruspini is Associate Professor of Sociology at the University of Milano-Bicocca, Italy. She holds a PhD in Sociology and Social Research from the University of Trento. She is a Board Member of the European Sociological Association Research Network 33 'Women's and Gender Studies'. She is the Scientific Coordinator of "ABCD-Centro Interdipartimentale per gli Studi di Genere/ABCD-Interdepartmental Center for Gender Studies", University of Milano-Bicocca. Her research interests include: The Social Construction of Gender; Gender Stereotypes and Gender Roles; Gender and the Generation Turnover; Family Change; New Forms of Parenthood; Men and Masculinities; Social Inequalities; Gender and Poverty; Economic Socialization; Gender and Religion; Future Studies. She has published extensively and contributed papers to several national and international conferences/seminars/workshops on gender, generational and family issues. Among her recent publications: (with G. Bonifacio and C. Corradi, eds.) *Women and Religion. Contemporary and Future Challenges in the Global Era*, Bristol, 2018; *Diversity in Family Life. Gender, Relationships and Social Change*, Bristol, 2013. Rassa Ghaffari is a PhD candidate in Sociology at the University of Milano-Bicocca with a thesis on the representations of gender roles among two generations in Iran. She has been visiting researcher at the Faculty of Oriental Cultures and Languages, University of Oslo, and holds a master's degree in African and Asian studies. Her research interests include youth studies, generation studies and Iranian culture and society. She was awarded the Cesare Bonacossa scholarship for a field research in 2014 and the Marina Chiola award for the best master's thesis on gender issues in 2015.

Feminist Responses to Anti-Gender Mobilisation - Feminism Against Conservative Threats (FEMACT)

Giritli Nygren, Anna Katarina; Sjöstedt
Landén, Angelika

Forum for Gender Studies, Mid Sweden University, Sweden
katarina.giritli-nygren[at]miun.se, angelika.sjostedt-
landen[at]miun.se

Our aim with this presentation is to discuss how gender studies and feminism address the diverse contemporary forms of anti-genderism and the growing resistance to pluralistic and inclusive understanding of gender and sexuality. We give examples from the work done in a pilot project (2017) funded by the Swedish Foundation for Humanities and Social Sciences where we did an inventory of feminist initiatives resisting and challenging anti-gender agendas across Europe. The experiences from this project show the differences in challenges facing feminist activists and gender scholars on local levels. It reveals similarities and differences that need to be addressed on a transnational level and with solidarity with the variety of feminist- and anti-racist struggles led by a curiosity of the different conditions that anti-gender initiatives create. How do we account for this while doing solidarity that can cut across regimes of oppression? What are the conditions of possibility for doing border-crossing scholarly cooperation? What are the ways in which we can challenge the different kinds of brick walls that we experience in institutional, national and other contexts, and that we need to get up against for doing transnational cooperation? We want to emphasize the centrality of collective practices in the production of feminist knowledge and theoretical concepts, providing solid and unique models of activist scholarship. We therefore also think that it is necessary to unsettle binary conceptions of politics as either global or local, central or peripheral and instead try to work to identify how to create chains of equivalence among various feminist struggles.

Biography

Katarina Giritli Nygren is a Professor in Sociology and Director of the Forum for Gender Studies at Mid Sweden University. Her current research addresses different forms of governance relationships with a focus on spatial processes of inclusion and exclusion in terms of gender, class, and ethnicity in different contexts. In her most recent research, she argues for feminist and intersectional analyses of the shifting governmentalities of neoliberal welfare states to elucidate the movement from a welfare to a punitive state with an increased focus on risks and national security. Angelika Sjöstedt Landén is a PhD in Ethnology and Senior Lecturer in Gender Studies at Mid Sweden University. She is the director of the human resources undergraduate programme. She has published articles, book chapters, co-edited books and editorials concerning intersectional studies of work life and gender equality policy as well as studies of rural morality and rural resilience including centre and periphery relations. Her work often aims at linking feminist and critical theory with research fields more rarely addressed with such perspectives.

SP05 | Contested Boundaries of Humanitarianism. Refugee Movements and the Global Crisis of Asylum Systems

Organised by RN35

Volunteering for Refugees and the Repositioning of State Sovereignty and Civil Society: The Case of Greece

Parsanoglou, Dimitris

Panteion University of Social and Political Sciences, Greece
parsanoglou[at]panteion.gr

In this presentation, I will focus on Greece and more specifically on the ways in which both state sovereignty and governance have been challenged by solidarity initiatives in unprecedented intensity. Since the beginning of the 'refugee crisis', particularly since the spring of 2015, multiple new actors have been playing a substantial role throughout the country wherever emergency conditions occurred. My main research question is to examine the interactions between these different actors and the possible impact of their involvement on the governance of mobility in all its instances, both during and after the 'refugee crisis'. In other words, I examine to what extent solidarity towards refugees has shifted both the scope of state sovereignty and the limits of citizenship. My analysis will be based on empirical material gathered from semi-structured in-depth interviews with volunteers and activists who have been working with refugees in different settings in Lesbos and in Athens, as well as with representatives of relevant authorities, e.g. Ministry for Migration Policy, Hellenic Asylum Service etc. My approach is three-fold: first, I will propose a typology of actors that have been present in the broad field of the 'management of refugee crisis'. Secondly, I will highlight the motivations, the content and the effects of enacted solidarity both on volunteers and activists themselves and on the socio-political context within which they are acting. Finally, I will analyse the repercussions of the 'intrusion' of individual, supranational and non-state actors into services, activities and interventions that belong to the hard sphere of State sovereignty.

Biography

Dimitris Parsanoglou is a Lecturer and Senior Researcher at the Department of Social Policy at Panteion University of Social and Political Sciences in Athens. He holds a DEA and a PhD in Sociology at the Ecole des Hautes Etudes en Sciences Sociales in Paris. He has coordinated, as Senior researcher of the Centre for Gender Studies of the Panteion University, the FP7 project "MIG[at]NET: Transnational Digital Networks, Migration and Gender" and he has taught Sociology at the Department of Philosophy and Social Studies of the University of Crete. He was a Post-doctoral research fellow at the University of Peloponnese, in the framework of the ARISTEIA project "Migration Management and International Organizations: A history of the establishment of the International Organization for Migration". He is currently coordinating the project "Beyond the 'refugee crisis': Investigating patterns of integration of refugees and asylum seekers in Greece", funded by the Hellenic Foundation for Research and Innovation.

On Governing Protection-Seeking People in Europe

Dahlvik, Julia

FH Campus Wien University of Applied Sciences, Austria
julia.dahlvik[at]fh-campuswien.ac.at

In this contribution, I first provide a brief overview on how the political category of “refugee” has developed over time and what are its linkages with global political and economic developments. While in the 1980s and 90s the distinctions between economic and political migrants already became increasingly problematic, some scholars agree that today people move between different categories and that the Geneva Convention is inadequate for dealing with today’s situation (Castles 2007, Westra et al. 2015). In the second part I argue that to understand the logics of today’s asylum system we have to consider the often overlooked level of state administration, where asylum politics are realized on a daily basis. Public officials not only implement policies but also contribute to them by making use of their discretion in implementing public programs and by attributing political meaning to their actions (Lipsky 2010, Fassin 2015). Also judges, when they determine refugee status, ideologically tend to follow either the national or the cosmopolitan paradigm, linked to the concepts of national or universal solidarity respectively (Morris 2010). In this part I will provide some insights from my institutional ethnography in the Austrian asylum authority. I conclude by exploring the question whether continuous reforms of the asylum system are the best way to deal with the current situation or whether a radical change is necessary. Considering e.g. extreme differences in countries’ recognition rates, which role does the European Union really play in this human rights issue? And which effects do recent attacks on fundamental legal instruments such as the ECHR have?

Biography

Julia Dahlvik earned her PhD in Sociology in 2014 at the University of Vienna, Austria, and currently works at the University of Applied Sciences FH Campus Wien. Her research focuses on migration and asylum, law and society, and organisations. She was a visiting scholar at the University of Stanford and the University of Amsterdam and has been teaching at different Austrian universities. She is a founding member and co-speaker of the Law & Society section of the Austrian Sociological Association and has co-organised annual conferences on migration and integration research in Austria for several years. Julia’s book *Inside Asylum Bureaucracy: Organizing Refugee Status Determination in Austria*, based on her award-winning dissertation, was recently published with Springer Open Access in the IMISCOE Research Series. Julia has edited and published numerous books and articles; her work has been published in *Migration Studies* and *Urban Research & Practice* among others.

SP06 | Nationalism, Europe, and Brexit

Organised by Halford, Susan & Scott, Sue
Presidents of the British Sociological Association and the European Sociological Association

European Cosmopolitanism and Atavistic Nationalism: The Twin Conditions of Brexit

Bhambra, Gurminder K

University of Sussex, United Kingdom
g.k.bhambra[at]sussex.ac.uk

The European project is commonly argued to be organized around the idea of 'cosmopolitan Europe' – a Europe that would distance itself from its recent past by uniting in recognition of its deeper, long-standing institutional commonalities and celebrating its cultural diversity within those commonalities. There is little discussion, however, of the diversity constituted by multicultural others as part of cosmopolitan Europe. This rests on a particular understanding of European history that evades its colonial past. It also disavows examining the consequences of that domination for the contemporary multicultural constitution of European societies – one that those on the far-right see as having been imposed upon them rather than created from Europe's historical imposition upon others. It is the colonial histories of Europe that have produced its multicultural present – a multiculturalism that over the last five years political leaders have declared to have failed. What does it mean to say that multiculturalism has failed when it is colonialism that created multi-cultural Empires and multicultural European societies? What does it mean to say that multiculturalism has failed when post-colonial European societies continue to be empirically multicultural? What sort of politics does it legitimate? In this talk, I suggest that the failure to acknowledge Europe's colonial past is responsible precisely for the rise of atavistic nationalism that is central to the politics of Brexit and I ask how could a postcolonial sociology better help us to understand this present.

Biography

Gurminder K Bhambra is Professor of Postcolonial and Decolonial Studies in the School of Global Studies, University of Sussex. Previously, she was Professor of Sociology at the University of Warwick and has been Guest Professor of Sociology and History at the Centre for Concurrences in Colonial and Postcolonial Studies at Linnaeus University, Sweden. She is author of *Connected Sociologies* (2014, available open access) and the award-winning *Rethinking Modernity: Postcolonialism and the Sociological Imagination* (2007). She also co-edited a volume on *Decolonising the University* (2018) and has spoken regularly on the crisis for refugees in Europe and on questions of citizenship in the light of Brexit.

She set up the *Global Social Theory* website (globalsocialtheory.org) to counter the parochiality of standard perspectives in social theory and is co-editor of the social research magazine, *Discover Society* (discoversociety.org).

Brexit and Britain's Overseas Citizens: Reframing Britishness from Beyond the Borders

Benson, Michaela Caroline

Goldsmiths, United Kingdom
michaela.benson[at]gold.ac.uk

Brexit has made visible the extent to which political and public understandings of Britishness conceive of it as an identity and citizenship allied to an 'island nation', contained by its borders. Yet, Britain's overseas citizens – its emigrants settled outside Britain and citizens of its former colonies and overseas territories – are conspicuously absent from such understandings. In a period when the question of who counts as British has fuelled major political transformation this talk argues that bringing overseas citizens centerstage offers a powerful corrective to hegemonic constructions of a solely White and/or indigenous Britishness. It builds on critiques that identify the neglect of Britain's imperial history and the presence of a multi-ethnic polity in the (post-)imperial core within such narratives of indigeneity (see for example, Bhambra 2017; Virdee and McGeever 2018), extending the geographical purview of this perspective to include overseas citizens – who only feature in these debates as and when they enter (or are asked to leave) the British Isles – and Britain's diasporic population – one of the largest in the world proportional to the resident citizen population in the United Kingdom. In particular, the talk draws on one element of a broader project looking into Britain's relationship with its overseas citizens: recent research on what Brexit means to British citizens living in the EU27. Through this focus it offers initial insights into Britain's ambivalent relationship to its overseas citizens, their inclusion and exclusion from public and political debate, and how a focus on dispersed contemporary geographies of Britishness might challenge contemporary understandings of who counts as British.

Biography

Michaela Benson is Reader in the Department of Sociology, Goldsmiths and the project lead for BrExpats: Freedom of Movement, Citizenship and Brexit in the lives of Britons resident in the EU27 (<https://brexitbritsabroad.com>). She has been Visiting Professor at Universidad Diego Portales, Chile (2014) and Université Toulouse-Jean Jaurès (2018-19). She is the author of *The British in Rural France* (2011), which was shortlisted for the British Sociological Association Philip Abrams Memorial Prize 2012, and co-author of *Lifestyle Migration and Colonial Traces in Malaysia and Panama* (2018) and *The Middle Classes and the City* (2015). She has edited 3 volumes and is the author of 37 peer-reviewed journal articles and book chapters. She is currently Managing Editor of *The Sociological Review*, the longest-standing journal of sociology in Britain. Throughout her career she has been committed to engaging publics with social science research, through public speaking, broadcast and print media, podcasting, and contributions to educational resources.

The European Union – The Failure of a Dream? An Ambitious Scenario Disproved by the Brexit

Haller, Max

University of Graz, Austria
max.haller[at]uni-graz.at

My book *European Integration as an Elite Process* (Routledge 2008) had a question as a subtitle: "The failure of a dream?" In my lecture, I will argue that the Brexit has proven that this scenario came true; it was in fact a massive event of disintegration. The dominant interpretation sees it as the result of an irresponsible behavior of British political elites and an inadequate application of direct democracy. However, against these views, I will argue: (1) Already among the historical ideas about European integration, there were two contrasting views: one of a loose federation of nation states, the other of a new federal, globally powerful state; (2) the political elites pursued European integration secretly along the second model; (3) the Brexit was only the logical consequence of deep doubts of the Britons about the EU; similar doubts had already been expressed by French and Dutch people in 2005 when rejecting the EU constitution. I will not argue that the EU will disintegrate. Rather, European integration has achieved some important aims, although by far not all which are ascribed to her. There exists an alternative, viable vision of European integration which could be attractive also for Britain irrespective if it will remain a member or not. This vision is that of a socio-economic Community of Law. As such a Community, the EU should abstain from all governmental functions, slim down many of its present institutions and strengthen its elements of Citizen's Initiatives. In this process, also Britain could contribute ideas and support.

Biography

Max Haller, born 1947 in Sterzing (Italy), Dr.phil. Vienna 1974, Dr. phil. habil. Mannheim, Professor of Sociology at the University of Graz (Austria) 1985-2015. He was president of the Austrian Sociological Association and is a member of the Austrian Academy of Science. He was co-founder and Vicepresident of the European Sociological Association and co-founder of the International Social Survey Programme (ISSP). He was a visiting professor at universities in Austria, Germany, Hungary, the Czech Republic, Italy, California/USA and Tanzania. He published and edited 40 books and about 250 papers in international sociological journals (incl. *AJS*, *ASR*, *Revue Française de Sociologie*, *International Sociology*) and readers. His main research areas are social stratification, sociology of European integration, comparative social research, and sociological theory. Recent publications include *Ethnic Stratification and Economic Inequality Around the World* (with Anja Eder), Ashgate Publishing 2015; *Higher Education in Africa. Challenges for Development, Mobility and Cooperation*, Cambridge Scholars Publishing 2017 (ed. with Anne Goujon and Bernadette Müller).

Identity Politics and the Crisis of Europe: On Current Articulations of White Reconstructions and the (Im-) Possibilities of an Intersectionality of Struggles

Thompson, Vanessa E

Goethe University, Germany
thompson[at]em.uni-frankfurt.de

The political developments of the last years in various European countries demonstrate that Europe and its democratic values are in crisis. Whether it be the 'necropolitical' responses to the flight and movements of those rendered refugees, the continuous rise of the far-right, or the neoliberal securitization of increasing poverty: The normative paradigms that undergird the project of Europe such as freedom, justice and equality are severely put to the test. At the same time, many social and political theorists analyze and explain these troubling formations against the backdrop of socio-economic developments such as neoliberal globalization and increasing economization. Most of these approaches as well as dominant democratic and left political movements signal the need for renewing the 'social question' and call for a return to (white) 'class politics' that respond to the fears of those who had been 'left behind'. However, these discussions often dismiss politics of racialized and minoritized groups and movements, disqualifying their claims as 'identity politics' that focus solely on the particular realm of rights. My talk problematizes these approaches, drawing on an actualization of W.E.B. Du Bois' conception of 'white wages' and Gurminder K. Bhambra's critique of 'methodological whiteness'.

I suggest that these approaches allow for a historicization of the interconnections of racism, colonialism and capitalism, including their gendered logics, that not only challenge the historical wrongs of the European project, but further enable the reconstruction of another Europe through what Angela Davis calls an 'intersectionality of struggles'.

Biography

Vanessa E. Thompson is a postdoctoral researcher and lecturer at the Institute of Sociology at Goethe-University Frankfurt. She was previously a fellow at the Department of Black Studies at the University of California, Santa Barbara. Her research and teaching are focused on black studies, critical race and racism studies, post- and decolonial feminist theories and methodologies, gender and queer studies, and social movement theories. Her book project, *Solidarities in Black: Anti-Black Racism, Black Urban Activism and the Struggle beyond Recognition in Paris*, explores forms of black urban activism and anti-racist mobilizations against anti-black racism in France as well as analyzes the re-production of coloniality through the workings of neoliberal French Republican Universalism. Her current research project focuses on racial gendered policing in Europe and transnational articulations of abolitionist alternatives from a black feminist perspective. Vanessa has published articles on the work of Fanon, black social movements in Germany and France, and racial gendered policing in Europe.

Organised by RN01

Agency, Choice and Control Until the End: Investigating the “Good Death”

Weicht, Bernhard

University of Innsbruck, Austria
bernhard.weicht[at]uibk.ac.at

Demographic and epidemiological developments have encouraged investigation into the latest life stages, often marked by dependencies, vulnerabilities and institutional living, with stigmatised deaths in institutions after periods of suffering and dependency functioning as symbolic antithesis to the good life and the proper person. More recently the importance of a “good death” has shifted the focus more explicitly onto the possibilities of choice and control over the end of life. People express their unwillingness to live a life of being a burden and of being dependent on others. In self-imposed withdrawal or requests for assisted dying the ability of agency is being upheld to represent a “good death” and a person’s autonomy. The underlying assumption here is that choice and the ability to plan one’s life until and beyond death confirm the existence of the proper person. While this idea is built around one assumption - the priority of individual separateness and independence - dying preferences and circumstances are shaped in concrete, culturally situated social relations. In this paper I analyse public discourses in different national contexts to identify the associations, connotations and constructions underlying the concept of the “good death” and the role agency can play in its conceptualisation. Drawing on a critical discourse analysis of newspaper debates, I ask in how far debates on euthanasia and assisted dying take up the ideals of choice and control in order to combat the challenges and fears associated with the latest life stage. The paper argues that this reasoning, while upholding the ideal of the good life, often reverts to an individualistic notion and thereby ignoring the social and relational context of old age and dying.

Biography

Bernhard has studied Economics in Vienna/Austria and Social Policy in Nottingham/UK. He holds a PhD from the University of Nottingham where he researched the social and moral construction of care for older people. He continued his work on care and ageing as Marie Curie Fellow at Utrecht University, Netherlands with a project on the intersections of care and migration regimes. Prior to joining the department of Sociology at the University of Innsbruck he worked as lecturer at Leiden University College. He received his Habilitation at the University of Innsbruck in 2018 with his work entitled “A Caring Sociology for Ageing Societies”. Bernhard has published on the construction of care, ideas of dependency, migrant care workers, the intersection of migration and care regimes and the construction of ageing. He is the author of *The Meaning of Care* (2015) and co-editor of *The Commonalities of Global Crisis* (2016), both published by Palgrave Macmillan.

SP08 | Symbolic Boundaries: Barriers or Belonging(s)?

Organised by RN07 & RN15

Status Struggle, Belonging and Symbolic Boundary Work Among Refugees, Established Immigrants and Belgian Natives

Verschraegen, Gert

University of Antwerp, Belgium
gert.verschraegen[at]uantwerpen.be

Symbolic boundary work can be seen as a crucial component in the competition between social groups. By producing symbolic boundaries different groups can produce, maintain, or rationalize status differences and social divides. But symbolic classifications can also be used to bridge existing social boundaries. In recent years numerous studies have documented the “equalisation strategies” individuals use to bridge social and cultural divides, especially when their identities have been spoiled by social stigma (e.g. Lamont, et al., 2016). In this paper I discuss some boundary as well as bridging strategies that are used by (Syrian) refugees, established immigrants and natives in Belgium. Drawing on in-depth interviews, I will describe how different respondents use ‘comparative strategies of selves’ (Sherman, 2005) to construct a dignified, deserving position for themselves by making implicit or explicit comparisons with other groups. The paper shows how different symbolic markers can be used to brighten or blur group boundaries and how boundary work can best be interpreted in the light of the structural positions in which specific groups find themselves, as well as the cultural repertoires they can draw on. It also highlights how people in relatively similar, disadvantaged structural positions (in the eye of the sociologist) do not form alliances as they derive part of their dignity from the moral and cultural differences they perceive between them.

Biography

Gert Verschraegen is Associate Professor of Sociology at the University of Antwerp (Belgium), where he also serves as the head of the department of sociology. His main research interests are in social theory, cultural sociology, the sociology of science and knowledge and the sociology of European integration. His work has appeared in *Poetics*, *Citizenship Studies*, *Journal of European Social Policy*, *Futures*, *Innovation*, *Journal of Law and Society*, *Current Sociology* and many other journals. His most recent books include *Diversity: Dealing with Diversity in Deprived and Mixed Neighbourhoods* (2018, Policy Press, edited with Stijn Oosterlynck) and *Imagined Futures in Science, Technology and Society* (2017, Routledge, edited with Frédéric Vandermoere, Luc Braeckmans en Barbara Segaert).

Religious Boundaries of Belonging as a Source for Perceived Discrimination Among Religious Minorities: A Specific Case of Muslims in Secular Europe?

Trittler, Sabine

University of Konstanz, Germany
sabine.trittler[at]uni-konstanz.de

Drawing on the concept of symbolic boundaries, this paper examines the consequences of religious and secular boundaries of national belonging among the majority population for the integration of religious minorities in Europe. It directly relates to and extends previous research, which reveals that Muslims report higher levels of perceived discrimination on religious grounds in secular contexts than in regions where Christianity is a more salient marker of national belonging. Three continuative issues are raised and analyzed: Firstly, the point that the results might represent the specific case of Muslims is addressed by extending the analysis to other Christian and non-Christian minorities. Second, the restriction to Western Europe as a highly secular context is overcome by also including Eastern European countries, where in some countries religion constitutes a highly salient marker of the nation. The third part then sorts out other explanatory factors that might influence perceptions of discrimination among religious minorities focusing on the institutional relationship between state and church. To analyze the linkage between religious notions of belonging and perceived discrimination, data from the ISSP pertaining to the majority population have been combined with data related to religious minority respondents from the ESS. Overall, the results of the multilevel models show that secular contexts are perceived as more exclusionary by each of the religious minority group while Muslims represent the most vulnerable. On the other hand, the results suggest that the symbolic boundaries may have different mechanisms of inclusion and exclusion, depending on the religious homogeneity of the majority.

Biography

Sabine Trittler is a postdoctoral researcher and lecturer at the University of Konstanz, Germany, who received her doctorate in Social Sciences from the University of Göttingen in 2017. Her research interests lie at the intersection of sociology of religion, nationalism, and integration research and focus on the role of religion as a marker of national belonging in cross-national comparison. As such she is interested in the formation of religious and secular boundaries of belonging, their relationship towards the toleration and integration of immigrants, as well as the perceptions of these symbolic boundaries among the minority populations in Europe. Her work has been published in *Nations and Nationalism*, *European Sociological Review* and *Journal of Ethnic and Migration Studies*.

SP09 | Social Mobilisations and the Shape of the Future: To the Left, Right, or Nowhere

Organised by RN11 & RN25

Justice or Vengeance? Capitalism, Crises and the Contemporary Social Movements

Langman, Lauren

Loyola University of Chicago, American Sociological Association, International Sociological Association, Global studies Association
llang944[at]gmail.com

The first of the Internet mediated social movements, the Zapatistas of Chiapas, was one of the first social movements to garner worldwide attention and support. This was soon followed by the Battle of Seattle that marked the rise of global justice movements resisting the inequities of neoliberal globalization. These various “mobilizations for human dignity” were preparing the networking culminating in the World Social Forum as well as inspiring subsequent mobilizations such as the Arab Spring or Occupy protests against neoliberalism and its retrenchments from social spending, while corporate profits mushroomed along with growing inequality and precarity. The various crises of global capital evoke powerful emotions that dispose support for, if not participation in the various rhizomatic expressions of resistance and protest. But progressive changes in society often evoke fear and uncertainty among the more conservative segments of the society, disposing reactionary movements to thwart progressive change, limit immigration, and restore a glorious past. There is a dialectic of progressive movements seeking equality, freedom, justice, democracy and universal dignity, versus reactionary mobilizations based on fear, anger and resentment. These ascendant reactionary movements now threaten democracy, human rights and the rules of law which enabled Enlightenment based modernity. As will be argued, the various legitimization crises of the modern social system are evident in the dialectic between progressive social justice movements that seek a more democratic, inclusive egalitarian society versus the various authoritarian populisms that would save or restore exclusive, intolerant rulebound hierarchies. What must be noted is that both left and right mobilizations are impelled by powerful emotions.

Biography

Lauren Langman, Professor of Sociology, Loyola University of Chicago, Ph.D. from the University of Chicago, has long worked in the tradition of the Frankfurt School of Critical Theory, especially relationships between culture, identity and politics/political movements. He is the past President of RC36 Alienation Research Committee of the ISA, past chairman of the Marxist section of the ASA. His publications deal with

globalization, alienation, identity, hegemony, global justice movements, reactionary movements, nationalism and national character. Recent publications include *Trauma Promise and Millennium: The Evolution of Alienation*, with Devorah Kalekin, *Alienation and Carnivalization* with Jerome Braun and editing a special issue with Tova Benski, of *Current Sociology on Arab Spring, the Indignados and Occupy*. His latest books are *God, Guns, Gold and Glory and Inequality in the 21st C: Marx, Piketty and Beyond*. He is on several editorial boards, including *Critical Sociology*, *Sociopedia*, and *Current Perspectives in Social Theory*.

Rethinking Concepts for Social Mobilisations around Brexit and the EU: Projects, Violence and the Political Economy of the World System

Walby, Sylvia

City University of London, United Kingdom
sylvia.walby[at]city.ac.uk

Theorisation of the social mobilisations around Brexit and the European Union requires addressing three debates about concepts. First, the concept of ‘project’ is preferred to the concept of ‘identity’ to avoid a tendency to cultural essentialism. Second, the significance and distinctiveness of violence as a form of power, with its own rhythm, temporality and emotionality needs to be addressed; rather than blurring the distinction between different forms of power. Third, the significance of contesting hegemony in the political economy of the world system needs to be addressed, not only nations, nationalism and nation-states. The empirical focus of the paper concerns the competing projects active in processes of Brexit and Europeanisation. This requires the theorisation of the EU as a would-be hegemon in the world system. Understanding the EU requires theorisation of the relationship of violence to political economy. The understanding of the emotions threaded through the Brexit process requires this analysis of the relationship of violence to political economy.

Biography

Professor Sylvia Walby has worked at City University of London as Professor of Sociology and Director of the interdisciplinary Violence and Society Centre since 1 March 2019. She was previously at Lancaster University where she was Distinguished Professor of Sociology, held the UNESCO Chair in Gender Research, and was Director of the Violence and Society UNESCO Centre. Sylvia was the founding President of the European Sociological Association, elected after chairing the steering committee to establish the association. She has been President of the International Sociological Association’s Research Committee RC02 on Economy and Society. She is a Fellow of the Academy of Social Sciences and a Fellow of the Royal Society of Arts. Professor Walby was awarded an OBE for services to equal opportunities and diversity. She is Chair of the REF Sub-Panel for Sociology.

SP10 | Understanding Risk and Uncertainty in the Anthropocene

Organised by RN12 & RN22

The Production of Nature: Towards a Risk-Taking Society

Zinn, Jens Oliver

University of Melbourne, Australia
jzinn[at]unimelb.edu.au

In scholarly and public debate the notion of nature is shifting from something that is naturally given and can be (freely) exploited, to being at-risk and in need of protection against technological and economic developments, to eventually considering nature as requiring active shaping and thereby necessitating risky decision-making or risk-taking under conditions of uncertainty. The presentation traces these developments in science and social science. The announcement of the Anthropocene scientifically acknowledges the human influence on nature has become so substantial that it is justified to speak about a new geological epoch. In environmental sociology the dominance of a protective approach to nature has given way to a growing variety of approaches including strategies to restore nature in areas where it has already been destroyed. There are a number of branches in economics to find ways using market mechanisms for organising a more sustainable use of natural resources without substantially compromising economic growth. Indeed, many of these and other debates are complex and controversial. Climate change deniers and supporters of exploitative approaches of nature remain influential. The presentation suggests, to the degree public debate and natural degeneration move towards a world where nature can no longer be merely protected but is increasingly actively produced and socially allocated, risk taking becomes endemic and secondary risks more frequent. In the conclusions I discuss social challenges and consequences of these developments.

Biography

Jens O. Zinn is Associate Professor in Sociology at the University of Melbourne and Guest Professor at the Sociology Department and the Risk and Crisis Research Centre at Mid-Sweden University. He researches how societies, organisations and individuals perceive and respond to risk and uncertainty. In a recent initiative he develops conceptual tools to better understand risk taking. In an interdisciplinary research project, he examines how language and the social combine in the changing discourse-semantics of risk. In 2015 the Alexander von Humboldt Foundation awarded him the Friedrich-Wilhelm Bessel Price. Zinn founded two international risk networks within the International Sociological Association in 2006 (TG04) and within the European Sociological Association in 2005 (RN22) and headed these networks for many years. In 'Living in the Anthropocene: Towards a Risk-Taking Society,' *Environmental Sociology* 2(4) he discusses environmental degeneration from a risk perspective.

SP11 | Sexual Citizenship in Europe and Beyond

Organised by ESA President Scott, Sue & RN23

Anti-Gender Movements in Europe

Kuhar, Roman

University of Ljubljana, Slovenia
roman.kuhar[at]ff.uni-lj.si

Numerous countries in Western and Eastern Europe, in Latin America and in some other parts of the world have recently been faced with a fierce opposition to ensuring rights deriving from intimate/sexual citizenship issues. Mass protests against marriage equality, reproductive rights, gender mainstreaming and sexual education have centralised around the so called “gender theory” or “gender ideology”. It is explained that the very notion of “gender” is in fact a hidden plan of “radical” feminists and LGBT activists, a new type of Marxism, aiming at nothing less than a cultural revolution: a post-binary gender world, where there is no place for “natural families”, masculinity, femininity etc. “Gender theory” has become an empty signifier, an all-inclusive and catch-all mobilising tool, used by various (religious) groups, political parties and even state establishments to prevent equality policies from being adopted and implemented. The contribution will map out and explore the emergence, the content and the effects of the “gender ideology” (or “gender theory”) discourse. It will examine how an academic concept of gender became a mobilising tool for neo-conservative social movements and massive street demonstrations and how the concept of human rights, which has been used until recently by the proponents of gender and LGBT equality, is now being (ab)used by neo-conservative actors.

Biography

Roman Kuhar is professor of sociology at the Department of Sociology, Faculty of Arts, University of Ljubljana, and teaches courses on gender, sexuality, popular culture and everyday life. Currently he is the dean of the Faculty of Arts and the head of the research programme The Problems of Autonomy and Identity in the Times of Globalization. He is the author of several books, among others *Media Construction of Homosexuality*, co-author (with A. Švab) of *The Unbearable Comfort of Privacy* and co-editor (with J. Takács) of *Beyond the Pink Curtain: Everyday life of LGBT people in Eastern Europe* and (with D. Paternotte) of *Anti-gender Campaigns in Europe: mobilizing against equality* (Rowman & Littlefield International, 2017. Translation into French: *Campagnes anti-genre en Europe: des mobilisations contre l'égalité*, 2018, Presses Universitaires de Lyon). He is also one of the associate editors at *Social Politics* (Oxford University Press).

Making and Unmaking Sexual Citizenship: From Past, Present to Future

Richardson, Diane

Newcastle University, United Kingdom
diane.richardson[at]ncl.ac.uk

Over the last two and a half decades the literature on the interrelations between sexuality and citizenship has rapidly expanded to become an important area of study across a number of disciplines, including sociology. Associated with this, sexual citizenship has become a key concept in the social sciences. It describes the rights and responsibilities of citizens in sexual and intimate life, including debates over equal marriage and women’s human rights, as well as shaping thinking about citizenship more generally. Sexualities is also, increasingly, a discourse of human rights with growing global concerns for ‘sexual orientation’ and ‘gender identity’ (SOGI) issues. This body of work extends beyond sexuality and citizenship studies and connects to a wide range of issues central to sociological enquiry including: understandings of identity and community; equality; neoliberalism and governmentality; individualization; nationalisms; and processes of globalization. Yet, while sexual citizenship is a term that is used by more and more people in a plurality of contexts, it is increasingly voiced uncritically. What does it mean in a continually changing political landscape of gender and sexuality? It is time for a critical rethink that encompasses a de-centering of a ‘western-centric’ focus, and considers the implications for future conceptual and empirical development, as well as for political activism.

Biography

Diane Richardson is Professor of Sociology in the School of Geography, Politics and Sociology at Newcastle University and a Fellow of the Academy of Social Sciences. She is internationally recognised for her work in the areas of feminism and the sociological study of gender and sexualities. Her recent research explores issues of identity, citizenship, recognition and belonging, and debates about equality. Her book *Sexuality and Citizenship* (2018, Polity) was based on a Leverhulme Major Research Fellowship project entitled *Transforming Citizenship?: Sexuality, Gender and Citizenship Struggles*. Other books include *Rethinking Sexuality; Contesting Recognition: Culture, Identity and Citizenship* (with J. McLaughlin and P. Phillimore); *Intersections Between Feminism and Queer Theory* (with J. McLaughlin and M. Casey); and *Sexuality, Equality and Diversity* (with S. Monro). A fifth edition of *Introducing Gender and Women’s Studies*, co-edited with Vicki Robinson, will be published in 2020. With Vicki, she also co-edits Palgrave Macmillan’s international book series *Genders and Sexualities in the Social Sciences*.

SP12 | New Understandings of Children and Young People's Activism

Organised by RN04 & RN30

Youth and Politics: Avoiding or Appropriating?

Pitti, Ilaria

University of Siena, Italy
ilaria.pitti[at]gmail.com

Over the last 30 years, youth studies have argued in favor of the need to pay more attention and give more recognition to the less traditional forms through which young people participate in the public space. This debate has expanded common definitions of youth participation beyond the classic tools and contexts of representative democracy. The diffusion of a broader understanding of youth participation has not only changed adults' and institutions' views on youth engagement, but it has also increased young people's awareness of the participative meanings of a series of apparently non-participative actions such as dancing, drawing graffiti, playing sport or cheering. In this scenario, the boundaries between the "political", the "social", and the "private" have become more and more blurred, while the use (or not) of the adjective "political" to describe a given action has often become a matter of choice. Between 2015 and 2019, the Horizon 2020 project has investigated youth practices of participation in eight European cities through ethnography and biographical interviews. Considering these materials, the presentation will propose a reflection on the relationship young people have with the concept of "politics". By exploring when and how the adjective "political" is used by young people to describe their practices in the public space, the presentation intends to highlight parallel tendencies to avoid and re-appropriate politics by younger generations. Results invite to rethink common understandings of participation and the public sphere.

Biography

Ilaria Pitti is Marie Skłodowska Curie Fellow at Örebro University (Sweden) and Vice-President (Southern Europe) of ISA's RC34 "Youth Studies". Her academic research is located at the crossroad between youth and social movement studies, focusing on the analysis of young people's participation in social movement organisations and subcultures. She is also interested in the effects of precariousness on young people's lives and on young people's individual and collective reactions to precariousness. On these topics, she has conducted research mostly through qualitative methods, participating in national and international projects (Horizon 2020 projects Partispace and Youthblocs). Her most recent publications include the book *Youth and Unconventional Political Engagement* (2018) and the article "Being women in a male preserve: an ethnography of female football ultras" (2018, *Journal of Gender Studies*).

Entanglements that Matter: Stretching the Political with the Help of the Connectors Study Children

Nolas, Sevasti-Melissa

Goldsmiths, University of London, United Kingdom
s.nolas[at]gold.ac.uk

What are the intersections of childhood and public life? What could we learn about politics and political theory if we were to closely look at children's everyday lives and practices? The presentation focuses on the distillation of a 3-year long, international ethnographic study which took place simultaneously in three cities (Athens, Hyderabad and London). Taking a multimodal ethnographic approach, the ERC funded Connectors Study focused on the everyday lives of 45 five- to eight-year-olds, and their families, during the period between 2014-2017, a historical moment most often referred to as one of political and economic 'crisis'. The children, and their families, who participated in the study were emblematic of a variety of urban experiences, family histories and trajectories. In moving out of institutional moments and spaces and joining children in their everyday lives, the presentation explores the idea and possible meanings of 'a political child' and its implications for political theory. In particular, I will focus on the sensory and embodied ways in which children encounter, experience, and engage in public life (broadly defined) and make some suggestions about how these sensory and embodied encounters might push political theory beyond the discursive (talk) and the cognitive (opinion).

Biography

Sevasti-Melissa Nolas is a Senior Lecturer in Sociology at Goldsmiths, University of London. Her research areas include: human agency and lived experience, childhood, youth and family lives, civic and political practices across the life course, and publics creating methodologies. She is the Principal Investigator of the ERC funded Connectors Study and the co-editor of *entanglements: experiments in multimodal ethnography*.

SP13 | What Boundaries Are (Not) Needed For: Conceptualising Boundaries Beyond the Metaphor

Organised by RN11, RN20 & RN32

Inclusion, Exclusion, and the Racialization of Space

Wodak, Ruth

Lancaster University, Austria
r.wodak[at]lancaster.ac.uk

Processes of inclusion and exclusion, of racialization of space and culturalization of debates, frequently involve conflicting discourses, narratives, and related identities about bordering, about access and rejection, and – more recently – about constructing new walls. These discourses are consistent with fundamental claims of critical discourse studies (CDS) – that is, that discourses and social realities are mutually constitutive and that discursive practices may have major ideological effects, helping to produce and reproduce unequal power relations and legitimize inclusion and exclusion; particularly in regard to ethnic and religious minorities, refugees, immigrants, and asylum seekers. In this lecture, I discuss the securitization, economization, and moralization of borders via specific discursive forms of argumentation and legitimation of exclusion, and then turn to one example: I briefly summarize Donald Trump's argumentation for building a wall in order to keep Latin American (primarily Mexican) migrants out of the US. In the conclusion, I reflect on the resemitotization of discourses about exclusion via borders and walls, and their continuous reinforcement via a politics of fear.

Biography

Ruth Wodak is Emerita Distinguished Professor of Discourse Studies at Lancaster University, UK, and affiliated to the University of Vienna. Besides various other prizes, she was awarded the Wittgenstein Prize for Elite Researchers in 1996 and an Honorary Doctorate from University of Örebro in Sweden in 2010. She is member of the British Academy of Social Sciences and of the Academia Europaea. Her research interests focus on discourse studies; language and/in politics; prejudice and discrimination; and on ethnographic methods of linguistic field work. Recent book publications include *The Handbook of Language and Politics* (Routledge 2018, with B. orchtner); *The Politics of Fear. What Right-wing Populist Discourses Mean* (Sage, 2015; translation into the German *Politik mit der Angst. Zur Wirkung rechtspopulistischer Diskurse*. Konturen, 2016), and *The Discourse of Politics in Action. Politics as Usual* (2011 Palgrave).

Living While Black: What Black Folk Know

Anderson, Elijah

Yale University, United States of America
elijah.anderson[at]yale.edu

In the United States, almost every black person has experienced the sting of disrespect on the basis of being black, and with forces of nationalism on the rise in Europe and beyond, more and more black people are experiencing this beyond the U.S. as well. A large but undetermined number of black people feel acutely disrespected in their everyday lives, enduring discrimination they see as both subtle and explicit. In the ongoing balancing act between cosmo (cosmopolitan) and ethno (ethnocentric) forces all around the world, the cosmopolitan frame is coming under attack. In the face of this reality, black people worldwide manage themselves in a largely white-dominated society, and particularly in the white space, learning and following as best they can the peculiar rules of a racially subordinate existence.

Biography

Elijah Anderson is the Sterling Professor of Sociology and of African American Studies at Yale University. He is one of the leading urban ethnographers and cultural theorists in the United States. His publications include *Code of the Street: Decency, Violence, and the Moral Life of the Inner City* (1999), winner of the Komarovskiy Award from the Eastern Sociological Society; *Streetwise: Race, Class, and Change in an Urban Community* (1990), winner of the American Sociological Association's Robert E. Park Award for the best published book in the area of Urban Sociology; and the classic sociological work, *A Place on the Corner* (1978; 2nd ed., 2003). Anderson's most recent ethnographic work is *The Cosmopolitan Canopy: Race and Civility in Everyday Life* (2011). Professor Anderson is the recipient of a number of prestigious professional awards, including the Merit Award from the Eastern Sociological Society, the Cox-Johnson-Frazier Award and the W.E.B. DuBois Career of Distinguished Scholarship Award from the American Sociological Association.

SP14 | Negotiation, Boundary-Making and Social Relationships in Migration Processes: Cultural, Ethnic and Religious Challenges in Southern European Societies

Organised by RN27 & RN34

Fortress Europe? The Governance of International Migrations and Asylum as a Battleground

Ambrosini, Maurizio

University of Milan, Italy
maurizio.ambrosini[at]unimi.it

The governance of immigration has been presented in recent literature as a multilevel process, where different actors play a role. As a consequence, not only national governments, but also local institutions are more involved in immigration policies, not only on the more traditional ground of provision of services, but also in the more recent and harsher ground of migration control. Northern Italy has supplied many materials to research on local policies of exclusion. Local policies of exclusion have been redirected in recent years towards a particular category of immigrants, namely asylum seekers, representing them as dangerous, undeserving and welfare scroungers. But these policies do not remain unchallenged. On the other side, local actors from the civil society mobilize in favour of the reception of refugees and immigrants. Four types of civil society's actors can be detected: NGOs and other specialized organizations, such as social cooperatives; other civil society actors (CSOs), such as trade unions, religious institutions, associations of volunteers; social movements with radical stances; spontaneous groups and private citizens, without any affiliation. The governance of immigration, especially at local level, can be defined as a battleground, in which different actors take part, according with various economic interests, social bonds, moral values and political beliefs. The practical governance of immigration and asylum is influenced by these different interests and visions.

Biography

Maurizio Ambrosini, Phd in Sociology (1989), is Professor of Sociology of Migrations at the University of Milan. He gives courses also at the University of Nice-Sophia Antipolis (France) and at the Italian campus of the Stanford University. He is the editor of the journal *Mondi Migranti* and the Director of the Summer School of Sociology of Migrations (Genoa). His main interests cover immigrants' labour markets, irregular migrations, ethnic entrepreneurship, migration policies, refugees studies. He is the author of more than 250 articles, chapters and books, published in different languages and in several leading scientific journals. Recently he published *Irregular Migration in Southern Europe: Actors, Dynamics and Governance* (Palgrave, 2018). He is responsible of the Italian unit of the European project MAGYC (H2020 program), on the governance of international migrations. In 2017 he has been appointed as an expert at the National Council of Economy and Labour (CNEL) of Italy.

MD01 | Cosmopolitanism, Antisemitism, Universalism: A Tribute to the Critical Social Theory of Robert Fine

Organised by RN15, RN29 & RN31

The goal of this session is to celebrate the life and work of Robert Fine (1945-2018) by looking at his idea of critical social theory and re-visiting the three areas of research to which he devoted most attention. The first is how political ideas and the political world are mutually shaped. From the enlightenment of the 18th century to humanitarian interventions in the 21st, Fine was concerned with how politics and political ideas inform one another so that politics without ideas is potentially totalitarian but ideas with no politics can become rather conservative. A second research area was the extent to which different forms of social and political exclusions, such as classism, racism and antisemitism, have to navigate a difficult dialectics between universality and particularity. Thirdly, the idea of critical theory itself deserves scrutiny as Fine's notion of critique chose openness over dogmatism, historical struggles over teleological progress, and immanent justifications over transcendental foundations. From Hobbes to Arendt, Fine construed a heterodox canon of critical social theory that is guided by the substantive quest for understanding the social world.

Biography

Robert Fine was Emeritus Professor of Sociology at the University of Warwick, UK. He played a leading role at ESA: sitting on its Executive Committee (2011-2015), serving as board member Research Networks 29 and 15, and playing a pivotal role in the founding and running of Research Network 31. He authored 6 books and published over 100 articles. He supervised over 30 doctoral students who now work all over the world.

Achinger, Christine | University of Warwick, United Kingdom

Christine Achinger is Associate Professor of German Studies at the University of Warwick (United Kingdom). Her research interests are in critical social theory, literary studies, history and theories of antisemitism, and constructions of gender, race, Jewishness and national identity and their interrelations as responses to capitalist modernity. Her publications include *Distorted Faces of Modernity: Racism, Antisemitism and Islamophobia*, New York: Routledge, 2015 (ed. with Robert Fine); *Gespaltene Moderne. Gustav Freytags Soll und Haben - Nation, Geschlecht und Judenbild* [Split Modernity: Gustav Freytag's Debit and Credit – Nation, Gender and the Image of the Jew], 2007.

Chernilo, Daniel | Universidad Diego Portales, Chile

Daniel Chernilo obtained his PhD at the University of Warwick under the supervision of Robert Fine. He has been a Lecturer in Sociology at Warwick, a Professor of Social and Political Thought at Loughborough University and is now a Full Professor in the Institute of Philosophy at Universidad Diego Portales in Chile. He has written widely on the history of social thought, humanism, nationalism and cosmopolitanism. Some of his books are: *Debating Humanity. Towards a Philosophical Sociology* (CUP, 2017), *The Natural Law Foundations of Modern Social Theory* (CUP, 2013) and *A Social Theory of the Nation-State* (Routledge, 2007). He is currently writing a new monograph on the contemporary University.

MD02 | Funding Opportunities at the European Research Council (ERC)

Organised by ESA Vice-President Papadopoulos, Apostolos G.

For more than ten years, the European Research Council has been supporting excellent, investigator-driven frontier research across all fields of science through a competitive peer review process based on scientific excellence as the only selection criterion. Without predetermined thematic priorities, the ERC encourages proposals that cross disciplinary boundaries, address new and emerging fields, and introduce unconventional, innovative approaches. Researchers of any career stage are offered flexible, long-term funding for up to five years (six years in the Synergy grant call). ERC calls for proposals are open to researchers from around the world who plan to carry out their research project at a host institution in an EU Member State or in a country associated to the current EU Framework Programme for Research and Innovation. In the case of the Synergy grant call, one of the Principal Investigators can be based outside the EU/associated countries permanently. There are currently 25 scientific panels to which researchers can submit proposals, spanning from the life sciences to engineering and physics to the social sciences and humanities.

Nielsen, Anne, Project Adviser, European Research Council Executive Agency

In the first part of the session, Professor at the Ecole des Hautes Etudes en Sciences Sociales (Paris) and European Research Council Member, Michel Wieviorka will talk about the objectives and principles of the ERC and say a few words on the ERC Funding Programme in the next European Commission Research and Innovation Framework Programme, Horizon Europe (note that he is also one of the Plenary speakers at the Opening).

Anne Nielsen is Scientific Officer in the European Research Council's Executive Agency where she has been working since 2017. Before this she was a Policy Officer in the Directorate-General for Research and Innovation. She holds a PhD from the European University Institute, Florence and subsequently did a 2-year postdoctoral fellowship at Yale University. She has worked for a migration think-tank in Washington D.C. and subsequently an NGO in Brussels, where she was working on women's and children's rights.

Nolas, Sevasti-Melissa, Goldsmiths, University of London, United Kingdom

In the second part of the session, Anne Nielsen, Scientific Officer at the ERC Executive Agency, will present the ERC funding schemes and their main features, with focus on the panel entitled: "The Social World, Diversity, Population", which covers sociology, social psychology, social anthropology, demography, education, and communication. She will also briefly talk about the Synergy Grant that provides funding opportunities for synergistic collaborative projects with up to 4 principle investigators.

Nolas, Sevasti-Melissa is a Senior Lecturer in Sociology at Goldsmiths, University of London. Her research areas include: human agency and lived experience, childhood, youth and family lives, civic and political practices across the life course, and publics creating methodologies. She is the Principal Investigator of the ERC funded Connectors Study and the co-editor of *entanglements: experiments in multimodal ethnography*.

Wieviorka, Michel, European Scientific Council Member

In the third part of the session, ERC grantee and Senior Lecturer in Sociology at Goldsmiths, University of London, Nolas, Sevasti-Melissa, will present her ERC project "Connectors – an international study into the development of children's everyday practices of participation in circuits of social action" and talk about her experience as an ERC grant holder (note that she is also a Semi-Plenary speaker in SP12).

Michel Wieviorka, Professor at the Ecole des Hautes Etudes en Sciences Sociales, is the President of the Fondation Maison des Sciences de l'Homme (FMSH). From 2006 to 2010, he was President of the International Association of Sociology AIS / ISA, where he created the encyclopedia on line Sociopedia, and has been a member of the ERC (European Research Council) Scientific Council since 2014. He heads SOCIO (with Laetitia Atlani-Duault), which he launched in 2013. His research has focused on conflict, terrorism and violence, racism, anti-Semitism, social movements, democracy and the phenomena of cultural difference. His more recent books include *Evil* (Polity Press), *Retour au sens* (éd. Robert Laffont), *Antiracistes* (éd. Robert Laffont), *Face au mal* (éd. Textuel). He is currently leading an international and multidisciplinary scientific program on violence and exiting violence.

MD03 | Assessing and Evaluating Research and Impact

Organised and chaired by ESA President Scott, Sue

Research will always be assessed before resources are allocated; but how should this best be done? Alongside the more traditional forms of funding for specific research projects, funding models have emerged based on national reviews of research by specific disciplines. The methods used in these assessments include publications, the research environment and research impact; with utilization of a variety of metrics. These co-exist with assessments based on citations of publications, and more rounded evaluation of CVs. In this Midday session we will discuss the various forms of national and international evaluation of research output and impact in Europe. In the UK, there have been regular national research assessments every seven or so years for over 30 years, whereas other countries across Europe have developed these processes more recently. In the last two reviews in the UK, the impact of research on society has been included alongside academic impact, an approach that is already being fostered by the new EC framework research programme Horizon Europe. The panel will discuss these review exercises and the various forms that they take. We will invite consideration of the variety of funding models and research environments across Europe, including their implications for 'permanent' academic posts and academic work patterns and careers. We will focus especially on whether and to what extent such reviews impact particularly on Sociology as a discipline.

with

Flecha, Ramon, University of Barcelona, Spain

Ramon Flecha is Professor of Sociology at the University of Barcelona and Doctor Honoris Causa by Vest Timisoara University. He coordinated the FP7 project IMPACT-EV and was Chair of the European Commission's expert group on Evaluation Methodologies for the interim and ex-post evaluations of H2020. He is co-author of the EC publication Monitoring the impact of EU Framework Programmes that has informed the evaluation system of FP9 Horizon Europe. His publications include journals such as PlosOne, Nature-Palgrave Communications, Journal of Mixed Methods Research and Current Sociology. Results of some of his research have been approved by the European Parliament and other relevant stakeholders, leading to political and social impacts.

Walby, Sylvia, City University of London, United Kingdom

Professor Sylvia Walby has worked at City University of London as Professor of Sociology and Director of the interdisciplinary Violence and Society Centre since 1 March 2019. She was previously at Lancaster University where she was Distinguished Professor of Sociology, held the UNESCO Chair in Gender Research, and was Director of the Violence and Society UNESCO Centre. Sylvia was the founding President of the European Sociological Association, elected after chairing the steering committee to establish the association. She has been President of the International Sociological Association's Research Committee RC02 on Economy and Society. She is a Fellow of the Academy of Social Sciences and a Fellow of the Royal Society of Arts. Professor Walby was awarded an OBE for services to equal opportunities and diversity. She is Chair of the REF Sub-Panel for Sociology.

Scott, Sue, Newcastle University and University of Helsinki

Sue Scott is the current President of the European Sociological Association (2017-2019). She was President of the British Sociological Association 2007-2009. She is a sociologist primarily of gender and sexuality. Sue has been a Professor at a number of UK Universities, as well as a Dean and a Pro Vice Chancellor, and is now a Visiting Professor at Newcastle and Helsinki. She is a Fellow of the UK Academy of Social Sciences and adviser to the Academy on Open Access. She is on the Board of the European Alliance for the Social Sciences and Humanities. Sue is a founding and managing editor of Discover Society, discoversociety.org.

MD04 | Meet the Editors: How to Write a Journal Article and Get It Published

Organised and chaired by ESA Vice-President
Näre, Lena

Edmondson, Ricca, *European Journal of
Cultural and Political Sociology*

Ricca Edmondson (DPhil Oxon) is Professor of Political Science and Sociology at the National University of Ireland, Galway, Visiting Professor at Tampere University, Finland, and editor of the *European Journal of Cultural and Political Sociology*, a journal of the European Sociological Association. Her publications cover rhetoric and the theory of argument, the life-course and ageing, and intercultural approaches to environmental theory. These research areas converge in her work on the theory of wisdom and methods of investigating it.

Lianos, Michalis, *European Societies*

Michalis Lianos is Professor at the University of Rouen and the editor of *European Societies*, a journal of the European Sociological Association. Michalis writes in English, French and Greek and is the author of *The New Social Control* (2012) and numerous other publications in the domain of late modern sociality. His most recent publication in English is *Conflict and the Social Bond* (Routledge 2019). He has conducted several international research projects in the areas of risk, uncertainty, insecurity and conflict, and has taught in various European countries. Michalis has served as member of the editorial boards of many journals.

Soler-Gallart, Marta, *International
Sociology*

Marta Soler-Gallart, Harvard PhD, is Professor of Sociology and Director of CREA Research at the University of Barcelona. She is currently ESA Vice-President and co-Chair of the ESA 2019 Conference Committee. She has been Chair of RN29 and is also member of RN33. President of the Catalan Sociological Association and Governing Board member of the European Alliance for Social Sciences and Humanities. Involved in the ISA as the Editor of the journal *International Sociology*. She coordinated the H2020 research SOLIDUS, was knowledge management coordinator of the FP7 IMPACT-EV project and has been involved in the Interim Evaluation of H2020 for the European Commission. Author of the book *Achieving Social Impact. Sociology in the Public Sphere* (Springer), and of articles in journals such as *Current Sociology* and *Qualitative Inquiry*. She was the first social sciences researcher serving at the ORCID Board of Directors (2014-2016), contributing to this organization's global expansion.

Näre, Lena, University of Helsinki, Finland

Lena Näre is Associate Professor of Sociology, University of Helsinki, Finland. She is the Editor-in-Chief of *Nordic Journal of Migration Research* and Vice-President of the European Sociological Association (2017-2019). Her research focuses on migration, asylum seekers, families, transnationalism, gender, work, ageing and care. She is currently leading a four-year Kone Foundation funded research project on asylum seekers' political activism and struggles for home and belonging. Her work has been published in *Identities*, *Men and Masculinities*, *Ethnic and Racial Studies*, *Journal of Ethnic and Migration Studies*. She is the co-editor with Katie Walsh of *Transnational Migration and Home in Older Age* (Routledge: London).

MD05 | Making Sociology Matter Beyond the Academic Journal

Organised by The Sociological Review and chaired by Benson, Michaela

In this panel, we focus on making sociology matter beyond the strictures of the academic journal. The session offers a collaboration between Discover Society (<https://discoversociety.org>) – an online platform aimed at making academic research about society accessible to an informed, interested general reader – and The Sociological Review (<https://thesociologicalreview.com>) – a digital platform centred on Britain’s oldest journal of sociological enquiry and extending its longstanding commitment to making sociology matter.

Loosely organised around the theme of Public Sociology, it brings together speakers who have taken the lead on initiatives to make sociology matter beyond the academic journal, and have experimented with different forms of making sociology public in their own research practice. As they discuss, this is far more than a way of communicating research differently, it is political, offering critical and creative interventions that makes visible the production of the social world and questioning inequalities and social divisions. The conversation between the contributors will focus on the urgency and importance of making sociology matter, the prospects for this, the value for individual sociologists in the context of their own research, what this brings to the discipline (and why we need this now more than ever), alongside the pitfalls and opportunities. They draw on their experience of curating digital platforms that showcase the research of academics from across the social sciences, of podcasting, exhibiting and working with print and broadcast media in their examination of contemporary and future landscapes of Public Sociology.

Bhambra, Gurminder K., Discover Society

Gurminder K. Bhambra is Professor of Postcolonial and Decolonial Studies in the School of Global Studies, University of Sussex. Her current project is on epistemological justice and reparations. She is Series Editor of the Theory for a Global Age series, set up by Bloomsbury Academic and now published by Manchester University Press and, in 2015, she set up the Global Social Theory website to support students and academics interested in social theory in global perspective. She is also co-editor of the online magazine, Discover Society and Trustee at the Sociological Review Foundation.

de Noronha, Luke, The Sociological Review

Luke de Noronha recently completed his PhD in Anthropology at the University of Oxford and is currently the Sociological Review Fellow for 2019, while teaching at Birkbeck College in Psychosocial Studies. His main research interest is in deportation – as is his political activism – and he is concerned with theorising the relationship between racism and immigration control. He has written blogs and journalistic pieces for several online publications – including The Guardian, Verso Books, VICE News, Open Democracy, Discover Society, Ceasefire Magazine, Border Criminologies and Red Pepper.

Benson, Michaela, Goldsmiths, United Kingdom

Michaela Benson is an ethnographer and sociologist based at Goldsmiths. Her current research is focused on Brexit and what this means to and for British citizens living in the EU-27 (<https://brexitbritsabroad.com>), a project that includes the ambition to communicate research in real time through podcasting, writing for print media and blogs, working with journalists and ThinkTanks. As Managing Editor of the Sociological Review, she is responsible for editorial vision and strategy for a journal that seeks to renew the critical and creative appeal of sociology in times of dramatic economic and political changes in many parts of the world.

MD06 | Paths of Transformations in Central and Eastern Europe: Boundaries, Barriers and Belonging

Organised and chaired by ESA Executive Committee Member Danilova, Elena

During this Midday session, we will discuss questions and outcomes steaming from the research of social transformations in the region of Eastern and Central Europe.

Are generational and technological factors in this respect decisive? Does political governance lead to new barriers and boundaries? Do the changes lead to a convergence or a gap between the East and West in Europe? Or are the barriers and boundaries that we talk about maybe illusive? What are the new divides arising and new types of belonging emerging?

The book *The Routledge International Handbook of European Social Transformations* (edited by Peeter Vihalemm, Anu Masso, Signe Opermann in the *Routledge International Handbooks series*, 2018) examines the social, institutional, spatial and temporal dimensions of social transformation as they are experienced in Eastern Europe and the European Union. The contributing authors address aspects of social transformations, link them to social theory and to global processes of transformation and provide empirical evidences. Those participating in the Midday session are: Veronica Kalmus, Marju Lauristin, Matej Makarovic, Zenonas Norkus, Triin Vihalemm.

Kostelecký, Tomáš, Institute of Sociology of the Czech Academy of Sciences

Tomáš Kostelecký is the Director of the Institute of Sociology of the Czech Academy of Sciences and is a senior researcher in the Department of Local and Regional Studies. He was a research fellow at the Woodrow Wilson International Center for Scholars in Washington DC; a Marie-Curie Fellow at Science Po Bordeaux, and a Fulbright Fellow at the University of Southern California in Los Angeles. Key interests are: the analysis of spatial aspects of human behaviour, socio-spatial inequalities and the process of (non)convergence between “old” and “new” Europe. Recent publications: *The political ecology of the metropolis: Metropolitan sources of electoral behaviour in eleven countries* (ECPR Press) and *“Food self-provisioning in Czechia: Beyond coping strategy of the poor”* in *Social Indicators Research*. He was the Chair of the Local Organizing Committee of the 12th ESA Conference in Prague in 2015 and elected member of the ESA Executive Committee 2015-2017.

Lauristin, Marju, University of Tartu, Estonia

Marju Lauristin is a professor of social communication in the Institute of Social Studies of Tartu University, where she is teaching political culture and critical analysis of political communication. Her main research areas are media and society, post-communist transformation and the emerging digital society in Europe. Professor Lauristin had also been active in Estonian and European politics. In 2014-2017 she has been a member of the European Parliament, where she was appointed as a rapporteur on e-privacy regulation.

Danilova, Elena, Institute of Sociology, FCTAS, Russian Academy of Sciences

Elena Danilova is Head of the Research Centre in the Institute of Sociology, FCTAS of the Russian Academy of Sciences (Moscow). Recent interests and publications lie at the intersection of the sociology of transformations – in particular those that are taking place in post-socialist societies – and of critical sociology. Her latest publications are: *“Transformations of Welfare Policy and Discourse on Social Justice in Russia”* in *Social Sciences*, 2018; *“Actual and perceptual social inequality under transformative change in Russia and China”* in *Europe Asia Studies*, 2017; *“Neoliberal Hegemony and Narratives of ‘Losers’ and ‘Winners’ in Post-Socialist Transformations”* in *Journal of Narrative Theory*, 2014. Within the ESA, she served as member of the Executive Committee (2009-2013), as Vice-President (2011-2013), and was again elected for the terms in 2015 and 2017. She initiated the ESA RN36 *“Sociology of Transformations: East and West”* and is its current coordinator.

MD08 | An Alliance for Research, NOT a Research Alliance

Organised and chaired by ESA Vice-President Soler-Gallart, Marta

The session presents how the research funding landscape is changing, as well as the interplay of a class of professionals in the design of science policy. Although a political agenda lies behind funding for research, researchers are gathering together to show critical mass and contribute to the co-design of the future instruments and tools for research. The European Alliance for Social Sciences and Humanities (EASSH) is the largest umbrella organisation of Humanities and Social Sciences in Europe and advocates for an important redefinition of science funding which can harvest the best research in Europe, with a particular attention to human and social research. The European Sociological Association is a member of EASSH, endorses its work and collaborates on its position papers.

Lombardo, Gabi, Director, European Alliance for Social Sciences and Humanities

Gabi Lombardo PhD is the Director of the European Alliance for Social Sciences and Humanities (www.eassh.eu), the largest advocacy and science policy organization for social sciences and humanities in Europe. She is an expert in both higher education and global research policy, and has extensive high-level experience operating at the interface of strategy, science policy, research support and funding. Gabi holds a senior level experience in strategic and 'foresight' planning in elite higher education institutions, international research funders and associations as she worked with the London School of Economics (LSE), the European Research Council (ERC) and Science Europe (SE). As Director of EASSH, Gabi advocates also for the need of a strong evidence-based approach to policy-making, and the inclusion of researchers in science policy development for strategic and broad-based research funding. In November 2018, Gabi received the Young Academy of Europe Annual Prize.

Soler-Gallart, Marta, University of Barcelona, Spain

Marta Soler-Gallart, Harvard PhD, is Professor of Sociology and Director of CREA Research at the University of Barcelona. She is currently ESA Vice-President and co-Chair of the ESA 2019 Conference Committee. She has been Chair of RN29 and is also member of RN33. President of the Catalan Sociological Association and Governing Board member of the European Alliance for Social Sciences and Humanities. Involved in the ISA as the Editor of the journal *International Sociology*. She coordinated the H2020 research SOLIDUS, was knowledge management coordinator of the FP7 IMPACT-EV project and has been involved in the Interim Evaluation of H2020 for the European Commission. Author of the book *Achieving Social Impact. Sociology in the Public Sphere* (Springer), and of articles in journals such as *Current Sociology* and *Qualitative Inquiry*. She was the first social sciences researcher serving at the ORCID Board of Directors (2014-2016), contributing to this organization's global expansion.

MD09 | How Big Data Changes Sociology

Organised by ESA Executive Committee Member Komp-Leukkunen, Kathrin and chaired by Perek-Bialas, Jolanta

Lately, big data became a topic in sociological discussions. “Big data” means large datasets that are often collected outside the academic context, for example from Facebook users. It provides rich information that opens up new research opportunities. However, it also raises concerns about privacy and analytical challenges.

In a first presentation, Andreas Diekmann discusses the opportunities that big data provides for sociological research. He starts from the insight that big data is not necessarily better than small data, meaning survey data. The advantages of big data lie in its different character. It is unobtrusive and often more valid than data on self-reported behavior. Moreover, it is often relational and informs about structures of large social networks. Geo-coded data open new routes to account for spatial context and there is the possibility to combine survey data with other sources of digital data. Problems and opportunities are illustrated with examples from social science research.

In a second presentation, Kathrin Komp-Leukkunen reflects on how big data affects the job chances of sociologists. Companies increasingly use big data to make business decisions. Consequently, their demand for researchers who can analyze this data increases. Because many sociologists have solid analytical skills, they are potential employees. However, handling big data often also requires some programming skills, which are less common among sociologists. Statistics on sociologists working in big data analysis are presented. Interview data are used to frame and discuss these statistics. The findings suggest several possible new directions in sociology study programmes.

Diekmann, Andreas, ETH Zürich, Switzerland

Andreas Diekmann is Professor em. of Sociology at the ETH Zurich (2003 – 2016), currently head of the Environmental Research Group at the ETH Department of Humanities and seniorprofessor at the University of Leipzig. He was a fellow of the Institute for Advanced Study Berlin (2017-2018). His areas of research are social cooperation and experimental game theory, environmental and population sociology, and methods of empirical social research. He serves as a chairman of the section “Economics and Empirical Social Sciences” of the German Academy of Sciences Leopoldina. He is also a fellow of the European Academy of Sociology and co-editor and board member of several professional journals and research institutions. Present research activities focus on experimental research on the emergence of social norms, energy consumption, and the analysis of the environmental burden of metropolitan areas with geo-referenced panel data (supported by the Swiss National Science Foundation).

Komp-Leukkunen, Kathrin, University of Helsinki, Finland

Kathrin Komp-Leukkunen is associate professor at the Faculty of Social Sciences, University of Helsinki, Finland. Her research focusses on population ageing, life-courses, comparative welfare research, work and retirement, and research methods. Moreover, she studies the situation of sociology as a scientific discipline. Recent publications include the articles “The commercialization of sociological research: On the how and why (not)” (European Societies, 2018) and “Capturing the diversity of working age life-courses: A European perspective on cohorts born before 1945” (PLoS ONE, 2019). Komp-Leukkunen is a former Marie Skłodowska Curie fellow, member of the Executive Committee of the European Sociological Association, and former coordinator of Research Network 01 “Ageing in Europe”.

Perek-Bialas, Jolanta, Jagiellonian University, Cracow, Poland

Jolanta Perek-Białas is associate professor at the Institute of Sociology of the Jagiellonian University, Cracow and at the Institute of Statistics and Demography, Warsaw School of Economics, Poland where besides of teaching (data analysis, survey design), she is mainly a researcher in the field of ageing/gerontology. She co-/authored many papers in peer-reviewed journals and chapters in books on the topics of sociology of ageing, social indicators, quantitative methods applied for socio-economic analysis. She is active as co-coordinator of RN21 on Quantitative Methods of the ESA (from 2015) and she organized the Mid-Term Conference of this RN in Cracow (2018). She is also a member of the Expert Group on Active Ageing Index (EC and UNECE). Since October 2018, she is the Director of the Center of Evaluation and Public Policy Analysis at the Jagiellonian University.

MD10 | Plan S and Open Access: What Kind of Reality Will it Make for Sociological Publication?

Organised by Holmwood, John and chaired by ESA President Scott, Sue

This Midday session will address Plan-S (see <https://www.coalition-s.org/about/>) and its mandate to achieve open access for all publicly-funded European science, including social science, by January 2020 – ‘making open access a reality’. The scope of the mandate varies by country, as do the means of making it happen (whether by incentives or by sanctions). We will assume that it will happen and that its application will be comprehensive, in order to assess the risks and opportunities for sociologists. We will consider the drivers of the policy – high subscription costs of journals – as well as problems of the new business models that are emerging (pay-to-publish, read-and-publish), revenue risks to professional associations as well as alternative ways of maintaining publication by associations. We will also consider the special circumstances of monograph publication.

Holmwood, John, University of Nottingham, United Kingdom

John Holmwood is Professor of Sociology at the University of Nottingham and a former President of the British Sociological Association and former member of the Executive Committee of the International Sociological Association. He was a member of the Higher Education Funding Council of England Expert Reference Group for its Monographs and Open Access Project. He is co-founder of the Campaign for the Public University and joint founder of the free online magazine of social research and commentary, Discover Society. He is a critic of the commercialisation of open access (‘Commercial enclosure: Whatever happened to open access?’, *Radical Philosophy*, 181, 2013).

Shaw, Alison, CEO, Policy Press

Alison Shaw is founder and CEO of Policy Press, a major not-for-profit publisher of sociology and social policy in the UK, awarded Academic and Professional Publisher of the Year 2016. In 2016 she founded Bristol University Press, incorporating Policy Press as an imprint within it. She was named by *The Bookseller* magazine in its list of the top 100 most influential people in the book trade. This recognises influence and leadership across a wide range of publishers, retailers, authors and members of the media. Alison was one of only eight scholarly publishers on the list and Bristol is the only University Press outside of Oxford and Cambridge to have been included.

Mortimer, Julia, Journals Director, Bristol University Press/Policy Press

Julia Mortimer is Journals Director and Head of Open Access at Bristol University Press and Policy Press. She was Assistant Director of Policy Press and has played a key role in developing both presses. Julia has been involved in many of the policy discussions around Open Access in the UK including the current Society Publishers Accelerating Open Access and Plan S (SPA-OPS) project initiated by ALPSP, Wellcome Trust and UKRI and the current UKRI Review into Open Access.

Scott, Sue, Newcastle University and University of Helsinki

Sue Scott is the current President of the European Sociological Association (2017-2019). She was President of the British Sociological Association 2007-2009. She is a sociologist primarily of gender and sexuality. Sue has been a Professor at a number of UK Universities, as well as a Dean and a Pro Vice Chancellor, and is now a Visiting Professor at Newcastle and Helsinki. She is a Fellow of the UK Academy of Social Sciences and adviser to the Academy on Open Access. She is on the Board of the European Alliance for the Social Sciences and Humanities. Sue is a founding and managing editor of Discover Society, discoversociety.org.

MD11 | Author-Meets-Critics: Refugees, Civil Society and the State - by Ludger Pries

Organised by ESA Vice-President Näre, Lena

In 2015 one and a half million forced migrants entered the European Union. Hundreds of thousands of volunteers, groups and organisations offered food or shelter. There also rose xenophobic protest, and EU-member states reacted between hostility and “we will make it”. Based on primary and secondary data analysis this book provides a social science insight into the dynamics of the so called refugee crisis, the origin of refugees and the responses of civil society. It characterises the politics of member states’ governments as organised non-responsibility and analyses the long term challenges of European refugee protection.

Pries, Ludger, Ruhr-University Bochum, Germany

Prof. Dr. Ludger Pries is Chair of Sociology at Ruhr-Universität Bochum, Germany. His fields of expertise are Sociology of Work, Organizations and Migration in a comparative perspective, transnationalism and globalisation research. He has published 10 monographs and more than 70 articles in scientific journals. His latest book from 2019 is an edited collection with Margit Feischmidt and Celine Cantat entitled *Refugee Protection and Civil Society in Europe* (Houndmills: Palgrave). He is the author of *Refugees, Civil Society and the State. European Experiences and Global Challenges from 2018* (Cheltenham: Edward Elgar).

Näre, Lena, University of Helsinki, Finland

Lena Näre is Associate Professor of Sociology, University of Helsinki, Finland. She is the Editor-in-Chief of *Nordic Journal of Migration Research* and Vice-President of the European Sociological Association (2017-2019). Her research focuses on migration, asylum seekers, families, transnationalism, gender, work, ageing and care. She is currently leading a four-year Kone Foundation funded research project on asylum seekers’ political activism and struggles for home and belonging. Her work has been published in *Identities, Men and Masculinities, Ethnic and Racial Studies, Journal of Ethnic and Migration Studies*. She is the co-editor with Katie Walsh of *Transnational Migration and Home in Older Age* (Routledge: London).

Massari, Monica, University of Milan, Italy

Monica Massari is Associate Professor of Sociology in the Department of International Relations of the University of Milan, after several years spent at the University of Naples. Her main research interests are related to the relationships between globalization and violence, including complex forms of crime and illegal markets, migration studies, especially from a gender perspective, and new forms of racism and discrimination in Europe. During the past ten years, her research activities have been focussing on irregular migration across the Mediterranean, migrants’ self-narrations and traumatic memories of desert and sea crossings through the use of biographical methods. She has recently co-edited the book *Mafia Violence. Political, Symbolic, and Economic Forms of Violence in Camorra Clans* (with Vittorio Martone, Routledge 2019), the special issue on “Biography and Society” of *Rassegna Italiana di Sociologia* (with Roswitha Breckner, 1/2019) and the special issue on “Emancipatory Social Science Today” of *Quaderni di Teoria Sociale* (with Vincenza Pellegrino, 1/2019). Her latest book is *Il corpo degli altri. Migrazioni, memorie, identità* (Orthotes, 2017). She is in her second mandate as member of the ESA Executive Committee.

MD12 | Disrupting Disciplinary Boundaries

Organised and chaired by ESA Vice-President
Papadopoulos, Apostolos G.

This session aims at exploring the interface of disciplinary boundaries and addressing the issue(s) of inter/cross-disciplinarity in relation to sociology which feels defeated or threatened because of the disruption of disciplinary boundaries. It is common knowledge that inter/cross-disciplinarity is easier to be said than accomplished due to the sovereignty of disciplinary boundaries and the impact of theories reinforcing them. The Midday session will address the main challenges accompanying the various attempts – at the level of particular research themes domains and/or funding institutions – to establish inter/cross-disciplinarity along with the prerequisites for achieving such a target. Those who work within disciplinary boundaries will value the virtue(s) of sociological theory and analysis against more ‘synthetic’ approaches.

However, on the other hand, there will be a discussion of the forces that drive sociologists to work in interdisciplinary contexts. Specific reference will be made to the complexity of organizational fields as the main cause for demanding a variety of skills that are spread over several professional groups. In this connection, a targeted discussion will refer to the skills and abilities required for interdisciplinary work in contrast to traditional academic practices. Finally, the available data from a survey of sociologists will be utilised to illustrate experiences with and perceptions of opportunities and challenges when working with professionals from other disciplines.

**Fernández-Esquinas, Manuel, Spanish
Council for Scientific Research (CSIC)**

Manuel Fernández-Esquinas holds a PhD. in Sociology and Political Sciences from the Complutense University of Madrid. He is a research scientist at the Spanish Council for Scientific Research (CSIC) and director of the Joint Research Unit on Knowledge Transfer and Innovation (CSIC and University of Córdoba). His main fields of research are sociology of innovation, sociology of science, innovation policies, knowledge transfer and the uses of the social sciences. He has published about these subjects in *European Planning Studies*, *Technological Forecasting and Social Change*, *Regional Studies*, *Industry and Innovation* and *Higher Education*, among others. His latest edited book is titled *Innovation in SMEs and Micro Firms: Culture, Entrepreneurial Dynamics and Regional Development* (Routledge, 2018, with van Oostrom and Pinto). Currently he is serving as President of the Spanish Sociological Federation and Coordinator of the Research Network 27 “Regional Network Southern European Societies” of the European Sociological Association.

Inglis, David, University of Helsinki, Finland

David Inglis is Professor of Sociology at the University of Helsinki. Before that, he was Professor of Sociology at the University of Exeter and the University of Aberdeen. He holds degrees in sociology from the Universities of Cambridge and York. He writes in the areas of cultural sociology, the sociology of globalization, historical sociology, the sociology of food and drink, and social theory, both modern and classical. He has written and edited various books in these areas, most recently *The Sage Handbook of Cultural Sociology* and *The Routledge International Handbook of Veils and Veiling Practices* (both with Anna-Mari Almila), and *An Invitation to Social Theory (Polity)*. He is founding editor of the Sage/BSA journal *Cultural Sociology*. His current research concerns the sociological analysis of wine and wine world globalization.

**Papadopoulos, Apostolos G., Harokopio
University Athens, Greece**

Apostolos G. Papadopoulos is Professor of Rural Sociology and Geography in Harokopio University Athens. He has worked as principal investigator and project leader in numerous research projects funded by Greek National Agencies, the European Commission and the McArthur Foundation (USA). He has research experience on socio-spatial transformations in rural areas, social class and stratification, rural development policy, return to the countryside, international migration, migration and local labour markets, inequalities in the labour market, and civil society. He has significant experience in the administration and management of academic institutions as Vice-Rector of Economic Affairs and Development in Harokopio University (2011-2015). He was President (2016-2018) of the Hellenic Sociological Society (HSS) and Chair of the LOC for the organisation of the 13th ESA Conference in Athens. Currently, he is Vice-President of the European Sociological Association and new co-Editor-in-Chief of the Wiley/ESRS journal *Sociologia Ruralis*.

Non Take-Up of Welfare Benefits and Poverty Trajectories in Old Age in Switzerland: Results from a five-year follow-up study

Kubat, Sonja (1); Gabriel, Rainer (1,2,3); Adili, Kushtrim (1)

1: Zurich University of Applied Sciences (ZHAW); 2: Center for the interdisciplinary study of gerontology and vulnerability (CIGEV); 3: National Centre of Competence in Research LIVES – Overcoming vulnerability: Life course perspectives
sonja.kubat[at]zhaw.ch, rainer.gabriel[at]zhaw.ch, kushtrim.adili[at]zhaw.ch

Even though Switzerland is one of the wealthiest countries in the world, recent studies show that the share of pensioners living in poverty is situated between 15% and 25%, depending on the chosen poverty measure and the underlying data. However, little is known when it comes to the actual mechanisms that create poverty in old age. In our contribution, we focus on one specific mechanism that is known under the term of “non take-up”: It is based on the observation, that some people who would be entitled to social welfare benefits do not claim them. We aim to extend the current literature by testing whether the fact of not requesting the benefits is mediated by psychological resources or factors related to the life course. Methodologically, we will use data from the gerontological survey “Vivre-Leben-Vivere” (VLV) which was conducted in 2011 as well as its five-year follow up in 2016. We will assess how participant’s financial situation – operationalized in a binary poor vs. non-poor logic – in 2011 and 2016 is related to non take-up of social welfare benefits. For the mediation analysis of the association between poverty trajectories and non take-up we employ two psychological measures (depression and motivation) as well as retrospective life course information (including work-, migration-, and family trajectories) that were collected by means of a life calendar in the first wave of the survey.

Social Support Provision and Employment Trajectories – Longitudinal Findings on Gender Inequalities from the German Ageing Survey

Vogel, Claudia; Klaus, Daniela

German Centre of Gerontology, Germany
claudia.vogel[at]dza.de, daniela.klaus[at]dza.de

Unpaid work such as giving social support to older family members is known to be more widespread among women than among men, due to a gender specific division of paid and unpaid work. We investigate in which stages of the life course individuals are most likely to provide support and whether (and how) the support trajectories differ for women and men. We focus on middle and later life (individuals aged 40 to 90 years) and consider the provision of grandchild care and help provided to others who are in bad health as well as being in full-time or part-time employment. Using panel data of the German Ageing Survey (starting in 1996), we estimate logistic panel regression models to analyse gender differences in trajectories. The data of more than 20,000 individuals and nearly 40,000 observations are available. As women on average start earlier in their life course to provide social support than men, women are more likely to arrange paid work and unpaid work over a longer duration. If men provide support for others, they do this mainly after entering retirement. The life course dynamics of providing support need to be taken into account regarding social inequalities in old age because not only discontinuous employment trajectories due to child care have an impact on the on average lower old age incomes of women but also the burden to provide care for family members in later career stages.

Emotional Support Networks and Care Exchanges: a Life Course Perspective

Nazio, Tiziana

WZB Berlin Social Science Center, Germany
tiziana.nazio[at]wzb.eu

This study adopts a life course approach to investigate the association between early family formation trajectories and differences in emotional support networks and informal care provision in later life. Sequence analysis on data from SHARE surveys (waves 3 and 4) compare family trajectories for individuals from the birth cohorts 1927-58 in five selected countries: Italy, (East and West) Germany, France, Denmark and Czech Republic. Family trajectories (timing of union formation and dissolution, childlessness and children parity over 31 years, at ages 16-46) are clustered by means of sequence analysis. The variability in patterns of family formation trajectories is used to predict elderly's emotional support network characteristics and care exchanged by means of a set of multivariate analyses (poisson, hierarchical probit and ordered logit models). Results from the sequence analyses revealed nine common patterns of family trajectories. These early family trajectories are significant predictors of the size of emotional support networks. Childless individuals, or those with just one child, tend to have smaller emotional support network. This is also true of individuals who suffered union disruption, especially in Czech Republic and Italy. However, union reformation seems to compensate for the lost part of the network. Results also found that the social network that provides emotional support overlaps only in part with that providing practical help. It is instead current family circumstances (number of children, the presence of a partner and the geographical distance to the potential caregivers), rather than family trajectories, what best predicts the exchange of practical help and personal care.

Lifecourse and Old-Age Vulnerability: The Case of Migrants in Switzerland

Ludwig-Dehm, Sarah M.; Ciobanu, Oana

University of Geneva, Switzerland
Sarah.Ludwig-Dehm[at]unige.ch, Oana.Ciobanu[at]unige.ch

While the group of older migrants in European countries is growing, researchers are becoming more interested in the topic of ageing of immigrants. However, research on old-age migrant vulnerability is still a relatively new topic and little is known about factors that might contribute to or even protect from old-age vulnerability, specifically for migrants. The aim of this project is twofold. First, we will examine and categorize typical life trajectories for natives and migrants and analyze how these affect old-age well-being and life satisfaction. Second, we will examine how transnationalism might protect migrants from vulnerability in old-age. Transnationalism, including transnational ties or a transnational lifestyle, can provide access to additional resources that can help migrants to overcome or avert vulnerability, resulting in lower old-age vulnerability. The data for this project comes from the first wave of the VLV (Vivre – Leben – Vivere) study in Switzerland from the years 2011 and 2012. The VLV is a Swiss longitudinal study of ageing, interviewing people aged 65 or older. The first wave includes an immigrant oversample as well as detailed information for all respondents based on a life event history calendar. These two aspects allow us to use life trajectories and explore their importance for old-age vulnerability for natives as well as migrants. The results of this study will provide researchers as well as policy makers with new insights into vulnerability for the growing older migrant population.

RN01_01b | Quality of Life, Life Satisfaction and Well-being in Older Age

Silver Workers' Dimensions Of (Life) Satisfaction - How Satisfied Are They?

Gerlich, Regina Ilona

Careum School of Health LTD, Switzerland
regina.gerlich[at]gmail.com

Data from the largest German household survey (GSOEP) show that people who work full-time beyond their normal retirement age (Silver Workers) are significantly more satisfied than full-time workers of regular working age. This applies to various areas of satisfaction such as: work, income, health, and sleep as well as for the overall life satisfaction. Silver Workers show significantly lower levels of leisure satisfaction compared to regular full-time employees. In this dimension even Silver Workers reach the lowest level within all the available satisfaction dimensions. First results indicate that satisfaction with leisure time decreases as soon as the situation of the Silver Working occurs, but this appears to be compensated by the other areas. Although Silver Workers generally have higher scores in most satisfaction dimensions, it can hardly be expected that Silver Working will be more satisfying overall. Rather, according to initial calculations, it is an effect of self-selection: people who are close to their statutory retirement age and more satisfied with their lives, work, and income are also more willing to continue full-time beyond their normal retirement age.

The Relativity of the Financial Quality of Life in Old Age – An Empirical Analysis of Pensioners' Subjective Income Comparisons and Financial Satisfaction (in Finland)

Palomäki, Liisa-Maria

Finnish Centre for Pensions, Finland
liisa-maria.palomaki[at]etk.fi

Many quality-of-life oriented gerontological studies have established a lower income position for old-age people as a determinant of a lower financial satisfaction. This finding illustrates the relative view on subjective well-being (SWB) that has gained ground also within the sociological research agenda since the 2000s. Nevertheless, the conclusions on the association between pensioners' income position and financial satisfaction are mainly based on objective income comparisons among unrepresentative old-aged populations. Very little is known about how pensioners at large perceive their income position relative to that of other pensioners, but also in relation to other population groups such as the employed, the unemployed, immigrants and families with children. Equally

unclear is the link between subjective comparisons and financial satisfaction. Based on a survey conducted by the Finnish Centre for Pensions in 2017, covering a representative sample of Finnish pensioners (n= 2 909), this study aims to answer the following questions: 1) to which population groups do pensioners compare their incomes, 2) what are the determinants of pensioners' most relevant income comparisons, and 3) how are subjective comparisons linked to financial satisfaction. The results provide a means to evaluate to which extent financial satisfaction is a matter of income and social and/or intra-biographical comparisons. They also offer valuable input for the evaluation of pension adequacy.

A Cross-cultural Study of Social Exclusion and Subjective Well-being among Older Adults: findings from European Social Survey

Lee, Sunwoo

Charles University in Prague, Czech Republic
lee[at]ftvs.cuni.cz

This study investigated how different indicators of social exclusion are associated with older adults' subjective-wellbeing across different European populations. Five underlying factors of social exclusion among older adults were examined: material resources, social relations, civic activities, basic services, and neighborhood cohesion. Using data sampled from European Social Survey (ESS8-2016), a cross-cultural study design was employed. A total number of 44,387 Europeans aged 65+ from 23 countries were analyzed. Study sample was divided into three groups according to the nationality—Nordic (e.g., Norway), Western (e.g., France) and Central-Eastern (e.g., Czech). Measured variables included discrimination due to age, social activities engagement, social interaction with friends, emotional attachment to the society, participation in politics, social trust, and health service. Covariates in the analyses included major predictor variables and demographic variables such as gender, marital status, and education level. Results indicated that social exclusion indicators were weakly to moderately correlated with one another (.02 to .23). Regression model was developed including social exclusion and subjective wellbeing measures, and standardized significant path coefficient was estimated between the study variables. Social exclusion variables all significantly affected subjective wellbeing across the three European populations, while magnitude and significance of the association between study variables varied. Study findings contribute to the existing knowledge about social exclusion in older age by measuring varied forms of social exclusion from relatively new databases.

RN01_01c | Social Networks and Intergenerational Relations in old Age

Intergenerational Solidarity in European Welfare States: Older Parents as Support Network?

Isengard, Bettina; König, Ronny; Szydlik, Marc

University of Zurich, Switzerland
isengard[at]soziologie.uzh.ch, koenig[at]soziologie.uzh.ch, szydlik[at]soziologie.uzh.ch

Intergenerational support across the whole life course is an important characteristic of parent-child relationships in contemporary aging societies, especially in times of societal crises and the withdrawal of welfare states. Despite the consequences of social and demographic changes over the last decades, the relations and bonds between parents and their children are impressively strong. While from a societal point of view, financial transfers mainly flow from younger to older generations, private monetary support within families shows an opposite direction, namely from the older to the younger family generations. Furthermore, it seems that within intergenerational kinship networks, giving and receiving of support is more complex and less univocal than within society. Against this background, the paper investigates which indicators at the individual, family as well as societal level promote or prevent the extent and distribution of monetary transfers from older parents to adult children. The analyses are based on the fifth and sixth wave of the Survey of Health, Ageing and Retirement in Europe (SHARE) including 19 countries. Descriptive findings and multilevel analyses show that parents serve as an important support network for their descendants. However, there are crucial differences between individuals, families, and societies. Furthermore, the analyses indicate a perpetuation of social inequality over generations and even a cumulation of (dis)advantages across the life course. Financial resources and wealth largely remain in higher-class families and are transmitted over generations. In this respect, life chances of the younger, receiving generation strongly depends on the resources and solidarity of the older generation.

Regular Grandchild Care and Grandparents' Labour Supply in Europe

Floridi, Ginevra

London School of Economics and Political Science, United Kingdom
g.floridi[at]lse.ac.uk

Grandparental childcare has consistently been found to facilitate young parents' participation in the labour market. However, its relationship with grandparents' own labour supply in Europe is understudied. I use data from 20 countries in the Survey of Health, Ageing and Retirement in Europe to investigate the relationship between regular grandchild care provision and two employment outcomes for grandparents aged 50–69: the probability of working, and, among those who work, the average weekly working hours. Unlike previous studies, I take actual grandchild care provision rather than grandparent status as the main explanatory variable, and I adopt a recursive bivariate modelling approach to account for the selection of grandparents with different unobserved traits into work and grandchild care. Moreover, I test for differences in the structural association by grandparents' sex and educational attainment. The results indicate that grandmothers who regularly look after young grandchildren are as likely to work as those who do not, but have lower average working hours if employed. By contrast, grandfathers are unlikely to combine paid work with regular grandchild care provision. These differences reflect the unequal prevalence and utilisation of flexible working arrangements between men and women in Europe. For both sexes, the conflict between grandchild care and labour supply is only manifested among lower-educated grandparents. This suggests the existence of socioeconomic inequalities in work-family reconciliation among European grandparents.

Social Capital Of Older Migrants, And Its Consequences For Well-Being: A Study On Share Data

Boerio, Pryanka

University of Milano-Bicocca, Italy
p.boerio[at]campus.unimib.it

The number of seniors in Europe is rapidly growing. This increase is even more important when focussing on older migrants. Between 2010 and 2015, non-native people over 55 years increased by 50% in countries like Finland, Portugal and Luxemburg. In this context, issues concerning older migrants' social inclusion are becoming crucial. Social Capital's (SC) approach is widely used in social inclusion studies of older people; while it has not been used as much in the literature on migrants' seniors and future seniors. The aim of this study is to fill those gaps in the literature, showing what kind of SC (bonding or bridging) allows the seniors or aging migrant to maximise their health and well-being. The analysis is conducted separately for migrants from high income countries and from low and middle income countries. Here I refer to a micro-level SC approach, following the definition of Van der Gaag and Snijder (2004). With the aim of isolating the effect given by the place of birth, a comparison with the native populations is performed. I perform this study at the European level using data from the Survey of Health Ageing and Retirement in Europe dataset (wave 6), and I created a measure of individual SC, which covers many of the dimensions identified in the literature (e.g. support, participation, social network). I performed regression models with interaction terms and, in order to check the macro level effects, I clustered countries by the expenditure (Purchasing Power Standard) on social protection on old age function.

Time to Others and Time for Oneself: Strategies of Resistance in Old Age

Fucci, Stefania; Favretto, Anna Rosa

University of Eastern Piedmont, Italy
stefania.fucci[at]uniupo.it, annarosa.favretto[at]uniupo.it

Sociological literature has shown that the meaning attributed to 'feeling good' and 'feeling bad' regards physical, psychological and relational aspects. This is especially relevant for women and the elderly population. For the latter, in particular, it seems that the inclusion in family, friendship, volunteering and active citizenship networks can improve the perception of individual well-being and quality of life. On the basis of this premise, we will present the results of a pilot research investigating the strategies that the elderly, both men and women, put in place to improve the quality of their existence and the perception of their 'feeling good'. Our study, conducted in a holiday residence for elderly people, has highlighted the existence of strategies and negotiations not only to maintain and increase relationships, but also to bring them to a greater balance when they are perceived as excessively burdensome and invasive compared to the daily life of elderly people themselves. Actually, relationality has been described, especially by women, as a requirement for the

protection of the quality of life on one side, and implying a significant emotional burden and excessive demands related to their role of caregiver within the family and among friends on the other. Our research has found that activities focused on the self are consciously used by older people to distance themselves from family care commitments, as much as rewarding social activities that allow recovery of physical and emotional energies do.

RN01_02a | Employment in Later Life

Older Workers And Job Mobility: Two Countries, Two Stories

Garavaglia, Emma (1); Hilsen, Anne Inga (2)

1: Università degli Studi di Milano Bicocca; 2: Fafo - Institute for Labour and Social Research
emma.garavaglia[at]unimib.it, Anne.Inga.Hilsen[at]fafo.no

Ageing population in Europe has led to several policy reforms intended to lengthen working careers. Despite the need to prolong work careers, if people have to work longer, we also need to recognize which factors enable or hinder longer careers, e.g. what happens if someone needs to change jobs either voluntary or because of job loss after 50? This paper discusses issues related to job mobility after 50, based on the results of two qualitative studies of older workers' experiences of voluntary or involuntary job mobility. Specifically, one study investigated the experience of 15 Italian managers made redundant and the other of 20 Norwegian employees who voluntarily changed jobs after 50. In both studies, data were collected through individual in-depth interviews. Participants from Norway changed jobs without experiencing ageism. Their stories reflect a context of valorization of older workers' competences and experience. On the contrary, the stories of participants from Italy reflect a context characterized by huge obstacles to job mobility and in which age discrimination is apparent. The differences in how the two groups make sense of their experiences of job mobility in old age reflect the huge distance between the institutional and cultural contexts of the two countries. Norway and Italy have followed divergent active ageing policy strategies. These, in turn, have resulted in different shared narratives around older workers. The joint discussion of results from the two studies can contribute to a better understanding of contextual forces that shape the possibility of action towards inclusive labour markets.

Routine, Repetition and Monotonie: Stress and Strain in Aging Workforce And Simple Labour

Geisen, Thomas

University of Applied Sciences and Arts Northwestern
Switzerland FHNW, Switzerland
thomas.geisen[at]fhnw.ch

Many workers in the European countries are employed in simple work, which means that the work they do is not determined by the qualifications they have. Moreover, their positions require no specific prerequisites such as vocational education training, and are characterized by routine, repetition and monotony. Growing older in these jobs, which are often difficult, dirty and dangerous (3-D-jobs), means new challenges for migrant workers, especially in relation to health, both physical and mental, and the demands for new qualifications linked to developments such as industry 4.0/digitalization. So far, workers in this labour market segment have not gained much attention in research. Therefore, we have carried out a qualitative study in Switzerland (2015–17) that focused on elderly workers doing simple labour. In a first step ten in-depth interviews with experts from politics, workers unions, employer associations and social insurances were conducted. In a second step we conducted interviews in twenty-five companies in the industrial, logistic, gastronomy, health and care sector (in-depth interviews with HRM or CEO, problem centred interviews, analyzed with qualitative content analysis) and in a third step we completed six case studies in companies (documentary analysis, problem-centred interviews with CEO/HRM and supervisors, focus-group discussion by employees). The presentation will show core findings of this study. The results show that workers face many difficulties at work as they age, particularly those doing physically demanding manual jobs. The main thesis is that there is an urgent need to support older workers in simple labour more effectively, and to develop new ways to provide professional support to both workers and companies.

Mature Entrepreneurs In West and East Germany In The Life Course Perspective – Motivations, Resources, Constraints

Myrczik, Janina (1); Franke, Annette (2);
Stypinska, Justyna (1)

1: Freie Universität Berlin, Germany; 2: Evangelische
Hochschule Ludwigsburg, Germany
janina.myrczik[at]fu-berlin.de, a.franke[at]eh-ludwigsburg.de,
justyna.stypinska[at]fu-berlin.de

According to Diewald and colleagues (2006), the analysis of the life course is particularly well-suited for the study of post-socialist transformation societies, since it is possible to observe in individual biographies the transfer from one form of society into another. For most men and women in East Germany,

reunification had been a major break in their career paths causing difficulties to make use of their previous occupational skills. Their life courses were less standardized than of those who lived in West Germany. The past or legacy of socialism has often been analyzed as one of the socio-institutional factors influencing or hampering business activities in transition economies (see Bluhm 1999, Diewald et al. 2006). However, in times of a tight labor market, people in East Germany could use precisely this experience of de-standardization as a resource to become self-employed. The paper presents results from a research project funded by the German Research Association (DFG) examining the process of becoming an entrepreneur in later life with relation to previous career paths. The analysis is based on 50 qualitative in-depth interviews using the life course perspective in East and West Germany with men and women who were 45 years and older when becoming self-employed. The paper casts a comparative perspective on the experiences of mature entrepreneurs in East and West Germany with focus on their motivations (opportunity or necessity entrepreneurs), the resources they could use, and the constraints in their activities.

Employment Market Participation in late adulthood - Insights from the district level

Nowc, Matthias; Bücken, Meike

University of Duisburg-Essen, Germany
matthias.nowc[at]uni-due.de, meike.buecker[at]uni-due.de

For more than 15 years, a more or less constantly positive developing employment rate of the 55- to 65-year-olds has been observed. This applies both to the European level as well as to the national and federal level in Germany. An extensive literature on “retirement transition” documents individual and institutional explanatory factors for the emerging late adulthood labour, in particular at national and transnational level. We ask if these statements can be transferred to a smaller-scaled level or should these “classical” factors be extended by additional explanatory approaches? What is the situation within the municipalities or the districts and cities? This governance-level has rarely been taken into account by researchers, but the trend of a longer gainful employment can also be confirmed for the county level in North Rhine-Westphalia. So what are the regional success concepts and how can the sometimes strong differences be justified? That is important, because districts and municipalities in Germany do not have special competencies in pension policy. We approach this topic with our central research question: Can the county level reveal new explanatory factors for the employment market participation in old age? Furthermore we enquire about different explanatory paths in the field of research (equifinality). The paper uses district level data and qualitative interviews with different stakeholders to offer rare insight into the late adulthood labour market participation. Methodologically, we use a mixed-method approach that uses both quantitative data from the “Socio-Economic Panel” and qualitative interviews. On this basis, the districts are compared in order to supplement local explanatory factors. In addition, the results are complemented in a Qualitative Comparative Analysis to correlate the structural determinants.

RN01_02b | Ageing and Technology I

Age and Migrancy-Specific Barriers to Access the Digitalised Public Services: Ethnographic Study

Safarov, Nuriar

University of Helsinki, Finland
nuriar.safarov[at]helsinki.fi

Online delivery of public services (eGovernment) is expanding all over the world aimed at improving their cost-effectiveness and inclusiveness. To use such services one is required to have access to internet as well as enough knowledge of Information and Communication Technology. The ability of users to adopt to online system of service delivery gained wide attention. Previous research has examined the difficulties of digital public service use, viewing age as a primary determinant. However, there are only a few studies on migrancy and language as considerable barriers to access public services based online. The paper analyses the early-stage ethnographic data on the case of Russian-speaking older migrants in Finland collected with participant observations and interviews to gain insights into user experiences of digitalised public services. The paper identifies obstacles that this minority faces adopting to new online-based public services as well as the most effective strategies that participants use to overcome the barriers by themselves. The analysis also pays attention to how people make sense of their experiences of digitalised services. The study contributes to the digital divides literature by providing a qualitative account of how unfamiliarity with the language and lack of social support amplify the difficulty of technology use by elderly people. Linking to concerns regarding underuse of public services and unmet needs of older migrants, the results have implications on the effort of European governments to make the public services more accessible and inclusive.

Older people and Social Networking Sites Use. A study on older people's patterns of SNS use in Europe

Gaia, Alessandra; Sala, Emanuela; Cerati, Gabriele

University of Milan-Bicocca, Italy
alessandra.gaia[at]unimib.it, emanuela.sala[at]unimib.it,
g.cerati2[at]campus.unimib.it

Older people's social exclusion is one of the challenges faced by many contemporary societies and welfare systems. The digital divide may be a source of social exclusion in old age, because of older people's differential access to and use of the Information Communications Technologies (ICT). With this regard, Social Networking Sites (SNSs) might be important tools to boost older people's social interactions, reinforce intergenerational connectedness, and strengthen their self-

esteem. Investigating the pattern of SNS use in older age is therefore key. Surprisingly, despite of the relevance of these issues, there are no quantitative studies that systematically documented differences in SNS use among the old age population in Europe. The overall aim of this work is to identify patterns of SNS use in old age across countries and time in Europe. We analyse data from the 2008-2016 Eurostat Community Statistics on Information Societies (CSIS) survey, a repeated cross-sectional survey carried out yearly in Europe and perform bivariate and multilevel regression analysis. We find that older SNS users are more highly educated and wealthier than non-user. We also find that while the effects of many socio-economic factors associated to SNS use vary over time and space, the impact of education and income is constant (and positive) for most country-years. Implications of the research findings in terms of their impact on older people's social exclusion are also discussed.

"I Think I Couldn't Live Without Television": Older Persons' Experiences and Meanings of Watching Television in an Institutional Context

Geiger Zeman, Marija; Zeman, Zdenko

Institute of Social Sciences Ivo Pilar, Croatia
marija.geigerzeman[at]pilar.hr, Zdenko.Zeman[at]pilar.hr

Watching TV is one of the most popular leisure activities all over the world (Fedorak 2009). Numerous studies have refuted the widespread belief about the irrelevance of television (Bignell 2008) and its triviality as a research topic in the academia. Consumption of television content is a multi-dimensional, individual as well as social practice with far-reaching consequences and multiple meanings for its audiences in the domain of everyday life. This hypothesis has been confirmed by research focusing on the importance and meanings of television in the everyday lives of older persons. Namely, a series of studies have shown that watching TV is "an important leisure activity" for many older persons (Vander Goot, Beentjes & Van Selm 2012). The paper is based on an analysis of semi-structured interviews conducted with older people – residents of the Home for Older Persons Maksimir in Zagreb. It has shown that watching television is an everyday (regular, habitual, taken-for-granted) activity (Felski 1999, Bennett 2002) with different meanings for participants. The importance of television and watching TV programs tends to change over time and increased with most research participants when they moved into the Home. There are different motives, consumption forms, and uses of TV programs, as well as differences in the preferences of specific TV content and genres. Watching television takes place in a specific physical and social environment, whereby the experience of watching and the patterns of consumption of TV programs differ in particular among the participants who live in single vs. double rooms.

RN01_03a | Work and Retirement

Ageing Baby-boomers, Housing Wealth and Retirement Trajectories

Izuhara, Misa (1); Forrest, Ray (2)

1: University of Bristol, United Kingdom; 2: Lingnan University Hong Kong
M.Izuhara[at]bristol.ac.uk, rayforrest[at]ln.edu.hk

This paper examines the interconnections between housing wealth, returns to education and retirement trajectories of the ageing baby-boomer generation. In particular, it explores the substantial, unprecedented but highly uneven pattern of housing wealth accumulation enjoyed by the post-war 'generation own'. There is also a positive and systematic relationship between income levels and levels of housing wealth across this generation. These new relationships between the length of the earning working life, income, education and housing wealth are assuming progressively greater importance with societal ageing signalling growing inequalities within older cohorts and their differentiated patterns into retirement. By bringing housing wealth more fully into the equation, this paper attempts to go beyond conventional indicators of income, qualification and nominal retirement age to analyse retirement inequalities. Drawing on data from the UK census, governments surveys and other secondary sources as well as setting in the context of trends in other home-owning societies, it examines these relationships via three contrasting 'biographies' of the post-war baby-boomers: 'Equity rich intelligentsia' (highly-educated older individuals who own multiple properties and work longer in the knowledge economy), 'Moderate equity retired' (retired early and using housing equity to meet welfare need in old age) and 'Equity poor workers' (less-qualified homeowners with mortgage debts who continue to work for financial necessity). In doing so, it offers new perspectives on processes of social stratification and the widening of inequalities in contemporary Europe.

Ageing Migrants, Gender and Retirement: The Case of Portuguese in Switzerland

Azevedo, Liliana

ISCTE-IUL, Portugal; NCCR – On The Move, Switzerland
Liliana_Marisa_Azevedo[at]iscte-iul.pt

Switzerland became a major destination for Portuguese migrants in the 1980's. A significant number lived their entire professional life there and are now reaching retirement age. According to official records, most of them returned to their home country, and only a small proportion grow old in place after retirement. Their pensions are generally not very high, due to their position in the Swiss labor market and to partial contributory careers. Consequently, ageing in place means material insecurity for a large number. On the other hand, the return migration might mean poor access to healthcare and other facilities, especially at a more vulnerable and needy age. In this communication, I will present some data from the cross-national empirical on-going research on Portuguese migrants in Switzerland that are retired or will be retired soon. Based on in-depth interviews conducted up to now both in Switzerland (with migrants settled there) and in Portugal (with migrants that returned), I will focus on the gender differences along migrants' life course (i.e. professional insertion, language possession) and in the return decision, but also on gender asymmetries in the transition to retirement and in post-retirement (i.e. pensions, occupation, health issues). I will conclude pointing out some challenges that this ageing population represents to both countries.

Explaining Differences in Late and Uncertain Retirement Preferences between the Solo Self-employed and Employees: The Role of Job Characteristics

Damman, Marleen (1,2); Zwier, Dieuwke (1); Heuvel, Swenne G. van den (3)

1: Netherlands Interdisciplinary Demographic Institute (NIDI), The Hague, The Netherlands; 2: University Medical Center Groningen (UMCG), Groningen, The Netherlands; 3: Netherlands Organisation for Applied Scientific Research (TNO), Hoofddorp, The Netherlands
damman[at]nidi.nl, zwier[at]nidi.nl, swenneke.vandenheuvel[at]tno.nl

Objectives: Previous research has shown that self-employed workers are more likely than employees to retire late or to be uncertain about retirement timing. However, little is known about the underlying mechanisms. This study aims to fill this gap, by focusing on the explanatory role of various job characteristics – flexibility, autonomy, skills-job match, and job security – for explaining differences in retirement preferences between the solo self-employed and employees. **Methods:** Data were selected of 8,343 employees and 665 solo self-employed respondents (age 45-64) in the Netherlands, who participated in the Study on Transitions in Employment, Ability and Motivation (STREAM) in 2016. The outcome variable distinguished between early, on-time, late, and uncertain retirement preferences. Multinomial logistic regression models were estimated, and mediation was tested using the Karlson-Holm-Breen (KHB) method. **Results:** The solo self-employed are more likely than employees to prefer late retirement (vs. “on-time”) and to be uncertain about their preferred retirement age. Job characteristics mediate 23 percent of the relationship between solo self-employment and late retirement preferences: the self-employed experience more possibilities than employees to work from home and to choose their own working times, which partly explains why they prefer to retire late. **Conclusion:** In discussions about retirement, often reference is made to differences in retirement savings and retirement regulations between the solo self-employed and employees. The current study shows that differences in job characteristics also partly explain the relatively late preferred retirement timing of solo self-employed workers.

What Drives Pensioners’ Transnational Mobilities? The Swiss Case

Crettaz, Eric A. (1); Nedelcu, Mihaela (2); Bolzman, Claudio (1)

1: University of Applied Sciences and Arts of Western Switzerland, Switzerland; 2: University of Neuchâtel, Switzerland
eric.crettaz[at]hesge.ch, mihaela.nedelcu[at]unine.ch, claudio.bolzman[at]hesge.ch

As health and life expectancy have improved markedly over the last decades, various mobility and migration patterns have emerged among pensioners in postindustrial societies. The study of international post-retirement mobilities have mostly viewed this phenomenon through the lens of the “snow birds” phenomenon. Yet, these mobilities have dramatically diversified, although their complexity has rarely been investigated as such. Based on a study conducted through a mix-method approach, we will analyze the multiple forms of post-retirement mobilities and their drivers, focusing on four main categories of factors: a) institutional factors (health and care systems, migration regimes, ...); b) relationships, social ties and networks; c) previous migratory and mobility experiences; and d) individual wellbeing expectations and care needs. We will put in evidence different mobility patterns of pensioners residing in Switzerland, whatever their nationality and country of birth. The Swiss case is interesting for different reasons: it has the second highest share of foreign-born population among OECD countries (behind Luxembourg), and most EU laws and rules apply to it through a large range of bilateral agreements. Our results show that post-retirement mobilities are much more diverse than the “snow bird” pattern. Reasons like accessing less expensive healthcare systems and cheaper products, spending holidays, going to cultural activities (museums, concerts, ...), and doing charity work, drive short-term international mobilities. Long sojourns and residence abroad are driven by family relationships, cultural immersion, or economic/professional reasons. We argue that retirees develop transnational mobility patterns dependent on various combinations of the four types of factors mentioned above.

RN01_03b | Ageing and Technology II

The Intra-action Of Learning And Teaching Digital Skills – Peer-tutoring As A Way to Support Belonging Of Older People In Finland

Korjonen-Kuusipuro, Kristiina; Pihlainen, Kaisa; Kärnä, Eija

University of Eastern Finland, Finland
kristiina.korjonen-kuusipuro[at]uef.fi,
kaisa.pihlainen[at]uef.fi, eija.karna[at]uef.fi

Digitalization seems to be an unstoppable development. This demands constant learning of new skills, and especially the older people are often seen at risk to be marginalized. Older people and aging are frequently perceived as problems and developers of digital services and technologies think that the 'future' seniors will be more enthusiastic and capable users of digital technologies (Suopajärvi, 2017). According to previous studies peer-tutoring is a good way to support learning of the older people, and it may also support the active membership and belonging to society. In our study, we have also observed that peer-tutoring creates new social communities around technology use. In our presentation we explore peer-tutoring events organized for older people learning digital skills. Our paper is based on empirical research data collected in ACCESS-project in both rural and urban areas in Finland. We draw on ethnographic observations of digi-training events, and this data is supported by semi-structured interviews and a questionnaire. Our hypothesis is that in these training events new kinds of social settings are formed, and this increases well-being of the participants. Also belonging to society may co-develop. Therefore, we ask what kinds of objects, people, feelings, and actions are "thrown together" in the peer-tutoring events and what does this tell us about practices of belonging of older people? References: Suopajärvi, T. (2017). Knowledge-making on 'ageing in a smart city' as socio-material power dynamics of participatory action research. *Action Research* 15(4), 386-401.

Older People Smartphone Internet Use In Daily Life: Practices And Meanings

Caliandro, Alessandro

University of Bath, United Kingdom
a.caliandro[at]bath.ac.uk

A growing number of people are using online services to connect and communicate and Social Networking Sites (SNSs) have rapidly become the most used web services in the world. Despite the digital divide among generations tends to persist in most European countries, older people are becoming increasingly familiar with ICT technologies. Most of the

literature on ageing and ICT focuses on the use of the Internet and computers. There is currently little research on Internet and social media use (i.e. instant messaging and SNSs) from mobile devices, despite they have become the preferred way to access the digital world. The few studies in this specific field are feasibility studies or focus on adoption patterns. This paper aims to contribute to filling in the knowledge gap about older people practices of use of Internet and social media from smartphones, based on a short-term ethnographic study. Adopting digital methods, we collected and analysed log data from smartphones of 30 people aged 65-75 and subsequently conducted 20 in-depth interviews and 3 focus groups involving the same participants – in order to deepen the understanding of digital data. Based on the data collected, the paper presents older people's practices of use of smartphones and SNSs in their daily lives and discusses the processes of sense-making they develop around these practices.

The inter(intra)generational use of ICTs among grandmothers: a field study in Italy, Romania, Spain and Israel

Carlo, Simone (1); Rebelo, Catarina (2)

1: Università Cattolica del Sacro Cuore, Italy; 2: Instituto Universitário de Lisboa, Centro de Investigação e Estudos de Sociologia CIES-IUL, Lisboa, Portugal
simone.carlo[at]unicatt.it, ana_catarina_rebelo[at]iscte-iul.pt

Our research aims to investigate the role played by media and ICTs in building intergenerational and intragenerational relations for the grandmothers (Colombo et al, 2016). The project aims to understand how grandmothers use Facebook and digital devices (computers, laptops, tablets, smartphones) within the family and the friend networks, the role of communication technologies for entertainment and the resistance and difficulties in using ICTs for elderly. Starting from the theoretical framework of mediatization (Couldry - Hepp, 2013), the research specifically investigates: - the possible relationships in place between the grandmothers, children and nephew, with the aim of understanding the dynamics of intergenerational exchange, and how grandmothers experience the use of Internet as a tool to facilitate family communication with family members. - the possible relationships in place between the grandmothers and their friends with the aim of understanding the dynamics of intragenerational exchange, and how grandmothers experience the use of Internet as a tool of communication and entertainment and for leisure activities with friends. - if different cultural and national contexts produce different uses of digital media in everyday life of elderly. Data for research analysis was collected through 15 focus groups conducted with 96 grandmothers living in Italy, Romania, Spain and Israel. Our focus groups (4 in Italy, 3 in Romania, 5 in Spain, 3 in Israel) show an intricate scenario: although the trigger to start to use new digital technology comes from family and people belonging to different generations, the daily use of the ICTs reveals a complex relationship with children and grandchildren regarding technological issues, which often characterized by incompatible netiquette, different competences and lack of learning assistance.

(Re-)Organization of Home Care through Digital Assisting Technologies for Elderly People?

Deisner, Jana Katrina

Technische Universität Berlin, Germany
jana.deisner[at]tu-berlin.de

Facing an expected increase in the average age of the population, numerous measures are currently being taken in Germany. One of them is the promotion and development of digital assistance systems aimed at enabling older people to live longer, self-determined lives within their private home. These technologies not only tend to shift care from the inpatient to the outpatient sector, they also often moderate the boundaries between formal and informal care. While the imagined users are the elderly themselves and their relatives, actual care often takes place in organized contexts. These contexts enable and restrict the use of such technologies on the one hand, but are also shaped by them on the other. Social science research has so far focused on the consequences of such technologies for the elderly users. My organization centered multilevel praxis based approach in contrast raises the question: how do digital assistance systems for seniors (re)organize home care? To answer this question, I conduct qualitative interviews in several projects that are developing or already operating a digital assistance system. An initial analysis of secondary data, participation in three conferences in the field and first explorative interviews suggest that, although the organization of care by digital systems is not intended by the developers, the technologies make demands on formal and informal care by defining their interfaces (generating emergency calls or configuring thresholds based on caregivers' expectations). My PhD project started in April 2018 and I will discuss my concept with empirical examples and first results.

RN01_04a | Volunteering & post-retirement work

Employment in Old-Age Retirement and Life Satisfaction

Polvinen, Anu; Kuivalainen, Susan

Finnish Centre for Pensions, Finland
anu.polvinen[at]etk.fi, susan.kuivalainen[at]etk.fi

In recent years, post-retirement employment has increased in many countries. The effects of this employment are less studied. Does post-retirement employment bring life satisfaction benefits? In this study, we look at how life satisfaction is associated with working as an employee, an entrepreneur or a volunteer while drawing an old-age pension. The data is based on a survey conducted in 2017, combined with register data of the Finnish Centre for Pensions. It includes 1,503 old-age pensioners aged 63–74. About 13 per cent of them were working as employees or entrepreneurs and 20 per cent as volunteers while drawing an old-age pension. Life satisfaction was measured through a subjective assessment of

the general satisfaction with life on a scale from 0 to 10. The association of life satisfaction with employment was analysed using regression models. The preliminary results show that old-age pensioners who were working had a higher life satisfaction than did the non-working pensioners of the same age. The odds ratio for a high life satisfaction was 2.0 among old-age pensioners who were working as employees or entrepreneurs and 1.6 among volunteers compared to those who were not working. Health, education and pension income were associated with life satisfaction. After controlling these factors, the differences in life satisfaction declined between working and non-working old-age pensioners. The results suggest that a selected group of old-age pensioners - those with a higher life satisfaction owing to better health, a higher income and a higher education - continue working after retirement.

Volunteering Among Older Persons With Low And High Levels Of Educational Attainment. Results From The German Survey On Volunteering 2014

Micheel, Frank

Federal Institute for Population Research, Germany
frank.micheel[at]bib.bund.de

Background: Quantitative studies have consistently demonstrated that education is the most important factor as volunteering in higher adulthood is concerned. Usually, these studies rely on comparisons between educational levels. However, thorough knowledge of variations within specific education groups is scarce. This presentation discusses which factors support volunteer activities among older persons with low education in Germany and how these factors differ from highly educated persons. Data and methods: Empirical analyses are based on the 4th wave of the German Survey on Volunteering from 2014. The analytic samples contain low and highly educated people (ISCED 0-2 and 5-6) aged 50 years or older (N = 946 and N = 7,094). Multivariate analyses are separately carried out for both educational levels examining the impact of socio-demographics, resources, individual values and social aspects on volunteering. The model selection process is based on the theoretical grounds of Einolf & Chambré (2011). Results: Analyses reveal in both groups the following statistically significant associations with volunteering: lower age, the German citizenship, living in Western Germany, absence from health restrictions, strong religiosity, social coherence at respondents' place of residence, and a good social network. Perceived self-efficacy has among low educated persons a positive, among highly educated a negative impact.

Conclusions: Different implications from these findings can be drawn to improve access of low educated people to volunteering including structural improvements in the areas of healthcare provision, in Eastern Germany, as well as urban and social planning. On the individual level, improving perceived self-efficacy is a promising approach.

Patterns of Productivity in the Early Years of Retirement: Individual and Societal Determinants in Europe

Mergenthaler, Andreas

Federal Institute for Population Research, Germany
andreas.mergenthaler[at]bib.bund.de

Productive ageing is discussed as an approach to tackle the consequences of population ageing. Empirical evidence suggests different patterns of productive activities among older adults. Therefore, this presentation aims at multiple productive activities (paid employment, formal and informal volunteering, education and training, grandchild caring and familial caregiving) among retirees aged 60 to 75 years in 17 European countries using the sixth wave of “Survey of Health, Ageing and Retirement” (SHARE, N=24,268). With reference to role theory (role extension versus role substitution) and disengagement approach, eight patterns of productive activities are identified with the disengagers as the largest group (37 %). One third of the sample was engaged in a single formal or informal activity (role substitution). Role extension could be observed in 10 % of the respondents which were combining paid employment with one or more informal activity and 14 % which reported multiple informal activities. Multilevel logistic regressions were carried out to identify individual, economic and societal determinants of selected patterns of productive activities. Socioeconomic gradients are identified at the micro-level: the higher the formal education and aggregated individual income of the household, the more likely is engagement in one or more productive activities. Moreover, disengagement shows a negative association with health ratio and political rights and civil liberties as well as a positive relation with the Gini coefficient for European countries (macro-level). Thus, the results point at the importance of social inequality and health on the individuals as well as the societal level for productive ageing in Europe.

The Motivation Not-to-work – Exploring Work-related Attitudes Of Older Workers That Have Exited Employment

Kellert, Marc André

Universität Duisburg-Essen, Germany
wdkellert[at]web.de

Beyond mere structural characteristics (such as age, gender, health or educational attainment), the individual motivation to work represents one of the key determinants of older workers employment and retirement decisions. Traditionally, the focus in empirical analyses on this topic is on those within employment and their principle readiness to continue working. This paper extends the focus to those outside paid employment and their willingness to return to employment respectively its reasoning. This largely under-researched group is of particular importance, not only from a scientific perspective, but also from a public policy angle, as raising the employment among the older age groups may not only rely on

promoting continued employment among those in the labour market, but also on potentially re-activating those that have left the labour market prematurely. Against this background, this paper uses data from the German TOP study (“Transitions and Old Age Potential”), gathered in 2013, to investigate those individuals that have left active employment before reaching mandatory retirement age. In a first step, it reconstructs whether these individuals would potentially consider a return to employment. In a second step, it investigates either (i) which reasons discourage older inactive people to consider such a return or (ii) for those that are potentially willing to return, which conditions they would like to see fulfilled. For both analytical questions, we do not restrict ourselves to a mere description, but also investigate how the respective patterns differ across social groups (e.g. with regard to age, gender, educational attainment or financial status). The paper closes with a critical reflection on political options and limitations to re-engage older employees in the labour market.

RN01_04b | Ageing Societies and the Welfare State

The Finnish Citizens’ Initiative On Pension Indexation

Komp-Leukkunen, Kathrin; Rantanen, Visa

University of Helsinki, Finland
kathrin.komp[at]helsinki.fi, visa.rantanen[at]helsinki.fi

It is well-known that population ageing affects pension schemes. The number of pensioners increases, while the number of those paying pension contributions drops – creating an imbalance. This imbalance is particularly problematic for pay-as-you-go-financed pension schemes, which redistribute across generations. Therefore, policymakers across Europe have been reforming pension schemes, trying to limit the amount of benefits distributed. In 2016, Finnish citizens tried to overturn this process. A citizens’ initiative brought the suggestion to parliament to change the pension indexation – which would immediately increase the pension benefits distributed. Today’s workers would have had to pay for this reform through increased pension contributions. After several days of debate, the parliament rejected the reform suggestion. This study analyzes newspaper articles and parliamentary debates on the reform suggestion. The research questions are: who participates in the debates around the reform suggestion? And which arguments are used in the debates? The analysis finds that mainly older citizens supported the reform. In many cases, their opinions were based on wishes and emotions, less often on arguments. Where arguments were made, they partly self-contradicting. Youths and middle-agers, who would have also been affected by the reform, largely stayed out of the debates. Their interests were mainly voiced by experts, such as researchers. These findings show that we already now experience generational conflicts due to population ageing. The winners of the conflicts do not need to be those with the better arguments, but they may just as well be those who take the time to engage in the conflict.

Securing Old-age Income in Times of Rising Employment Uncertainty: Comparing 7 European Countries

Hofäcker, Dirk; Sina, Schadow

University of Duisburg-Essen, Germany
dirk.hofaecker[at]uni-due.de, sina.schadow[at]uni-due.de

Background: Faced with demographic ageing, many countries have introduced multi-pillar pension systems – combining public, occupational and private pensions – to ensure the future sustainability of old age income. Young labour market entrants are often expected to invest into such plans. At the same time, the labor market situation of youth has worsened, as they often face (long-term) unemployment and are disproportionately found in atypical work. The uncertainty associated with these employment instabilities hinders young people to make appropriate savings for old age. Our paper will analyze evidence from seven selected country cases – Sweden, the United Kingdom, Germany, Italy, Poland, Estonia and Ukraine – to investigate what consequences employment uncertainties have for young people’s future pensions and to what degree country-specific policies mediate their possibly detrimental effect. Methods: The paper utilizes findings from institutional analyses of public pension systems. In addition, expert interviews with scientists as well as administrators from financial institutions are used to similarly assess the effect of employment uncertainties on private and occupational pension plans. Results and conclusions: The paper synthesizes the findings from these analyses and derives policy recommendations to ensure sustainable pensions for future generations. It highlights that the ability of public pension systems to ensure a decent standard of living is shrinking. Additional pension plans, however, are often not fully able to fill this pension gap, particularly for those young people facing employment uncertainties. Against this background, the paper argues for an extension of mandatory savings into occupational and private plans, supported by respective governmental policies.

Pension Reforms and Old Age Inequalities in Europe

Ebbinghaus, Bernhard

University of Oxford, United Kingdom
bernhard.ebbinghaus[at]spi.ox.ac.uk

Pension reforms cut back public pension benefits, gradually extended the official retirement age, and fostered privately funded pensions. This marketization and privatization of income responsibility in old age has already important social consequence today. While the sustainability of pension reforms in the face of demographic ageing has been widely discussed, the adequacy of retirement income has often been neglected from current debate, partly because poverty in old age seemed no pressing concern in advanced welfare states until recently. However, already in the past, poverty and income inequality varies across pension systems in Europe. Cross-national comparison shows considerable variation across Europe when we analyse poverty rates at different

levels. Using past and current EU-SILC and LIS indicators, a comparative analysis of poverty rates in old age reveals that Beveridge basic security is not always capable of effectively reducing poverty despite the explicit purpose to do so, while some contributory Bismarckian systems are better suited to reduce poverty, despite focusing on status maintenance. The lowest poverty rates are found in the relatively generous Dutch and Danish basic pensions, while Finland and Sweden have moved away from basic pension to a new multipillar system that is doing still relatively well. In contrast, Ireland, the United Kingdom and Switzerland with basic security and Belgium, Greece, Italy and Spain as well as Slovenia with meagre pensions have the highest poverty rates, coming close to US levels. Considering indicators of inequality, the elderly are more at risk than the working population with the exception of few Bismarck systems (France, Germany, and some CEE countries) as well as the Dutch multipillar system.

The Discursive Change From ‘Early’ To ‘Late’ Exit

Jensen, Per H

Aalborg University, Denmark
perh[at]dps.aau.dk

The aim of this paper is to analyze how new ideas about how and when to terminate working life have been discursivized and institutionalized as new norms of appropriate behavior at the international level as well as in countries such as Denmark, Germany and the UK. The paper analyzes how the emergence of new ideas (i.e. ideas about the transition from early to late exit) is rooted in new linguistic events strategically expressed in speech, writing, reports etc. orchestrated by international and national ‘change agents’ such as (1) policy, (2) campaign and (3) discourse institutions. Examples of national policy institutions are public commissions, while the EU agency ‘Eurofound’ is an example of an international policy institution. Examples of national campaign institutions are Economic Advisory Councils while OECD is an example of an international campaign institution. Examples of national discourse institutions are analytical units in the Ministry of Finance and universities, while analytical units of the Commission and the EU-JPI program, ‘More Years – Better Lives’ are examples of international discourse institutions. The paper shows that different discourses emanating from policy, campaign and discourse institutions have all pointed in the same direction: the call for working longer. One discourse emphasis that pension systems are economic unsustainable and that pension systems function as disincentives to work. Another discourse, that early retirees have been victims of exclusionary processes that can be handled if employers change their behavior and employability is maintained. These discourses have supported pension and early retirement reforms across Europe.

RN01_05a | Social inequalities and social exclusion in older age

Precarious Pathways Into Retirement and New Risks for Gendered Economic Exclusion in Sweden 1990-2015

Motel-Klingebiel, Andreas; Kelfve, Susanne; Homman, Lina

Linköping University, Sweden

andreas.motel-klingebiel[at]liu.se, susanne.kelfve[at]liu.se, lina.homman[at]liu.se

Background: The ability and disposition of ageing people to maintain their labour market activity and/or to retire from work structurally depend on pension systems, activation policies, ageism, changing labor demand and economic shifts. Structural conditions are changing and most societies may in the long run and on average benefit from them – or not. But social change does not mature homogeneously and neither do the institutional shifts induced by it. Gains in opportunities and resources do not benefit all people, groups and even societies in the same way. Changes increase insecurities and life course inhomogeneity, create unequally distributed challenges and show asynchrony in shifts and outcomes. They generate new precarity in ageing and socially structured risks for exclusion in work and retirement and refer to existing later life inequalities by cohort, gender, region, education, class and ethnicity. Aim and data: From this perspective of ageing and social change, the paper deals with shifts in late work and retirement patterns and later-life outcomes under changing institutional conditions, focusing on gendered risks for economic exclusion and later life precarity in Sweden. Swedish registry data comprising individual work and health histories as well as employer, regional and neighborhood information on the total population 50+ ever living in Sweden 1990-2015 is used in a cohort sequential perspective. Analyses focus on gender inequalities and concentrate on occupational activities, retirement transitions and pension revenues under changing social conditions. Results: Models find increasingly heterogeneous pre-retirement and transition patterns, new gender gaps and increasing risks of economic exclusion in retirement with disadvantaged groups as forerunners in overall relative declines in later-life economic positions.

Social Exclusion and Mental Wellbeing in Older Romanians

Precupetu, Iuliana (1); Aartsen, Marja (2); Vasile, Marian (3)

1: Research Institute for Quality of Life, Romanian Academy, Romania; 2: NOVA Norwegian Social research / Oslo Metropolitan University, Oslo, Norway; 3: Faculty of Sociology and Social Work, University of Bucharest, Romania
iulianapre[at]gmail.com, maraar[at]oslomet.no, marian.vasile[at]sas.unibuc.ro

In Romania, after the fall of communism, the many transformations in economic structures and the welfare regimes contributed to a trend of increasing social exclusion, in particular for the older generations. Social exclusion is a multidimensional problem with substantial effects on the mental wellbeing of people. The present study examines age differences in mental wellbeing and evaluates to what extent differences can be explained by age and social exclusion, while controlling for a number of potential confounders. Data are from the fourth wave (2016) of the European Quality of Life Survey. Data for Romania include 1004 people of which 726 are used in the analyses (only complete cases). In the study sample, 254 were older than 55 years. Mental wellbeing was measured with the World Health Organization Well-Being Index (WHO-5 scale), and social exclusion was measured on four domains (social relations, material resources, services and the neighborhood) (Walsh et al., 2017). The results show that older Romanians have a statistically significant lower mental wellbeing than younger Romanians. All domains of social exclusion contributed to lower levels of wellbeing. These effects remained significant after controlling for partner status, chronic diseases, having children and level of education. Improving mental wellbeing of older Romanians would greatly benefit from increasing social inclusion by means of social transfers provided by the government, improving the neighborhood and access to services, and providing facilities to enhance the social network.

Reallocation of Resources between Gender and Generations in Ageing Society

Holub, Martin; Stastna, Anna

Research Institute for Labour and Social Affairs, Czech Republic
martin.holub[at]vupsv.cz, anna.stastna[at]vupsv.cz

Low fertility and improvements to the health status of the population are the key determinants of population ageing in many countries across Europe. This is especially true for the Czech Republic after two decades of very low fertility regime (TFRs persistently below 1.5) and with an increase in life expectancy at birth for both men (more than 8 years) and women (more than 6 years) since the beginning of the 1990s. Ageing poses relevant questions in terms of the sustainability of national welfare systems, but also in terms of intergenerational relationships and equity. All these issues are at the heart of the challenges contemporary welfare states are faced with. We employ the European National Transfer Accounts data to improve our understanding of the consequences of population ageing by introducing demographic information into the System of National Accounts. These detailed age- and gender-specific economic data on income, transfers, consumption and saving allows us to study the relationship between age, economic activity and the organization of intergenerational transfers in the Czech Republic. Gender dimension of age reallocations within the market is particularly relevant for the Czech Republic, which shows high female employment rate in general, but records the most significant impact of childbirth on the employment of mothers of all the EU countries and where the gender pay gap remains one of the widest in the EU.

Consequences Of Employment Inequality For Living Condition In Old Age

Mika, Tatjana C

German Pension Insurance, Germany
tatjana.mika[at]drv-bund.de

The paper investigates causes for different types of working careers, which have great consequences for the living conditions in old age. More or less secure labour market positions are an important dimension of social inequality. Those who have gained secure stable labour market positions are well protected from labour market turbulences and profit more often from seniority pay. This structure divides older workers into two groups: those who profit from stable employment and those who have a reduced chance to be hired at higher age if they become unemployed (Heywood et al, 2015). Unstable employment has a negative impact on health (Gash et al., 2007) as have disruptions in the career due to lay-offs even if they are not accompanied by income loss (Black et al., 2015). The paper demonstrates individual pension entitlements from socially employed work according to the pension law for different types of working careers. The German old age security system is based on the principle of

equivalence between income during the working career and pension. We observe therefore a high correlation of long time uninterrupted employment and higher acquired pension rights. The analysis of the causes for the different employment careers requires comprehensive data. The papers uses the German sample of the Survey of Health, Ageing and Retirement in Europe (SHARE). The German sample offers also SHARE-RV as combined research data from the survey and from the pension insurance records. This survey data in combination with the whole employment career are the basis of the analysis.

“Some Days are Better than Others”: Older Persons and Everyday Life in an Institutional Setting

Zeman, Zdenko; Geiger Zeman, Marija

Institute of Social Sciences Ivo Pilar, Croatia
Zdenko.Zeman[at]pilar.hr, marija.geigerzeman[at]pilar.hr

The term “everyday life” is very flexible, even ambivalent, but extremely important for sociologists (Bennett 2005). The domain of “trivial” and “banal” things, academically neglected and theoretically downplayed for a long time, has in recent decades become an inspirational field of sociological interest, and thus Sztompka (2008) has referred to this “focus on everyday life” as a “new turn in sociology.” Everyday life always takes place in a specific social context as well as a localized area (Sztompka 2008). The key question in this paper is: what does everyday life in a home for older persons look like for its residents? This is a research question that intersects different dimensions, categories, and aspects. Homes for older persons are a “very special place” (Backhaus 2009), that is, complex social universes with stratified and often contradictory meanings immersed in networks of rules, codes, norms, and expectations. As institutions strongly defined by the categories of age and gender, they are social sites where older persons are not merely passive observers (Somera 1997), but autonomous agents who create their daily existence by themselves. What does their daily schedule look like? What do they do and what meanings do these daily activities have for them? These are just some of the questions that we are addressing here. The presentation is based on an analysis of interviews with residents of the Home for Older Persons Maksimir in Zagreb. Research is based on qualitative methodology, with an emphasis on the voice of the silent generation (+80).

“Does It Matter What I Think?” Care Preferences Of Older People In Finland

Mathew Puthenparambil, Jiby; Vasara, Paula Helena

University of Jyväskylä, Finland
jiby.j.mathew-puthenparambi[at]jyu.fi, paula.vasara[at]jyu.fi

The landscape of social care services for older people in Finland has been in a state of flux for quite a while. The policy of ageing in place, supporting older people to continue independent living in their own homes with services, has been presented as a key to reduce welfare expenditure in greying societies. Moreover, the idea of being able to choose among service providers is attached to the notion of active responsible individuals ageing well, which is used as legitimation for replacing publicly funded universal services with more market-oriented private provisions. This study looks into older people's care preferences by asking from which sources would older people like to receive services, what kinds of reasoning they use to explain these preferences, and does this coincide with the actual sources of support (e.g., public, private, informal). Mixed methods approach employs quantitative data from Everyday life, support and services -survey and qualitative interview data gathered in Moving in old age: Transitions in housing and care -project on older people aged 75 and above who live at home or in service housing in Finland. Preliminary analysis indicates that the majority of older people continue to prefer to receive social care services from the public sector. A sense of entitlement is attached to these with imagery of reliability, affordability and adequacy. However, some considered public services unobtainable. The least preferred and not much-used sources of assistance were from relatives along with friends and the voluntary organizations.

Public Policy and Cultural Value in Museum-led Dementia Care. The case study of House of Memories

Neiva Ganga, Rafaela; Wilson, Kerry; Whelan, Gayle

Liverpool John Moores University, United Kingdom
r.neivaganga[at]ljmu.ac.uk, K.M.Wilson[at]ljmu.ac.uk,
G.Whehan[at]ljmu.ac.uk

Drawing on the case of House of Memories (HoM), this paper discusses the instrumental value of arts and culture in dementia care, in relation to the civic and social responsibility of publicly-funded arts and cultural organisations. HoM is a museums-led dementia awareness-training programme focus on the reminiscence potential of museum collections. Created by National Museums Liverpool (NML) in 2012, with funding from the Department of Health (UK), it provides dementia caregivers (formal and informal) resources to support people to live well with the condition. Across the policymaking spectrum there is a call for cross-sector collaboration to stimulate innovation, social inclusion, and the production of evidence-informed research outcomes to enlighten policies

and decision-making. HoM has been referenced within leading policy documents as a creative intervention that focuses positively upon the individual's quality of life. Within this scope, since 2012, Crossing Boundaries: The value of museums in dementia care has been collecting data on HoM through a mix-method strategy. This paper address the suggestive findings of the value of the HoM programme to i) increased awareness and understanding of dementia and its implications; ii) improved subjective wellbeing for professional dementia carers; iii) skills development including listening, communication and professional empathy; iv) improved capacity for (individual and collective) critical, reflective care practice; v) confidence in trying new, creative approaches to dementia care; and vi) increased cultural engagement with museums. Equally, this paper contributes to the debate of the role of social science research to demonstrate the value of artistic and cultural interventions in preventing and postponing longer-term conditions such as frailty and subsequent dependence on acute medical interventions.

Hazardous Human Waste

Vana, Noa

Tel-Aviv University, Israel
noavana[at]gmail.com

Bauman (2004) asserted that globalization results in a vast production of rubbish; both inhuman as well as human. He then identified key examples of social groups recognized and assigned as “human waste.” The homo sacer, refugees, asylum seekers, migrants, etc. I propose that a crucial point escaped Bauman's macro theory. My data was gathered from social networking sites (SNSs); comprised of family members caring for people with advanced stages of dementia who lived at home during their final days. My findings suggested that people with advanced stages of dementia, as well as their migrant caregivers, are both examples of human waste assigned to sealed social dumping sites. For example, family members continually monitored their impaired loved ones; confined their bodies with different apparatuses and forced them to receive medical care that made them suffer. They also encouraged one another to always monitor the activities of the “dangerous” migrant caregivers, and they utilized the SNSs to warn one another of potential threats emanating from the caregivers. They remained vigilant; they didn't trust the caregivers and refused their “outrages demands.” In contrary, family members “acknowledged the dependency” (MacIntyre, 1999) of the elderly people. They regularly discussed the possible wishes of their impaired relatives and cherished them. Moreover, they did their best to protect them. Based on this microanalysis I propose to subdivide between two categories of social groups considered as human waste: “non-hazardous human waste,” and “hazardous human waste.” This new conceptualization refines Bauman's theory and contributes to the sociology of “otherness.”

Reimagining Ageing: Wisdom Traditions and Contemporary Evidence

Edmondson, Ricca

National University of Ireland Galway, Ireland
Ricca.Edmondson[at]nuigalway.ie

This paper draws on multiple traditions of wisdom and their contemporary variations in order to reimagine what ageing means both for individuals and for society. It highlights contributions that a palette of wisdom traditions can offer to our understanding of later life as a focus of meaning, insight and creativity, but also as a stage that offers specific pains and challenges. While contemporary understandings of wisdom among positive psychologists tend to stress personal characteristics connected with wise behaviour, classical traditions may emphasise intricacies of deliberation and virtue. Essayistic and literary accounts illuminate ways in which wisdom features in people's experience of their lifetimes, a feature sometimes left implicit in other analyses. This paper draws not only on these traditions but also on intercultural empirical investigations in order to cast light on ways in which capacities for various forms of wisdom can evolve through human lifetimes, not least in connection with ethics, caring and activating private and political values. This is intended to expand our understanding of the parts older people may play in both social and symbolic landscapes. The paper is supported by empirical data from the international 'Self, Motivation and Virtue' project in which the author is participating, together with colleagues from Canada, South Korea and the United States, as well as by longitudinal ethnographic observations from relevantly-themed meetings among older people in Germany, Austria, the Netherlands and Ireland. It advances a novel 'hexagonal' model of challenges linked to ageing, and connects them with features derived from a variety of conceptions of wisdom.

The Good Version Of What? Subjective Definitions Of Ageing Well And The Diverse Faces Of Ageing

Kadi, Selma

Tuebingen University, Germany
selma.kadi[at]uni-tuebingen.de

Research on subjective definitions of ageing well contrasts with some of the established concepts of ageing well, particularly the widely referenced concept of successful ageing by Rowe and Kahn. Compared to Rowe and Kahn's concept, subjective definitions tend to include more components, comprise more components which pertain to the context rather than the individual, and attest more people that they

are ageing well. At times when successful ageing following Rowe and Kahn has gained influence on the policy level, research on subjective definitions can provide alternative perspectives on ageing well. However, research in this field tends to focus on the aims in terms of ageing well only. The paper presents findings from a study based on qualitative content analysis of 45 semi-structured interviews with adults. I argue that by simultaneously researching how ageing is experienced, we can take its diverse manifestations and meanings better into account in the study of subjective definitions of ageing well. By not only focusing on the dimension of ageing well but equally on the (current) experience of ageing, we gain a better understanding of the foundations on which subjective definitions of ageing well are based. This is important to better understand the diversity of definitions of ageing well and to develop policy which can respond to the diverse manifestations and meanings of ageing in people's lives.

Respecting the Elderly in Contemporary Russian Society

Bogdanova, Elena (1,2)

1: European University at St.Peteresburg, Russian Federation;
2: Centre for Independent Social Research, Russian Federation
bogdanova.nova[at]gmail.com

In recent years, older people in Russia are increasingly becoming the object of various governmental initiatives, which claim deep understanding of their needs, and also their place and role in the society. Despite some efforts by reformers, there is no uniform policy in Russia regarding older people. Moreover, in Russia there is no clear cultural pattern of attitudes towards the elderly. It has neither the Eastern model of respect for the elderly, nor the Western legal tradition. Most likely, there is an intermediate version, which combines Soviet morality, new Orthodox norms, traditional family values and (post-)socialist contract of generations. The current generation of the elderly in Russia has a unique life experience. Most of them went through a life full of crises: World War II, famine, soviet political repressions, collapse of the Soviet regime in 1990s. This study is designed to compensate for the lack of sociocultural understanding of their life experience, and to follow connections between this experience and relation of the contemporary Russian society to the elderly. The study is based on a method, developed by Michèle Lamont and her co-authors in the book, "Getting Respect" (2016). Our study is conducted in the North-West region of Russia. It includes a series (currently 25, and in plan over 100) of in-depth biographical interviews with men and women over 75 years old, focused on their experience of respect and disrespect in various situations of their life, especially in their old age. In final result an analysis of the interview reveals the attitude of society towards the elderly, as well as the factors and mechanisms of social isolation of the elderly in modern Russian society.

Cultures of Deservingness: a Boundary Work Perspective to the Precarious Position(s) of Ageing Migrants in Finland

Olakivi, Antero (1); May, Vanessa (2); Wrede, Sirpa (1)

1: University of Helsinki, Finland; 2: University of Manchester, United Kingdom
antero.olakivi[at]helsinki.fi,
Vanessa.May[at]manchester.ac.uk, sirpa.wrede[at]helsinki.fi

In Finland, ageing people with migrant backgrounds are vulnerable to material poverty but also to social stigmas. Anti-immigration discourses can question the social and welfare rights of migrants in general, or, alternatively, limit these rights to 'deserving' migrants who are 'active' in the labour market (i.e., employed, not retired). Further, (neoliberal) discourses of active ageing highlight the ability of all ageing people to manage their lives with minimal state support. These discourses, as potential sources of stigma for individuals who might need customized support, are well-known in sociology. In contrast, we know little about the (assumedly various) ways in which ageing people with different migrant backgrounds live their lives in relation to these discourses. This study examines the symbolic and affective practices through which ageing people with different migrant backgrounds can avoid and manage the above (potential) stigmas, especially when they need social or state support in Finland. First, the study examines the boundary work through which ageing people with different migrant backgrounds can be socially constructed – and can construct themselves – as 'deserving' members of the Finnish society. Second, the study examines how this boundary work entangles with nationality, gender and class. The political aim of the study is to facilitate stigma-free communication in everyday and institutional settings where the care and other welfare needs of people with migrant backgrounds come into focus. Empirically, the study examines boundary work in interview interaction. The participants in the interaction are people aged over 65 who were born outside Finland and University researchers who were mostly born in Finland.

RN01_06b | Formal and Informal care II: Care recipients - needs and access

'We Treat Them All the Same': the Attitudes, Knowledge and Practices of Staff Concerning Old/er Lesbian, Gay, Bisexual and Trans Residents (LGBT) in Care Homes

Simpson, Paul (1); Almack, Kathryn (2); Pierre, Walthery (3)

1: Edge Hill University, United Kingdom; 2: University of Hertfordshire; 3: University of Oxford, United Kingdom
simpsonp[at]edgehill.ac.uk, k.almack[at]herts.ac.uk,
pierre_walthery[at]yahoo.co.uk

The distinct needs of LGB&T residents in care homes accommodating older people have been neglected in scholarship. On the basis of a survey of 187 individuals, including service managers and direct care staff, we propose three related arguments. First, whilst employees' attitudes generally indicate a positive disposition towards LGB&T residents, this appears unmatched by ability to recognize such individuals and knowledge of the issues and policies affecting LGB&T people. Statements such as, 'We don't have any (LGBT residents) at the moment,' and 'I/we treat them all the same' were common refrains in responses to open-ended questions. Simultaneously, in showing reflexivity of staff professing strong religious belief, we challenge over-association of such beliefs with LGBT phobias and as representing traditionalization. They suggest the working of heteronormativity which could deny sexual and identity difference. Second, failure to recognize the distinct health and social care needs of LGB&T residents means that they could be subject to a uniform service, which presumes a heterosexual past and cisgender status (compliance with ascribed gender), which risks compounding inequality and invisibility. Third, LGB&T residents could be obliged to depend largely on the goodwill, knowledge and reflexivity of individual staff (including people of faith) to meet care and personal needs, though such qualities were necessary but not sufficient conditions for inclusion and no substitute for collective practices (involving commitment to learn about LGB&T issues) that become integral to care homes' everyday functioning. A collective approach is key to advancing inclusion, implementation of legal rights to self-expression and securing equality through differentiated provision.

Reflexivity And The Need To Care In The Lives Of Older Men Living Alone

Leontowitsch, Miranda (1); Stiehler, Steve (2); Baumgarten, Diana (3)

1: Goethe-University Frankfurt, Germany; 2: Fachhochschule St Gallen, Switzerland; 3: TU Dortmund University, Germany
leontowitsch[at]em.uni-frankfurt.de, steve.stiehler[at]fhsg.ch, diana.baumgarten[at]tu-dortmund.de

Older men living alone represent a rising and historically new social group that will significantly influence the future of ageing. So far, this sub-population has been considered a homogenous group at risk of social isolation or one too small to be given much attention. The small amount of empirical work suggests that the lives of older men living alone are much more heterogeneous and that social isolation is only one theme among many others. Indeed social relationships and caring about others can play an important role in the lives of older men living alone and resonate with work on changing cultures of ageing in late modernity and increased agency in later life. This paper sets out to gain a better understanding of the social reality that shapes the lives of older men living alone by theorising the social position of being on your own, both in terms of reduced relationality with a significant other (e.g. partner or spouse), but also in terms of increasing personal agency (e.g., having to make decisions for oneself). To do so this paper will use Margret Archer's theoretical work on reflexivity and its relevance to personal agency. Following Archer, reflexivity is the mental capacity of people to consider themselves in relation to their social contexts and their social contexts in relation to themselves. If older men living alone can care for themselves and others despite decreased relationality then increased reflexivity may well be the process through which they 'make up their minds'.

Doing Care in Rural Environment: interlinks between place, care arrangements strategies and social exclusion in Germany and Poland

Urbaniak, Anna (1); Heusinger, Josefine (2); Falk, Katrin (2)

1: Irish Centre for Social Gerontology, Ireland; 2: Institute fuer Gerontologische Forschung, Germany
anna.urbania[at]nuigalway.ie, heusinger[at]igfberlin.de, falk[at]igfberlin.de

Existing literature recognises the diversity of care needs in heterogenous group of older people. However, little is known about spatial aspects that influence the need for care and access to care services for those individuals. These issues become more and more important especially in the context of current discussion on age friendly cities and communities as one of the frameworks aiming at combating social exclusion of older people. Model of age – friendly community assumes that a community adapts its structures and services to be accessible to and inclusive of older people with varying needs and

capacities (WHO, 2007, p.1) However, dependent older people are quite often excluded from the discourse of active ageing and their needs remain not fully recognized, especially in the context of age – friendliness of rural environment. In this paper qualitative interviews with dependent older people, their carers and local stakeholders are analysed in order to investigate how place, homecare arrangements and social exclusion of dependent older people are interconnected. By doing so we aim to shed more light on the processes that seem to be crucial for understanding what constitutes age – friendly community in the rural context. Here, we draw on evidence from different kinds of rural community in two different jurisdictions: Poland and Germany. Results show that rural environment creates specific challenges and possibilities that impact care arrangements strategies of caregivers and stakeholders as well as expectations of older dependent people.

RN01_07a | Culture, Values and Images in the Field of Ageing II

Media Representations of Old Age in Slovenia: What the Old-age Exclusion Lens Offers

Gerdina, Otto (1); Torres, Sandra (2)

1: Faculty of Social Sciences, University of Ljubljana, Slovenia; 2: Department of Sociology, Uppsala University, Sweden
otto.gerdina[at]fdv.uni-lj.si, sandra.torres[at]soc.uu.se

We appear to live in a time of unprecedented concern about population aging, a time in which narratives of 'demographic burden' and stereotypical images of old age and aging are endlessly and cyclically reproduced in the media. These images often clash with academic and political efforts to create an inclusive environment for older people. To better understand this discrepancy this study takes a closer look at how Slovene media representations of old age and older people are shaped. Although some Slovene research has brought attention to how older people are represented in the daily media, virtually no research has addressed how old-age exclusion is discussed, what kinds of exclusion are brought to fore, which kinds of older people are described as socially excluded and on which grounds. To address this knowledge gap, a longitudinal analysis of the representation of old-age exclusion as well as the contexts in which it appears has been conducted in order to identify which cultural images are deployed in order to tell the story of old-age exclusion to the Slovene public. Through quantitative content analysis, the study sheds light into the ways in which representations of old-age exclusion have changed over the past 15 years in four Slovene daily newspapers. These representations are interrogated against the backdrop that scholarship on old-age exclusion offers.

Future Scenarios Of Living When Old – Comparative Views From Finland And The USA

Koivula, Ulla-Maija (1); Woodward, Amanda (2)

1: Tampere University of Applied Sciences, Finland; 2: Michigan State University, USA
ulla-maija.koivula[at]tuni.fi, awoodwar[at]msu.edu

Population ageing is one of the megatrends shaping the future world. Care services for the elderly are in constant public discussion often with some of “ageism” (Applewhite 2016). But what do the present day 60-year-olds think about what their future will be like when they are 80 years old? And what do present day elder care workers think about services in the future? This is asked in the ongoing project based on a futures research approach. The data are collected via an empathy-based role play method from two countries representing different welfare regimes, Finland and the US. To date, stories have been collected from 54 Finnish persons and about 90 persons from the State of Michigan in the USA. Data will be collected from care workers later in 2019 followed by future workshops of care workers and people of early retirement age to be held in 2020. The theoretical background of the research is based on critical futures research (Inayatullah 2003; 2008) and critical gerontology (Baars et al. 2006). The research questions are: 1) What elements are present (and what are missing) in the positive or negative future visions of life in old age? 2) What are the differences and similarities between respondents in the two countries? and 3) What is their relation to the cultural norms or social welfare structures in each country? Preliminary results suggest that key elements of a positive old age are related to self-directiveness, meaningfulness and belongingness. In the Finnish texts there is an implicit trust that services will be available when needed. In the US the wellbeing in old age tend to depend on individuals themselves.

Meaning in Later Life – Belonging and Believing in Non-religious Contexts

Spännäri, Jenni

University of Helsinki, Finland
jenni.spannari[at]helsinki.fi

Meaning in life has been redeemed crucial in older adulthood by both research and the experience of healthcare professionals. Especially in the context of life’s finity and end of life issues, sense of meaning has a significant impact to quality of life, subjective wellbeing and resilience. Traditionally it has been argued, that this phenomenon is behind the turning to religion, religious social activities and religious meaning systems, which many older persons experience and exhibit. However, exploring questions of meaning in the late modern societal context has highlighted that religion is not a preferred choice for many older adults. Instead, questions of meaning in transitions of later life are reflected and pondered in non-religious contexts. These contexts might involve spiritual, non-religious activities or social groups centered around personal

growth. This paper lays out the essential approaches and theoretical foundation needed for empirically examining this phenomenon, including the ways of measuring and approaching meaning in life. The paper also reports the results of a qualitative pilot study on a group of Finnish older adults (65-85 years old), taking part into a good life and wellbeing workshops on their free time. The paper provides new insight into the generation and usage of meaning systems – the questions of shared meaning in non-religious but spiritual contexts – and thus can offer valuable outlook to approaching meaning in life of older adults, both in research and in practice.

RN01_07b | Formal and informal care III: Consequences of care giving and receiving

User Fees Of Home Care Services Pose A Risk Of Poverty And Care Deprivation For Older People With Low Income

Ilmarinen, Katja Maaria (1); van Aerscht, Lina (2)

1: Institute for Health and Welfare, Finland; 2: University of Jyväskylä, Finland
katja.ilmarinen[at]thl.fi, lina.vanaerschot[at]jyu.fi

Ageing in place has become one of a key aims of the care policy in Europe. A growing number of older people find themselves in need of long-term care at home and with paying user fees for those services. The costs of health and social care have become a remarkable economic burden for many elderly people. Yet, only little is known about the scale and the regional differences of the financial burden of home care services. According to the legal regulation, user fees may not “endanger the subsistence of the person or the family” in Finland. This principle is not always attained as the service fees easily constitute considerable monthly costs and, at the same time, almost one in five older persons are making their ends meet with low incomes. Research shows that expensive user fees are one of the main reasons for unmet needs. Here, our data consists of information of the user fees of home care services from Finnish municipalities. In addition, user fee data was collected on assistive services. In order to evaluate the average financial burden for individuals (fees as a share of income), income data for households' average disposable income was obtained from Statistics Finland. According to our preliminary results the user fees of necessary and inevitable services alone may add up to one third of the monthly income or even more. In addition there is significant variation in the user fees between municipalities. Thus user fees of home care services may cause a risk of poverty and care deprivation for elderly. Results highlights the need for care policies to focus on equality and affordability of care.

Family Care and Its Impact on Women's and Men's Retirement Decisions in Germany

Ehrlich, Ulrike; Klaus, Daniela; Kelle, Nadiya

German Centre of Gerontology (DZA), Germany
ulrike.ehrlich[at]dza.de, daniela.klaus[at]dza.de,
nadiya.kelle[at]dza.de

Objective: this study addresses the relationship between taking on unpaid care for an ill, disabled or frail elderly family member ('family care') and individuals' retirement decisions in Germany. **Background:** While individuals in their late career are increasingly confronted with family care tasks, the latest German pension system reforms aimed at postponing retirement entry and at the lengthening of lifetime employment. Therefore, the question arises whether, and if so to what extent, these conflicting expectations are associated with family caregivers' retirement decisions. **Method:** Data came from the nationally representative German Socio-Economic Panel Study (SOEP, 2001–2016). Using Cox shared frailty regressions, this study examines how different family care indicators are associated with women's and men's transitions from paid work into retirement. **Results:** Family care is associated with women's and men's retirement decisions. In particular, family care intensity plays a crucial role: only those women and men providing extensive family care show an increased propensity to transition into retirement earlier compared to their non-caregiving counterparts. **Conclusion:** The first findings reveal the importance of disentangling family care into low- and high-intensity family care for analyzing transitions into retirement. **Implications:** this study highlights a policy mismatch that it is likely to apply to most western industrialized countries confronted with rapidly aging populations: even if desired by policy makers, some individuals cannot maintain their employment over the course of family caregiving and tend to withdraw from the labor market completely.

Informal Caregivers and the Impacts of Images of Aging. Insights and Reflections from a Qualitative Study

Schorch, Marén

University of Siegen, Germany
maren.schorch[at]uni-siegen.de

The demographic change of the population worldwide is also accompanied with an increasing proportion of elderly people suffering from chronic illnesses. In Germany, most of the care is practiced at home (Federal Statistical Office for Germany, Care Statistics 2018). My contribution will not focus on the elderly sick people, but highlight the informal caregivers that are often their relatives, of old age themselves (from sixty years old), with declining physical and mental capacity and often under constant stress due to the 24/7-care situation. I'm going to reflect on insights from my qualitative research (participant observation, interviews, photos) in five families in

a rural area in Germany that I carried out over more than a year in a completed research project. Most of those elderly informal caregivers were in their seventies and long-term caregivers for their sick spouse with dementia, Alzheimer's or Parkinson's disease for at least four, mainly ten years. Whilst the focus of my research was on the everyday practices of caregiving, another key aspect emerged in the field and from the data: the multi-facetted and dynamic aspects of ageing respectively the underlying images of aging. Age can be seen as a "transition" stage in general, but as a specific challenge when becoming an informal caregiver, in many times quite suddenly. Furthermore, there are discrepancies between the self-images of the elderly informal caregivers and the imposed images of ageing, for instance by (care) institutions, organizations, politics, public media, relatives etc. that will be discussed in the paper.

RN01_08 | Health in Old Age

Overcoming Vulnerability and Achieving Wellbeing among Older Migrants and Natives in Switzerland

Ciobanu, Oana; Baeriswyl, Marie

University of Geneva, Switzerland
oana.ciobanu[at]unige.ch, marie.baeriswyl[at]unige.ch

This paper will compare elderly persons with high vulnerability that report a high wellbeing in old age, and persons with a comparable vulnerability that report a low wellbeing. In this way, the paper aims to understand how and why some elderly cope with and overcome vulnerability and others not. The paper will explore the impact of migration on vulnerability, wellbeing and resilience in old age. To address these interdisciplinary issues, the paper will draw on data from the survey "Vivre-Leben-Vivere: Old Age Democratisation? Progresses and Inequalities in Switzerland" (VLV) conducted in 2011/2012 in Switzerland. This includes a representative sample of elderly persons and a large sub-sample of older migrants. A first interesting result is that those who are vulnerable are very diverse with regard to their wellbeing. The results are relevant due to the innovative empirical analysis of divergence and convergence in wellbeing among people who have high vulnerability. Our paper goes further to explore the factors leading to high or low wellbeing for people with comparable vulnerabilities. This allows us to understand why disadvantages accumulate for some and not for others. The novelty of the paper consists in the comparison between older migrants and natives. Furthermore, we take a life-course approach to understanding vulnerability and resilience.

Grey Divorce and Health of Older Adults in Europe

Štípková, Martina

University of West Bohemia, Czech Republic
marsti[at]kss.zcu.cz

Quality of life is closely related to the social relationships of individuals. This paper focuses on persons aged 50+ and analyses their subjective health in relation to their marital status. In particular, the effects of divorce and widowhood are analysed. Bereavement is known to have an adverse impact on health and wellbeing. The consequences of losing a partner through divorce are, however, much less understood, despite the fact that divorce at a later age is becoming more common. I assume that divorce is less harmful than death of a spouse because it is a voluntary decision (at least of one of the spouses). Decisions of older adults regarding partnership do not involve considerations about wellbeing of dependent children and increasingly reflect their personal life preferences. I use longitudinal data from the Survey of Health, Ageing and Retirement in Europe. The dependent variable is self-rated health and the main independent variables are marital status and gender. I control for the effect of age, labour market participation, financial situation and parenthood. Preliminary results seem to confirm the hypothesis. Married individuals tend to have the best health. As expected, divorce has a less negative effect on health than widowhood. The gap between divorce and widowhood is wider among men than among women. There is a variation in the effects across countries which I aim to explain by using macro variables that measure divorce prevalence and values climate in the countries.

Long Term Consequences Of Accommodation Histories On Later Life Health Within Different European Contexts

Deindl, Christian; Wahrendorf, Morten

Heinrich Heine University Duesseldorf, Germany
deindl[at]uni-duesseldorf.de, wahrendorf[at]uni-duesseldorf.de

In order to fully understand the impact of socio-economic conditions on later life health the entire life course has to be taken into account. In our analyses we will concentrate on accommodation history. Housing reflects the social position of an individual as well as his / her social origins and life course trajectories. What makes housing even more interesting is that it is influenced by the family and the welfare state. Parents often help their children to buy a house with financial transfers, and houses are also frequently part of a bequest. Rent regulations, social housing or taxes for home owners are state means to regulate housing. As a result of different policies, there are huge differences between countries in the prevalence and preferences of certain accommodation types and housing assets. We will use life course data from the Survey of Health, Ageing and Society (SHARE) to disentangle

the impact of housing histories on later life health within different socio-economic contexts. Later life health will be considered as mental health as measured via the Euro-D Scale. Housing histories will capture the timing and the duration of specific stages (rent, ownership, etc.). The impact of country context will be measured as economic conditions in the countries based on the GDP during childhood years, young adulthood and midlife. First results show that housing reflects cumulative inequality over the life course with owners reporting better health outcomes.

Health and Social Needs of Polish Women in the Subsequent Phases of Aging

Slonska, Zofia Antonina

Cardinal Stefan Wyszyński Institute of Cardiology, Poland
slonska[at]post.pl

Usually the phase of procreation, due to its great importance for the society development, focuses attention of systems, institutions and families. It doesn't mean that other phases of women's life, and specifically phases of aging, don't create any threats of health and social nature. The aim of the study was to identify social and health problems faced by Polish women aged 50+ in their subsequent stages of aging and assess their relations with the process of dynamic Polish population aging. The analysed data come mainly from data officially published by the Central Statistical Office's (GUS) and some other reports. Currently, the most serious problem, specifically in the absence of adequate care system in Poland, seems to be the growing number of women aged 80+ usually needing health and social support. In 2050 Poles aged 80+ will account for 10.4% of the general population, which means 3.5 million people, and the share of women in their 80s will be 65% in cities and 62% in the countryside. The transition of women into the phases of old age is associated with an increased risk of suffering from chronic diseases, the occurrence of multiple disorders, disability, dependence on others, poverty, marginalization, exclusion and violence. In the face of the diminishing in Poland the care potential of family, traditionally responsible for the care of children, the elderly, the sick and the disabled, there is amongst others an urgent need to support families, by undertaking a series of activities necessary for the rapid development of the institutional care system.

RN01_09a | Conditions of Housing in Old Age

Housing Concepts In Close Relationships In Old Age

Piel, Julia; Robra, Bernt-Peter

Otto-von-Guericke University Magdeburg, Germany
julia.piel[at]med.ovgu.de, bp.robra[at]gmail.com

In social research, living as a couple in the same household is considered as the ideal form of housing in a close relationship (CR) for each age group. Especially for younger generations of older people, it can be assumed that CR-concepts have diversified by individualization. Then forms of housing in CR vary from the ideal of cohabitation. For sociologists it is interesting with which orientation older people choose an alternative arrangement of housing in a CR besides the traditional form of cohabited housing. In a qualitative interview study with German couples aged between 63 and 88, the type of living together has an identity-forming function. It was possible to observe a correlation with the negotiation of partnerships and with the individual's need for autonomy and closeness in a CR. On the basis of two case studies of a heterosexual and a homosexual older couple it can exemplarily be depicted how partners negotiate couplehood through the form of housing. This was observed in interactive processes like "doing couple" and "doing difference" in the couple interview. Partners who have underlined individuality in life course have a greater need for self-realization, also in later life phases. This is reflected in apartment's size or in separate living arrangements. The influence of biographical and socializational factors is more relevant than the sexual orientation of couples. The findings invite researchers to discuss scientific views on CR in old age by taking greater account of older couples who live in non-traditional housing concepts together.

Age or Environment? What is Determinative in how Homeless People Spend their Time after the Age of 55?

Kalvas, Frantisek; Vane, Jan

University of West Bohemia, Czech Republic
kalvas[at]kss.zcu.cz, vanejan[at]kss.zcu.cz

As people grow older, their action radius as well as sense of belonging tend to shrink to smaller geographical areas and places. It also applies to the homeless people. But there are two more important factors to add: time dispositions and living in the street or at the shelter house. Using unique data gathered in our own research of homeless people, we will explore whether it is either age or environment what is determinative in how homeless and roofless people (definition based on the European Typology on Homelessness and Housing Exclusion) spend their time ensuring livelihood and

doing their free time activities. We focus primarily on the homeless and roofless people who are after the age of 55 and are excluded both by age and space. We conducted data collection in the city of Pilsen in the Czech Republic. We visited 79 temporary shelters where homeless and roofless people slept overnight. The data collection included a census and was a single action in institutions providing shelters and in pre-selected locations in order to reach homeless and roofless people in places of their overnight dwell.

Relocation In Later Life – Experiences From Communal Senior Housing

Vasara, Paula Helena (1); Mathew Puthenparambil, Jiby (1); Jolanki, Outi (2)

1: University of Jyväskylä, Finland; 2: Tampere University
paula.vasara[at]jyu.fi, jiby.j.mathew-puthenparambil[at]jyu.fi, outi.jolanki[at]tuni.fi

Policy of ageing in place is strongly encouraged in western welfare societies battling with issues related to greying populations and welfare costs. Supporting older people to continue living in their familiar surroundings with necessary services is portrayed as a cost effective and benevolent policy that enables ageing well. However, it is not self-evident that anchoring oneself to a certain place guarantees good outcomes, and people do move for several reasons later in life. Up until recently, the number of alternatives to regular housing have been limited. Our survey Everyday life, support and services supports common findings that older people seek to relocate reasons related to more easily manageable everyday life, such as services nearby and familiar residential area. The characteristics of home also play an important role, particularly in connection to major life events, such as bereavement. However, there is not yet much research on experiences related to moving into one of these new kinds of alternatives. The purpose of this study is to look into the reasoning and outcomes related to moving into a communal senior block. The dataset is part of first wave map-assisted interviews carried out in the CoE AgeCare / AHAVA. Preliminary analysis indicates that this senior block not only offers residents convenient and suitable housing, but also appears to benefit their overall wellbeing with more active and social lives. It enables older residents to create positive interpretations, continuums and turning points in their life course.

RN01_09b | Active Ageing and Social Participation in Old Age

Active Aging and International Migration: A Comparative Approach

Voicu, Mălina (1); Manea, Madalina Elena (1,2)

1: Research Institute for Quality of Life, Romanian Academy, Romania; 2: University of Bucharest, Romania
malina.voicu[at]iccv.ro, madalinamanea.eu[at]gmail.com

Dropping fertility rates and increasing life expectancy brought about by modernization and industrialization led to a significant contingent of seniors over 65 years old in many countries in Europe and North America. This demographic trend influenced the very conception of ageing and its associates. This conception is built around the idea of successful aging, which stands at the intersection between the preservation of physical and mental capacities, avoiding disease and disability, and engagement with life. Active aging is one of the core concepts of successful aging, pointing to seniors' labor market participation, social participation, informal help and housework. Population structure is also shaped by international migration. In advanced economies, immigration brings inflows of relatively young workforce which occupies mainly low skilled, "3D" jobs, whereas in less affluent countries the active workforce share dropped rapidly. This research focuses on the interplay between population aging and international migration, investigating how international migration influences seniors' propensity to lead an active life. We expect that positive net migration rate boosts seniors' engagement in volunteering and labor market, while a negative rate decreases seniors' propensity for social participation. Using cross-sectional comparative data from the EQLS 2016, covering 27 EU countries, and administrative data from the UN Data Bank, we run Latent Class Analysis to capture the cluster of activities among seniors over 65 years old, prevailing in each country and then, using multilevel regression models, we investigate the relationship between latent classes' membership and net migration rate.

Cultural Exclusion in Old Age – Developing a Social-Exclusion Perspective on Cultural Participation

Gallistl, Vera

University of Vienna, Austria
vera.maria.gallistl[at]univie.ac.at

Expanding the cultural participation of socially marginalized groups is a major concern of cultural policies around the world (COM 2011). However, cultural exclusion in old age is conceptually under-developed and empirically under-explored (Fraser et al. 2015). This results in a lack of knowledge

concerning the mechanisms through which cultural exclusion is produced in old age as well as which policy instruments might support the cultural inclusion of older adults. This article explores how patterns of cultural participation change in old age and how these changes are connected to manifold dimensions of old-age social exclusion. From a social-exclusion perspective, we can conceptualize cultural participation as a threefold concept that comprises a) participation in going-out-culture, b) participation in home-bound cultural activities and c) participation in identity-culture, e.g. through artistic activities (Morrone, 2006). Each of these domains might, however, relate differently to old-age exclusion. Empirically, this article draws upon survey data (n=1400), which investigates patterns of, motivations for and barriers towards cultural participation of Austrian people aged 60 and older. Data shows that while all three domains of cultural participation are significantly influenced by older adults' social position, there is evidence suggesting that cultural activities shift to private spheres as adults grow older. These processes are most prevalent for disadvantaged older adults. Results suggest that cultural participation is not declining but shifting in old age. In order to build more age-inclusive cultures across Europe, policy needs to address older adults' cultural participation and provide support in bringing it to public spaces and discussions.

Extended Working Life from Older Workers' Perspective - Discursive Approach to "The Attitude Problem"

Niska, Miira; Nikander, Pirjo

Tampere University, Finland
miira.niska[at]helsinki.fi, pirjo.nikander[at]tuni.fi

One key concern across EU countries concerns the challenge the ageing population presents to the welfare system. Consequently, the emphasis on delayed retirement age and extended working lives abound in political discussions. One crucial problem with this political endeavour is the so called "attitude problem": most Europeans want to retire before the age of 65 and do not agree with the goal of pushing the retirement age up. Although several quantitative survey studies demonstrate that such an attitude problem exists, there is very little qualitative research on the issue. In this study, we approach "the attitude problem" from the perspective of discursive social psychology, and analyse the variation in the way aspiration to extend working lives is evaluated by older workers. The interview data used in the study, was collected using a qualitative longitudinal research design, and originates from a research project Towards a two-speed Finland? (2015–2019). In the data, 40 participants between 50–65 years, comment on the political goal to extend working lives. The results demonstrate that extended working lives is an ambiguous and controversial object of evaluation. The version of the labour market constructed in the accounts of older workers differs significantly from the version constructed in political discourses.

Active Ageing Society and Long-term Care Reform: Through an International Comparative Analysis between Netherlands and Japan

Watanabe, Daisuke

Seikei University
dwatanabe[at]fh.seikei.ac.jp

The aim of the presentation is to examine the relationship between active ageing and long-term care reform in Netherlands and Japan. In Netherlands and Japan, expenditure on Long-term care (LTC) for the elderly is a matter of immediate concern due to rapid demographic ageing. Both LTC policies need serious improvements in order to react increasing expenditure for LTC services, to keep quality of these services, and to improve QOL for the elderly. In the name of active society, the promoting and utilizing elderly volunteers in a local community is focused as one solution of the LTC reform which is decentralization of social support for older people. Based on semi-structured interviews to staffs of care organizations, care professionals, and public officials in 6 cities of Netherlands and Japan. Particularly, I focus on Socialwijk teams (social district team) which does not support what client cannot do but what can do in Netherlands, and on self-organized groups of care prevention in Japan. I would like to show (1) features of long-term care (LTC) policy reform on promoting community-based solutions, and (2) differences of community approaches of care prevention. As the result of my research, socialwijk team in Netherlands positively activate and utilize previous local civil groups for active ageing. In contrast, Japanese practices primarily focus on community building through active ageing. These differences is based on the difference of LTC regimes and historical experiences of volunteering.

RN01_10a | Loneliness in Old Age

Loneliness Across The Life-Course: Preliminary Findings From The BBC Loneliness Experiment

Victor, Christina (1); Barreto, Manuela (2); Richins, Matthew (2); Eccles, Alice (3); Qualter, Pamela (4)

1: Brunel University London, United Kingdom; 2: Exeter University, Exeter, United Kingdom; 3: University of Central Lancashire, Preston, United Kingdom; 4: Manchester University, Manchester, United Kingdom
christina.victor[at]brunel.ac.uk, m.barreto[at]exeter.ac.uk, mtrichins[at]mail.dstl.gov.uk, aeccles1[at]uclan.ac.uk, pamel.qualter[at]manchester.ac.uk

The established representation of loneliness in the UK has been as a social problem of old age with very little exploration about how older adults experienced loneliness in earlier stages of their life-course. We use data from the BBC Loneliness Experiment an on-line survey that took place in Spring 2018 and which had 55,000 responses of whom approximately 13,000 were aged 60+ to explore the issue of loneliness across the life-course. Using a self-rating loneliness scale approximately 28% for those aged 60+ report that they are often/always lonely. When using a novel measure that combines frequency, intensity and duration of loneliness the prevalence decreases to approximately 7% of participants in this category. Responses to questions about which period of their life-course has been the loneliest provided by older adults enables us to put loneliness in later life into a broader life-course perspective rather than seeing it in isolation from the rest of the lives of individuals. We conclude by exploring how perceptions of the positive aspects of loneliness increase with age and how this may be linked with the apparent age-related decrease in loneliness and how these novel findings can generate fresh thinking on the topic of loneliness in later life.

Offline and Online Social Networks and their Impact on Loneliness and Wellbeing among Italian Older People: Results from the “Aging in a Networked Society” Study

Zaccaria, Daniele; Casanova, Georgia; Guaita, Antonio

Golgi Cenci Foundation, Italy
d.zaccaria[at]golgicenci.it, g.casanova[at]golgicenci.it,
a.guaita[at]golgicenci.it

In the last decades the study of older people and social networks has been at the core of gerontology research. The literature underlines the positive health effects of traditional and online social connections and also the social network's positive impact on cognitive performance, mental illness and quality of life. “Aging in a Networked Society” is a randomized controlled study aimed at investigating the causal impact of offline social networks (more traditional and face-to-face social networks) and online social networks (social relationships developed using SNSs) on older people's physical health, cognitive functions and well-being. A social experiment, based on a pre-existing longitudinal study (InveCe study - Brain Aging in Abbiategrasso) has involved 180 older people born from 1935 to 1939 living in Abbiategrasso, a municipality near Milan. We analyse the effects on health and well-being of smartphones and Facebook use (compared to engagement in a more traditional face-to-face activity), exploiting the research potential of four past waves of the InveCe study, which collected information concerning physical, cognitive and mental health using international validate scale, blood samples, genetic markers and information on social networks and socio-demographic characteristics of all participants. Descriptive and multivariate statistical data analysis are performed using Stata version 15. Results show that poor social relations and high level of perceived loneliness (measured by Lubben Scale and UCLA Loneliness scale) affect negatively physical and mental outcomes. We also found that gender and marital status mediate the relationship between loneliness and mental wellbeing, while education has not significant effect. Moreover, trial results underline the causal impact of ICT use (smartphones, internet, social network sites) on self-perceived loneliness and cognitive and physical health.

Older Men At The Margins: Loneliness, Isolation And Help-seeking Experiences Of Men (65+) From Marginalised And Hard-to-reach Groups

Willis, Paul; Vickery, Alex

University of Bristol, United Kingdom
paul.willis[at]bristol.ac.uk, alex.vickery[at]bristol.ac.uk

Social isolation has been flagged as a concern for men in later life and a greater percentage of older men (50+) report moderate to high levels of social isolation in comparison to older women (Beach & Bamford, 2013). In relation to help-seeking, older men are also less likely to report loneliness than older women (Davidson & Rossall, 2014). Despite increasing policy attention on loneliness amongst older populations, there is a dearth of research into men, masculinities and loneliness in later life for men from hard-to-reach groups. In this paper we present findings on older men's views on combating loneliness, based on the OMAM project which is a 2-year study of men's experiences of loneliness and social isolation in later life. Between 2017 and 2018, 111 men (65-95 years) took part in semi-structured interviews from hard-to-reach groups across South-West England: men who are single and living alone in rural and urban areas; gay men who are single and living alone; men with hearing loss; and, men who are caring for significant others. Findings indicate that hegemonic masculine discourses of self-reliance and 'getting on with it' are still present in older men's accounts of loneliness and isolation yet seeking out social engagement and participating in group-interventions can also be perceived as taking action and exercising agency. We discuss how the dimensions of social context, circumstance and gender shape men's experiences of help-seeking, psycho-social barriers to accessing groups and implications for informing provision of community-based services for older men from diverse social backgrounds.

RN01_10b | Age Discrimination

To What Degree Is Ageism Actually Disableism?

van der Horst, Mariska (1); Vickerstaff, Sarah (2)

1: VU Amsterdam, Netherlands; 2: University of Kent, United Kingdom
m.f.j.vanderhorst[at]vu.nl, S.A.Vickerstaff[at]kent.ac.uk

In many countries there is a call for older workers to extend their working lives. Policies to accomplish this include abolishing mandatory retirement age and increasing the state pension age. Ageism has been identified as a possible threat to this policy goal and it has been suggested that ageism needs to be tackled in order to extend the working lives of employees. However, ageism only recently became a popular topic of research and is not yet well understood. In this article we explore to what degree ageism is actually hidden disableism. We conclude that not all ageism is likely to be disableism, but a large part is, with the difference that it is not *actual* impairments, but *expected* impairments that is judged. However, even though we would still expect ageism to affect employment of older workers, without disableism we argue it is unlikely that ageism would be as detrimental to the employment of older workers as it is now. Therefore, it is important for researchers in the field of ageism to learn from knowledge acquired in the field of disableism and for the extending working lives agenda to be aware of disableism as well.

Age Discriminations In Belgium: Has Nothing Changed?

Burnay, Nathalie

University of Namur, Belgium
nathalie.burnay[at]unamur.be

An anti-discrimination law was adopted in Belgium on 25 February 2003. In this new context, protection against discrimination was extended to a set of criteria, including sexual orientation, age, religious or philosophical belief and disability. Despite this new legislation, indirect discrimination (Drury, 1993) continue to affect older workers. In this presentation, we will analyse age discrimination among older workers in the Belgian labour market. Indeed, this presentation will shed light on discrimination related to, in particular, recruitment process. Older workers have difficulty finding a job because of their age, even if age discrimination is strictly prohibited in Belgium. Age is never used explicitly to exclude the worker from employment, but real suspicions suggest that their exclusion from the recruitment process depends on their age. This presentation will be based on a double sample, separated by twenty years. Sample 1: in 1998, 28 semi-directed interviews of unemployed people (45-65 years old) Sample 2: in 2018, 36 semi-directed interviews of temporary workers in agencies (45-67 years old). The results show that age discrimination continues to exist, even if it is illegal. But the social interpretation of the failure has completely changed. In this way, in 1998, if an older worker was not able to find a new job, the social responsibility was collective and structural. In 2018, this failure is above all an individual responsibility. Moreover, the legitimization process has also changed from "you are too old" to "you are too expensive".

The Economics of Labelling People: It's Time to Retire "The Elderly"

Turner, John (1); Hughes, Gerard (2);
Maher, Michelle (3); Chen, Tianhong (4)

1: Pension Policy Center, Washington DC, USA; 2: Trinity College Dublin, Ireland; 3: Maynooth University, Ireland; 4: Guangdong Institute of Public Administration, China
jturner49[at]aol.com, gmacaodh[at]eircom.net,
michelle.maher[at]mu.ie, chentianhong2006[at]163.com

Age-related labels are often used in economics and in common discourse. They can have both positive and negative effects on the people to whom they apply. This paper examines the use of the term "elderly" in economics, other scientific literature, public policy and common discourse. The issue is not solely about terminology, it is also about attitudes toward older persons. While the term elderly was initially introduced as a replacement for the word old, life expectancy and health at older ages has greatly improved while the term has been static as to the age group to which it applies, and thus has become outdated. First, we argue that the term "elderly" is too poorly defined to be used in scientific writing. There is considerable variation currently in its meaning in terms of the age at which being elderly starts. Instead, a better option is to specify the age group being discussed. Second, we argue that the term "elderly" has negative connotations of inability to work and frailty. It reflects negative perceptions of some younger persons toward the older population. It is a term that many in the group to whom it is applied consider to be objectionable because of its negative connotations. The term applied to persons who are participating in the labor market may foster discrimination against those persons. Third, if the term is thought to refer to advanced older age, the common age cut-off of 65 currently is too young. A problem with many systems for naming the older population is that they are static, not having a mechanism for adjusting to improvements in life expectancy. A dynamic rule is needed.

Unfolding Career Trajectories: Dynamics of Ageism in Contemporary Labour Markets

Keskinen, Katri

Tampere University, Finland
katri.keskinen[at]tuni.fi

Keywords: Ageism, Career Trajectories, Age Norms, Decision-Making. Background: Pension systems and social security systems globally are facing a major change with ageing populations. Prolonging working careers has become a widely accepted solution to these challenges; however, many older workers withdraw from the labour force before reaching the set retirement age. This paper examines the unfolding career trajectories after redundancy in former postal workers aged 50-65. Research questions: What are the dynamics of ageism and agency in the labour market decisions? How do age, ageist beliefs and practices influence career trajectories? Methodology: This paper uses qualitative longitudinal data from 40 former Finnish postal workers who were followed for approximately two years after redundancy. The data was collected between 2015-2018, through two waves of face-to-face interviews, and phone interviews between the waves. Discourse analysis is employed to unravel the dynamics of ageism within social constructs from the experiences of redundancy and unemployment the participants shared over time. Preliminary findings: The preliminary findings show that experiences of ageism can be deeply embedded in our age norms and practices. Current age restrictions and legislations consider age in simplistic chronological terms, without taking into account health disparities, which can cause problems to those with low socio-economic status. Conclusions: Chronological age determines widely the choices people have after redundancy, namely access to retirement, re-education and unemployment services. In order to prolong working careers, these age constructs need to be addressed.

RN02 | Sociology of the Arts

RN02_01a | Theoretical Development in Arts Sociology and Cultural Studies

Aesthetic Power and Aesthetic Fields: Theoretical and Conceptual Tools for Integrating the Work of Art into Sociological Analysis

Alexander, Victoria D. (1); Bowler, Anne E. (2)

1: Goldsmiths, University of London, United Kingdom;
2: University of Delaware, United States of America
v.alexander[at]gold.ac.uk, abowler[at]udel.edu

In 1987, Wendy Griswold discussed the importance of “aesthetic power” in sociological studies of art. She suggested that some works are more powerful than others, in their ability to link to “present and pressing” social concerns (p. 1104) and to sustain multiple coherent interpretations along with the capacity to “linger in the mind” and to “enter the canon” (p. 1105). More recently, Jeffrey Alexander (2008; 2012) has developed the concept of “iconicity” in a meaning-centred sociology. J. Alexander’s concept may at first brush seem similar to Griswold’s, but there are important differences. In this paper, we consider the notion of aesthetic power more fully, distinguishing it from iconicity, and integrating it into an aesthetically inflected sociology of art. We focus on a case study of a single work, a carved limestone sculpture entitled *Boxer* by the American artist William Edmondson (1874-1951). This sculpture is notable in that, in 2016, it set a new world-record price for Outsider art sold at auction and established a blue-chip auction market for the field. We analyse the elements of aesthetic power evident in the work and its reception. Our analysis also considers Edmondson’s canonization along with wider debates in the Outsider art world, which we characterize as an “aesthetic field.” We show that a consideration of the work of art itself is necessary for understanding the record-breaking sale of *Boxer*. This underscores the importance, more broadly, of attention to the work of art in arts sociology.

Bourdieu's Political Capital Revisited - Artists' Political Activities in View of the Field Theory

Kirchberg, Volker

Leuphana University of Lueneburg, Germany
kirchberg[at]uni.leuphana.de

In his fundamental text on field theory, Bourdieu (1993) presents artistic success as a product of relations between social positions that are taken actively by artists using their endowed powers of specific symbolic capital (SSC) and other types of capital. This position-taking is caused by the field-internal peer recognition of their artistic works, “but also [by] political acts or pronouncements, manifestos or polemics” (Bourdieu 1993: 30). Although often limited to economic issues, the “force of heteronomy” as a detriment for artistic autonomy can also have political elements; if members of the art field act politically, i.e., intervene in the political field, they might lose their status as autonomous artists (ibid, 51). In this paper I will focus on the significance of gaining or losing artistic symbolic capital (aSC) and political symbolic capital (pSC), neglecting the economic capital (EC) as a force of heteronomy. How much do participatory political activities of artists (and a subsequent gain of political symbolic capital, pSC) increase their artistic symbolic capital, aSC, today? Or is an informal political activity outside the political class detrimental to peer recognition? To test these questions, I will present a three-dimensional model of artistic symbolic capital, political symbolic capital, and political capital. The empirical data are provided by an extensive research project about politically active artists in four cities, Hamburg, Hanover, Jerusalem, and Tel Aviv. The paper also wants to advance the theoretical discussion about field theory in general, and heteronomy of artist (as a barrier in the arts) in particular.

The Impact of Cultural Competencies on the Reception of Visual Art

Lübbe, Holger; Gunnar, Otte; Luisa, Wingerter

Institute of Sociology, Johannes Gutenberg-University Mainz, Germany
Holger.Luebbe[at]uni-mainz.de, gunnar.otte[at]uni-mainz.de, luisa.wingerter[at]uni-mainz.de

It is well established that the consumption of art varies among people with different levels of education and other socio-demographic criteria. Theories of Bourdieu (1977), Berlyne (1974) and Becker (1964) posit that people differ in competencies to understand art and to decode its symbolic meanings. Especially modern and contemporary art may confuse people without a proper art socialization. The mechanisms between cultural competence and art reception are complex though (Daenekindt & Roose 2017). What are the effects of a well-grounded knowledge of the classical art canon? How important is it to know how art is practically produced in terms of colour or composition? Do more cultural competencies of this kind lead to an analytic rather than emotional mode of reception? In most quantitative research, only one, if any, of these constructs is measured in a differentiated way: either a direct measurement of cultural competencies or nuanced indicators of art reception are lacking. In a recent survey of the general population in Germany, we developed measurement instruments for both. We operationalized art reception in two situations: during typical exhibition visits and with regard to a work of art presented in the interview. Building on Bourdieu and Panofsky and guided by standards of competence measurement in international student assessments, we developed a competence test for the visual arts which allows us to investigate the levels of perception, historical context, analysis and interpretation of art works.

The Origins of the Structure of the Modern Art Field in Spain: Understanding Boundaries, Barriers and Belongings

Renau, Vera

Universitat de Barcelona, Spain
verarenau[at]ub.edu

When the Spanish philosopher Marina Garcés asked about which cultural practices we should study in order to work for a better global society, she highlighted one of the keys to understand what could be the implication of the art worlds in recent social transformations in Europe. The global economic and cultural order started developing at least from the beginning of the 19th century with the economic and social revolutions of modernism. In this study we will highlight the importance of studying the origins of the transnational or global taste within the field of fine arts. We consider that understanding the inception of the organization of the modern art world based on the interrelation and tension between countries and diverse cultural models, is fundamental to complete the history of the transnational in the 20th and 21st century. Specific geopolitical centers and diverse expressive languages haven't been considered in studies on global taste. Similarly, we believe that historical perspectives aren't fully present in current studies focusing on contemporary culture, resulting in a marginalization of the comprehension of the past. Therefore, we want to suggest a comparative analysis of the inception and the development of the organization of the modern art system in two geographical centers characterized by varying degrees of influence within the cultural order, which are increasingly interconnected and, above all, hierarchical: Spain and France. Studying the potential origins of the transnational in the art field will help us to understand the possible foundations on which to build an interpretation of the present based on the past. From this, we can draw important observations regarding the genesis of the possible barriers, boundaries or belongings.

RN02_01b | Process of Production, Presentation of Arts

The Social Turn in the Literary Field – Is Sharing Reading Experiences and the Love of Books in Social Media Reshaping the Literary Field?

Linko, Maaria

University of Helsinki
maaria.linko[at]helsinki.fi

The Internet and mobile technology have changed the reading habits everywhere. Literary blogs form a thriving part of contemporary book culture despite newer social media platforms whereas culture sections are shrinking in many quality newspapers (Hellman & Jaakkola 2012; Verboord 2009). Being aware of the power of algorithms, the publishing houses have included many bloggers to their marketing networks. By using netnographic methods, this paper compares the contents, esthetics and style of renown and popular literary blogs in Britain, Sweden and Finland and analyses whether a similar style of mixing personal reading experiences and more analytic book commentary is prevalent in each country. Furthermore, this research aims to find out, how blog posts curated by readers are cited and recycled in other forms of social media. Which genres of books and what kind of authors appear in popular blogs? Is the omnivorous taste pattern or taste preferring high culture (Purhonen & al. 2011; Peterson 1996) prevalent in literary blogs? In which cases are non-fiction books discussed in blogs or in other social media forms? Furthermore, by interviewing popular bloggers, the research aims also to find out, whether the bloggers motivations are related to enhancing their professional career as actors in a reputation market (Pierre Bourdieu 1984). Blogs and Bookstagram posts are also interpreted as part of a social turn in reading. Do they manage to fulfill a sense of belonging to a reading community? Could blogs or other forms of social media increase the popularity of books and reading? This paper is a preliminary report on an ongoing research and is planned to be a part of a broader research on social turn in reading.

The Legitimation of Art Photography in Italy

Zaffaroni, Lorenzo Giuseppe

Catholic University of the Sacred Heart, Milan, Italy
lorenzogiuseppe.zaffaroni[at]unicatt.it

Legitimacy, status and the establishment of genres are of utmost importance in fields of cultural production. Yet, research on the subject has not systematically focused on marginalised domains of cultural production within the globalised contemporary art system. Using the field of art

photography in Italy as a case study and drawing on a PhD research project, the paper examines the processes of legitimation, classification and status formation in a peripheral art world. Historically, art photography in Italy has failed to gain the status of a legitimate art form due to field-specific dynamics which fail to reproduce success stories of the same field in other EU countries. From a theoretical standpoint, studying peripheral art worlds – occupying a less market-oriented position, and less endowed with institutional resources – allows to challenge orthodox interpretations and fundamental oppositions in the sociology of cultural production. By combining different fields of investigation, namely the sociology of art with the sociology of organizations and market of cultural products, we articulate a theoretical framework that aims to challenge mainstream approaches in the sociology of artistic fields. We will present the salient analytic categories emerging from qualitative interviews to photographers, art critics, curators and gallerists conducted in 2019 and, in this way, we will demonstrate that a combination of analytical approaches is more appropriate for theoretical development than the adoption of a discipline-specific perspective. This ultimately allows to treat art photography as a distinctive field while enabling comparisons with other domains of research.

Masterpieces of Visual Art - A Survey

Puşcaşiu, Voica

"Babeş-Bolyai" University, Romania
voicapuscasiu[at]gmail.com

Masterpieces, artworks distinguished among others, have been studied from numerous points of view in order to try to determine a common denominator in an otherwise notoriously heterogeneous group. And while the specific set of characteristics is still largely debatable – does it have to do with aesthetics, or craftsmanship, or is it more a question of ‘marketing’ – one thing is certain: In order to be considered a masterpiece, a work must be first be called as such and this label must stick. Thus a survey was designed to find out what people tend to name masterpieces. Besides the rather common questions related to age, gender, and occupation, the form asked the respondents to name 3-7 works of visual art that they consider as being masterpieces, operating on the dictionary definition of the word. The open-ended question also required that they mark the artworks which they have experienced live in order to hopefully add another layer of understanding to the mechanism behind their choices. This survey was aimed exclusively towards members of the art world, mainly those based in Cluj-Napoca, Romania. It is still a work in progress, but with over 200 responses from both professionals in various artistic fields, and from Fine Arts and Art History students, it is already shaping up to be quite revealing regarding the biases generated by a particular cultural sphere and educational environment. Ultimately it would be interesting to expand the targeted area as well as to include different categories of respondents and observe changes or constants.

Discursive Infection, Incubation and Delirium in Life Stories on Becoming an Artist

Szenajch, Piotr

Polish Academy of Sciences, Poland
piotrszenajch[at]gmail.com

Modernist street art decorating a youth festival in the ruins of 1950s' Warsaw, Salvador Dali's performance in communist public TV in the 1970s, or an album on hyperrealist painting, owned by an older sister involved in punk since a spell of seasonal labour in the 1980s' UK. These are examples of an electrifying first encounter with contemporary art in early childhood, still vividly remembered, emotionally recounted by my interviewees and reconstructed today as significant turning points in their lives. This paper will be based on a research project, that resulted in a sociography of becoming a renowned visual artist, based on autobiographical narrative interviews with key figures of the Polish art world. The virological metaphors in the title are theoretical proposals grounded in the material, put forth in order to describe processual narrative structures recurring in the interviews. The first encounter deeply influenced the lives of my interviewees, reoriented them towards new interests, practices, and role models, in a process that eventually led them to pursue artistic education and intensive artistic production. These early stages of entanglement with modern art seem particularly interesting in the case of my interviewees, who came from working class, peripheral, rural or small-city backgrounds, lacking the mixture of capitals associated with choosing an artistic career. The discursive infection and incubation will be described as a reconfiguration of the budding processes of subjectivation – an interpretation inspired by Deleuzoguattarian rhizomatic ontology, actor-network theory, and the debate on embodiment, from Foucault, Bourdieu and Butler to corporeal feminism and new materialism.

2018, I show how the most important institution for collecting and exhibiting fine art navigates in a complex landscape of artists, academics, cultural politics, visitors, media, and private sponsors – each with particular interests in the museum. To understand multiple and partially contradicting practices of museums, I argue for reconstructing the museums' perspective in form of a cognitive map of these dynamic organizational ecologies. My study refers to concepts of “conflicting pressures” (V. Alexander) and “tension of missions” (V. Zolberg) in modern museums of art. I critically add nuanced insights into museum's strategies for maintaining aesthetic and professional evaluative criteria for fine arts (P. Bourdieu, N. Luhmann) in times of neoliberalization, “instrumentalisation” and “commodification” (C. Gray), or contamination of the art world by “hostile worlds” (O. Velthuis) through particularistic market interests or an indicator-driven bureaucracy. My research design is based on constructivist organizational theory (K. Weick, N. Luhmann) and applies sociological concepts regarding (e)valuations (M. Lamont), comparisons (B. Heintz), and quantification (T. Porter). My findings show how museums gather, process and communicate different data in different form (language, numbers, visualizations) to meet own professional goals as well as external demands by different environments. I argue that these strategies are shaped by organizational constructions of these environments, which allow following professional art world logics without sacrificing the museum's cultural mission for economic or political profits.

Seeing like a Museum. Art Museums' Cognitive Map of Organizational Ecologies and Conflicting Institutional Goals

Buckermann, Paul

University of Lucerne, Switzerland
paul.buckermann[at]unilu.ch

How do public art museums meet multiple demands in times of a globalized art world, neoliberal cultural politics, and heterogenic audiences? Based on interviews with high-ranking museum professionals in Germany and Austria from 2015-

Meditated Seeing: Taking Photographs of Artworks in Art Museums

Lee, Chien

Goldsmiths, University of London, United Kingdom
chienofjune[at]gmail.com

Photographic recording has fabricated contemporary experience—everyday and extraordinary. When brought into the art museum space, this photographic perception challenges the institution which historically has attempted to keep popular forms of seeing outside its doors. How do art museums now accommodate both types of seeing—the photographic and the direct? How does the performance of the first type configure the visitor's encounter with the artwork? Visitor photography is treated in this research as a potentially destabilising factor which re-shapes both the art museum as an experiential space and the visitor's relations with the exhibited artwork. To explore this topic, ethnographic observation at four London-based art museums and galleries—complemented by that made in other museums in various cities and countries—and interviewing with both museum professionals—curators, educators, visitor experience managers, and invigilators—as well as visitors were conducted. On the one hand, while the curatorial plans still do not usually take the photographic seeing into consideration, visitors' demand for picture-taking is acknowledged by many art museums by loosening their photography policies. Visitor photography is thus gradually normalised. On the other hand, picture-taking—by occupying more of the attention and time of visitors and thus replacing to some degree direct-seeing—can be seen as a popularly performed ritual through which visitors establish their connection with the artworks and the museums. It is suggested that this altered dynamic between art museums, artworks, and visitors requires art museums to rethink exhibitionary design and their roles as art mediators.

“Artists’ Exhibitions”: The Museum Exhibition as Medium for Contemporary Art Practice

Buț, Ana-Georgiana

"Babeș-Bolyai" University Cluj-Napoca, Romania
georgianabut[at]gmail.com

This paper explores contemporary artists' engagement with museums, as both subject and medium of their practice, focusing on exhibitions that take shape as the result of artists' interventions within the museum. Referred to as “paramuseums” (Nora Sternfeld, 2017), “museum interventions” (James Putnam, 2009), “artworks” (Fred Wilson, 1994) or “artist’s museums” (Harald Szeemann, 1972), these practices should be understood within the context of the blurring of boundaries between artistic and curatorial practice and the phenomenon of the artist-curator. Moreover, they are rooted in the 1970s trend of artist's personal museums, and institutional critique. Drawing on recent theorization of the aesthetic medium in contemporary art practice – Rosalind

Krauss's reconception of the medium as paradigm (2011), Juliane Rebentisch's concept of “intermediality” (2003) and Thierry de Duve's concept of “multimediality” (1993) – we analyze the conditions under which museum exhibitions are considered artworks, and the museum, a medium in itself. We advance the exhibition apparatus and the museological methodology (the process of selection, design, display, arrangement, presentation, classification, hierarchization, labelling) as support, both material and as a paradigm or logic, in the artistic practice of Marcel Broodthaers.

At The Intersection Of Spatial And Conceptual Change. A Case Study Of The Amos Rex Museum Project

Alatalo, Aino Iiris Elena

Tampere University, Finland
aino.alatalo[at]tuni.com

Tracing the museum project of Amos Rex, the newly inaugurated art museum in the city centre of Helsinki, this paper offers a spatially driven theoretical perspective of how to examine processes of change in art organisations and more generally in art worlds. The Amos Rex project produced not only a new museum building, but brought along with it also a renewed museum concept. It expanded the former emphasis on experimental contemporary art of its predecessor, Amos Anderson Museum, to cover “visual culture” in all its multitude. The paper focuses on this dual process: how the space and the conceptual renewal of the museum intertwined and mediated each other during the project. The paper draws on the recent discussions of imagined futures: the impact that imagining possible future scenarios have for orienting our actions in the present (Mische 2009; 2014; Eliasoph & Tavory 2013; Beckert 2016; Tavory 2018). Following Ann Mische (2014) I approach the museum project as “a site of hyper-projectivity” – as an arena of “heightened, future-oriented public debate”. As such it presents future aspirations in an explicit and conscious form. The study demonstrates how in the project these very ideas about future operations are developed in relation to the ideas about space, location and different materialities. In this sense, the building is not only an empty platform, but also an active counterpart on re-thinking the museum conceptually. The case study is based on expert interviews, media articles and documents.

RN02_02b | Cultural Policy and Cultural Participation

Older Audiences and Cultural Policy

Zembylas, Tasos (1); Gallistl, Vera (2)

1: University of Music and Performing Arts Vienna, Austria; 2: University of Vienna, Austria
zembylas[at]mdw.ac.at, vera.maria.gallistl[at]univie.ac.at

Older audiences – 24% of the Austrian population is 60+ years old – occupy a rather marginalised position in the discourse of arts and culture. Many cultural policy programmes emphasise the cultural education of children and young people – which is worthy of support – but they seem to ignore the large group of older people. We worked on a research project (2016-2018) with the first intention being to explore the field: Who provides cultural educational offers that are consciously aimed at older people? And, what are the implicit images of ageing that are put forward by those offers? The second aim was to closely analyse some selected cultural offers to deepen our understanding of internal and external barriers as well as of the factors that inhibit inclusive policies in arts organisations. The third aim was to formulate some recommendations for the Austrian cultural policy authorities to improve the quantity and quality of cultural educational offers for older participants. The methodical approach combined an online survey to identify relevant providers and networks, and 6 case studies, which included field observations, expert interviews, quantitative questionnaires and episodic interviews with participants. The criteria for the selection of the 6 case studies related to the inclusion of different art forms (e.g. theatre, visual arts, dance, singing, poetry slam), by different organisations (public and private organisations, cultural and other educational organisations) from various Austrian regions. In the conference we would like to present and discuss the main results of this empirical project.

How Mega-Galleries Transform The Art World – Monopoly And Its Consequences

Anastasiu, Iolanda-Georgiana

Babeş-Bolyai University, Cluj-Napoca, Romania
iolandaanastasiu[at]yahoo.com

The main issue I address in my study is that of the ever-growing phenomenon of small or emerging galleries that are closing because of the uncontrollable expansion of mega-galleries which have a great influence in the contemporary art world. In order to illustrate this process that led to a monopoly of mega-galleries in the art world I will be analyzing their structure and functioning mechanisms in relation to the contemporary art market. I consider the art market to be a defining feature in the understanding of this issue, given the fact that the market is an integrated part of the art world. Starting from Arthur Danto's approach that sees the art world as a network of conventions, as well as from Hans Abbing's perspective that

defines the value in art as being socially-determined, the present study will address some fundamental questions: What are the organization policies of mega-galleries? How did they manage to reach a monopoly in the art world and how is their expansion related to recent transformations in the global social-economic system? What solutions would there be for small galleries to develop and to continue existing in a context dominated by mega-galleries? For a proper analysis of the methods specific to mega-galleries and for an investigation of the possibilities that emerging galleries can have in the context of the contemporary art world, I will focus on a case study involving three mega-galleries with great cultural and economic capital: Gagosian, Pace and Hauser & Wirth.

Site Under Construction: The Reshaping of Hong Kong Culture After 1997

Zhang, Marco, Zexun

Queen's University Belfast, United Kingdom
zzhang27[at]qub.ac.uk

The proposed project is focusing on studying Hong Kong government's cultural policy after the hand-over in 1997, which will compare past cultural policy in colonisation area and the intervention from Chinese central government in a globalization context. I will take West Kowloon Cultural District (WKCD), which is a Government-led urban regeneration cultural project, to exam the authority's intention and ambition to construct the territory into cultural hub in greater Asia that is also a commend trend to reveal policy mobility from Europe to the others. This suddenly cultured policy from the government provokes questions concerning its role in achieving status and visible cultural capital among current global phenomenon – the emergence of 'global cities of the arts' or the now global aspiration among major cities to be a 'Capital of Culture'. By examining the Hong Kong's cultural policy after 1997, the thesis intends to discuss the local government's intention to inculcate a specific cultural taste as constructing certain habitus (Pierre Bourdieu). Moreover, by drawing upon Marxist's formulation of Ideology and Cultural Hegemony, the thesis will create a framework of analysis how the central government intervenes in building local identity through culture projects after long-term absent in colonial period. Overall, I argue that the Hong Kong culture is an extension of Lingnan Culture (Cantonese culture) that originated from Southern China. The operation of construction and administration of WKCD should handle to Hong Kong cultural experts, rather than adopting western mode or tangling with bureaucracy. And the cultural projects should genuinely response to the needs from all social classes.

Towards Social Prescribing – Do Arts Come For Free?

Procter, Simon

Nordoff Robbins, United Kingdom
simon.procter[at]nordoff-robbins.org.uk

The recent move in the UK towards “social prescribing” has highlighted the role that health policy makers consider the arts able to play in addressing contemporary concerns around healthy lifestyles. At the same time, however, health policy is constructed around an assumption that arts come at no cost. Recently announced funding for social prescribing is to be used to employ people who will refer NHS patients to the arts, not into funding the arts activities to which they are referred. This presentation asks what an appropriate sociologically-informed response might be – not only from formal agencies such as Arts Council England, the Arts Council of Wales and Creative Scotland, but also from grassroots arts organisations and other providers which have long been endeavouring to involve in their work people who might otherwise be excluded from cultural activity, but who (for the very same reasons) might most stand to benefit from it. Whilst there are frequent attempts to justify funding of such activities on the basis of health economics, there is also a parallel track of social justification which draws on strands such as rights to culture, social capital and empowerment. There is also controversy within arts providers as to what the role of “professionals” should be. What does sociology have to offer here?

RN02_03a | Arts Management

Rethinking the Relationship of Management and Arts Management

Fang, Hua

Shanghai Conservatory of Music, China, People's Republic of
hifanghua[at]163.com

Arts Management usually be think as a subdiscipline of Management, this view has aroused different discussions about the relationship of these two fields. Some scholars and practitioners use the management tools into arts management teaching and practice. Meanwhile, some others believed there have obviously different features comparing the activities of arts management with activities of general management. Following the changes of network world has brought, management activities have to do some changes together, so it can response to the new environment. These changes happened in different management aspects. Some scholars of management believed these changes have led to thorough innovation in management field. Changes which happened in management field also bring an opportunity to arts management field, it will let the scholars and practitioners rethinking the relationship of two fields. Through analyzing some literatures and some interviews in this paper, I wish to present the relationship of two disciplines, and meanwhile

comparing common and different features in them. The following four questions are the main points of discussions. 1. What kinds of relationship between management discipline and arts management discipline? 2. What kinds of same and different features are affecting these two field? (Cross-disciplinary influence, the problems happened in education, methods of research) 3. What kinds of new trends in management? 4. What kinds of challenge that arts management field should think?

Social Boundaries and Exclusion in the Arts

Abbing, Hans

Erasmus University of Rotterdam, Netherlands, The
hansabbing[at]gmail.com

Symbolic boundaries in the arts become less important. But the social boundaries, which (potential) consumers and artists from various social groups face, remain important. This applies strongest to the established arts. In my presentation I discuss several mechanisms of exclusion in the established as well as popular arts and explain why they differ. An example is that of a combination of subsidies and vested interests, which largely explains why the formal and informal barriers, which keep larger social groups and younger people from participating in classical/serious music concerts, are still high. Subsidies plus vested interests also slow down innovation and the application of new techniques which could have led to new attractive music and lower barriers. Another example: Being artists is primarily a self-declared state, but recognition makes a difference. In the established arts with the help of public support the barriers which artists face to become recognized are differently “organized” than in the popular arts. I will show that in the first, more than in the latter this reduces, the chances of less well-educated and non-white artists to become a recognized artist with voice; that is somebody who artistically expresses him/herself and expresses the problems and needs of the own social group, and is heard. I will discuss more mechanisms of social exclusion. (The presentation is based on parts of my forthcoming book *The social economy of art; are the arts becoming less exclusive?*)

Cultural Management As Instrument Of Regeneration In Rural Areas: An Example From The Southern Periphery Of Europe

Kolokytha, Olga

University of Vienna, Austria
olga.kolokytha[at]univie.ac.at

The long-term goal to regenerate a rural area combined with a lack of systematic institutional support of culture and the need of the citizens to experience cultural activities, has led to the Giortes Rokkas (Rokkas festivities) initiative in Crete in 2013. The Festival is organized by approximately 40 citizens of two small villages in the inland of the western part of Crete in Greece and its vision is "The restoration of a viable framework for inland communities through the practices of cultural management" (<http://giortesrokkas.gr/en/about/>). The initiative has developed into a cultural institution attracting national audiences and has so far reached around 20.000 people through its various activities. The Festival involves the citizens throughout the culture-management and making process, developing relationships between inhabitants and strengthening the sense of community. Local inhabitants are active in the cultural production as well as the cultural management process, organizing events which they might have never attended themselves as an audience, but acknowledging the importance and power of them as tools to reshape community relations and raise awareness of the area and the region. This paper is based on empirical research and policy analysis using Giortes Rokkas as a case study; it looks into the conditions that shape the cultural life of rural areas in the border of Europe in the 21st century and investigates the role of cultural management as a tool to 1. restore and develop regional and community frameworks; 2. create a sense of belonging and social inclusion in small communities.

RN02_03b | Artists and Audiences

Richard Sennett and the Jewish Ghetto in Venice: for a Socio-Literary Interpretation of Cultural Displacement

Lombardinilo, Andrea

Gabriele d'Annunzio University, Chieti-Pescara (Italy), Italy
andrea.lombardinilo[at]unich.it

This proposal aims to further investigate the relationship between power, conflict and displacement developed by Richard Sennett in the first part of his volume "The Foreigner: Two Essays on Exile" (2011). The purpose is to focus on the literary references (Shakespeare and Castiglione among others) chosen by Sennett to snapshot the instable balances determining the cohabitation with the Jewish community in Renaissance Venice. The particular social and cultural scenario marking life in Venice allows Sennett to dwell on the contingent tensions begot by the presence of the Jewish community. To the fore is a clever reflection on the condition of exiled people in a foreign land, to the extent that this issue implies a reflection on the rights of citizenship and principle of tolerance at the dawn of our modernity. The practice of power may foster the confliction between justice and violence, as Sennett emphasizes in reference to the pogrom which afflicted the Jewish in 1627. This means the precariousness of the exile people, subdued to the unfathomable action of justice and the sudden manifestations of violence. Hence follows the reference to Shakespeare's play "The Merchant of Venice" that Sennett viewed as representing the centrality of the unwritten word in commercial affairs at the time of old Dukes. The role of trust among people and the communicative dimension highlighted by Sennett in reference to "the legitimation and protection of words in themselves" preludes to the social learning of Shakespearian work, so much needed in the quest for understanding of our post-modern complexity: "the connection between freedom of speech and sanctity of contract. This economic freedom derives from freedom of speech".

The Connection Of The Everyday Objects With The Reproduction Of Art- Working on Armenian Visual Culture Through Mahreç Arthouse, Istanbul

Berktaş, Esin

Beykent University, Turkey
ebpostaadresif[at]gmail.com

Karl Marx argues that the economic mode of production i.e. infrastructure determines the culture of each society called superstructure. This life circle represents the production, reproduction, and transmission of the culture. As a special case, Urartian people created one of the most important civilizations of Eastern Anatolia. For Urartian people, visual ornamentations over jewelry and daily objects were depicting their public life, private memories, rulers, beliefs, ideas, hopes, emotions, desires, gestures, wars, holy icons, rituals etc. Urartian culture has been inherited by Armenian people who maintained this visual language over this background. Coming today, Istanbul, as we all know, is very famous with its historical accumulation in museums, galleries, antique shops, private institutions, and collections etc. One of the most important places of this archive is Grand Bazaar. Within this economic arena and having a close relationship with the art scene, Mahreç Arthouse in Istanbul is a private Armenian art school specialized on the design and production of jewelry. If we look at the organizational structure of this art school as “a big atelier” we can confront different memorial objects including historical equipment, visual materials, examples of products etc. In fact, these materials compose “the timeless, spaceless, traditional” cultural infrastructure upon which a contemporary understanding of jewelry design has been constructed. These valuable objects are very important to keep the social as well as the political identity of different social groups alive. In fact, these old objects symbolizing the social status and economic class of the owner, protect the aura of the “genuine, old, original and real” from unstoppable, faceless transformation created by the capitalist mode of production and capitalist lifestyle in modern times.

Is this even Theatre? Investigating Audiences of Contemporary Theatre and Performance

Gemini, Laura (1); Brilli, Stefano (2)

1: University of Urbino Carlo Bo, Italy; 2: IUAV University Venice, Italy
laura.gemini[at]uniurb.it, sbrilli[at]iuav.it

Despite the growing interest in the study of theatre audiences over the last three decades (Bennett 1990; Reason & Sedgman 2015; Sauter 2010), little attention has been paid to the impact that different theatrical genres have on audience behaviours and experiences. Most often, similarities between classical, modern and contemporary theatre audiences have been assumed rather than addressed by empirical research, disregarding the aesthetic, productive, distributive and relational specificities of the field of contemporary experimental theatre. This paper presents a study on the Italian audiences of contemporary theatre that aims to 1) provide a preliminary profiling of such audiences, 2) investigate how spectators construct the field of the “contemporary” and the difference in terms of experience with other performing arts fields, 3) how contemporary theatre spectatorship relates with other types of media spectatorships. The methodology employed in this study comprises a survey (n= 1039) realized in the most prominent Italian contemporary theatre festivals, 15 semi-structured interviews and four focus groups with young attendees. In all these phases the differences between “frequenters of contemporary and experimental theatre,” “non-frequenters” and “spectators uncertain about the attribution” is addressed, in order to describe attitudes, motivations and attending behaviours by the different degrees of affection and competence towards this specific cultural sector. Although the investigated audiences present very heterogeneous features, they show a strong willing to accept the challenges of artistic innovation, they have an omnivorous media consumption routine and an appreciation for contemporary art, music and cinema generally stronger than that for more classical theatre forms.

From Art Museums to Galleries: the Role of Art Institutions in the Czech Republic through the eyes of their Audience

Grigar, Ewa (1,2)

1: Charles University Faculty of Arts, Czech Republic; 2: North Carolina State University (Prague center)
egrigar[at]yahoo.com

While more than two decades ago the sociologist Vera Zolberg noted that many studies have been suggesting the advent of new audiences to be one of the main common motors of change in artistic practice, it seems that many art institutions still face many struggles with creating a better relationship between their status as art educational facilities and their visiting audience. Based on the empirical research study involving the collection of over 500 surveys conducted in ten different art museums and galleries in the city of Prague (over the period of two years), the case of the Czech Republic appears to be not an isolated one. The visitors participating in the survey and representing different generations, raise equal concern over scarcity of art history education and equal access to contemporary and historical art objects at their visiting premise. Furthermore, the presentation of art works in the museum/gallery space, oftentimes does not evoke desired expectations of their curators, hence weakens the propensity for effective perception. Indeed, the aim of my presentation is to examine and unveil the (un)educational character of the Czech art museums and galleries as seen by their audience differentiated by age, education, and social class, among other other factors. Additionally, the opinions of interviewees relating to permanent and temporary exhibitions being visited, can offer better guidance to art institutions when making choices over subject, content, and display, to more effectively serve their institutional role as a facilitator in providing truly public education.

RN02_04a | The Aesthetic Experience in Everyday Life

Participatory Art Production - Invested Attempts of Equality and Horizontality

Jonvik, Merete

NORCE - Norwegian Research Centre, Norway
mejo[at]norceresearch.no

This article departs from a participatory art project where the participants were a group of children and a professional artist. The project was both an artistic one, aiming at creating an artwork together, and a research project, driven by the urge to explore invested attempts of equality and horizontality in art production. The artist deliberately tried to create a flat structure and an open creative space through strategies of

“un-hosting” (Patricia Reed 2008), and the children responded to these in a number of individual ways. With the use of participant observation and qualitative interviews, the socio-material process of creating art is explored. Through in-depth analysis of both the participatory strategies from the children and the artist, and the actual art work they created, and with reference to theoretical perspectives provided by Rachel Anderson (2010), Claire Bishop (2004; 2012), Shannon Jackson (2011) and Eduardo de la Fuente (2007), the article discusses topics such as authority and horizontality, situational understandings, negotiation strategies and definitional power in art production. The article asks: Is the goal of equality and horizontality between adults and children in art production utopian? Who mimics whom in a flat structure, and what learning potential does it entail? How can we evaluate socially oriented participatory art projects?

The Models Of Contemporary Works Of Art Conveyed By The Dialectic Between Symbolic-Artistic Forms And Society

Faloni, Valentina

Sapienza University of Rome, Italy
valentina.faloni[at]uniroma1.it

The paper investigates the dialectical relationship between symbolic-artistic forms and society. The study aims to reconstruct the narrative models of the imaginaries conveyed by the works of art through the hermeneutic and sociological analysis of the interpretations of the users, compared to the narratives of the stakeholders of the artistic universe (Artistic Directors, Critics and Art Historians, Curators, Art Dealers, Artists). The research aims to answer the questions: How contemporary art interprets complex social themes and if it can be considered a form of "storytelling" of the present about themes of fear's perception, insecurity, uncertainty and identity fragmentation. The survey work presents a multidisciplinary scientific reconstruction and an empirical research. The case study is the Venice Biennial of Art 2019, where have been selected a corpus of contemporary works of art on show.

Cultural Logics in the World of Classical Ballet

Røyseng, Sigrid

Norwegian Academy of Music, Norway
sigrid.royseng[at]nmh.no

The aim of this paper is to provide knowledge of the cultural repertoires of the world of classical ballet by asking the following questions: 1) What are the main cultural logics available in the world of classical ballet? 2) How are the different cultural logics of the world of classical ballet related to each other in a social democratic context? Previous research has indicated that the hierarchical and authoritarian aspect of the tradition of classical ballet is under reform. Working methods and structures with a more human and democratic foundation has been evolving for a couple of decades. This paper will analyze how a traditional and modern cultural logic seem to be co-existing in the daily life of a ballet company. The paper will illustrate how the relation between the two cultural logics can be characterized as a relation of ambivalence due to some important dimensions of the specific work. First, classical ballet companies work very concretely in the cross-roads between national and international contexts. Second, classical ballet is a craft that is learned by practicing together with ballet masters that have the status of being legendary dancers and/or tradition bearers for canonized ballet repertoire. The paper is based on a case study of the Norwegian National Ballet in the period from September 2016 to November 2017. The material consists of field observations, 27 semi-structured interviews covering and documents.

Avantgarde or Pop - On the Relation of Sensual Perception and Discursive Situatedness of Pop Cultural Practices in the Arts

Schäfer, Franka

FernUniversität in Hagen, Germany
franka.schaefer[at]fernuni-hagen.de

That art as well as popmusic performance is heard, seen, smelled, tasted and perceived different according to time, space and physical conditions - that is an experience everyone has made joyfully or sorely once. Popular music performance often becomes art or remains business because of what consumers know about it. As sociological research object it demands innovating ways of analysis on the ground of a practice based sociology of popular culture, because of its steady transformation by popularization of "the New". The talk takes practices of perceiving on the border of artistic and commercial music into account and ask about when the output of artificial practices in interaction of the senses of perceiving generate art. The example of an accompanying research project during the exhibition "Komm nach Hagen, mach dein Glück" at the Osthausmuseum in Hagen Germany about the new german wave, brings answers. NGW consisted of different arts and accumulated in cities like Düsseldorf affected by euys or Hagen affected by music-, avantgardist and aesthetic

practices by Wolfgang Luthe, Ideal or Extrabreit. The oscillation between artificial and popular music is caused by affecting socialized bodies within performances and disturbing traditional schemes of perception of pop and art. With the help of poststructural concepts I will pre-sent practices of perceiving as conditions of popular culture on the boarder of becoming art and compare avantgardistic practices with popcultural practices during different events, to define the conditions of art in the field of popular music.

RN02_04b | Culture and Public Memory

Beyond Europe: Belonging and Repair in Visual Culture and Public Memory

Quadraro, Michaela; Tota, Anna Lisa

University of Rome III, Italy
michaelaquadraro[at]libero.it, annalisa.tota[at]uniroma3.it

Our contribution refers to the connection between photography and memory, with a particular focus on the images associated to traumatic events. Our theoretical questions address the nature, the role, and the function of the photographic representation of a traumatic event: a picture is considered as a "condenser", a container of a particular part of the reality, and a conveyer of meanings in the public arena. In particular, we wish to stress the efficacy of the arts and their implications for questions of belonging and controversial pasts. In our view, this places the sociology of the arts on the forefront of the study of culture, providing a framework for the investigation of more general implications and human variables. Our investigation will focus on contemporary art works that speak of a past that cannot be forgotten and wounds that cannot be fully healed, but still demand recognition in European history or, we could say, an alternative form of "repair". Indeed, an act of repair always brings to the fore an open-ended process of transformation, particularly when it involves experiences of communal trauma. For example, in the provocative work of the Berlin-based French-Algerian artist Kader Attia, the attention is drawn on European colonialisms and wars, damaged bodies, and repaired objects. Here, the artist brings us into a decomposed and alternative archive, which is not a monument of the past, but an aspiration for alternative futures and ethico-aesthetic forms of repair.

The Social Construction Of Artistic Judgement: An ethnography of a theater rehearsal

Muntanyola-Saura, Dafne

Universitat Autònoma de Barcelona, Catalunya, Spain
dafne.muntanyola[at]uab.cat

How can we understand artistic judgement sociologically? Theater or dance rehearsals arise from the multitude of small decisions made by participants. A play is an intentional and intersubjective product, which emerges when there is a shared knowledge in which "all-participants-know-they-all-know-what-they-know" (D'Andrade, 1995). Moreover, for ethnomethodology every judgment follows rules of interaction in context (Cicourel, 2002, Lieberman, 2013, Schwarz, 2013, DeNora, 2014, Fele, 2016). Artistic judgements happen in an institutional environment and in a specific geographical context. Thus, we need to start from an observation of the concrete, following Simmel (1903). We intend to understand a certain dimension of the artistic decision process, the shared attention of the participants of an essay. Specifically, we define synchronously the intersubjective meanings that go hand in hand with a sense of mutual orientation and collective action; and we analyze diachronically the multimodal communication that goes towards consensus or dissent. Methodologically, we started an ethnographic observation of the physical theater company La Fura dels Baus, which we analyzed through a conversational analysis and ELAN qualitative video analysis program. The results show that if art provides a field for innovation and new possibilities of meaning, it is thanks to (and not in spite of) a particular form of selective (dis) attention.

Constructing Collective Memory through Choral Singing in Fukushima

Miyamoto, Naomi

Ritsumeikan University, Japan
nmiya[at]sd5.so-net.ne.jp

This presentation will argue that a collective memory of a region can be made through choral singing practice, taking the example of the case of Fukushima in Japan. Fukushima prefecture is famous for eager participation in choral activities and is known as "the kingdom of chorus" in Japan. People in this area have reconstructed their homeland and cultural life after World War II through chorus. Eight amateurs first formed the "FMC Choral Group" in 1947, and they sang Western art music and Christian music, which have no relationship to this region. Since then, choral singing has quickly spread among various adult circles and school activities, so both young and old residents are involved in chorus. The daily choral activities in Fukushima constructed a community image among its inhabitants. In addition, after the Great East Japan Earthquake of 2011, choral singing activities in Fukushima played an important role in overcoming the disaster and ascribing a collective memory of the landscape. Such activity led to cultural exchange with foreign countries. In this area, chorus was always the essential element to recovering from the

devastation of the war and the earthquake. Each time disaster strikes, people reconfirm their common image of their homeland. I will examine the constant choral activities in terms of Alfred Schutz's argument in "Making Music Together" and Maurice Halbwachs' collective memory theory.

Reimagining African Cultural Heritage in Lisboa Through Collaborative Projects

Gomes, Rui Telmo

Instituto Universitário de Lisboa (ISCTE-IUL), Centro de Investigação e Estudos de Sociologia (CIES-IUL), Portugal
rui_telmo_gomes[at]iscte-iul.pt

As part of an ongoing ethnographic research on community art, a case study will be presented of a local association on the periphery of Lisbon and two of its recent projects to promote African cultural heritage. "Danced fado" involve dance workshops and public performances of a historical variant of the musical genre, now less known or even forgotten, quite different from the Lisbon urban song identified with the renowned 'fado' tradition. This project originates from a collective journey of researching and reinventing African cultural references, involving professional and amateur artists, while crossing different cultural repertoires associated with the origins of 'fado' (in particular Arab and Brazilian influences). The work process includes research of historical documentary sources, as well as the mix of traditional and contemporary artistic languages. "African Lisbon - Guided Tour" maps relevant cultural monuments and symbolic places from oral tradition, highlighting spaces of remembrance of African presence in Lisbon. The project is based on academic research and represents different partnerships and new challenges for the association, including a greater public awareness for its cultural and social work. Both projects entail partnerships that may open new horizons in the future. Crucial to this is the ability to establish collaborative networks with artists and academics, as well as public and private institutions. In short, these projects are part of the strategy of sustainability and activism in the urban space that the association has been looking for.

RN02_05 | Barriers and Opportunities in the Arts

Liberator For The Oppressed, Or A Useful Tool For The Dictatorship? Analysing Controversial Art Projects In North Korea, In Light Of Goffman

Hagen, Målfrid Irene

MI Hagen, Norway
moliren[at]online.no

In his theory on performance and reality, Erwin Goffman (1959) describes two kinds of extremes, sincerity and cynism. In this paper I discuss a series of controversial art projects conducted by a Norwegian artist in North Korea & Norway between 2013-2017. I analyse how the artist present the projects, as well as how they are debated in the media, in light of Goffman. The projects involve North Korean performers and audience, including many youths and children. A reason for examining this case, is also that the Arts Council Norway supported the projects economically with a great amount of money. In particular, I look at how the artist and the Arts Council defend the project in the media, in order to legitimate the costs and make the art project that appear unethical to many people, as expressed in the media debates, appear ethical. The artist claim that the projects are for the best of the North Korean participants. However, many of his statements to the media reveal another attitude to the projects, which is also in accordance with the theory of Goffman.

Barriers and Opportunities in Culture - Access to Art in Europe

Feder, Tal

Tel Aviv University, Israel
talfeder[at]gmail.com

Access to art is considered a basic human right, but it is unequally distributed in society, since barriers to consumption appear in various forms and different contexts. Discrepancies in access to art between social groups generate differences in levels and manners of engagement with art which are referred to as 'cultural inequality.' A central goal of most arts policies is the promotion of access to art and 'cultural justice'. This paper explores access to art, cultural equality and cultural justice in Europe. I study how access to art is distributed in different countries along axes such as class, education, place of residence and ethnicity and what are the key factors that determine different types of access to art. I explore how access to art is related to the notions of cultural equality and cultural justice and how cultural policies are developed to support cultural equality in the face of contemporary economic recessions, immigration waves and the rise of digital art consumption. The study makes use of surveys from different countries that pertain to access to art such as The Eurobarometer survey in Europe; The Encuesta de hábitos y

prácticas culturales in Spain; The TGI survey in Ireland; The Norwegian cultural barometer in Norway and others. I conduct a comparative analysis of access to art based on these surveys. I distinguish between different types of access to art and link the discrepancies between countries in levels of access to art to differences in social stratification and arts policy.

Mapping Accessibilities Of Art Institutions

Pelger, Dagmar; Marguin, Séverine

Technische Universität Berlin, Germany
d.pelger[at]tu-berlin.de, severine.marguin[at]tu-berlin.de

At the interface between sociology of the arts and architecture, our lecture aims to make a spatial-sociological contribution to museums and public studies. The theme of our empirical analysis is the accessibility of the reknown Berlin art institutions "House of the Cultures of the World" (HKW): how inclusive or exclusive is the HKW? Addressing this question on a spatial-material but also social-political level, we investigated the entanglement between the architectural morphology and the feeling of belonging or exclusion (Bourdieu & Darbel 1991, 112). For that we focussed on three dimensions, including an original emphasis on physical materiality: the actors (artists, audience, staff, project partners); the resources (buildings, landscape structure, furnishing, symbolic capital, network, funding, ...) and the rules and regulations of inclusion and exclusion. Within an interdisciplinary research and teaching project, we conducted a methodical experiment on mixing different mapping techniques (Corner, 1997) with the aim of visually synthesising qualitative and quantitative data collections. Compiling expert interviews, participative observations, collective workshops, questionnaires and preliminary cartographies in one BIG Map, we analysed the entanglement between structures, morphologies and atmospheres of openness or closedness on the scale of the surrounding and the building of the HKW. On the basis of this visual analysis, we developed different aspects of accessibility – walkability, visibility, permeability, openness and appropriation – as a spatial sociological analysis of how people cross the threshold of an art institution. Bourdieu, P. and Darbel, A., 1991: The love of art: European art museums and their public. Trans. Caroline Beattie and Nick Merriman. Cambridge: Polity Press Corner, J., 1999: The Agency of Mapping: Speculation, Critique and Invention. S. 213–300 in: D. Cosgrove (Hrsg.), Mappings. Reaktion Books.

Experiences of Discrimination and Harassment among Artists: The Case of Finnish Visual Artists

Karttunen, Sari

Center for Cultural Policy Research CUPORE, Finland
sari.karttunen[at]cupore.fi

The #MeToo movement has raised heated debates in and around the art world. Stories about the film industry and the performing arts have made media headlines. Visual art has received less attention, although it also provides ample cases of discrimination, harassment and exploitation. My paper deals with visual artists in the Finnish context that has features that I presume make them vulnerable to abuses. They include, e.g., the high dependence on grants, hence on peer-reviewers. Also, the number of graduates, and women among them, has increased fast, and the field is very competitive. My presentation draws upon data from the Finnish Arts Barometer Surveys 2017 and 2018. With annually shifting key themes and respondent groups, the survey maps out the operational environment of the arts. The 2017 edition was targeted on young artists, while the latter covered all age groups and focused on mobility. Both surveys contained recurrent questions dealing with, among other things, experiences of inequality, discrimination and harassment. The number of visual artists in the data is altogether around 600. In the presentation I aim to connect the inequalities and abuses reported by visual artists to the established practices and structural features of the respective art field. Based on the first rounds of close reading, many types of discrimination and harassment emerge in the data, including sexual harassment by teachers, (other) gatekeepers and buying customers. The weaker status of young, female and immigrant artists is repeated in the statements. Many artists also feel that their job is despised and ridiculed in wider society.

RN02_06 | Music Practices and Access

Building Social Capital in a Port Town Neighborhood with Contemporary Art Projects and Classical Music Concerts

Takahashi, Kaori

Rikkyo University, Japan
k.artkhs[at]rikkyo.ac.jp

Art is often thought to possess the ability to build social connections between people of different walks of life, a process Putnam called “bridging social capital” (2001). But suppose different art genres are involved in one neighborhood. Would the character of the neighborhood’s residents and their relationship differ? To answer this question, we analyzed the case of an art festival, Assembridge

NAGOYA, held in a port town suburb of Nagoya, the third largest city in Japan. In 2016, the local government initiated this festival to make art more accessible to local citizens. The festival involved contemporary art exhibitions and classical music concerts, though both activities were held not in strict spaces, such as museums, galleries, or concert halls, but in open spaces, including old buildings, streets, and aquariums. Though held simultaneously, the two activities drew starkly different audiences: The exhibitions featured younger attendees who were mostly female, while the concerts attracted an older crowd that was mostly male. Even though, the festival as a whole attempted to make the local community more connected. Hence, it appeared that the festival only reinforced the neighborhood’s fragmentation, rather than bridged it. Through observations of the events and interviews with the directors of both the exhibitions and the concerts, this presentation discusses the conflict between the directors’ visions and their audiences’ reactions, and searches for ways to overcome the barrier between art lovers and music listeners. In doing so, we seek to develop a new account of the social capital created by the arts.

How Music Festivals Contribute To The Social-Ecological Transformation

Kahle, Ina

Leuphana University Lüneburg, Germany
Ina.Kahle[at]stud.leuphana.de

Music festivals will not change the world, but they do serve as an acceleration torque regarding the advance of the social-ecological transformation of societies in terms of disengaging from the capitalist fundamental idea of economic growth. That’s the finding from an investigation which was conducted in 2017 on one of the biggest, commercialized and unpolitical open-air, rock-music-festivals in Germany, the Hurricane Festival. Surveys on five other German open-air-festivals corroborated this outcome. The study uncovers the festival audience as a temporary community dealing with different values and norms as in everyday-life within an improvised infrastructure over up to 5 days. The absence of obligations, competition and social hierarchies was the most obvious festival specific aspect describing the festival atmosphere by the festival audience. In return phenomena that are comprehensively explained by the concept of Resonance by the German sociologist Hartmut Rosa are identified as a main part of the festival specific aspects of think- and behavior pattern of the festival audience. In festival situations these phenomena are collectively experienced by young people in a positive setting and thus memorable. Resonance is identified as a possible solution for the grievance implemented in modern societies through the dominance of capitalist market logic. The study includes a combination of qualitative and quantitative research on the Hurricane festival with a response rate of more than 30 semi-structured interviews and 2077 completed questionnaires. It is accompanied by quantitative surveys on five further German open-air festivals with a response rate of in total 3.977 completed questionnaires.

Countering the Modern Japanese Self through Polish Art: Reflexive Reception of F. Chopin's Music by Contemporary Japanese

Shibata, Yasuko

Polish-Japanese Academy of Information Technology, Japan
yshibata[at]pja.edu.pl

The paper examines the social cognitive effects of the music of Fryderyk Chopin on Japanese pianists and music lovers in late modernity by analyzing their reception of Chopin's music through a Polish cultural lens. Poland's presentation of Chopin's music, based on the pursuit of both national and cosmopolitan ideals, keeps attracting Japanese musicians and music lovers. The amateurs, students and professional pianists, while brought up with Chopin's institutionalized presence in the Japanese classical music sphere, vigorously joined in the ritual of witnessing the current "sacredness" of Chopin's music in Warsaw, at such events as the International Fryderyk Chopin Piano Competition, Łazienki Park summer concert series and the brand-new International Chopin Competition on Period Instruments. What are the attitudes of Japanese pianists and music lovers to the Chopin-related music industry back in Japan? How do they observe today's national and cosmopolitanizing Chopin discourses in the Polish musical sphere? What are the values of Chopin's music that help them in their real and artistic life? The empirical materials, including in-depth interviews with Japanese pianists who underwent studies in Poland and those with Japanese listeners and participants of Chopin-related events in Tokyo and Warsaw (2005-2019), are examined by a method of narrative analysis and critical discourse analysis. The interviewees' answers suggest that the experiences of Chopin in Poland let them alter their "neoliberal" sense of self and recognize the importance of civil values such as freedom and reason, which are meagre in Japanese society, and that this changed how they pursued human performance and life.

A Matter Of Habitus: Musical Repertoires Of Music Teachers In Chile

Poblete-Lagos, Carlos

Universidad de O'Higgins, Chile
carlos.poblete[at]uoh.cl

The current work explores the musical repertoires of an purposive sample of music teachers educated in Chilean universities between 1970 and 2010, from the analysis of descriptions and categorization ways used to name musical repertoires performed in the social origin and University education contexts. Using a qualitative approach, the study uses data obtained from a questionnaire of socio-musical characterization, semi-structured interviews, and, for comparative purposes, analysis of curricular proposals of initial teacher training in music. Subsequently, qualitative content analysis was used to propose a classification model of musical repertoires, supported conceptually from musicology

references (Tagg, 1980, Harris, 1995, Lena & Peterson, 2008) and sociology (Bourdieu, 1979, Bernstein, 1990, 1999). Results are showing a complex reality, where the heterogeneous use of language to denominate and classify musical repertoires constitute a sample of the relative power that University training would have in the recontextualization of knowledge acquired in the social context of origin. In this sense, categorisation of musical repertoires of music teachers allow to see the ways that origin social context and University participate in the conformation of musical experience of music teachers, showing us how they building part of their professional knowledge (in terms of specialized disciplinary language), in a fragile balance between personal experience and professional knowledge. Key words: musical repertoires, sociology of music, music teacher education in Chile.

RN02_07 | Arts Organisation and Strategies

Art Organisations of a New Era - A Media Analysis of the Changes in State Funding and Leadership of Orchestras, Art Museums and Theaters in Finland.

Ojamo, Hanna Maija Päivikki

University of the Arts Helsinki, Finland
hanna.ojamo[at]uniarts.fi

The funding of arts organizations and the effects of the changes of the ongoing state subsidy system renewal process in Finland are at the core of this multidisciplinary research that combines sociology, law, cultural policy and leadership to analyze structures of power in the framework of critical theory. The research has progressed into a stage where a vaste media analysis has been conducted together with the juridical process analysis, since 2016. In 2016 PM Sipilä's center-right wing cabinet started a historical renewal process of the state subsidy system in Finland, the object of which was "to renew the legislation to meet the demands of the society today" by suggesting choices instead of even distribution of the state funds; quality criteria for arts organizations, and geographical equity. However, in 2018, after the legislation proposal was introduced by the Ministry of Education, the Minister Terho of the Blue Future, - formerly known as the Finns party - put the legislation process to a halt, advancing only a part of the performative arts legislation renewal suggested by a group of specialists as well as the museum legislation. The qualitative research's data consists of a media survey, statistics and policy reports as well as interviews in the field. Qualitative analysis been conducted to define which factors drive the change in discourse and thus have an effect on the leadership of future arts organizations in Finland through thorough analysis of the leadership of the legislative process of 2018- of the state funding structure for the arts in Finland, VOS, in the light of critical theory and CDA. Topic areas: Arts organizations, cultural policy, funding Keywords: Leadership, change, sociology, critical discourse analysis

From Diva to Democracy: An Assessment of Arts Organizational Governance Structures

DeVereaux, Constance

University of Connecticut, United States of America
cdevux[at]gmail.com

This paper is a conceptual analysis of the tensions between intent, ideal, and application in arts organization management practice emphasizing the role of ideological norms as factors influencing leadership and governance strategy. The focus is on nonprofit arts organizations in the United States. Recognizing that trends in management and policy have changed significantly through the 20th century, to today, I look at changes in the landscape of arts management in which the realities imposed by the art world, by funding dynamics, political vicissitudes, moves toward increased professionalization in trained staff, and public perceptions about the arts—create conflicts that “complicate leadership and decision making.” (Cray, Inglis, and Freeman 2007, 295). In fact, knowledge about leadership and management as they apply in the arts management sector remain underdeveloped in the literature (Evrard and Colbert 2000). Trends indicate, however an increased tendency toward collaboration and participation, fewer boundaries between leader and led, and more access and inclusivity for both internal and external actors. In other words, developments are toward more democratic and away from autocratic management structures. This paper asks, therefore, whether democratic principles and structures—a democratic setting, in other words—can improve leadership and management for arts organizations. If yes, what leadership models and management strategies can best support democratic aims. I argue that arts organizations, by their nature, are best suited for democratic leadership and governance. Assuming that the ideals of democracy “define a necessary frame of reference for analyzing work organizations in a democratic society (Vredenburg and Brender 1993, 99) I consider the prospects for engagement, perceptions of organizational purpose, and increased participation. Case study analysis of an arts center in the Western United States is considered.

Leadership Strategies in Amateur Arts. The Example of Latvian Nationwide Song and Dance Celebration Tradition

Lake, Anda; Hermane, Agnese

Latvian Academy of Culture, Latvia
lake.anda[at]gmail.com, agnese.hermene[at]lka.edu.lv

More than 40 000 people from the 1,9 million inhabitants of Latvia participate in the Nationwide Song and Dance Celebration – the widest amateur choral singing and dancing tradition of Baltic states. The tradition is sustained due to continuous amateur art process and is aimed to be with high participation and high artistic quality. Amateur groups are led by professional artists thus they become key-actors in the

preservation of tradition and their leadership approach has to balance between the quality expectations and the limits and motivation of amateurs. A partnership between professional artists and amateur artists ensure quality and enhances the value of the experience for all participants but at the same time, professionals need a certain mindset in order to be able to successfully operate with amateurs (Smith 2006). Relational leadership (Fairhurst & Uhl-Bien 2012), collective leadership (Kuenkel 2016), the discourse of the inspirational and connectionist leaders (Chiapello and Fairclough 2002), arts leadership (Hewison, Holden 2011, Caust 2013) has been studied to define those elements that would be the most efficient working with amateur artists. A survey of group leaders (n=574), participants (n=1091) and 27 semi-structured interviews have been carried out to study various participation aspects of the tradition. The data shows that there is a tension between the wish of the professionals to raise the artistic quality, while most of the amateurs care more about social interaction and positive emotions. To deal with that group leaders use diverse strategies that combine the elements of leadership approaches mentioned above and can be characterized by the following keywords: the commander, the prophet, the partner and the shepherd.

The Construction of the Field of Light Art

Garcia-Ruiz, Manuel

University Institute of Lisbon, Portugal
manuel_ruiz[at]iscte-iul.pt

In this work we review the different processes of artification that take place around the industry of light festivals. We review the problems for the constitution of the field of the light arts, as a result of the lack of adhesion on the part of the artistic community that works with light as a medium; and the difficulties to constitute a professional identity. We also analyze the on-going attempts to legitimize this set of cultural practices. We study the resistance and opposition processes of the artists present in this type of events, and we deepen in the motivations that discourage them to integrate the community of light artists. We also analyze the possible causes that limit the appearance of light art in an institutionalized way, specially outside of a context of pseudo-entertainment event. We reflect on the conflict of interests between artists and curators and we question ourselves about the continuity of light festivals following their traditional formats. This work is based on the analysis of 55 in-depth interviews with artists, curators and artistic directors, as well as ethnographic work carried out in the context of light festivals (2017/19).

RN02_08 | Boundaries for Artists and Audiences

Art Intelligentsia: On Acting and Power in a Contemporary Western Theatre

Gamliel, Tova

Bar Ilan University, Israel
tova.gamliel[at]biu.ac.il

How should the point of view of artists in a current kulturkampf be understood? The lecture will probe how the Israeli mainstream theatre which is perceived as a liberal, critical and "leftist" actually became as a conservative space that does not uphold pluralist practices. This question will be viewed through the senior theatre actors as significant cultural agencies. By the interweaving of Bourdieu's habitus with Marvin Carlson's theory, I discuss how the theatre actors preserve their hegemonic status, which catches simultaneously liberal image with conservative and even racist elements. An analysis of the Israeli theatre actors' habitus follows the historical tendency of this bourgeois theatre, including its creators and actors, in this profession toward "possession" or the "back-to-the past, and signifies this tendency as additional sources of "artistic capital". This tendency establishes a close relationship between actors' heroic biographies and artistic conventions in the Western theatre. The article connects this theatrical habitus to an ideological justification of the Zionist movement in Israel. Theoretically, the novelty of the analysis concerns to the historical element of Bourdieu's concept of "habitus". The argument is that the duplexity of this element in the "back-to-the past" habitus, is embodied in mythization's processes of the theatre's actors thereby it provides to the theatrical habitus a relative durability against social transformations.

Who (What) Is An Artist? Israeli Visual Artists' Status

Trajtenberg, Graciela

The Academic College of Tel Aviv Yafo, Israel
gtraj[at]mta.ac.il

The number of professional artists has grown over the past 30 years, and this process has not passed over Israel. Along with the growth in artist population, both sociologists and policy makers have increased their interest in these groups. Despite the fact that Israeli cultural sector is not an exemption, no in-depth study on these questions has been done so far. Our research project includes two stages, an online survey and in depth interviews. The paper will present the first findings from the survey that has recently started circulating amongst Israeli visual artists. The methodology chosen to conduct the online survey was online, via internet-based questionnaire. The boundaries of the category "visual artists" were set following the accepted definition in the Israeli field of visual arts: painting, drawing, print, sculpture, etching, installation, mixed media, photography and video. In order to detect new

definitions, the option "other" was included several times in the survey for respondents to describe their art. Before the survey could get underway it was necessary to compile the list of artists. The potential respondents contact information (email) was sourced on various websites of art institutions and schools in Israel. The purposes of the survey are threefold: the first, systematically gathering data about age, gender, ethnic belonging, art studies, art studios and information in relation to artists' employment and income. The second, mapping the stages of the professional artistic carrier and its social profile. Third, exploring artistic selfhood regarding local and international context.

Theater 21 And Inclusive Art Center: Downtown – "Placeless Spaces" in Warsaw

Kietlińska, Bogna

University of Warsaw, Poland
bogna.kietlinska[at]gmail.com

For the last 14 years, Theater 21 has gone a long way - from the school hall to the stages of repertory theaters and the space of many other cultural institutions. Due to the lack of its own place, it became a "flying institution", which is a nomadic organization that fulfills the role of a cultural institution, but without permanent financing and necessary infrastructure. Today we already know that Theater 21 needs another step, which is transforming into a full participant field of culture - with its own place and resources for long-term functioning. This is also due to the fact that Theater 21 aspirations to expand the field of social awareness about intellectual disability are increasingly transformed into social postulates and an element of inclusion policy, which seems to be invisible for city authorities. It's a "non-physical" space, which engages people with disabilities in the artistic field in order to strengthen them as the full-fledged employees of the cultural sector. On the basis of 30 qualitative interviews (with creators of Theater 21 and representatives of institutions that have so far cooperated with this theater) and participant observation, I built a new model of cooperation that takes into account the existing barriers, but also emphasizes resources that have not always been noticed. This model is also a starting point of the institution called Inclusive Art Center: Downtown, which is planned to be a physical representation of socio-political processes concerning intellectual disabilities issues and inclusion policy.

“If You Show an Italian film, Serve Italian Wine”: (Re)constructing Authenticity Through Film-going Experience

Hanzlik, Jan

Charles University, University of Economics in Prague
jan.hanzlik[at]icloud.com

After 1989, film exhibition in Czechia have been affected by several major transformations that significantly changed the film-going experience. Post-1989 decline in film attendance has been gradually averted by the establishment of numerous multiplexes starting with 1996, reflecting the same development that took place in the West during the 1970s and 1980s (e.g., Gomery 1992; Acland 2003; Hanson 2007). An opposition towards multiplexes stemming from their association with shopping malls, Hollywood blockbusters, and popcorn paved the way for the establishment of art-house cinemas in larger cities that provide spectators with more highbrow offerings. Most recently, film exhibition has been characterized by what has been termed an eventization and festivalization of culture (see e.g., Bennett, Taylor and Woodward 2014): Regular film screenings are replaced by the rising number of film festivals of various kinds and unique one-off events that combine film-going experience with other social activities. This trend is apparent both in the operation of multiplexes (opening nights of blockbusters are marketed as global events) and art house cinemas (e.g., a screening of an Indian film is combined with a tasting of Indian food). The presented paper addresses this trend through an analysis of cinema programs, participant observation at film events, and interviews with film industry professionals. The trend is interpreted through theories that address the desire for and decreasing sense of authenticity and belonging in the globalizing world (e.g., MacCannell 1999; Zukin 2010).

RN02_09 | Arts Education

What Is the Value of Aesthetic Education? Going Beyond the Work First Principle at the Swedish Folk High School

Fürst, Henrik (1); Nylander, Erik (2)

1: Uppsala University, Sweden; 2: Linköping University, Sweden
henrik.furst[at]soc.uu.se, erik.nylander[at]liu.se

How is aesthetic education valued in society? In the Swedish public discourse, the perceived value of an education is its “usefulness” for labor market integration, where an education is valuable only if it leads to work. With highly competitive winner-takes-all labor markets for artists, the aesthetic education is conveyed as a useless credential not leading to work. Nonetheless, is an aesthetic education useless for the

participants themselves? What motivates them to choose an aesthetic education? The study draws on 43 interviews with participants and teachers at 27 aesthetic courses at the Swedish folk high school. Each year these folk high schools offer aesthetic courses, at the post-compulsory level, for several thousands of participants. Participants are aware of the work first principle for the evaluation of school choice. Nevertheless, their own participation becomes an implicit or even explicit critique of this principle of evaluation. In justifying their school choice, they see the (1) course offering them a chance to regain health and general well-being after burn out from work or not having found a job, (2) allowing them to be in a particular state of creativity and creating room to plan for the future, not made possible in other educations and work-related experiences, or (3) the course being a stepping-stone to becoming a professional artist despite slim chances for its fruition. The relative institutional autonomy of folk high schools enables school cultures based on artistic self-exploration, challenging hegemonic ideas of education that disallow non-instrumental desires of self-discovery and artistic creativity.

Twilight Of Musical Education - Between Traditional Textbooks And Modern Generations

Keserovic, Jelena Zoran (1); Vuksanovic, Gordana Dragomir (2)

1: Music Academy, Serbia; 2: Novi Sad Business School
jelenaKeserovic01[at]gmail.com, gordanaVuksanovic[at]uns.ac.rs

In recent years, fewer students have graduated from secondary music schools and are enrolled in music academies. After finishing high school, they prefer to choose to study at some other faculty. There are also those who move from a secondary music school to some other high school. For most, these passages also mark the cessation of interest in music. The aim of the paper is to examine whether and to what extent the content of the textbooks and the manner of its presentation is adapted to social changes. The basic source of data is the research carried out using the method of content analysis. Content analysis was applied to textbooks for the subjects the Music High Schools, Music theory and Harmony. Textbooks that are currently used in music schools in the The Republic of Serbia are included. The paper will also use relevant statistical data, as well as interviews with students and teachers. The data was collected via a biographical interview. The research was conducted in 2018. The results of the research point to a disbalance between the content of the textbooks and the way it is presented, on the one hand, and new learning models, on the other hand. The lack of interest of lecturers in adapting textbooks to young generations is a consequence of their dissatisfaction with their position in the society as well as marginalization of art in it. Key words: musical art, learning, social changes, Music theory, Harmony.

Manifestations of Inequality in Finnish Arts Education and Basic Services in Arts

Rautiainen, Pauli Anttoni

Tampere University, Finland
pauli.rautiainen[at]tuni.fi

The ARTSEQUAL research initiative (for more information see: <http://www.artsequal.fi/>; coordinated by the University of the Arts Helsinki and financed by the Academy of Finland's Strategic Research Council) has examined the arts as public service, with equality as the starting point, and explored how the arts can meet the social challenges of the 2020s. In my presentation I will present some preliminary results from the ARTSEQUAL project based on on-going analyse of the publications and other results of the initiative. I will focus to the main research question shared by the whole ARTSEQUAL initiative: what mechanisms in Finnish basic services in arts and arts education sustain unequal participation and, assuming equality as the starting point, how should practices in basic services in arts and arts education be changed? In my presentation I will concentrate to manifestations of inequality researched by the Arts[at]School team (a subproject of ARTSEQUAL initiative, lead by professor Eeva Anttila, the University of the Arts), which has investigated as how the arts can support equal participation and learning in Finnish schools. Arts[at]School team has identified ways to foster every student's possibility to participate in arts education and learn through the arts in support for his/her learning, school engagement, and well-being.

Artistic and Leisure Production and Consumption and Wellbeing among Swedish Schoolchildren

Mathieu, Chris; Kaya, Gökhan

Lund University, Sweden
christopher.mathieu[at]soc.lu.se, gokhan.kaya[at]soc.lu.se

Applying topic modelling to a survey of schoolchildren in the southern Swedish region of Skåne we trace how artistic, cultural and other leisure activities cluster, or are composed by youths, and how various patterns of artistic and cultural activities correlate with self-reported psycho-social and somatic health, as well as residential and socio-economic variables. The survey (Folkhälsoenkät Barn och Unga i Skåne 2016) is the most comprehensive such survey of schoolchildren, with 27 400 respondents in the region of Skåne (total population in the region 1,3m). The survey is administered to schoolchildren in all 6th and 9th grade classes in Skåne, as well as students in the 2nd year of (non-obligatory) high school. Preliminary results show that as school children get older, their cultural and leisure activities become more social and less individualised, and less focused on specific activities and more diffuse. An interesting preliminary result is that schoolchildren who engage in artistic and cultural consumption activities have better psychic wellbeing than their colleagues who do not, but that those who are engaged in

artistic production activities have worse psychological wellbeing than their colleagues who are not active in artistic production.

Grant Proposals: Strategic Discourse or 'Reasonable Without Being Reasoned'? A Field Analysis of Visual Artists and their Justifications for Government Money

Peters, Julia; Roose, Henk

Ghent University, Belgium
j.peters[at]ugent.be, henk.roose[at]ugent.be

For many visual artists, government funds make up an essential part of their livelihood. We analyze (1) what kinds of justifications visual artists deploy when they request government money, and (2) whether the nature of these justifications is related to artists' field positions. In other words, we explore whether Bourdieu's field-theoretical framework—, which links positions and dispositions through the habitus, can be deployed to understand variation in artists' justifications. Analyzing 500 Flemish visual artists' grant proposals (1965-2015), we find five value registers underlying justifications: the reputational, aesthetic, romantic, socio-logical, and entrepreneurial register. We explore with Multiple Correspondence Analysis whether artists' capital—prizes, previous subsidy success, exhibition career—is related to these value registers and artists' subsidy success (i.e. decision by the selection committee). Firstly, we find that subsidy success is linked to the symbolic capital of an artist, validating the reliability and validity of our approach—so, capital does matter for success, even more so in the more recent applications. This suggests a Matthew effect underlying the subsidizing process, which we discuss in light of the professionalization of cultural policy and organizational isomorphism. Secondly, we find that the five value registers are only marginally related to an artist's field position. The justificatory discourse used in the proposals does change over time, but hardly varies with the field positions artists occupy. Supposedly, strategic interests overrule the workings of the habitus. This suggests that the habitus indeed works to its full only by the 'complicity of the unconscious'.

Street Art as a Point of Conjunction between Figurative Art and Conceptual Art

Stochino, Emanuele

Università degli Studi di Brescia, Italy
socialarte[at]tim.it

This work focuses on the contraposition of Figurative Art and Socio-Experimental Art between 1960 and 1980 and how Street Art succeeded in reconciling the antithetic vision of the figurative versus the socio-experimental. In 1979, highlighting the period between 1960 and 1980 during which, for some critics, art only focalized on the ideological, Barbara Rose held "The Eighties: American Painters" exhibition at the MoMA. According to Rose, Rudi Fuchs, the curator of documenta 7, based this exhibition upon the subjectivity of artists who created artworks employing figurative language which could be decoded, albeit to varying degrees, by the general public. This artistic language made use of a code which was not only that of the artists themselves, unlike the cryptic language used by abstract artists; it was a language similar to that of the public of the times. Reflecting the importance of Figurative Art, Street Art has now gained global popularity, its being a means to present concepts and underline socio-political issues simply. Since street artists are well-acquainted with everyday problems, Figurative Art is not exclusively ideological. The accessibility of Street Art and its ability to express real issues is the point of conjunction between the socio-experimental artist who aims to highlight social issues using language which only he can explain and the figurative artist who may pay less attention to the conceptual and more to the aesthetic.

Georg Simmel's Sociological Aesthetics as "Treasure Hid in the Field" of Empirical Art Sociology

Zahner, Nina Tessa

Kunstakademie Duesseldorf, Germany
nina.zahner[at]t-online.de

Georg Simmel and his sociological aesthetics or aesthetic sociology are not given much attention in the field of empirical art sociology nowadays. This strikes me as very surprising. Simmel has not only provided Weber and Bourdieu and probably also Adorno and Foucault with far-reaching methodological suggestions, but has also presented a very stimulating critique of historical materialism. The low attention paid to Simmel's work is probably due to the fact that any form of simplistic dogmatism was a horror to him. Instead he provided us with a vast number of extremely delicate analyses of very diverse subjects. These studies often encourage all kinds of misunderstandings and misinterpretation. The proposed paper argues that it is precisely the sophistication of Simmel's analyses that makes the strength of his position. I will argue that Simmel offers far-reaching methodological suggestions for researching art and its publics in present times. Current positions in art sociology like Tia DeNora, Antoine Hennion, or Sophia Krzy's Acord reinforce questions of

perception and materiality in the sociology of art. Simmel provides here far reaching suggestions: The reconstruction of the relational sociology of Simmel offers very inspiring alternatives to pseudo-objectivistic tendencies within the field of audience research while not following an exaggerated relativism or the decay diagnostics of (Neo)Marxism. I will show that Simmel's far-reaching reflections on the epistemological foundations of sociological research are very fruitful for art sociology as they were actually modeled by using the arts as their template. To lift this "treasure hid in the field" (Gessner) of art sociology is the task of my paper.

Songs and the Performance of Kurdish Identity

Greenwood, Joseph Matthew (1); Marques, Ana Cristina (1,2)

1: University of Kurdistan, Hewler, Iraq; 2: Univeristy of Lisbon
joseph.greenwood[at]ukh.edu.krd,
anacristina.hmarques[at]gmail.com

The Kurdish language(s), oral traditions (particularly stories and songs), and more 'recently', written literature, have been central to the 'construction' of a Kurdish cultural identity, supporting the claim for an independent nation-state. In the contemporary world, the transmission of songs in the media and on the Internet and the recordings of highly influential singers, cross over national boundaries, helping to give Kurdish people across the globe, a sense of common identity. Simultaneously, these cultural strands strengthen the claim of an 'authentic' cultural identity, which further supports the arguments for the long desired foundation of a Kurdish nation state. Taking into consideration the importance of songs in contributing towards this sense of a distinctive cultural identity (and the quest for national sovereignty), this paper will start by presenting the results of a questionnaire, two focus groups and 16 in-depth interviews. These are held with higher-education students and their relatives in southern Kurdistan, in relation to the 'use' of Kurdish songs in their day-to-day lives. We will then proceed to briefly analyze examples of different song types considered to be common in Southern Kurdistan: historical songs, battle songs, love songs, and laments. We argue that the lyrics of the songs, their performers, and the spaces and times of their performances will provide initial insights – if only partial – into what is designated by Kurdish culture. Furthermore, the analysis of intergenerational attitudes towards different song types can reveal modifications and consistencies in the construction and perceptions of Kurdish national identity.

Considerations on Triangulation of Biographical Narrative Interviews and Expert Interviews - Methodological Modifications and Extensions to Identify Relations Between Biography and Practical Theory

Epp, André

University of Education Karlsruhe, Germany
andre.epp[at]ph-karlsruhe.de

In the foreground of biographical narrative interviews are especially life stories and not the acting (strategies) of pedagogies. Inverse with other interview forms information about the pedagogical acting can be captured but biographical process sequences are neglected. As biographical professional research operates in the conflict area between biographical and work-related (professional) sense structures it is currently discussed in what extent triangulation is able to capture biographical constitutional conditions of pedagogical professionalism. The paper outlines the similarities and overlaps between biographical narrative interviews (cf. Schütze 1983) and expert interviews (cf. Meuser/Nagel 1991). It is justified theoretically why the combination of both interview forms makes it possible to identify biographical and work-related (professional) sense structures in practical theories and why they can be related to each other. Moreover, reasons are given how and why category and sequence analytical methods can be productive combined for analyzing the biographical constitutional conditions of pedagogical professionalism. With the help of a research project, which deals with the biographical genesis of practical theory structures of teachers, it is illustrated and exemplary shown how with Bronfenbrenner's ecological systems theory (1981) and the narrative analysis (cf. Schütze 1983) the interview material can be analyzed. Additionally, it will be shown how methodically controlled connections between biographical and work-related (professional) sense structures can be worked out. References: Bronfenbrenner, U. (1981). *Die Ökologie der menschlichen Entwicklung*. Stuttgart: Klett Verlag. Meuser, M./Nagel, U. (1991). *Experteninterviews - vielfach erprobt, wenig bedacht: ein Beitrag zur qualitativen Methodendiskussion*. In SFB 186 *Statuspassagen und Risikolagen im Lebensverlauf*. Bremen: Universität. Understanding Socio-Political Values through Biographies

Pretto, Albertina; Marcucci, Debora

University of Trento, Italy
albertina.pretto[at]unitn.it, deboramarcucci[at]yahoo.it

Data from European Values Study show that Italians - with regard to the socio-political values at least - are increasingly discouraged and distrustful toward political parties and institutions. Nevertheless, in the 2018 Italian general election, the Forza Italia party (centre-right) and its leader Silvio Berlusconi gained almost the 14% of votes; and this, despite all the scandals – despite all the corruption allegations, the abuse of women, the conflict of interests and so on – and despite the almost complete failure of the Berlusconi governments to bring about the change and renewal promised at the time of his entry the field in 1994. Staying within the topic of values, our question is: what the Berlusconi's voters think about him and which values he represents for them? To understand the nature of electoral support for the Forza Italia party, we have gathered 40 life stories of Italians who always voted for Berlusconi's party. Through their biographies, we have analysed the socio-political values and the political traditions and orientations that lead their vote.

Connecting The Dots: Mapping The Field Of Biographical Research In Europe

Baía, João; Caetano, Ana; Nico, Magda

ISCTE - University Institute of Lisbon, Portugal
joabaiacosta[at]hotmail.com, ana.caetano[at]iscte.pt,
magda.nico[at]iscte-iul.pt

The long and established roots of biographical research have been documented throughout the years in a rich body of reflections directed at the main trends and traditions of its evolution within social sciences. However, many of the texts mapping its key approaches and methods tend to be exclusively qualitatively driven, cross-disciplinary, and focused on particular approaches and national traditions, zooming in the context of specific research designs or issues. In this presentation we aim to contribute to this mapping of biographical research by narrowing down the disciplinary focus to sociology and the scope to the European academic context, while simultaneously broadening the analytical approach to include both a qualitative and quantitative outlook on the field. The main results of a bibliometric analysis and literature review are discussed, taking into consideration elements such as year and type of publication, geographical scope, type of concepts used, main focus (theoretical, methodological, mixed), methodology, type of approach, use of content analysis software, among others. With these approaches (content and statistical analysis) we are able to identify and characterise the major trends, debates and stages in the development of biographical research in the European sociological literature. This analysis is part of a research project entitled "Biographical echoes: triangulation in the study of life histories" whose main goal is to reconstitute a person's life history by means of autobiographical accounts, but also using the testimonies that significant others (family, friends) share about that biography.

Lifeworld - The Sociology of Alfred Schutz, Screening and Discussion of the Documentary Film

Santos, Hermílio

PUCRS, Brazil
hermilio[at]pucrs.br

The documentary film "Life-world: The Sociology of Alfred Schutz" (directed by Hermílio Santos, 56', Brazil, 2018), with interviews on different aspects of the work of Alfred Schutz is divided in four parts: some notes on his biography; the main theoretical influences on his work, as Edmund Husserl, Max Weber and Ludwig von Mises; the main concepts of his sociological theory and how his sociology have been used currently in theoretical and empirical researches. Among the interviewees are Claudia Schutz Gahagan, Michael Barber, Lester Embree (USA), Hisashi Nasu, Mototaka Mori, Masato Kimura (Japan), Ilia Srubar, Martin Endress, Jochen Dreher, Andreas Göttlich, Joachim Renn (Germany), Thomas Eberle (Switzerland), Michel Maffesoli (France), Carlos Belvedere,

Silvana Figueroa-Dreher, Daniela Lopez, Mercedes Krause (Argentina), Luigi Muzzetto (Italy) and Tomas da Costa (Brazil). The interviews were conducted in English, German, Spanish, Japanese, Italian, French and Portuguese with English subtitles, with locations in Vienna, New York, Tokyo, Porto Alegre and Buenos Aires. After the screening the director of the film will discuss some topics explored in the film. The proposal of this film session is based on the increasing worldwide interest on the sociology of Alfred Schutz, showed by the publication of his complete work in twelve volumes in German, by the creation of the Journal Schutzian Research, initiated in 2009, by the establishment of the Alfred Schutz International Circle for Phenomenology and Interpretive Social Science (created in 2012), besides the publication of recent books and articles exploring different aspects of his sociology and his influence for the biographical research. The teaser of the film is available under: <https://www.youtube.com/watch?v=gn05zvZJXwY&t=42s>

RN03_02 | Methods of Analysis of Biographical Data

Global Migration And Local Communities: Social Solidarity And Collective Grievance With The Absent State In The Italian Island Of Lampedusa

Franceschelli, Michela

UCL, United Kingdom
m.franceschelli[at]ucl.ac.uk

This paper takes its cue from the case of the Italian island of Lampedusa, to explore the question of how global migration affects the 'social solidarity' of local communities and, relatedly, what keeps their people together in face of fast social changes. Lampedusa, Italy's southernmost territory, is the ideal context where to explore this question. As the first port of arrival for migrants crossing the Mediterranean Sea, the island has turned from a tourist destination into a new symbolic place of the European migration debate. Based on interviews and ethnographic fieldwork, and disseminated by a film documentary, the research suggests that although Lampedusa is at the frontline of the European debate about migration, the concerns of Lampedusans are only marginally about migration. Instead, islanders address their grievance toward the Italian absent state, as expressed by a number of unresolved local issues, marking the island's enduring marginality even under global attention.

Hearing, Heading and Holistically Analysing to 'See' That 'Unsaid' in Biographic Interviews

Wright, Hazel Rosemary

Anglia Ruskin University, United Kingdom
hazelwright[at]btinternet.com

In this paper I seek to share the benefits of holistic data analysis of biographical interviews, and of using both sociological and psychological perspectives, by offering several examples of occasions when this established new insights that went 'beyond' the words uttered. As a researcher I had early learned to 'do qualitative research differently', to recognise when language was indicative of inner discomfort and capture this through conversation analysis (CA), to find ways to help participants unearth and share their newly sculpted truths. CA encourages data immersion and I find the lengthy involvement with each narrative frees the mind to think associatively and creatively, enabling new ideas to emerge; dramatically, as private epiphanies, more often seeping quietly into the consciousness. For this paper I will share three specific examples. Firstly, an understanding gleaned after analysing 30+ interviews with adult students when, unable to write a focused education chapter, I realised I was missing the point entirely. Secondly, how searching for narrative structure – examples of emplotment – revealed that a seemingly irrelevant story was hugely informative about the person interviewed. And finally, a conversation about doctoral study where the student seemed only to want to tell me her family history. By letting the narrative run before asking why (it offered rich insights into class, gender and social regulation) and considering the interview holistically, we together uncovered the shackles of 'imposter syndrome', enabling her to breach these constraints. This was truly a case where biographical and therapeutic conversation converge, raising some interesting issues around the benefits and challenges of biographic interviewing and the importance of anticipating the unexpected.

Biographical Experiences of Transformation in the Cohort Born 1980-1990. A Case Analysis

Waniek, Katarzyna

University of Lodz, Poland
k.m.waniek[at]gmail.com

Usually taken for granted "typologies" of contemporary Poles ("winners" and "losers") in their simplified version do not really reflect complex and ambiguous biographical processes and their interplay with social processes in everyday life. Still, they have a real impact on social policies and media ways of explaining social reality. The analysis of the autobiographical narrative interview with Julia (compared with many other accounts of people born between 1980-1990) verifies this schematic image. It will be argued that the cohort (entering their adolescence period and later labour market) in a socio-cultural context framed by the dynamics of interrelated

processes of political transformation, vibrant modernization, globalization, and development of neoliberal ideology has been the first one in Poland to be exposed to the deep and overwhelming biographical changes. They have been oftentimes connected with the feeling of biographical trap and the experience of precarious balance of everyday life that is a consequence of belonging to intensively multiplying social worlds with their divergent stocks of knowledge, clashing ideologies and conflicting moral standards. Additionally, we will deal with a biographical irony: Julia is both – a zealous propagator of allegedly universal attitudes of neoliberalism and a victim of this subtle mode of power. Her autobiographical account is not a story about the path to success, but about continuous efforts to maintain the precarious balance of everyday life and to deal with excluding logics of different social worlds as well as the constant necessity to suspend her own biographical plans. All these contradictions and tensions are seen in the renderings of many people born in the 80's renderings, which are nonlinear, incoherent, emotionally overloaded and full of fading-out phenomena.

Biographical Research in the Era of Big Data: CV Analysis of the Management Business Elite in Russia

Rozhdestvenskaya, Elena

National Research University Higher School of Economics,
Russian Federation
erozhdestvenskaya[at]hse.ru

The report analyzes the educational and professional trajectories of social mobility of a special group of elites - general directors of leading companies (CEOs and directorates) of public joint-stock companies. The research methodology is a combination of cohort and event analysis. The study uses a CV or resume as a source of data: this is information about career trajectories, professional mobility and mapping of intra-industry and inter-industry relations of the social actor. The Moscow Exchange has been selected as a platform for the formation of the object of analysis of professional trajectories of the business and managerial elite with open information about open-stock companies-issuers. As a result, 646 CV (resume) of managers (CEOs) and members of the board / of directors from 50 public joint-stock companies were analyzed. The total sample was segmented by three main age cohorts: the eldest (60 years and above), the middle (41-59 years) and the younger (24-40 years). The traditional type of career from the bottom up in one enterprise / corporation / industry with an increase in status and with a transition from the regional to the federal level is characteristic of more than half of the subsample of the CEO, these are mostly so-called technocrats, as well as the banking sector. The rest represent complex types of career, industry, position in the academy, the executive, and again in the economic sector. An important routing to the position of the CEO seems to be an early professional career with the experience of crossing the boundaries of industries and its subsequent conservation in certain leadership roles.

Second Order Sexual Harassment And Solidarity Networks In Universities

Vidu, Ana (1); Candamil, Juanita (2);
Aubert, Adriana (3)

1: University of Deusto, Spain; 2: University of Barcelona,
Spain; 3: University of Barcelona, Spain
ana.vidu[at]deusto.es, juanita.candamil[at]gmail.com,
adriana.aubert[at]ub.edu

Understanding sexual harassment from a wider perspective involves analysing Second Order of Sexual Harassment (SOSH) and its implications. From its first definition (Dziech & Weiner, 1990) SOSH raised awareness on the need to protect not only survivors but also those who actively support them. While sexual violence' prevention and response actions have been broadly approached during the last decades, the role of SOSH for the overcoming of gender violence is still little explored. This paper pretends to fill this gap from the case of the Solidary Network of victims of gender violence within universities. It was created in 2013 facing the lack of institutional commitment with the first complaint against a professor for sexual harassment at a Spanish University. 14 victims dared to complain and followed the entire process, suffering from revictimization, among other effects. They could keep fighting because of the support gathered from other professors, who also suffered attacks because of standing with survivors, becoming second order of sexual harassment victims. While it is known that bystander intervention (Banyard et al, 2005) constitutes one of the most efficient mechanisms for action and prevention, bystanders protection is crucial. The efforts for combating sexual harassment have to contemplate SOSH while protecting direct and SOSH's survivors. Aiming at contributing to overcoming sexual violence, the pioneer contribution described in this paper demonstrates the impact of approaching SOSH from considering biographical perspective as a way to empower survivors and to engage people into action; contributing to the agenda of sexual harassment eradication.

RN03_03 | Biography and Memory

1968 in Poland – Biography and Memory

Czyżewski, Andrzej

University of Lodz, Poland
andrzej.czy[at]gmail.com

In March 1968 Poland witnessed both an anti-Semitic and anti-intellectual campaign which led to the arrest of hundreds of people and forced thousands to leave their country. Therefore, there are at least two main motifs in the collective memory of those events, based mostly on biographical experience that emphasises the perspective of political events taking place in Warsaw. The aim of the presentation is not to question this "central" version of collective memory, but to possibly supplement it with the biographical experiences of the participants of March '68 in Łódź who, in this context, represent the "peripheral" memory. In other words, this analysis seeks an answer to the question whether there are any variants of the phenomenon referred to in the literature as the March '68 generation, in which apart from the "central" version there is also a "peripheral" one related to a different community of experience and different ways of interpreting it. This presentation is based on an analysis of interviews conducted with participants of March '68 in Łódź, and on the assumption that the wider use of analytical tools provided by the biographical method might be a potential opportunity to extend the existing interpretive patterns of interviews with the participants of March '68. The list of potential benefits from such a research perspective includes going beyond the scope of history as perceived from the point of view of political events, the course of which is determined by a small group of people, towards analyses of social ideas understood in a more egalitarian way.

Narrative Construction Of Generational Experience In Latvian Life Stories

Šūpulis, Edmunds
University of Latvia, Latvia
edmunds.supulis[at]lu.lv

Biographies demonstrate a variety of trajectories, resources and opportunities, choices and acting strategies. It may be reflected through life stories, which are studied like personal experience narratives developed along the master scripts and collective memory. However, in some approaches the notion of generation is utilized to describe the social dimension of life stories (see Passerini 1996). Generally generation refers to an age-defined subgroup, where individuals are exposed to and shaped by similar historical events and experiences (Mannheim 1927), which in turn generate a 'community of perception' (Olick 1999). In this way, it provides a space where memory and identity, change and transformation are problematized and performed (Assmann and Shortt 2012). In my paper I focus on interplay between memory and formation of generational experience. Historic shifts, wars and changes in value systems left deep impact on people's biographies especially in Eastern Europe and the Baltics (Aarelaid-Tart and Bennich-Björkman 2012). What kind of historic generations can scholars locate studying biographies and narratives there? We are aware of similarities and diversity in terms of history and nation-making within the space once covered by Soviet power. Therefore, there must be particular factors used for different contexts to recognize relevant generations. Historic turning points have driven dynamics into the formation of generations and open a question about subtle generational consciousness. I will use biographic interviews from Oral history archive in Latvia to elaborate generational model and compare it with similar approaches from Estonia (Kirss, Kõresaar, and Lauristin 2004; Jõesalu 2016).

Winners And Losers Of The Process Of Transformation From The Biographical Perspective

Kazmierska, Kaja
University of Lodz, Poland
kaja.kazmierska[at]uni.lodz.pl

One of the common and schematic descriptions in the perspective of the 1989 breakthrough are two ways of dealing with it by people who are respectively called winners or losers of the process of transformation. These stereotypical characteristics are not only the tool to draw the general image of effects of transition but are also based on the specific way of interpretation deeply rooted in neoliberal perspective. In my presentation I would like to present some findings of the project Experience of the Process of Transformation in Poland in Biographical Perspective. Sociological Comparative Analysis based on the collection of autobiographical narrative interviews with people born in three decades: 60., 70. and 80. I will show that the categorization of winners and losers not only simplifies the description of social reality but also is difficult to

be easily biographically justified. The etic categorization not always is relevant to the emic perspective. It can be also noticed when we compare life history of an individual - showing the main phases and events of biography - with his/her life story - the way that an individual interprets biographical experiences. The analysis of these two aspects of biography (what is lived through and it is interpreted) shows how people dealt with the process of transformation. I will discuss the topic by presenting some cases of narratives.

Reception And Integration: The Narrative Of The Riace Case

Contini, Paolo (1); Mongelli, Angela (2)

1: Facoltà Teologica Pugliese, Italy; 2: Università degli Studi di Bari Aldo Moro
paolo.contini[at]uniba.it, angela.mongelli[at]uniba.it

The migratory phenomenon in Italy is at the heart of the political debate for a while already. It has resulted in different narrations that divided the public opinion considerably, with meaningful political consequences for our Country. The Riace case, which refers to a little town in the Tyrrhenian Calabria, emerges as "extremetype" within the framework of the common actions of the SPRAR (Sistema di Protezione per Richiedenti Asilo e Rifugiati; i.e. the Protection System for Asylum Seekers and Refugees), and it is also a contentious matter. Thinking a case in point is that of Riace, the aim of this speech is to describe the way of constructing narratives aimed at rousing public opinion, shifting the focus of attention from the factual dimension of the migratory phenomenon to the symbolic dimension. This is justified by the fact that migrations are a real phenomenon as well they have a dimension related to the sphere of imagination, i.e. the culturally constructed. The narratives on the facts of Riace, featuring its mayor, Domenico Lucano, were retrieved from some particularly representative Italian newspapers, from October 2018 to January 2019, and elaborated through textual analysis conducted with the T-Lab software, will show how the "supporters-detractors" polarisation does not have as its object the "substance" of the action of Lucano, but rather the but rather the former focus on the merits, the latter on the method, using -the detractors- the method to discredit the merit and failing, however, to debase the value and the behavioral content.

RN03_08 | Biography and Identities

To Become or Not to Become a Parent? How Childless/Childfree Men Experience Their Life Trajectories

Maříková, Hana

Institute of Sociology, Czech Republic
hana.marikova[at]soc.cas.cz

An increasing number of adults today have never experienced parenthood for a variety of reasons. While in Western societies being 'childfree' became a non-stigmatised lifestyle option and particular attention has been paid to this phenomenon, in Central-Eastern Europe there have been only a limited number of empirical studies focusing specifically on childlessness (mainly quantitative surveys or qualitative studies focusing mainly on childless women). Special attention has not been paid at all or insufficiently to childless/childfree men. However, it can be expected that, at least partly, different reasons contribute to the development and increase of childless not only women, but also men in Central-Eastern Europe from those in the West. In the qualitative study, 14 in-depth interviews were conducted with men from the Czech Republic (between the ages of 40 to 60, with different level of education, from cities as well as small localities) who remained childless/childfree as a result of certain constraints and choices. This study reveals how these men experience their life (and especially reproductive) trajectories and what meanings they attach to them, what mechanisms underpin the changes/stability of their experience, identities and attitudes to childlessness/parenthood in a new societal situation (i.e. after 1989). Special attention is paid to non-normativity of fatherhood/fathering (compared to motherhood/mattering) as well as new life's opportunities for self-realization after 1989.

The Racialised - not being Polish, not being White, not being European

Balogun, Bolaji

University of Leeds, United Kingdom
ssbb[at]leeds.ac.uk

Racialisation is an essential area of race through which, for centuries, the ways of life of the people of the Middle East and Africa are gazed through Eurocentrism. Using different ways of representation, Europeans often represent the Other as the European fantasy of exoticness, strange and foreign. It is a kind of representation that has been advanced in the discourses on race and nation-state. Studies on migration in Poland often focus on in-out migration in the country. What is largely ignored is the complexities of racialisation in the configuration and negotiation of racial identity in the country. Perhaps, the consensus that Poland is strictly homogeneous state beclouds the possibility that identity is never fixed in time or place. Studying the everyday lives of sub-Saharan African immigrants in Poland provides an opportunity to explore racialisation processes during a time when European boundaries are undergoing migration transformation massively influenced by the 2015-2016 EU migrant crisis. It is within such crisis that I examine the racial contours that are often neglected in migration discourses in Poland. In doing so, I draw on the long tradition of representation of Africa as the racialisation of people of colour in Poland. I argue that such representation puts immigrants from sub-Saharan Africa and their children, either born or brought up in Poland, in a condition where their link to Polishness, if not disconnected, is fragmented through the processes of racialisation. Hence, I situate the European migration crisis within the representation of those racialised as White, Black or Brown.

Boundaries Un/Making By Young Refugees In Urban Spaces

Rauf, Abdul

Bielefeld University, Germany
arr.baloch[at]gmail.com

The European societies are confronted-especially since summer 2015- with the consequences of civil wars in Syria, Iraq and Afghanistan refugees. Meanwhile, the rise of right-wing populism and an increasing anti-rhetoric migration discourse has created a 'moral panic' concerning immigration in Europe. Frequently, the discourse portrays refugees as an existential threat to traditional European values and individual countries national security (Lazaridis, 2016). This narrative has spurred on feelings of resentment, prejudice and discrimination, all of which contribute to sense of unequal worth among refugees (Fozdar & Torezani, 2008). The refugees who experienced the episodes of violence and a long coercive journey, this exclusion and hostility results into the cliffhanger where immigrants encounter uncertainty and discrimination in the arriving society. In this context, the study aims to explore the experiences and practices of belonging when they are confronted with boundaries and stigmatization. Zooming into micro experiences of young refugees to answer the research question: how are the social boundaries contested and re-negotiated by young refugees in localized and transnational spaces? With two supporting sub-questions: a). How the cultural repertoires and biographies of these young refugees intervene with the re-figuration of such boundaries? b). How discrimination and discourse have impact on these boundaries making and unmaking process? In order to answer these questions, the study will take multi-sited ethnographic approach to uncover the lived-experiences and imaginaries of young refugees by participation observation and interview with them. The protagonists of study are young refugees aged 18-26 years-old. Analysis of study will be built up on symbolic boundary making underpinnings, getting respect (Lamont et al., 2016) that will help us to understand the social integration of young refugees.

"I Get Along Better with Whites than with Blacks." Discursive Imprisonment and Ways out for Third Generation of "Others" in European Space. Czech-Slovak Roma Mothers Narrating their Way to Upbring the Early School Children

Sidiropulu Janku, Katerina; Obrovská, Jana

Masaryk University, Czech Republic
katerinasj[at]fss.muni.cz, obr[at]mail.muni.cz

The paper develops the coping strategies of contemporary parent generation (namely mothers) of third generation of Slovak Roma who came after 1945 to Czech lands. It is based on the analysis of 25 biographic interviews that has been realized within the H2020 ISOTIS project, and collaborative analysis that confronted the Czech case with research fields in Greece and Portugal. The international perspective on the nature of contemporary European Roma mothers' narratives revealed the importance of wider context of everyday life, namely cultural and political climate in the affected countries. The contemporary Czech Roma mothers present in their narratives of upbringing early school children the symptomatic melange of assimilative approach and stereotyping labelling discourse. They are using their habitual gear to influence the identity shaping of the upcoming generation. Many of the mothers we spoke with are bilingual, they speak Czech and Roma, sometimes other languages. Thus, the early socialization in their own families concerns choice of mother tongue for their children, which presents strong input into the process of cultural identity shaping. The variety of coping strategies with othering processes (in the Czech context essentially driven by the recognition of darker pigmentation as undesirable) serves as inspiration for considering today's newcomers into European space upcoming generation upbringing choices when coping with othering. Identity processes are always situational and interactional and thus we need to elaborate on structural conditions contemporary newcomers entered while they immigrated, together with the micro analysis of their strategies and tactics they employ in everyday life.

RN04 | Sociology of Children and Childhood

RN04_01 | Borders and Theory in Childhood Studies I

Children and Animals as objects of study of the Sociology of Childhood

Nunes de Almeida, Ana; Policarpo, Verónica

Instituto Ciencias Sociais - ULisboa, Portugal
ana[at]ics.ul.pt, veronica.policarpo[at]ics.ulisboa.pt

In this communication, we ask how the Sociology of Childhood can theoretically address the relationships between children and companion animals. We depart from one perplexity: despite animals are ubiquitously present in the lives of children, they have remained surprisingly absent in the new waves of childhood studies, both as direct or indirect objects of study. While developmental psychology has addressed children-animals interactions, this approach has been mostly human-centred, focussing on the benefits for children of having a pet, on the one hand; and considering children mostly as “adults in the making”, who have to learn (through animals, among other ‘tools’), how to reach the ‘better achieved’ condition of adulthood, on the other hand. Crossing contributes from the Sociology of Childhood, and Human-Animal Studies, and drawing on some pioneer research that has questioned the historical conflation of the two categories “childhood”/ “pethood”, as well as the presence of pets in children’s lives), we are proposing a different approach. One in which animals are considered as companions in the lives of children, members of different species with whom children develop companionship relations (Haraway, 2003), rather than stewardship ones. For this, we focus on what children and animals do, together, in their daily lives. Therefore, we bring to the forefront the importance of (social and affective) practices in the making, through which both children and animals co-build common worlds – across the species barrier?

Childhood Studies And Politics Of Childhood: Essential Contributions To The Future Of Democracy In The 21st Century

Suenker, Heinz

Wuppertal University, Germany
suenker[at]uni-wuppertal.de

From the early Frankfurt School to M. Castells today there is a social analysis of bourgeois capitalist societies which focuses on the significance of the ‘cleavage’ between technological overdevelopment and social underdevelopment for the

constitution of subjectivity and the survival of both democracy and humankind. Recognising that under this state of affairs the future of democracy is very much at stake, this paper will argue that a core means of bridging this cleavage lie in the full integration of children as democratic subjects into the social life of our societies in order to enhance the political voice and the political consciousness of everyone. We will show how the correspondence between the new childhood studies and concepts of politicization open up the possibility of an emancipatory societal perspective undergirded by real participation and political education leading to the democratization of all areas of everyday life and of all institutions. This offers a direct challenge to authoritarianism, populism and the rule of power.

Panopticon, Materiality and Generational Relations in Early Childhood

Nilsen, Randi Dyblie

NTNU, Norway
Randi.Dyblie.Nilsen[at]ntnu.no

In recent years, materiality has become a rising interest of childhood researchers. From his historical studies, Michel Foucault provides us with conceptualizations of power and control that are applicable to get insights into everyday life events in contemporary childhoods as well as wider social processes. Panopticon, or panopticism is one such concept, that Foucault also connect to traits of modern society, in which power relations might take form of continuous supervision, control and correction. This concept is beneficial for paying attention to materiality and architecture in research within Sociology of childhood. This will be illuminated in the paper, which presents an analysis from the context of Early Educational institutions. I will attend to power and regulation embedded in architectural elements and generational practices, which have daily life consequences for both children and adults. When seen in light of earlier research and experiences, the analysis might be related to changing discourses that are actualized in childhood as well as the wider society and culture in a Nordic context.

Play-based Participatory Research with Children: Transforming Boundaries and Belonging

Wright, Laura Helen Virginia (1,2)

1: University of Edinburgh; 2: International Institute for Child Rights and Development
s1797192[at]ed.ac.uk

Participatory approaches for research with children are growing in popularity and research on children is losing favour. While children as researchers are becoming increasingly recognised many academics caution against a panacea assumption that participation is inherently "good" without questioning what it entails and how to do it well (Tisdall, 2008; Davidson, 2017). This presentation will operate from a sociology of childhood, social ecological, and child rights framework to introduce a qualitative play-based participatory research process that uses a relational approach with newcomer children and adult researchers in Metro Vancouver, Canada. This research explores the role of play-based methodologies in child researchers' psychosocial wellbeing and meaningful participation. Similar to arts-based research that refers to the use of art during the research process (Knowles & Cole, 2008), I employ the term 'play-based research' for intentional play-based research tools and spontaneous play that arises in the research process to gather and interpret data. Akin to Lester (2016) I suggest that play in research and practice can be seen as a form of minor politics that can transform bordered spaces into participatory spaces and that can be used to reconstruct boundaries and belonging. This presentation will introduce: 1) the research design; 2) the play-based participatory research training with children; 3) the process of research led by children; and 4) preliminary reflections on the role of play for child researchers. This presentation aims to contribute to the conference dialogue on reconstructing boundaries and belonging.

RN04_02 | Children, power, politics and dialogue

Teens and Brexit in Northern Ireland: A Generational Chasm

Leonard, Madeleine

Queens University Belfast, United Kingdom
m.leonard[at]qub.ac.uk

On June 23rd 2016, a referendum was held on Brexit – the exit of the United Kingdom from the European Union. A narrow majority across the UK (51.9%) voted to leave. The results of the referendum have been contentious especially in Northern Ireland since the region retains a border with the Republic of Ireland which remains within the EU. Since teenagers under 18 years of age had no voting rights, the implications of Brexit decided by adult voters in mainland UK has been imposed on them by the voting choices of an older generation. The purpose of this presentation is to report on a qualitative study

of teenagers aged 15-16 living in Belfast on their attitudes to this referendum and its implications for their future lives. The data draws on reflections from teenagers on how they feel about adults voting in this referendum and if they feel they made the right choice. Young people were asked if they felt they would be better-off or worse-off outside the EU and if they had the vote would they have voted to remain or leave. Initial findings suggest teenagers feel that they have been let down by the older generation and that this will have a negative material impact on their future lives where they will be economically worse off in a post-Brexit Northern Ireland. A generational theoretical framework will be utilised to discuss the findings.

Children and Young People's Voice: Moving from Monologue to Dialogue

Moxon, Dan (1,2,3,)

1: People Dialogue and Change; 2: Centre for Children and Young People's Participation - University of Central Lancashire; 3: Pool of European Youth Researchers Co-ordinated by the Partnership between the Council of Europe and the European Union in the field of youth
dan.moxon[at]peopledialoguechange.org

Popular constructions of child participation, portray 'voice' as something expressed by children and listened to by adults or decision makers. This conceptualises voice monologically with meaning emerging from within the child and expressed to the adult through language. The limitation of this have been highlighted previously with many calling for more emphasis on dialogue with children and the relational aspects of participation. Drawing on Bakhtin's theory of the utterance (Todorov 1984), and psychosocial concepts of intersubjectivity and recognition this paper will explore what a dialogical approach to child participation might look like, both in theory and practice. It is based on in depth analysis of small group dialogue within a co-production project between children and practitioners considered in the light of poststructural and psychosocial theory. The paper proposes new ways in which practitioners and researchers might understand and engage in child and youth participation. It will demonstrate how we can understand children's voices as constructed intersubjectively with the adults they are in dialogue with. This involves the adult and child triangulating and shaping both of their identities with each other and their understanding of the external world. It explores questions of the boundaries of thought and voice between one person and another, and how these may relate to child and adults when engaged in dialogue, as well as how dialogue enables the recognition of children as active subjects. Todorov, T. (1984) Mikhail Bakhtin: the dialogical principle, Manchester, Manchester University Press.

Building Belonging: The power of an opportunity

Frankel, Sam; McNamee, Sally

King's University College, Canada
sam.frankel[at]juwo.ca, smcnamee[at]juwo.ca

This paper considers power and how it informs belonging with implications for children's meaning making when they engage with a boundary or barrier. The paper will reflect on the structure/agency dialogue as it explores children's meaning making. It will highlight the extent to which researchers must engage with 'elements of agency' and how through this we can look at a range of processes that shape children's sense of belonging. Drawing off the notion of intra-generacy (Leonard 2016) - this paper will focus specifically on how perceptions of power influence agentic action or reaction. Reflections on self and other highlights themes such as risk and capital and can disclose feelings of power/lack of power. With this it offers an opportunity to examine the nature of actions and the ways in which children might come to establish, reinforce, maintain, or discard a sense of belonging within the context of certain relationships. Notably, combining this with barriers and boundaries brings into focus the multilayered process that come to inform children's decision making and how this connects with a moral component as children assess the acceptability of the situation they are engaged with. This paper will touch on these themes in relation to children's perspectives on everyday relationships as well as topics such as Brexit. It considers the way in which children's sense of belonging and their moral competence to explore what is and is not acceptable is more informed by a search for possibilities to build relationships rather than reject them.

Narratives of Exclusion, Narratives of Belonging. Irish Social Work at the Intersection between Adults' and Children's Voices

Farini, Federico (1); Scollan, Angela (2)

1: University of Northampton, United Kingdom; 2: Middlesex University, United Kingdom
federico.farini[at]northampton.ac.uk, a.scollan[at]mdx.ac.uk

Five years since the creation of the Child and Family Agency that embodied the cultural shift towards in Irish Social Work towards the recognition of children as active participants in making decisions that affect their lives(1)(2), a research was designed to explore the spaces of children's voices in Irish Social Services. The methodology consisted in 8 interviews with children aged 12 to 14 to promote children's narratives around their interactions with Social Workers. The narratives collected allowed a phenomenological description of the interplay between adults' voices and children's voices(3)(4). The presentation discusses three types of narratives: 1) narratives of boundaries between children and social workers along the lines of a difficult construction of trust based on ephemeral interactions; 2) narratives of barriers for children's voices that are subordinated to the Family-State partnership,

indicating the ambiguous status of rights-based policies. These narratives appear to be tightly intertwined. More eccentric is the position of narratives of belonging to child-adult relationships based on affective expectations(5), when children are promoted as the main partner of the Social Workers and their authority raised consequently to circumstances affecting their family. Sociological research argues that between representations of childhood and practices of working with children the gap regards the actual spaces for children's voices(6)(7). Whilst children-adult partnership and empowerment of children's voices underpin Irish policies, yet children seem to recognise boundaries that alienate from, as well as barriers that prevent, a meaningful involvement in decisions that affect their life. However, in situations when family-State partnership is precluded Services need to upgrade children's authority. The risk of trusting children can foster their sense of belonging to the relationship with the Social Worker.

RN04_03 | Childhoods and Children's Rights

Differences In The Construction Of Belonging Of Missing Children

Brantl, Isabelle Marie; Klein, Barbara

Frankfurt University of Applied Sciences, Germany
brantl.isabelle[at]fb4.fra-uas.de, bklein[at]fb4.fra-uas.de

According to Missing Children Europe (MCE), 250,000 children are reported missing in the EU every year. MCE distinguishes between five categories of missing children cases, namely runaways, abductions by a third person, international parental abductions, lost, injured or otherwise missing children and missing unaccompanied migrant minors. While cases of criminal abductions by strangers dominate the media discourse, runaways make up the majority of reported cases in the EU. Despite the increased risks that all missing children face due to their vulnerability without adult supervision, their identities of belonging are constructed differently, depending on the category they are assigned to. Specifically, the parental bond can be traced as a key theme in media reporting on stranger abductions as well as international parental abductions, which is in sharp contrast to the far more contested parental relationships in runaway cases, which influences both the construction of belonging as well as the intervention responses to the children going missing. The EU-funded research project ChildRescue (HORIZON 2020 Grant Agreement Nr. 780938) that is currently being implemented in four EU countries (Belgium, Cyprus, Germany, Greece) aims at understanding underlying structures of missing children cases as well as improving the immediate response to those incidents through an innovative technological solution. As a part of the research project, interviews with international experts, who work on different types of missing children cases, have been conducted (N=13). The results of these interviews have illustrated the different needs and challenges faced by missing children, both in their experience of being missing as well as in their (non-) belonging to their families.

Is This a Child? Rights, Protection and Responsibilities in a Globalized World

Neumann, Cecilie Basberg

Oslo Metropolitan University, Norway
cecilie.neumann[at]oslomet.no

In 1989, the UNCRC working group decided that a person is a child until the age of 18. This was done despite a minority opposition from African and Asian countries. The UNCRC held out a subject position 'child', which was, and is, based on children's vulnerability and rights, aimed at a legally binding protection of all children. This categorization of 'child' is an ambiguous one and is contested in and between states in the global community. Norway, prominent in endorsing the notion of 18 years, nonetheless operates with provisos defining different age-levels denoting the child's moral and judicial responsibilities for crimes (15), sexual relations (16), voting rights (18) and access to alcohol (18/20). However, within the child protection services, a person may be a child until the age of 23. In this paper, I want to investigate shifting meanings as well as identity politics in Norway in relation to childhood with the UNCRC as the constitutive other. In so doing, I direct special attention to specific limitations and moral connotations of the 'child' - especially in cases where children have committed crimes versus those where they have been subjected to harm entitling them to care under the child protection services.

Child Sex-Trafficking: A Qualitative Analysis Of Risk Factors From The Experiences Of Survivors

Merodio, Guiomar; De Botton, Lena;
Puigvert, Lidia

University of Barcelona, Spain
guiomar.merodio[at]gmail.com, lenadebotton[at]ub.edu,
lidia.puigvert[at]ub.edu

According to the ILO (2017) one million children are victims of sexual exploitation worldwide. In Europe, 14% of registered victims of sex-trafficking are minors (Eurostat, 2015). Scientific literature has described risk factors for sex-trafficking of children pointing to poverty, violence, lack of educational opportunities, domestic violence, child abuse, among others. In this paper, we focus on the influence of these risk factors for sex trafficking, particularly on family violence, abandonment, and abuse. Under the Spanish research project END-TRAFFICKING (Puigvert, 2015-2017) we carried out extensive qualitative fieldwork using the Communicative methodology of research (Gómez, 2011). For this paper, we selected 10 interviews with professionals and 15 daily life stories with sex trafficking survivors who were trafficked when they were underage, some of them were also migrants. This contribution aims to reveal the experiences and the silenced voices of the underage victims of trafficking, through the analysis of the life trajectories of adult sex-trafficking survivors. The results show the violation of children's rights suffered and the gravity of the consequences. The findings confirm some of the risk factors indicated by previous research and point to new dimensions of

analysis like the relevance of social relations within the peer group and with other adults. Also, the findings show the lack of an adequate social response in front of risky situations that the children endured, which increased their risk for being victim of sex-trafficking. Implications for preventing sex-trafficking of minors and future sociological research on this issue will be discussed.

Growing Up with Violence in a Kashmiri Neighbourhood

Malik, Aatina Nasir

Indian Institute of Technology, Delhi, India
aatinamalik[at]gmail.com

In Kashmir the inevitability of state violence and its entrenchment in the everyday has brought to the forefront the voices of the Kashmiri people, marking a shift from understanding Kashmiris as passive receivers or victims of violence to focusing on them as agentic beings. While the scholarship interrogates suffering, resilience and resistance of men and women as 'adults', there is no significant academic work which looks at children in Kashmir to bring out how they live in/with violence. Based on ethnographic field work in one of the downtown neighbourhoods in Kashmir which is essentialized as a 'stone-pelting' hub, the paper would look at the everyday of children and explore the subjectivity of childhood through individual as well as group experiences of children. Taking a departure from the pornography of violence, it would look at the way children are impacted, reflect upon, challenge, resist and live with various structures - which constrain as well as offer possibilities. It is going to be an exploration of the 'social' in the lives of children thus, arguing for a different kind of 'childhood' in Kashmir and at the same time explore multiple childhoods within.

RN04_04 | Children navigating economic inequalities

The Liquid Lives of Poor Children: Water, Waste and Work in Informal Urban Childhood

Mizen, Phillip

Aston University, United Kingdom
P.Mizen[at]Aston.ac.uk

This paper explores the social relations of urban childhood through the prism of water. More specifically, a focus on water permits understanding poor children's integration into the informal social relations that increasingly define the cities of the global south (Davis 2006). Bounded by these informal urban childhoods, the paper specifically considers the opportunities and constraints that water presents to children when living in the context of acute urban poverty. As the basis of life, attention to water reveals some of the fundamental barriers children face to their existential reproduction and the labour required if access to clean drinking water is to be maintained. A focus on water further reveals how poor children confront the dilemmas posed by living in an environment where water is an endemic vector of dirt and disease, and the effort expended in maintaining a modicum of personal hygiene and well-being. As precipitation and flooding, water also reveals the precarious living conditions of children living on pavements or in dilapidated buildings and jerry-built shacks that increasingly define urban habitats. And in its commodified form, exploring the hawking and selling of water throws light on the terms upon which poor children are integrated into the informal economy. These themes will be explored by drawing on data from long-term research with street children in Accra, Ghana, and those living in a huge informal settlement adjacent to the city's central business district.

Does Money Matter? Examining the Relationship Between Material Resources and Children's Subjective Well-Being

Toikka, Enna Sinikka

University of Turku, Finland
ensito[at]utu.fi

This study examines the links between children's material resources and the overall subjective well-being (SWB) by using regression analysis. The data is based on the international Children's Worlds Survey (ISCWeB) collected 2016 in Finland. ISCWeB's main idea is to collect data on perceptions and evaluations of children (8, 10 and 12 years olds) especially on subjective well-being matters. The data (N=2840) used in this paper is a representative sample of Finnish school-children. Adopting a child-centred point of view and focusing on subjective well-being has significantly shaped the child indicators research. Children themselves are increasingly used as an informants of their own lives. Despite the growing interest in child-derived measures there is a shortage of examining the suitable measures in detail. Previous research indicates contradictory evidence on the relationship between material resources and subjective well-being. Qualitative studies suggest strong evidence whereas findings from quantitative studies are more elusive. In this study the measures of material resources are child's concern over family's financial situation, their satisfaction with the things they have in general and material deprivation index. The Brief Multidimensional Students' Life Satisfaction Scale (BMSLSS) is used as an indicator of multidimensional subjective well-being. BMSLSS contains of single-item measures of five key domains in children's lives – family, friends, school, self-image and living environment and is academically widely accepted measure of SWB. The preliminary results indicate strong relationship between children's material resources and the overall subjective well-being. However, the material deprivation index appear to be inconsistently connected to the overall subjective well-being.

RN04_05 | Approaching capabilities in diverse childhoods

Barriers, Boundaries and Belongings: Complementary Angles on the Participatory Capability of Children in Street Situations

Stoecklin, Daniel; Fayet, Quentin; Cardozo Sarli, André

University of Geneva, Switzerland
daniel.stoecklin[at]unige.ch, quentin.fayet[at]unige.ch,
Andre.Cardozosarli[at]unige.ch

The notions of “barriers”, “boundaries” and “belongings” are insightful to understand the participatory capability (Stoecklin, 2014) of children in street situations. These children are often treated in discriminative ways because of the barriers erected between childhood and the street environment, and are behaving according to the boundaries and belongings generated, reproduced and negotiated through their own strategies. Inspired by the capability approach (Sen 1999), we consider childhood as the set of choices at hand for the population aged 0-18. Yet, the boundaries of the options children can choose from are moving. Their capability set is expanding or shrinking not only because of institutions acting for or on behalf of children but also through their own agency. We are suggesting that the adoption, in June 2017, of the General Comment 21 on Children in Street Situations by the UN Committee on the Rights of the Child (UNCRC, 2017), is potentially reflecting these moving boundaries. In order to come to a closer understanding of these social dynamics, we build a theoretical framework that shall allow us to observe the implementation of children’s participatory rights. We will do this by focusing on the participatory capability of children in street situations in two countries with very different institutional arrangements, namely Brazil and China. We examine modes of action (Stoecklin, 2018) to analyze the interplay between the factors converting rights into participatory capability (Sen, 1999). We thereby intend to specify the recursive dynamics of “rule-resource properties” in the structuration theory (Giddens, 1984).

Economies of Belonging: Conceptualising Child Care Under Neoliberalism

Alfano, Chiara (1); Kokot-Blamey, Patrizia (2)

1: Kingston, United Kingdom; 2: Queen Mary, University of London
C.Alfano[at]kingston.ac.uk, p.kokot-blamey[at]qmul.ac.uk

In 2016, a health economic report on child development (Anand and Roope, 2016) resulted in media reports suggesting that ‘children are better off at nursery than they are with their parents’ (Independent 2016). The authors use Sen’s (1979) capability approach, which emphasises capabilities, wellbeing and activities as indicative of life quality, to examine the happiness and development of toddlers. By characterising child-rearing as an input-output relationship of activities and interaction on the one hand, and development, ability and wellbeing on the other hand, the authors, perhaps unwittingly, further a mechanistic view of care work where parents and children remain, in a very real sense, separate. In contrast, recent work in feminist maternal studies (Ruddick, 1995; also see O’Reilly, 2016) repositions mothering as a relational practice producing profound and transformative ethical effects within — and also beyond — the mother-child dyad. We examine the consideration of the young child as ‘haver of capabilities’ and ‘doer of activities’ rather than the ‘cared-for’ standing in a complex and rich dynamic to the ‘one-caring’ (Noddings, 2013) as a symptom of the transformation of childhood under neoliberalism. Applying contemporary critiques of neoliberalism by Rottenberg (2018) and Holloway and Pimlott-Wilson (2014), we problematise and unpick the move away from a focus on the child as a relational subject, towards an image of the child instead as a future subject in a market of human capital.

"We Are Here To Improve San Jerónimo, Aren't We?" TekeLab, a Neighborhood Technology Project del Moral-Espín, Lucía (1); Madero-Silva, Macarena (2); Pérez-García, Alicia (3)

1: University of Cadiz; 2: Tekeando - Tramallol; 3: University Pablo de Olavide
lucia.delmoral[at]uca.es, hola[at]tekeando.net,
aliciaperezgarcia[at]yahoo.es

San Jerónimo is a peripheral neighbourhood of Seville (Spain). It emerged in the 19th century as an urban settlement based on self-built housing linked to the works of a railway station and some factories established in the area. Geographically, it is located between the Guadalquivir River and the train tracks and it is surrounded by a cemetery, a wastewater treatment station, a funeral home and a power plant. These metropolitan infrastructures and facilities fostered a (perception of) historical isolation of this neighbourhood from the rest of the city. This is the context in which the initial phase of the TekeLab takes place. TekeLab, a research, art and technology project theoretically based on the capability approach (Sen 1985, 1993), aims at fostering children's social and cultural participation. For this purpose, it promotes children technological autonomy while exploring and reflecting with them about their own experience regarding public space and, more precisely, about the barriers, resources and needs of their neighbourhood. Through the whole process, the collaboration with local organizations, networks and institutions is extremely important. In this paper, we first introduce the objectives and thesis of the project. After that, we describe the actions developed and the outcomes generated so far (cartographies, photos, videos, audios, apps, interviews). Then we analyse children's experiences and aspirations for their neighbourhood through the capabilities lenses and how they would have (or not) changed through their participation in the project. Finally, we propose some preliminary conclusions and reflect on possible methodological improvements and the potential replicability of the project. More info: <http://www.tekeando.net/>

Boundaries Inside The Hearth: When Our Parents Mustn't Be The Ones We Grow Up With. The Case Of Foster Children In France

Oehmichen, Helene

Ecole des Hautes Etudes en Sciences Sociales, France
helene.oehmichen[at]juvsq.fr

This paper proposes to address the barriers to affiliation faced by children in France removed from their parents and placed in foster care at a judge's decision. Since the 1980s, the legislative framework requires children to count their family of origin as relatives, even if they never see them. They must not belong to their foster family with which they share their daily lives. From a field survey conducted for my thesis, based on

interviews with foster children, family monographs (long-time observations), judicial files review and statistics on their trajectory, I will present the experience these children have of family belonging. I will first explain what are the material and symbolic supports of this barrier in the home put on by professionals. I will then show how and why foster children may want to break the barrier and belong to their foster care: age at the placement, frequency of contact with the family of origin, but especially sharing of intimacy (with the heat of the hearth), of norms and of worldview during a long time, and even more the place dedicated by the foster mother (who places or not barriers between the child and her relatives). Finally, I will describe which conscious or unconscious strategies are put in place by the child who wants to belong to his foster family: looking for the physical resemblance, the similarity of tastes and skills, playing on words of kinship, hiding his placement in the outside world, or even eventually asking to be adopted.

RN04_06 | Children in space and place

Place Meaning for Children in the Forest Garden

Hammarsten, Maria Jennie

Jönköping University Sweden, Sweden
maria.hammarsten[at]ju.se

Previous studies show that outdoor places have different meanings for children's lives based on children's preferences from experiences and memories. The purpose of the study is to investigate the forest gardens' places from the children's perspective. The theoretical framework is Social Studies of Childhood, where children are regarded as competent social actors and right to give their voices. This study intends to use empirical material from walk-and-talk conversations and photography with 28 children. The results from this ongoing study presents the four most photographed places in the forest garden, which are places with plants, the pond, the fireplace and the tipin place. Places with plants give children a sense of belonging to the nature and think they are friends with the insects. Boundaries in forest gardens are fuzzy and barriers like the fencing are designed to keep animals out rather than children in. Educators positively encourage risk taking, inviting children to try different activities and offering a range of opportunities from which children can select and self-regulate their level of risk and challenge. Barriers, however, exist in taking up of all opportunities because socioeconomic disadvantage and cultural norms mean many participating children have never before experienced such natural environments in their deprived home neighbourhoods or for immigrant children, in their countries of origin. It is therefore interesting to report that theme of boundaries, barriers and belonging are intersect in shaping children's relationship with the places in the forest garden.

Inside and Around Schools' Toilets: Theorizing Boundaries Between Adults and Children

Garnier, Pascale

University Paris 13, France
pascale.garnier[at]univ-paris13.fr

Toilets are an unique place inside schools where children can escape from the "panoptical" (Foucault, 1975) power of adults. They create boundaries between adults and children regarding cleanliness, which are both physical, symbolical and moral (Douglas, 1966). These age boundaries (Garnier, 2015) are not only that of the segregation of toilets for adults and for children, which is systematic in France, as well as the gendered divide. Inside and around children's toilets, these boundaries are also disputed and performed through their respective strategies and tactics (De Certeau, 1984). In order to study them, our inquiry in French schools is based on an ethnographic study in écoles maternelles (2), elementary (2) and secondary schools (2), using interviews with adults and visual methodologies with children (aged 3 to 16 years). Our results show how adults' control children's body, but also the failure of their strategies in order to keep the "proper" uses of the toilets. From children's point of view, schools toilets are often avoided individually and criticized as too dirty and dangerous, but they are still attractive for groups of peers. Boys and girls have very different uses of schools' toilets, but they exert a same collective resistance against adults' power upon their body. It seems that what they also challenge is the conception of "the body" rationalized by the institution as an individual territory and object of hygienic care, for a more collective and joyous embodied performance (Bakhtine, 1965).

Why Emil Spend His Breaks at the Outskirts of the Schoolyard. Anthropological Perspectives on the Battles for Territories in the Schoolyard

Ladekjær, Else

VIVE, Denmark
elol[at]vive.dk

The purpose of the presentation is to look closer at the relation between children's social status and their possibilities for taking up space in the schoolyard. Said in other words how children's social relations intertwine with the physical spaces. I am inspired by Thorne, who has shown how boys take up more space than girls in school in her book "Genderplay. Girls and Boys in School" (1993). Some activities take up a lot of spaces in the schoolyard, e.g. boys playing soccer. But not all children who want to play soccer are allowed to play, as there is not space enough for everyone. Thus there is a battle for territories - age and skills are central elements in these battles. These battles is related to childrens possibilities for being physically active - if you cannot take up any space in the schoolyard you cannot move and be physically active. Some

children like Emil who cannot take up any space in the schoolyard thus cannot move physically. Emil tries different strategies to change his position both socially and physically. The presentation is bases upon fieldwork among children in Danish public school, where I followed the children from two classes from two schools from the 5th to 7th grade.

The Children of Kypseli Square

Vlachou, Sofia (1); Andishmand, Baharan (2)

1: Panteion University, Athens, Greece; 2: University of Amsterdam
SVlachou[at]gmx.de

My presentation relies on a short film that was created in the framework of a post- graduate summer school, organized by the Athens Ethnographic Film Society, in cooperation with the Netherlands Institute of Athens, in 2015. The film deals with the children's appropriation of the urban space around Kanari Square (commonly referred to in Greek as Platia Kypselis), in Athens. That square is located in one of the most densely built metropolitan areas, in the heart of the multiethnic quartier of Kypseli that has been basically inhabited by first- and second generation migrants for the last few decades. While the Square environment represents one of the very limited social encounter opportunities for the mostly unemployed- and starkly impoverished local population of all ages, the youngest ones reclaim it as an exciting and ever transforming field of action and as a terrain to negotiate their affiliations, tastes and sense of belongingness on a steady basis. The authors undertake to trace the multitude of playful trajectories and creative ways that reattribute meaning to an otherwise mundane piece of urban space 'at children's eye- height', in order to remind us of the enrichment carried along with the childrens' presence and the value entailed in the existence of free, public spaces open to all.

RN04_07a | Belonging and Migration

The Interactional Construction Of Migrant Children's "Belonging"

Baraldi, Claudio

University of Modena and Reggio Emilia, Italy
claudio.baraldi[at]unimore.it

This presentation concerns some research results of a European project on innovation in education, aiming to promote children's agency in the construction of their personal memories and dialogue around these memories. The research results regard the ways of constructing the meaning of migrant children's experiences and identity. The data were collected through the video-recording of 96 meetings, coordinated by facilitators, in 48 classrooms, in Germany, Italy and the UK. During these meetings, the children's narratives of cultural identities were influenced by both the way of facilitating communication and the specific social context of the schools. The narratives of cultural identities are observed as contingent constructions in classroom interactions, rather than as essential components of children's personalities. In particular, the way in which facilitators act as co-tellers is important in this contingent construction of narratives, which frequently highlight the importance of children's personal experiences and preferences, rather than cultural values or principles, thus showing the distance between children's personal life, on the one hand, and stereotypes about their cultural identity on the other. This presentation highlights two results of this research. First, the facilitated interactions led to the construction of different types of narratives, regarding cultural belonging, uncertain or hybrid identities and rejection of cultural belonging and identity. Second, the facilitators' sensitivity for the delicacy of children's conditions of migration led the facilitators to give up the promotion of the children's narratives, but this also led to the failure of the promotion of the children's agency and dialogue around their experiences.

Young People Migrating In Ethiopia And Nepal: Editing Social Norms While Still Wanting To Belong

Johnson, Vicky

Goldsmiths, University of London, United Kingdom
V.Johnson[at]gold.ac.uk

The paper challenges assumptions that young people want to break traditional bonds within families and communities and change social norms, following Bauman's theories of insecurity and community. Instead, marginalised young people, who often have successful migrants as their role models, tell stories of desires to maintain respect in their communities of origin. To be able to support their families, feel accepted and a sense of belonging on their return. Participatory and large scale qualitative research started from the perceptions of children and youth (aged 15-24) in fragile and conflict affected research

sites to understand how they negotiate and navigate uncertainty. In both countries, young people move to small towns to find pathways out of poverty, but find services are inadequate and inaccessible to the most marginalised. Many young women may want to escape from traditional systems of early marriage and strong gendered norms that discriminate against girls. Young men feel an impossible burden to meet expectations to provide for their families. Rural-urban mobility is often a step to international migration where youth hope to find new futures. Children and youth may embrace uncertainty and find creative solutions to their marginalisation and poverty, but this is temporal. They break with traditional transitions, form new social bonds and seek alternative ways of earning a living in the informal sector, but they only want to 'edit' social norms and to still feel that they belong.

Fluid Boundaries, Fixed Borders and Belonging? Homes Of Asylum Seeking Young Children In Finland

Paju, Elina

University of Helsinki, Finland
elina.paju[at]helsinki.fi

In my presentation I ask how the material and affectual boundaries and borders of children's homes are made and re-made. I focus on the homes, experiences and everyday practices of young children who are either in the process of seeking asylum in or have recently received asylum permits to Finland. My analysis suggests that the homes in the reception centres or the first homes after gaining the asylum permit consist of fluid boundaries keeping some entities outside while letting some in. To make sense of the dynamic nature of the homes of the asylum seeking children I conceptualise them in relation to the concept of space as produced in relation to and in the networks with other spaces (cf. Massey, 2008; Ingold, 2011). A home is, thus, seen as a nexus for different networks of human relations as well as material artefacts. The borders of the homes are not fixed but dynamic (cf. Barad, 2007). I explore what passes through the borders of the homes and its relation to the belonging of the children. The presentation is based on my on-going research on the material and affectual practices of making homes of asylum seeking children in Finland. I am currently conducting ethnographic fieldwork for data generation.

Exploring Children's Experiences, Barriers and Boundaries in the City and (Re)Imagining Children's Places

Castro Seixas, Eunice (1); Portugal Melo, Benedita (2); Tomás, Catarina (3); Fernandes-Jesus, Maria (4); Castro Seixas, Paulo (5)

euniceseixas[at]socius.iseg.ulisboa.pt,
mbmelo[at]ie.ulisboa.pt, ctomas[at]esexl.ipl.pt,
maria.jesus[at]iscte-iul.pt, pseixas[at]iscsp.ulisboa.pt

Recent sociological research on childhood has emphasized children's agency and autonomy as social actors, who interpret and experience places differently from adults. Nevertheless, children are seldom heard in matters of urban planning. Consequently, some of the public places designed for children are not appropriated by them as their own, making these "places for children", but not "children's places". These discrepancies are related to boundaries between children's and adults' living experiences and place-making processes. They can also be understood as barriers (both symbolic and material) to children's access to the city, or as restrictions to children's social and cultural rights, namely their "right to the city". However, cities are also, by their spatial and relational characteristics, potential contexts for promoting children's rights and empowerment (a rising number of child-friendly cities initiatives, as well as participatory and inclusive urban planning are examples of this). It is in this dialectic relation between restriction and possibility that CRiCity project tries to analyze the condition of childhood in the city, from an interdisciplinary perspective anchored in the work of Urban Studies, Sociology of Childhood, and Public Administration. We present preliminary findings of our analysis of children's experiences and sense of place, including their own notions barriers, boundaries and belonging, in various urban public spaces in Lisbon, the capital of Portugal. Diverse child-centered methodologies, as well as ethnographic observation are used, including techniques that focus on the children's imagination of the ideal neighborhood, park or city to grasp children's aspirations of belonging. Note: The presenting author will be Eunice Castro Seixas. Authors have all equal merit in this communication and are presented by alphabetic order.

Being a Grandchild: Meanings, Practices, and Experiences with Grandchildhood

Souralová, Adéla

Masaryk University, Czech Republic
asouralo[at]fss.muni.cz

Given the demographic changes in Western countries, specifically the increasing life span, grandparents have emerged as potentially significant figures in family life. The roles of grandparents and grandchildren become more important as the long-lasting intergenerational relationships across three or even four generations are increasingly common. While the research on grandparenthood is booming, researchers have paid little attention to the meanings, experiences, and practices of grandchildhood as seen from the perspective of grandchildren. How do the grandchildren make sense of grandchildhood? How do they reflect upon the relationship with their grandparents? What does it mean to them to be grandchildren? The paper answers these questions, drawing upon in-depth interviews with grandchildren living in three-generation households (age 16-26). This paper elaborates the notion of 'grandchild practices' (drawing upon 'family practices' proposed by Morgan, 1996) and focuses on the minutiae and mundanities of everyday life that shape the role of a grandchild in early adulthood and retrospectively in childhood. In the context of three-generation households, four dimensions of grandchildhood are key: everyday grandchildhood, direct grandchildhood, caring and cared grandchildhood, and teaching and learning grandchildhood. These dimensions are examined to show the active role of grandchildren in negotiating intergenerational and family relations.

The Role of Social Stratification In The Childhood Life Of Generation Z

Kolosova, Elena

Russian State Children's Library, Russian Federation
the_shmigal[at]mail.ru

The eventfulness of the new generation depends on many characteristics of the historical situation (primarily an ineffective social family policy, process of informatization, the formation of consumer behavior patterns, the childhood industry etc.). Innovative methods and analytical schemes of the research results allowed us to describe the determinants of the childhood events of 2000-2010, based on the inequality of society, and to assert that they potentially provoke contradictions within the juvenile groups. A survey of young people to determine the age of the most important events of childhood was held in 2018 (N 774). The study of the transition from childhood to maturity showed that the age of the end of childhood depends on stratification: children from poor families "childhood ended" at 12.6 years (average age), in families of average wealth at 13.8 years, in rich families at 13,4 years. Practices of everyday life of the children themselves, family, parental behavior models also depend on the socio-economic situation of families and resources of the places of residence where they grew up. Poor children earlier than children from middle-income and high-income families go to the grocery store to buy groceries and household goods; walk in the yard without an escort; move independently (to school, to grandmother, etc.) in a locality, city. On the other hand, they later than their peers began to engage in community, received their nominal document (award), did a tattoo, piercing; went on a diet. With a marked independent mobility, they are limited to travel to another city, terrain and abroad. Interestingly, respondents from poor families noted that teenage conflicts with their parents also began later.

Participate to Planning: Children Thinking Together for Urban Design

Berritto, Antonella; Mazza, Rocco

Università degli studi di Napoli Federico II, Italy
berritto.antonella[at]gmail.com, rccmazza[at]gmail.com

Becoming an adult-centered and anti-democratic social space, the contemporary city is a resource and a bond for social action. More specifically, the city represents a limitation in the biographical development of the child, violating their right to citizenship. The theme of the relationship between the child and the urban environment urges us to look at childhood as a social category on a par with all others and to rethink the urban planning discourse on city planning practices. The study starts from a recognition of what social research techniques can create, among the participants of the research, a theater of democracy that promotes participation and cooperation, respecting the child's own freedom as a person, and the expression of one's opinion. In this sense the thinking together of children was necessary, because on the individual and collective level it allowed them to assume critical and responsible attitudes. Through an mixed methods approach, aimed at the convergence of the experience of children, we

have tried to restore the creativity and the evaluation of the protagonists of the research, considered as "future citizens". In conclusion, the work aims to bring out, also, the methodological solution that is implemented through the activity of participatory planning: the activation of a preparatory phase of mutual learning and convergence of meanings of the protagonists. In fact, with regard to the communicative aspects in the participatory planning processes there is an understanding of the different languages and the acquisition of a perspective that includes the other, important for involving the child in a dialogue on his / her own city.

Coming Of Age With Asthma: Chronic Illness As Accelerator In Acquiring Autonomy?

Chassagne, Aline; Duprat-Kushtanina, Veronika

University of Besançon, France, LASA
a.chassagnechub[at]gmail.com, veronika.duprat-
kushtanina[at]univ-fcomte.fr

Epidemiological studies describe a propensity for asthma to decline during adolescence (Akinbami et al., 2011), its beginning (12-14 years) and its end (18-21 years) being considered as critical points in the care pathway. Sociological perspective concentrates on the logics of action of adolescents collecting their experiences, discourses as closely as possible (Corsaro, 2018; Diasio, Vinel, 2017). To explore these issues, a group of sociologists and anthropologists is conducting a mixed-methodology study in France. The quantitative study explores 120 trajectories of persons aged from 12 to 21. The qualitative study analyzes the experiences of 15 children. In-depth analysis shows that children develop skills in asthma management in terms of self-administration of treatment, body techniques, risk management. Even if they are helped by their parents and professionals, the adults' objective is to make them, as they say, responsible and autonomous. Children are expected to conform themselves to care trajectories elaborated by professionals and parents, their capacity of playing by these rules is seen as a sign of maturity (Mayall, 1994). A recent study showed that the young with a mental disease do not really access the statute of adult (Eideliman, 2012). As it comes to physical sickness, this issue seems to have never been treated. We will thus question whether having a chronic illness might work as an accelerator in coming to age, if proving one's maturity through managing the disease has an impact on gaining autonomy in other everyday life choices (leisures, studies, housing, etc.). And on the contrary, if being seen by parents and professionals as incapable of managing one's disease can be an obstacle to the access to autonomy.

Institutionalized Childhood as Barrier to Fitting in while Transitioning to Adulthood

Roth, Maria; Antal, Imola; David-Kacso, Agnes; Laszlo Bodrogi, Eva

Babes-Bolyai University, Romania
roth.mari[at]ymail.com, imolaan[at]yahoo.com,
kacso_agnes[at]yahoo.com,
laszlo_bodrogi_eva[at]yahoo.com

This research discusses the topic of boundaries impeding social inclusion of young adults with childhoods marked by institutionalization. As part of the SASCA Project ("Support to adult survivors of child abuse and neglect", www.sasca.eu) the Romanian team interviewed 45 young people (19-35 of age) who spent their childhood in child protection care-settings in Romania. They told stories about their childhoods marked by traumatic experiences due to chaotic environments, lack of emotional and social support, and various forms of abuse perpetrated by other children, by family members, educators and other professionals. The objective of this presentation is to highlight their efforts of fitting in in the period of transitioning to adulthood and reflect on the effects of the victimization experiences. Disclosure of being rejected and abused were followed by reflections about becoming aggressive, revengeful, angry, distrustful, solitary and secluded, or eventually powerful and persistent. Interviewed young adults define their identity as different compared to their peers raised in their own families, and identify themselves as being different ("others"). Our interpretation is based on the conceptualization of 'othering' (Spiviak, 1985; Powell & Menendian, 2016): young adults with childhood experiences in residential care have built their own identity by incorporating otherness and seeing themselves as incomplete (sub)human beings, without the rights to be protected or to express pain. Listening to their stories and recognizing their suffering is a first step on the road to regain their dignity and to strengthen their selves.

Studying Parental Mediation of Children's Internet Use as a 'Tangible' Part of Socialization: An Eight-Years Perspective on Barriers versus Belonging

Kalmus, Veronika

University of Tartu, Estonia
veronika.kalmus[at]ut.ee

Parental mediation of children's internet use, defined as 'regulatory strategies that parents introduce to maximise benefits and minimise risks for their children' (Kirwil, Garmendia, Garitaonandia & Martínez Fernández, 2009) in their online lives, enjoys an increasing attention as an interdisciplinary research field. This paper, by looking beyond a narrower focus used in media and communication studies, addresses parental mediation as an empirically tangible part of

broader patterns and dynamics of socialization and intergenerational relations. Particularly, restrictive and monitoring mediation strategies (rules and restrictions) tend to match authoritarian parenting style and 'barriers' in parent-child interaction, while active mediation (help and guidance) corresponds to supportive family atmosphere and 'belongingness'. The analysis is based on two waves of the cross-national EU Kids Online survey, conducted in 2010 and 2018 among 9-16-year-old children and their parents (N=1,000 in each country). The paper focuses on one of the surveyed countries – Estonia – that has experienced remarkable technological and social transformations during the last decades. By looking at comparable indicators of parental mediation (active mediation, restrictive mediation, technical restrictions, and monitoring), asked from children as well as their parents, the paper aims at delineating main trends in Estonian parents' practices and strategies of (media) socialization. Preliminary analysis indicates the increased prevalence of technical restrictions as well as active mediation, according to both children's and parents' answers, evidencing (1) the rising level of parents' online safety awareness and digital skills; and (2) the continuing struggle between different, often contradictory, socialization values and parenting paradigms (such as old, child obedience-oriented, and new, child autonomy-oriented ones).

How do Family Relations Alter the Relationship Between Parent-to-Child Physical Violence and Adolescent-to-Parent Physical Violence?

Beckmann, Laura

Criminological Research Institute of Lower Saxony, Germany
laura.beckmann[at]kfn.de

The present contribution examined the extent to which beneficial and hazardous family relationships altered the relationship between childhood exposure to parent-to-child physical violence and self-reported physical adolescent-to-parent violence (APV). Current levels of perceived family cohesion, family conflict, and interparental violence were assessed as moderators. Based on data from 2,490 ninth graders who took part in a large school survey in the federal state of Lower Saxony, Germany, results showed that parent-to-child physical violence was positively related to APV. Family cohesion buffered detrimental effects of parent-to-child physical violence on physical APV, while family conflict exacerbated this link. Specifically, parent-to-child physical violence had weaker effects on APV for students who reported greater levels of family cohesion, while stronger effects were observed for students who reported greater levels of family conflict. In sum, APV, and the role of family relationships deserve greater attention in discourse about lasting, adverse effects of childhood exposure.

RN04_08 | Boundaries and Generationing

No Diapers, Not a Baby Anymore! Constructing “Babyhood” as an Age Boundary while Toilet Training

Chantseva, Victoria

University Paris 13, France
vika.chantseva[at]gmail.com

Different conceptions of growing up are sources of multiple tensions in the field of the sociology of childhood and children, as well as in everyday practices. The modern child-rearing is torn by conflicting precepts. On the one hand, the parents must give the child time to grow by respecting his needs for care and protection. On the other hand, they should nurture him to become autonomous. Indeed, the increasing social value of the childhood restricts forcing the child to grow up, but at the same time, many aspects of early childhood education consist of pushing children to quit the “infantile” attitudes or attributes by challenging them and emphasizing the benefits of being a “big boy” or a “big girl”. Being a child appears as a discrete period composed of both rhetorical and material “milestones” to pass. Using the example of toilet-training, this paper aims to explore the construction of children’s agency and of growing-up as a sequence of stages and barriers to surmount. The empirical data comes from an ongoing sociological study of toilet-training in different cultural contexts (France, Norway, Russia) that includes the analysis of childcare books for parents, toilet training books for children, interviews with parents and observations in educational settings. The comparison of different methods shows that the more the toilet-training is conceptualized as something that depends on child’s will, the more it is presented as a “rite of passage”. The test of crossing a symbolic border may be ratified by some market products or by institutions.

Symbolic Boundaries Of Time: Exploring The Production Of Temporal Socialisation

Nissen, Stine Karen

Aarhus University, Denmark
skn[at]edu.au.dk

According to Elias (1992), in order to take up the position of an adult in society, children must learn how to regulate their behaviour and feelings to make them compatible with the social institution of time. As implied here, temporal dimensions can be highlighted as important boundaries when approaching ideas of the child in various settings (James et al. 2016). In exploring the concept of temporal socialisation (Darmon, 2018), this study sheds light on various symbolic and moral dimensions at play when children struggle with disparities between individual and collective temporal frameworks. In contrast to studies that depict children as

workers or students from whom all knowledge of time was deliberately withheld as a means of power (Kydd, 1857; Lærke, 1998), this study shows children who are expected to know, embody and practice time in multiple ways. Based on ethnographic fieldwork carried out among first, sixth and ninth grade children in Danish schools, the study draws on a particular institutional setting to examine what, how and why certain temporal attitudes are made more significant than others. The purpose of this paper is to: 1) pay attention to culturally specific and age-appropriate temporal norms in terms of temporal socialisation and to 2) show how these norms are contested, produced and reproduced through everyday practices involved in the transformation and diversity of children’s classifications of time.

Childhood in Germany – The View of Refugee Children

König, Alexandra; Schwittek, Jessica

University Duisburg-Essen, Germany
alexandra.koenig[at]uni-due.de, jessica.schwittek[at]uni-
due.de

An “anthropological view” characterizes an observer who is a stranger to the group or culture under study. Relating to this, we assume that children who have recently migrated to an unfamiliar country may have such an “anthropological view” on local childhood. In an ongoing project, we examine refugee children’s views of childhood in Germany, focusing particularly on the way they acquire knowledge of the generational (and social) order and how they manage their own position in it. Our study focuses on refugee children who have lived in Germany for about two years. We combine three kinds of data: interviews, group discussions and photo-centered chats. In the group discussions, participants were asked to describe childhood in Germany. Although not explicitly asked to do so, they contrasted childhood in Germany with childhood in their home countries, bringing up a broad variety of topics such as teachers’ and parents’ expectations towards children, concepts of friendship and children’s safety in the public space. However, the interviews show the heterogeneity of (generational) expectations perceived and managed by children in different social worlds (family, school, peers). As they identify differences and similarities concerning their social worlds in both (sometimes: several) localities, differences in concepts of childhood and generational order become tangible. In line with the topic of this conference we will discuss our first results against the background of the questions 1) How are boundaries between adulthood and childhood drawn within different social worlds? 2) To what extent are (contradictory) generational expectations perceived as barriers and how are they managed?

RN04_09a | Borders and Theory in Childhood Studies II

Child-Led Research, Children's Rights and Childhood Studies: a Defence

Thomas, Nigel Patrick

University of Central Lancashire, United Kingdom
npthomas[at]uclan.ac.uk

Recent articles by Kim (2016) and Hammersley (2015, 2017) have critiqued, respectively: the methodological and normative assumptions that underlie research 'by' children; claims that have been made about the implications of children's rights for the ethics of research involving children; and some of the central commitments of Childhood Studies, including the idea that children are worthy of study 'in their own right' and that participatory methods are the gold standard. These distinct but connected critiques deserve a serious response, and that is the aim of this paper. In doing so I distinguish between three categories of criticism made by Kim and Hammersley: (i) those that are pretty obviously valid, and should be accepted to the extent that they apply; (ii) those that seem to be based on a misreading or misunderstanding of the claims being made by proponents of child-led or participatory research, or by scholars of Childhood Studies; and (iii) those that represent serious challenges to defend, redefine or rethink our aims, claims or research practices. In particular, the paper will consider: what we are saying when we make claims for children's competence and agency; questions around the purpose, and ownership, of knowledge; the relationship between ethics, research and the study of childhood; and the relevance of Spyrou's (2017, 2018) call for a 'decentering' of childhood.

How to Look at Childhood and Modernity: Beyond the View of the New Wave

Motomori, Eriko

Meiji Gakuin University, Japan
motomori[at]soc.meijigakuin.ac.jp

This paper attempts to reconsider the New Wave view of childhood and modernity. Alan Prout stated that the New Sociology of Childhood reached modernity by stressing the agency of children and childhood as a structural form, while social sciences reconsidered the concrete views of subjectivity and the social system and that persistent dichotomies surrounding childhood and adulthood made it impossible for us to grasp complex childhoods in late-modernity. Alternatively, he and his followers suggested a plurality of childhoods and the heterogeneous network of the social, using theories such as Deleuze and ANT. However, plurality seems to be too broad. Can we allow the strength of modern views to

be ignored? As Phillippe Ariès described and Prout himself insisted, modernity constructed childhood in certain ways and the child-adult dichotomy is rooted in our society as laws, institutions, and academic theories; and the New Sociology of Childhood might be the effect of this construction. We need to review the strength of modernity and, as an extension of it, the complexity and liquidity of late-modernity, in which even the disappearance of (the modern) childhood has been repeatedly announced, should be described. With this interest, this paper will explore an alternate frame by referencing Jacques Donzelot's metaphors of "tutelary complex" and "lines of flight" to understand modern and late-modern childhoods. In doing so, Japanese examples will be used, in which the child-centered tradition has been strong, and post-war economic growth has constructed a strong monolithic view of childhood.

Acting Children, Care and Subsumption in Late Capitalism: the Fantasy of the Agentic Child

Moran-Ellis, Jo

University of Sussex, United Kingdom
j.moran-ellis[at]sussex.ac.uk

Since the global financial crisis of 2008, Capitalism, and the crises therein, have been on the agenda of many academic discussions. However, within these discussions, little attention has been paid to the realm of social reproduction despite its significance for the capitalist mode of production. In this paper I draw on Nancy Fraser's work on the crisis in social reproduction to analyse an instance where children figure as key actors in social reproductive work through carework in an advertisement for IKEA. I argue that within the advert there is both a fantasy of the child as an actor and agent of intervention, and an alignment of IKEA with values of love, care and emotion in the family nexus even whilst the care work is directed to the social reproduction of the worker – in this case a nurse. The advertisement in question is one produced by IKEA for a UK television audience in the winter of 2016 in which a narrative is presented which emphasises values of care rather than selling goods to the consumer. Sociologically, I examine both the mobilisation of a fantasy agentic child and alignment with values of care at the boundary between the commodified (the IKEA product) and the non-commodified (the child's care and/or family love) in terms of questions how children feature not only in questions of social reproduction, where their contribution is largely invisible, but also in questions of subsumption and commodification in late capitalism.

Crossing Roots: Interdisciplinary Challenges Of a Critical and Public Sociology of Childhood

Trevisan, Gabriela De Pina; Sarmiento, Manuel Jacinto

Institute of Education, University of Minho, Portugal
gabriela.trevisan[at]gmail.com, sarmiento[at]ie.uminho.pt

Childhood sociologists often come across demands of interdisciplinary dialogue with scientific researchers and other professionals from different fields and disciplines. This is especially true when they assume a critical paradigm of the Sociology of Childhood which seeks, not only the understanding and interpretation of the living conditions of children - especially poor children or children in specific situations of subalternity (ethnic rations, gender, disability, or other) -, but also contributing to the transformation of the social structures that (re)produce those conditions. The dialogue generated in the scope of the design, development or evaluation of social intervention programs or forms of advocacy or action in public policies contributes to the test of constructs and concepts, but it also challenges sociological theories and perspectives. The development of the field of "Childhood Studies" is perhaps the greatest evidence of this interdisciplinary epistemological challenge, but it is largely due to the balance of the effects of this dialogue on the evolution of the discipline of Sociology of Childhood itself. From the analysis of theoretical practices of authors in Critical and Public Sociology of Childhood, of researches about the local childhood citizenship in the city and in educational settings, this paper seeks to interrogate the theoretical possibilities of dialogue with areas such as urbanism, psychology, neurosciences, educational sciences and law studies, amongst others, contributing to a multimodal theoretical positioning, without losing its critical and transformative perspective.

RN04_09b | Protecting and promoting children's rights and well-being

A Critical Sociological View on the Child Rights Governance of the EU: Where European Children Stand?

Firinci Orman, Turkan

Baskent University, Turkey
turkanfirinci[at]gmail.com

The main objective of this paper is to offer an alternative society-centric perspective on the Child Rights Governance (CRG) in the EU which could be grounded on the new theory of the sociology of childhood while using the operational capacity of the New Modes of Governance (NMG) applied to the children's rights sphere. The research will follow a descriptive

analysis which is mainly based on the literature review. The legal perspective on CRG of the EU has many shortcomings such as tokenism on children's political participation and a need for better mechanisms; the stress on the protection of children and less interest in their empowerment; the fact that the EU as a non-state actor in international politics cannot ratify the UNCRC; and formidable changes which UNCRC presupposes and requires running against the grain of popular beliefs and practices of elected officials, administrators, and the generality of citizens. By addressing these shortcomings and gaps of such normative approach it is debated that the new theory could provide a bottom-up approach for CRG in which children are better represented with further reaching their participation rights in the EU. The NMG will be also debated and compared with the existing child rights institutions and mechanism (both private/civil and/or public) including various actors such as the special networks, NGOs, and, other formal mechanisms regulated by laws (such as the ombudsmanship for children). The findings and the results could lead to future research aiming to design better political participation models and tools for children in the EU. Keywords: Child Rights, the EU, New Modes of Governance, Sociology of Childhood.

Does Economic Distress Undermine Children's Wellbeing?

Lindberg, Marja; Nygård, Mikael; Nyqvist, Fredrica

Åbo Akademi University, Finland
marja.lindberg[at]abo.fi, mikael.nygard[at]abo.fi,
fredrica.nyqvist[at]abo.fi

Even though Finland is known for its comprehensive family policy, sluggish growth, uncertain labour markets and austerity policies such as cutting of child benefit, have undermined the economic security of families with children and put families in the risk zone of poverty, health inequalities and other kinds of ill-being. Earlier research show that austerity policy and economic distress have affected the wellbeing of families and hence the wellbeing of children. However, earlier studies mostly have focused on parents' or family wellbeing and the knowledge of children's experiences has mainly been studied by asking parents or other adults. We analyse the experience of wellbeing amongst Finnish children and whether wellbeing is related to the economic situation of the family. We also study the influence of self-confidence, health, friends, bullying, leisure time activities and school satisfaction on children's wellbeing. We use the data of the international survey of children's lives and wellbeing conducted by Children's Worlds project during the years 2013–2014. The results show that worrying about family economic has a significant impact on the wellbeing of children. The other factors related to subjective wellbeing are for instance self-confidence, health, friends, bullying and school satisfaction.

History as a Playground. A Study of Children's Visit to a Historical Theme Park

Samuelsson, Tobias Hans Olof; Svensson, Carl-Johan

Jököping University, Sweden
tobias.samuelsson[at]ju.se, carl-johan.svensson[at]ju.se

The mix of entertainment and education – edutainment - is an ever-growing trend blurring the distinction between for example museums, zoos and amusement parks. Edutainment establishments attracts growing numbers of children, families and schools every year. The edutainment business is said to offer new methods and different ways of spreading knowledge and tries to introduce novel, surprising approaches to attract visitors. Often the parks use hands-on-pedagogy and visitors get to experience and try features first-handed. The establishments thus expect an active, explorative and interested visitor. Then again, at times it is questioned what visitors actually learn from edutainment institutions, and if the entertainment does not more or less dominate a visit to these places. Research in the field is still scarce and particularly when it comes to studies where researchers follows visitors during their visits. This paper report on a study of 10-12-year-old school children's visit to a western theme park in Sweden, a theme park distributing an historical journey back to the 1870s America. In the paper we use Gibsons theory of affordances to highlight how the children take on different features and how they through their actions enacts the park. Using material from participant observations during the children's visits to the park we specifically analyse how the children react to the parks use of history and the parks mix of entertainment and education. The paper thus highlights the visiting children's contribution in the very learning experience.

Participation As Methodological And Ethical Issue In Child Protection Research

Kiili, Johanna (1); Moilanen, Johanna (2)

1: University of Jyväskylä, Finland; 2: JAMK University of Applied Sciences, Finland
johanna.j.kiili[at]jyu.fi, johanna.moilanen[at]jamk.fi

The presentation discusses children's participation in recent child protection research by asking how children are involved with research activities and what are the methodological and ethical decisions made by researchers. The dilemmatic issue in child protection research is the balancing between children's rights to participation and protection, which is interlinked, in essence, to the matter of power relations between adults and children. The presentation discusses findings of an integrative literature review of 78 journal articles. The integrative review methodology summarises and synthesises research from diverse range of methodologies to provide more comprehensive understanding of a phenomenon. The review addresses so-called emerging topic, which means holistic conceptualisation and synthesis of the literature, as there are

very few comprehensive reviews made on this topic. Studies included in review are peer-reviewed studies with original data (collected from children), methodological quality, and with clearly defined research questions. In review, children's participation is approached by using the conceptualisation of ethics in practice (Guillemin and Gillam 2004). Ethics in practice means day-to-day ethical issues that arise in doing of research and are the ones that arise and persist after the ethics approval has been granted. Majority of the studies included in the review have rather traditional adult-led approach for doing research with children. Researchers are the ones who decide on the research design and child welfare professionals and parents assess the eligibility of the children. To put it short, children are the ones who adapt (and be suitable) for research, not the vice versa. The presentation addresses, with more detail, the boundaries and barriers of children's participation in child protection research and their possibilities for recognition.

Do Children Have a Voice? The Legitimacy of Research with Children on the example of Poland

Zalewska-Królak, Aleksandra, Katarzyna

University of Warsaw, Poland
zalewska.krolak[at]gmail.com

Research with children in Poland is not a common. It is even said that they are silent voices. This may be related to the marginalization of this social group. Unfortunately, children are barred from the opportunity to speak out on the one hand because still exist people who believes that they are incomplete creatures, and on the other because these kinds of researches are difficult. If we want to answer the question whether research with children is justified, we have to talk to them. During my research I used the methodology that I consulted with my specialists - children. The same research tool developed together was used later during the focus groups and individual interviews with children and representatives of their social world, such as, for example: parents, teachers, pedagogues, psychologists, family judges, architects, employees of community centers and NGOs, etc. In Poland, the approach to children as citizens has been slowly changing in recent times. For the celebration of the 100th anniversary of independence of Poland, the Polin Museum decided to create an exhibition in accordance with Korczak's assumptions for small and large people. The action is aimed at convincing about the sense of conversation with children about the history, including topics as a war. In my research, I am trying to analyze such movements by confronting them with actions that exclude children. Research with children can broaden the description of the examined social reality, show an important perspective, however, only when we design them well. Key words: research with children, children's voice, qualitative sociology, research with children in Poland, public policies

'School is Just a Problem. All They Care About is the A Grades.' Young People Navigating Barriers to Their Educational Journeys

Crook, Deborah Jane; Satchwell, Candice

University of Central Lancashire, United Kingdom
dcrook5[at]uclan.ac.uk, csatchwell[at]uclan.ac.uk

This paper will argue that boundaries and barriers to young people's educational journeys are culturally specific, value laden and do little to ensure children's participation and education rights. The UK has increased access to higher education for growing numbers of young people but a gap remains between those experiencing disadvantage and those less so. Young people's lives can be complex, influenced by multifarious experiences and circumstances, which present obstacles to their educational journeys. However, how they are supported to navigate such journeys may be more significant than the obstacles themselves. Standardisation and emphasis on subject teaching rather than opportunities for active participation and nurture of young people's talents, personalities and abilities in schools, draws attention away from structural boundaries, whilst placing artificial responsibility on individual children to adhere to increasingly narrow courses of education that many are ill equipped to follow. Through arts-based methods in a qualitative study in disadvantaged areas of Lancashire, young people identified barriers to their educational journeys, the ways they are sometimes able to overcome such barriers and the relationships necessary to do so. Belonging is an essential ingredient in young people's understandings of such resilience, built through consistent and positive relationships, where capabilities are acknowledged and encouraged.

The impact of the Great Recession on the wellbeing of "Latchkey Children" in Spain 2008-2018

Giamello, Clarisa María; De Castro, Gonzalo

Educo Foundation, Spain
clarisa.giamello[at]educ.org, gonzalo.decastro[at]educ.org

The effects of the Great Recession in Spain (2008-2018), analyzed through daily life and people's life aspirations, expose the limits related to improving wellbeing in a Development model based on economic growth. These limits can be perceived in the inconsistency between social policy arguments that focus on employability as a mechanism of social integration, and the cost that this has had for thousands of families. It is also evident in the challenges faced by organizations and local governments as a result of the increase in social problems and needs, and the lack of necessary resources for addressing them. The dilemma in both examples is to find individual or local solutions to structural and supranational problems. Bearing in mind the characteristics of the period, this research on the lives of latchkey children, developed by Educo, shows the effects of the Great Recession on a vulnerable, diffuse, invisible group that has brought

poverty and precariousness indoors. These are children unwillingly living in social isolation, with parents who have little time, few resources for resisting the risk of poverty, and above all a lack of close family and social relationships. The scarcity in these three areas shows the relational impact of poverty and social exclusion on children and adolescent wellbeing. The research has also revealed the existence of a particular group that survives in extreme hardship, in densely populated urban environments, and most often in single mother families. The Other Latchkey Children reflects an apocalyptic version of globalization in the 21st century.

RN04_10 | Naming and Intersectionality

Speaking Darija: A Value or a Stigma? Language Proficiency as Ambiguous Cultural Capital in the Discourses of Young Migrant Children and Their Families Living In Rabat, Morocco.

Massaroni, Chiara

University of Innsbruck, Austria
chiara.massaroni[at]student.uibk.ac.at

Scholars often look at migrants' cultural capital as ethnically defined, univocal and homogeneous. This article questions this approach by focusing on the way in which language can assume ambiguous and fluid values within various frames, and, based on the relation within which it is inscribed, it can represent a stigma or a mark of honour. Stemming from my PhD project, which explores how young migrant children residing in Rabat, Morocco, construct their identities and belonging, I will look at the way children reflect on their use of multiple languages, in particular Darija, Classical Arabic, and one or more home languages. I will explore the circumstances in which these languages represent a bridging or bonding capital or, contrarily, a factor of exclusion and highlight the relational functions and values attributed to different languages. While I will foreground children's experiences and narratives, I will also present parents' and adult migrants' own perceptions and use of languages, to point out the way children can unsettle the adult's view on their own identities and belonging. The aim of the paper is to reflect on the multiple social positions that young migrant children occupy in society, at the crossroad between various forms of belonging, inclusion and exclusion, and how this influences their autonomous ability to make sense and utilise their cultural capital.

He and She in IT: How Stereotypical Gender Portrayals in Social Media Marketing impact Children's future Social Practices

Steinnes, Kamilla Knutsen

Oslo Metropolitan University, Norway
kamillak[at]oslomet.no

Children in Norway are forced to navigate through a highly complex digital marketplace targeting them based on individual characteristics such as their gender and age. The Norwegian Equality and Anti-Discrimination Act and the UN Convention on the Rights of the Child are intended to protect children against discrimination and promote equality. In spite of this, sophisticated algorithms based on personal data collected from social media leave certain markets overtly gendered – and discriminatory. This study aims to investigate how gender stereotypes are expressed and marketed to children as consumers on social media and how such stereotypical portrayals may affect future social practices. Existing stereotypes will be mapped through a content analysis using over 800 screenshots of marketing directed to children between 2016-2018. Children's attitudes and experiences with such stereotypes as well as their scope will be explored through focus groups and a nationwide survey among children (N=1000). Preliminary findings suggest an apparently rigid traditional dichotomy between competent masculinity and esthetical femininity, where girls are cute and caring and boys are tough and productive. The results will be discussed in terms of these stereotypical portrayals' potential impact on social practices related to identity formation, gender diversity, equal rights, body pressure, and vocational choices.

Sea, Sun and a Sense of Adventure: Uncovering The Bullying, Belonging and Business Barriers to Children's Enjoyment of Natural Coastal Environments in a Time of Brexit

Larkins, Cath

University of Central Lancashire, United Kingdom
CLarkins[at]uclan.ac.uk

Children from socio-economically disadvantaged and minority ethnic backgrounds are less likely to spend time in outdoor natural environments than their peers. This can exclude them from the potential mental, physical, social and emotional benefits that are associated with spending time in nature. Research was undertaken with 59 children and young people (aged 11-17) from disadvantaged communities. They used mapping, discussion, song writing, drama and art-based techniques to reflect upon barriers to their enjoyment of natural coastal environments. A participatory critical realist approach to data analysis was also undertaken through repeat meetings with research participants and an advisory group of young people. The barriers they identified included adult attitudes about risk; children's risk competence; experiences of bullying and the weather. Barriers could be overcome when: children felt like they belong; they can secure employment by the coast; a variety of clean and adventurous environments are accessible; activities, food and travel are affordable; and information about opportunities and risks is shared. Underpinning potential causal mechanisms were explored by naming and exploring silences in the data, for example causes of bullying that were hinted at. Young people subsequently identified the most significant barriers as related to adult attitudes towards childhood and youth and child and adult attitudes about gender, sexuality and race. The role and politics of business interests remained largely unexplored. Reflecting on this remaining silence, in the context of Brexit and changing patterns of parental employment, I suggest additional theoretically informed approaches to bridging boundaries between childhood sociology and critical political economy.

RN05_01a | Consumption and inequalities

Economic Scarcity and Wellbeing: Consumption-Based Measures for Poverty and Deprivation

Bakkeli, Nan

Oslo Metropolitan University, Norway
nanbak[at]oslomet.no

Abstract. It has been widely recognised that income in itself may not accurately reflect people's economic circumstances. In recent years, there has been an increasing focus on multidimensional measures of poverty and material deprivation. In this study, we employ the newest survey data from Consumption Research Norway to explore the relationship between economic scarcity and psychological wellbeing in Norway. The study first defines economic scarcity by identifying multiple disadvantaged social groups in terms of income, wealth, consumption, and material deprivation. It then studies the impact of economic scarcity on psychological wellbeing, using propensity score matching estimations with bootstrapped standard errors. The study applies empirical evidence from Norway to the existing literature of poverty and wellbeing studies. It also has policy relevance in improving the quality of life of people with low socioeconomic status.

Too Poor to Die: Commodification and 'Market Violence' in Funeral Crowdfunding

Lillqvist, Ella; Harju, Anu

University of Helsinki, Finland
ella.lillqvist[at]helsinki.fi, anu.a.harju[at]helsinki.fi

GoFundMe is the world's largest social fundraising platform where fundraising campaigns range from the mundane to the more socially and politically acute causes. In this article, we approach funeral crowdfunding as a form and consequence of 'market violence': harm or suffering inflicted on people by the inherent logic of the market (Firat, 2018). Drawing from Marxism, there is no escape from being part of—and in some ways enslaved by—the market; yet some people suffer from market violence more than others. Through the conceptual lens of market violence, we can see double harm: First, the market harms especially the poor by excluding them from essential services like healthcare; funerals are another socially important service needed for a dignified life. Second, individuals subjected to this kind of market violence are offered a market solution, crowdfunding, where the memory

of the deceased becomes a commodity exchanged for money. However, the platform solution does little to help with the original problem of market violence. Engaged in a grotesque popularity contest, many campaigns fail to reach their funding targets; crowdfunding can thus further marginalize the already marginalized. In addition, there is the ethical question of lack of consent on the part of the dead. Taking a critical discourse studies approach, we analyse the texts and images used in funeral crowdfunding on GoFundMe. We shed light on how the memory of the dead is commodified in the narratives aimed at attracting donations, and how deservingness is constructed in these narratives. Reference: Firat, A. F. (2018). Violence in/by the market. *Journal of Marketing Management*, 34(11–12), 1015–1022.

'Welcome to the Shopping Revolution': The Metro Centre and the Rise of Neoliberal Consumerism

Casey, Emma Helen

Northumbria University, United Kingdom
emma.h.casey[at]northumbria.ac.uk

In October 1986, the Newcastle Chronicle devoted its entire edition to celebrating the opening of the new shopping mall, the Metro Centre. Marking a dramatic shift in terms of 'new' modes of consumption and commerce, the Metro Centre promised 'choice', 'sparkle' and 'a focal point for a community'. A letter from the then Prime Minister Margaret Thatcher was published on the front page and promised that the Metro Centre would bring community enhancement, employment opportunities and an increased sense of local pride. Drawing on and presenting original archive material from the Metro Centre and Tyne and Wear Archives, the paper will examine the extent to which the Metro Centre marked a call to 'accept the prevailing ideals' of consumption (Coward, 1984: 29) and a key moment for the reformulation of selfhoods and consumer identity practices. It argues that rather than offering community and collectivity, the Metro Centre marked the rise of hyper-real dream-worlds (Baudrillard, 1992) and a highly individualized and anonymous consumer experience (Chaney, 1993). Furthermore, the shifting discourses around consumerism that occurred during this time, set the foundations for the emergence of a new neoliberal consumer citizen; one which offered the illusion of choice, personal growth and betterment. These aspiration and meritocratic ideals became interwoven into a new language of consumption promoted by the Metro Centre. The paper concludes by proposing that the Metro Centre came to embody new neoliberal notions of social worth, value and inclusion entwined with engagement in new processes and practices of consumption.

Smart Home Technologies Enabling Energy Flexibility: The Importance Of Embodied Know-how

Larsen, Simon Peter Aslak Kondrup

Aalborg University, Denmark
spl[at]sbi.aau.dk

The influx of renewable energy sources (RES) in the energy system entails that energy consumption must be increasingly flexible in order to compensate for the intermittent nature of RES. Throughout recent years policy initiatives have tried to shape a flexible energy demand, utilizing the smart grid and employing digital demand-side-management tools. Smart home technology for enabling energy flexibility is an example of such. However, these technologies have been criticized for their embedment in a techno-economic paradigm and have not yet proved widely successful in enabling energy flexibility, resulting in a so-called performance gap. This has called for an understanding of user practices and their engagement with smart home technologies. Theories of practice have proved useful in analyzing energy consumption as intertwined in everyday practices, thus being in focus. This article uncovers how occupants in 20 Danish households engage with smart home technology and examines how practices of space-heating are intertwined in everyday life. Conducting qualitative interview and 'show and tell' tours of the home, it is highlighted how practices of heating are intertwined with embodied technological know-how and that user adaption AND adoption of smart home technology is dependent on previous engagement with technology and competences for doing such. The results highlight the importance of understanding differences in embodied know-how and taking this into account when designing and integrating smart home technologies for enabling energy flexibility. The results contribute to the emerging research on the gap between embedded understanding of smart home technologies and embodied everyday practices of mundane consumption.

'Prosumption' At Night: Are 'Prosumers' More Likely To Time-shift Everyday Practices To Reduce Peak Electricity Demand?

Hansen, Anders Rhiger; Jacobsen, Mette Hove

Aalborg University, Denmark
arh[at]sbi.aau.dk, mej[at]sbi.aau.dk

Engaging and activating energy consumers is seen as important mechanisms to reduce peak demands in the energy system. Transforming consumers into prosumers, which refers to consumers producing their own energy by installing micro-generations technologies, is considered a useful approach to achieving this. However, to what extent (if at all) does being a

'prosumer' make households more likely to time-shift their everyday practices to hours with lower peak electricity demands? In this study, we investigate this by comparing electricity consumption patterns of households with solar panels systems to a comparison group of households that have not installed solar panels. Using cluster analysis on hourly electricity consumption data, we are able to identify different electricity- and load profiles. By focusing on hours when the sun is not shining, for example at night during summer and in the afternoon, night and morning during winter, we are able to investigate whether prosumers also act differently than other households when they are not directly 'prosuming', but still are 'prosumers'. By combining the data with administrative data, we are able to compare households with and without solar panels by using matching. Moreover, the administrative data enable analysis of social differences within the groups of prosumers and non-prosumers. These results become important with a growing focus on adjusting energy consumption to fluctuating patterns of production, which becomes a fact in future energy systems that are intended to rely on fluctuating renewable energy production such as wind and solar photovoltaic.

Prosuming Lifestyles: Young People's Prosumption as a Means of Establishing and Evaluating Lifestyles

Theodoridis, Konstantinos

Manchester Metropolitan University, United Kingdom
konstantinos.theodoridis[at]stu.mmu.ac.uk

The relationship between production and consumption has been the centre of attention in sociological studies. The expansion of new digital technologies and social media has rendered the notion of prosumption (Ritzer and Jurgenson, 2010) even more crucial and it has attracted an increasing interest from scholars. This paper introduces the concept of prosumer lifestyles and the transformation that has occurred in a complex world where young people self-work daily in the digital sphere. Young people use prosumption as a means of establishing, evaluating and promoting lifestyles in an age of precarity. In particular, this study investigates how young people cope with insecurities and seek affirmation from their peers. It cannot be denied that lifestyles lie at the heart of young people's experiences and in that sense, they affect the construction of young people's identities. Young people are dealing with a number of social and economic challenges as part of their everyday lives. I argue that while social media expansion has given even more choices to young people, it constrains youth to the orthodoxy of prosumption. The research examines based on focus groups and photo-elicitation interviews of a qualitative research project in which I assess the changing nature of young people's consumption in Manchester and Athens. I consider whether prosumer lifestyles can play the role of the primary means by which young people's transitions can be better understood in a world which is characterized by a lack of stability.

Employee Branding as ‘Class’ Consumption: Towards a Reframing of Employee Agency from ‘Pro-sumption’ to ‘Refor-sumption’

El-Amir, Ayman Mohamed Ragaa

Trent University, Canada
aymanelamir[at]trentu.ca

In the context of employee branding, this paper problematizes the role of employees as consuming agents in their firms’ strategic orientation to creating brand value. The paper argues that this orientation has failed to account for the active process of collective employee agency in creating their own sociocultural values from employment. Taking the practice-turn in consumption studies, this study draws upon the multifaceted ontological frameworks of ‘Class’ relations to critically examine the role of collective agency in employee branding. The employee branding literature is seen to offer agency a limited role since the structural theories of ‘Class’ relations underpin its managerial practices and consequently develop a hegemonic process of production-stimulating consumption--‘Pro-sumption’. Using a praxis-based analytic framework of socio-historical ‘Class’ relations, an ethnographic study contextualizes Egyptian employees’ practices working for a global supermarket brand within the broader socio-historical praxis of the Egyptian working-class. While handling their daily duties for a global brand, Egyptian employees’ practices were found rekindling a sociocultural tradition of working-class identity reformation in national-colonial Egypt. Broadening the analytical scope of agents’ practices from intra-organizational to extra-organizational, the study reframes employee branding as a sociocultural process of reform-stimulating consumption-- ‘Refor-sumption’: a process whereby employees’ agency to reform their own ‘Class’ norms creates the value of consuming/working for a brand. The paper concludes with a broader discussion on the potential of ‘Refor-sumption’ in consumer branding where ‘Pro-sumption’ is becoming the norm.

RN05_01c | Leisure

Between Data Collection And Learning – Focus Group Interviews As A Tool For Informing Policy

Egerer, Michael (1); Alanko, Anna (1); Hellman, Matilda (1); Järvinen-Tassopoulos, Johanna (2); Lerkkanen, Tuulia (1)

1: University of Helsinki, Finland; 2: National Institute of Health and Welfare, Finland
michael.egerer[at]helsinki.fi, anna.alanko[at]helsinki.fi, matilda.hellman[at]helsinki.fi, johanna.jarvinen-tassopoulos[at]thl.fi, tuulia.lerkkanen[at]helsinki.fi

Large scale population level surveys are the standard scientific tool to inform policy decisions. Surveys are however bound to the notion that informants have their answers ready to be collected. This might be less a problem regarding easy, clear-cut and publicly present questions, but becomes problematic for more complicated matters. Inquiries on attitudes, opinions or justifications of gambling regulations is such a matter. 19 Focus groups with altogether 88 Finnish gamblers and non-gamblers have been conducted. Focus group participants took also part in a population survey. During the focus groups gambling commercials and tasks concerning gambling regulations and the Finnish gambling monopoly were used as discussion stimuli. The focus group discussions showed a considerably higher degree of criticism than the parallel population survey. The focus group participants even actively reflected on their learning process regarding the issues addressed by the tasks and the commercials. Population surveys on complex subjects need to be triangulated by qualitative studies in order to inform policy decisions properly.

Social Practices in Consumption of Theatre

Varpa, Jani Oskari

University of Helsinki, Finland
jani.varpa[at]helsinki.fi

Consumption of theatre in sociology has often been researched from the taste point of view. In my research, I concentrate on different kinds of social connections concerning the consumption of theatre. The data consists of twelve interviews among Finnish adults concerning their consumption of leisure time and especially theatre. Theatre seems to be involved not only to presenting one’s high cultural taste, but also to diverse social practices. For example, family relations among adults and their parents as well as socializing with friends and actors came up in the interviews. Consumption of theatre, then, should be seen in a wider context of social practices instead of restricting the analysis to social capital and its transferring to the following generation.

A Study on the Importance of Leisure Activity: How to Improve Quality of Leisure

Danbi, Hong

Yonsei University, Korea, Republic of (South Korea)
muhan3860[at]gmail.com

The purpose of this paper is to argue that it is important to improve the quality of leisure as well as work-leisure balance. While labor and accumulating wealth through it was considered the most important part of life as a form of social 'calling', social and economic development resulted in stable income acquisition and a consumption-oriented society emerged, the use of income has become an important social phenomenon. As a result, leisure, as a way of spending what people get, has gone beyond dictionary meaning and has become a key element in shaping modern life. Thus, simply defining leisure as 'time other than physical and economic activities' now does not fully reflect the social meaning of it. While the importance of leisure is increasing, the fact that it is undervalued relative to its actual value is shown by the following results. First, the world is actively reducing working hours. Second, however, the results of these politic movements are merely increasing the time for leisure physically and therefore showing a flaw that overlooks the quality aspects of leisure life. Third, previous studies have mostly discussed the impact of satisfaction with securing leisure time on job performance or the inequality in leisure due to income inequality. To compensate for this deficiency, I would like to reiterate the importance of leisure in modern life and study what social and personal methods can be taken to improve leisure quality. Keywords: leisure activity, importance of leisure, quality of leisure, consumption communities

RN05_02a | Conspicuous consumption

Change in the Consumption of the Rich in the UK, 1967-2018

Warde, Alan (1); Karademir Hazir, Irmak (2)

1: University of Manchester; 2: Oxford Brookes University, United Kingdom
alan.warde[at]manchester.ac.uk, ihazir[at]brookes.ac.uk

The Financial Times is a British daily newspaper with a readership among the business community and especially the City of London. For just over 50 years it has included a section called 'How to Spend It', initially a single page, now a magazine supplement, which reflects upon possibilities for personal and household consumption for the exceptionally rich. Primarily concerned with purchases of goods and services, it offers insight into how the wealthy engage with the culture of consumption. We examine changes in patterns and justifications of primarily conspicuous consumption by sampling the newspaper at strategic intervals. This gives a preliminary account of how, as inequalities accelerated rapidly

during the period, the very richest minority has adjusted its behaviour in relation to globalised consumer culture. We address themes of conspicuous consumption, trickle down effects, cosmopolitanism, omnivorousness, luxury and justifications of privilege.

It is not just Class and Status: Network Correlates of Consumption Tastes and Practices in Poland

Cebula, Michał (1); Sadura, Przemysław (2)

1: University of Wrocław, Poland; 2: University of Warsaw
michal.cebula[at]uwr.edu.pl, sadurap[at]is.uw.edu.pl

According to popular proverbs such as: "birds of a feather flock together" or "who keeps company with the wolves will learn to howl", what we think, like or do depends on or affects with whom we keep in touch or where we belong to. It is widely accepted in the sociology of consumption that our interests, tastes and practices are not socially neutral but fulfil socializing and communicative functions. Nevertheless, most researchers have rather focused on the class variety in consumption, leaving social connections beyond the scope of their attention. To fill this void, we refer to the state-of-the-art theorizing on the mutual links between social network characteristics (e.g. size, diversity, resources) and cultural preferences, knowledge and activities and present them in the context of Polish society. We draw on data from a large – scale survey carried out on a random sample of the large city adult population (N = 1010), complimented by qualitative in-depth interviews with its representatives (a research project financed by the National Science Centre in Poland - UMO-2016/21/D/HS6/02424). We hypothesize that consumption variety is a function of networks of larger size, more diversified, rich with cultural incentives and spanning larger distances in social space (especially through weak and non-family ties). Additionally, we investigate whether there is a systematic connection between strength of preferences (intensity of engagement) and a type of network correlates (e.g. density, closure, strength of ties)?

Disclosures, Cover-up, Mocking: Comparing What Individual vs. Focus Groups Interviews Do Best When Studying Cultural Consumption

Heikkilä, Riie (1); Katainen, Anu (2)

1: Tampere University, Finland; 2: University of Helsinki, Finland
riie.heikkila[at]tuni.fi, anu.h.katainen[at]helsinki.fi

Interviewing still stands at the heart of qualitative research methods, with individual interviews and focus group interviews as their most well-known and oft-used practical applications. Yet, few empirical studies consciously argue and debate on exactly why a specific kind of type of interview is chosen above many other possibilities. While individual interviews are associated with a potentially strong confidentiality and a high level of disclosure between the interviewer and interviewee, focus groups are usually understood to uncover group understandings, social and cultural contexts and interactive dynamics about the topic in question. In this paper our aim is to shed systematic light on what are the pros and cons of individual versus focus groups interviews when studying cultural consumption, understood here as the manifestations of cultural taste, knowledge and participation. We will draw empirical evidence from a large Finnish research project and the interviews collected in it in 2018. The data includes 10 groups interviews and 40 individual interviews, all conducted with an identical set of open-ended questions touching upon life course, leisure, taste, highbrow and lowbrow participation and different pieces of art used as vignettes to evoke conversation. Our analysis shows that interviewees mobilize radically different cultural competences and exhibit different modes of cultural capital depending on whether they face the interviewer alone or in a group, both types of interviews being essential for understanding the studied phenomenon in depth.

The Changing Consumption of Luxury among Different Consumer Generations

Wilska, Terhi-Anna

University of Jyväskylä, Finland
terhi-anna.wilska[at]jyu.fi

This paper focuses on the consumption of luxury products and service in Finland during the past 30 years. The perceptions of luxury and necessity have changed, as the standard of living has been rising. The environmental concern and demands for sustainability have also changed the perception of socially desirable consumption. Traditionally, products and services that go beyond necessity, are expensive and generally desired for the comfort and enjoyment they bring, are regarded as luxury. The perceptions of luxury varies with age, gender, income and social class, in particular. This paper presents the trends of luxury consumption in Finland between the years 1985 and 2016 in different age groups. The data analysed in this study are the Statistics Finland's Household Budget

Surveys that produce data on changes in the consumption expenditure of households and on differences in consumption by population group. The luxury products and services in the focus are products such as cars and boats, antique and arts, jewellery, as well as travel and some new technology items. The preliminary results reveal that macro-economic conditions cause notable differences in luxury consumption in all age groups. With regard to age, young people spend relatively less than older people on vehicles, arts and antique, for instance. Travelling and technology seem to be typical young people's luxury consumption. However, spending on "traditional" luxury has generally decreased in all age groups.

RN05_02b | Sustainable food

Feeding The Melting Pot:

Inclusiveness in accessing healthy and sustainable food in multicultural cities

Brons, Anke (1,2); Oosterveer, Peter (2);
Wertheim-Heck, Sigrid (1,2)

1: Aeres University of Applied Sciences, Almere, The Netherlands; 2: Wageningen University, Wageningen, The Netherlands
a.brons[at]aeres.nl, peter.oosterveer[at]wur.nl, s.wertheim-heck[at]aeres.nl

The need for a shift toward healthier and more sustainable diets is evident and is supported by universalized standards for a 'planetary health diet' such as provided by the recent EAT-Lancet report. At the same time, differences exist in tastes, preferences and food practices among diverse ethnic groups, which becomes progressively relevant in light of Europe's increasingly multi-ethnic cities. There is a growing tension between the current sustainable diets standards and how diverse ethnic resident groups do or don't relate to it within their 'culturally appropriate' foodways. What are the mechanisms and processes around inclusiveness in healthy and sustainable food practices in a multi-ethnic urban context? We study this question among Syrian migrants with different lengths of stay in the Netherlands. Our theoretical framework is based on practice theories, which emphasize the importance of socio-material context and of bodily routines, skills and competences. We use qualitative methods, combining in-depth semi-structured life history interviews with participant observation. Our findings indicate that mechanisms and meanings of inclusiveness change over time as migrants' food practices and the food environment change. In terms of health and sustainability in food practices, understandings and competences around particularly fresh food change over time among both long and short term migrants, replacing making from scratch in the season with buying more processed products and out of season vegetables and fruits. Still, awareness of seasonality and buying local was relatively common, revealing some 'inconspicuously sustainable' elements in migrants' food practices: not intentionally sustainable but nonetheless with positive environmental effects.

How Can Sociology of Consumption Contribute to Sustainable Food Transformation?

Jallinoja, Piia (1); Mäkelä, Johanna (2); Niva, Mari (2)

1: Tampere University, Finland; 2: University of Helsinki, Finland
piia.jallinoja[at]tuni.fi, johanna.m.makela[at]helsinki.fi, mari.niva[at]helsinki.fi

The Paris Agreement (2015) and the IPCC report (2018) call for drastic changes at all societal levels and in all sectors. Reports strongly urge dietary shift towards more sustainable food consumption in order to mitigate climate change and biodiversity loss. Although both policy and lifestyle changes have been painstakingly slow, many indicators, such as widespread media publicity on sustainable foods and eating, sales of vegan foods, vegan pledges and cookbooks, show an increased interest in plant-based diets, at least in some population groups. We claim that the increasing interest in sustainable eating builds momentum for a paradigm shift in food culture. The presentation, based on the results of POPRASUS and RUOMU projects, will discuss how sociology of consumption may contribute to what has been recently termed as "The Great Food Transformation", i.e., an ecologically sound food system offering a healthy diet (Lancet 2019). We will analyse the characteristics of the momentum and the barriers to the shift. We have located the following characteristics of contemporary consumer societies that hinder the shift: The positive meanings of indulgence, the high cultural value placed on meat and dairy, the focus on short-term rather than long-term benefits in consumption and politics, the ephemeral nature of many food fads, conflicting information in the media, the crisis of expert knowledge, the responsabilization of consumers, and lack of effective food policies. In the presentation, we discuss these factors and the conditions for sustainable food transformation through empirical examples and sociological theorization on consumption.

Food Waste Reduction Practices in the Digital Age

Marciante, Lucia

University of Bologna, Italy
lucia.marciante2[at]unibo.it

The sociologic research results (starting from a PRIN research) about food waste reduction practice through Italian food sharing platforms study are discussed. Most of investigated web platforms represent the training factor to the food sharing, at a rational and non-economic logic, promoting the relationships because accessible and collaborative increasingly. The alternative models of food supply downstream of the food supply chain, in the process of domestic consumption, are the target. The aim of these platforms has revealed the redistribution of food surplus for solidarity more than food waste reduction, through innovative sharing, participation from below and social networking

practices. Indeed, these practices often involve charitable associations as a response to the economic and social sustainability of local communities. Against the background of a systemic crisis that has undermined the prospects of many people for personal, professional and social inclusion fulfilment and has reduced the possibility towards primary goods like food, mostly of quality one, and towards basic services. In order to understand the motivations, the type of users, the kind of practices and their possible replicability, the impact upon the local community, 5 case study have been examined. The main limit of the web platform investigated, peer-to-peer, is emerged to be that rely on a limited number of nationally active users because of a trust low level as well as digital divide among the users. The trust plays a decisive role. The platforms have revealed to be an information hub that are able to offer users empowerment and agency.

Challenges and Potential of Interdisciplinarity in the Study of Healthy and Sustainable Food Consumption

Godin, Laurence (1); Sahakian, Marlyne (1); Ernstoff, Alexi (2)

1: University of Geneva, Switzerland; 2: Quantis International, Switzerland
laurence.godin.1[at]gmail.com, marlyne.sahakian[at]unige.ch, alexi.ernstoff[at]quantis-intl.com

This paper explores the difficulties that arise when taking an interdisciplinary approach to healthy and sustainable food consumption. Trying to understand food practices towards the normative goal of supporting transitions to healthier and more sustainable diets involves not only deciphering consumption practices and what supports them, but also defining a 'direction of travel' as to what and how we should eat. For a Swiss national research project on healthy and sustainable food consumption, we brought environmental and health impact assessment together with social practice theory, to understand how 'healthy and sustainable' Swiss diets could look like, taking into account dominant food prescriptions and actual food practices, as well as consumers and stakeholders concerns. This interdisciplinary collaboration did not come without challenges. We will explore three of them: engaging in a pedagogical effort, working with ambiguous categories, and putting disciplinary baggage aside. We will also present the most important findings that came out of our collaboration in relation to dominant food prescriptions in Switzerland, and how they can be used to develop policy aiming at transforming the context of consumption, rather than trying to change individual intentions and motivations.

Crossing Taboo Boundaries: Facilitators And Barriers In Women's Sex Toy Consumption

Mayr, Cornelia

Alpen-Adria University Klagenfurt, Austria
comayr[at]edu.aau.at

There are consumers that may prefer to operate in relative secrecy. It may concern the purchase of 'exclusive' products that are silenced and hidden. And it may simply concern barriers in consumption practices which are deemed necessary of exploration. Bringing attention to the consumption of specific products that are largely concealed due to potentially inconvenient consequences, this paper focuses on the role of women's sex toy purchase as one example of taboo consumption (Scott, 2017). Yet, since some taboo products are unmentionable, like sex toys, it seems to be instructive to study how women perceive and buy these products. Hence, this paper addresses following research questions: (1) which motives favour or impede women's purchase of sex toys? (2) which factors help women to overcome economic, cultural and social barriers in buying sex toys? Concerning the methodology, the paper integrates and extends the theory of planned behaviour (Ajzen, 1991) as a theoretical framework. Semi-structured interviews with female consumers are used to gather data relevant to the subject matter of this study. In particular, the paper represents one of the first efforts to identify women's motives that interact with facilitators and barriers that are involved in a taboo purchase. Since little research on taboo consumption and women's sex toy purchase is currently done, the paper can act as a catalyst for future empirical investigations on the role of taboos as boundaries in consumption. Ajzen, I. (1991). *The Theory of Planned Behavior*. *Organizational Behavior & Human Decision Processes*, 50, 179–211. Scott, S. (2017). *Sexual embodiment and consumption*. In M. Keller, B. Halkier, T.A. Wilska, M. Truninger (eds.), *Routledge Handbook of Consumption* (pp. 372-383). New York: Routledge.

Rhythm and Booze on the Transpennine Real Ale Trail

Thurnell-Read, Thomas

Loughborough University, United Kingdom
t.thurnell-read[at]lboro.ac.uk

Ale Trails, where a series of pubs noted for serving real ale and craft beer are linked together along a prescribed route followed either on foot or by bus or train, are now a well-established activity in the UK and beyond. One of the most prominent examples of this is the Transpennine Real Ale Trail which links eight villages and towns along the Manchester to Leeds train line. While Ale Trails were initially praised as a moderate mode of alcohol consumption and a novel way of

bringing customers to rural and suburban drinking venues, the Transpennine Real Ale Trail has in recent years courted controversy for being 'hijacked' by large groups of rowdy drinkers characterised by excessive consumption and disorderly behaviour. Within the spaces constituting the Ale Trail - including pubs, train carriages, station platforms and village streets - real ale and craft beer enthusiasts are thrown together with these more hedonic revellers, and both come into frequent contact with local residents and hospitality service workers. This paper will present findings from a group ethnographic study of the Transpennine Real Ale Trail and will use Lefebvre's model of rhythmanalysis to explore these various alignments and conflicts between the drinking practices found amongst various groups of actors along the Ale Trail. It concludes with reflections on the spatial, temporal and affective dimensions of alcohol consumption and demonstrates the relevance of rhythmanalysis concepts and methods for exploring contemporary forms of leisure.

Well Beshaved Women Rarely Make History – Exploring Gendered Beauty of Body Hair

Åberg, Erica; Kukkonen, Iida; Pajunen, Tero; Sarpila, Outi

University of Turku, Finland
ermaab[at]utu.fi, iltkuk[at]utu.fi, teaapa[at]utu.fi, oukasa[at]utu.fi

The unruly bodies of women have been normatively governed by beauty ideals throughout the ages. One of these norms is the "hairlessness norm" (e.g. Tiggemann & Kenyon, 1998), forcing women to remove the hair on their legs and underarms. According to previous literature, despite its naturalness, the body hair of women is often considered unfeminine, and common reasons for removing body hair include the willingness to appear sexually attractive and desirable (Tiggemann & Lewis, 2004). Since the 1960's feminists have addressed this norm, yet the body hair of women is still considered an anomaly or a radical statement. Our data consists of tweets and Instagram-posts under the hashtag #januhairy, a social media project for women to challenge social norms by going "au naturel" with their body hair in January 2019. We analyze the data for reoccurring gendered discourses and analyze the imagery of participants in this project to understand their visual strategies. According to our preliminary results, discourses of visceral repulsion are to some extent endorsed by both women and men. Despite the alleged inclusiveness of the #januhairy project, the imagery generated in the project is young, thin, white and 'pretty'. Moreover, the imagery uses the sexualization of underarm hair, in particular, as a strategy for opposing gendered beauty-related norms. Our research adds knowledge of the appearance-related norms for women and explores the field-specificity of such norms, ultimately asking whether in some social fields body hair could act as a form of capital.

The Marketisation Of HIV Pre-Exposure Prophylaxis (PrEP) In The United Kingdom: An Exploratory Consumer Culture Inquiry

Eichert, Christian A. (1); Coffin, Jack (2); Bettany, Shona M. (3)

1: Goldsmiths, University of London, United Kingdom; 2: University of Manchester, United Kingdom; 3: Liverpool John Moores University, United Kingdom
c.eichert[at]gold.ac.uk, jack.coffin[at]manchester.ac.uk, S.M.Bettany[at]ljmu.ac.uk

New HIV diagnoses in the UK have dramatically declined in recent years, mostly due to the proliferation of Pre-Exposure Prophylaxis (PrEP), which is up to 99% effective in protecting HIV-negative people from contracting the virus. London's biggest sexual health clinic, for example, recorded an 80% drop of diagnoses within two years. While PrEP has been approved in the US since 2012, it is currently not available on England's public National Health Service (NHS). Indeed, a one-month private prescription of PrEP can cost up to £800 at high-street pharmacies, a price inaccessible to many. We trace the surprising success of PrEP, despite its lack of institutional support, through international networks of consumers, activists, healthcare-providers, and other stakeholders, who helped to legitimise, de-stigmatise, and disseminate this radical healthcare innovation. For example by importing cheaper generic PrEP through online-pharmacies from India, or by educating fellow consumers, the emerging market-system of PrEP has empowered consumers to take responsibility for their own sexual health, and that of their extended social networks, well before institutions like NHS England conceded to act. Adopting a consumer culture approach, our research explores how these networks transgress and transform traditional geopolitical and socio-cultural boundaries between concepts such as 'citizen', 'patient', and 'consumer'. We discuss the phenomenological, practical, and political implications of producing and participating in markets of sexual health products, and theorize how consumers incorporate PrEP as a disruptive innovation into their existing regimes of risk management, social responsibility, and hedonistic intimacy within the neoliberal paradox of privatised public health.

Highbrow Parents Raise Omnivorous Children? The Inheritance of Cultural Capital in Finland in 2007 and 2018

Kallunki, Jarmo Johan Petteri

Tampere University, Finland
jarmo.kallunki[at]tuni.fi

Parental influence on cultural capital and lifestyles as a research theme has gained prominence in recent sociology of culture. Following Bourdieu's division between embodied cultural capital (taste, participation, dispositions) and institutionalised cultural capital (educational credentials), it has long been known that institutionalised capital is intergenerationally transmitted. Recent research on the inheritance of embodied cultural capital has provided evidence that parents' cultural participation increases the cultural participation of their children. In Finland, research on the topic has been scarce. This paper contributes to this discussion by focusing on the degree to which parents' cultural capital (both embodied and institutionalised) influences the level and type of cultural participation of their children in contemporary Finland. More precisely, drawing on two nationally representative and comparable Finnish survey data from 2007 (N=1279) and 2018 (N=1425), I analyse how parents' example in appreciation of culture and parents' active guidance (during children's childhood) influence the cultural participation of their children. The datasets also permit an analysis of change over the past decade. Parents' example and guidance are measured by an array of cultural activities, out of which a highbrow orientation seems to have the best explanatory power regarding children's participation. However, children's participation (measured with the same array of activities) seems to be omnivorous, not highbrow. This suggests that while there is an intergenerational transmission of cultural capital, the content of the capital has changed between the generations from highbrow towards omnivorous.

Building a Sociologically Meaningful Classification of Food Products for National Household Budget Surveys

Plessz, Marie (1); Lhuissier, Anne (1); Gojard, Séverine (1); Nicheèle, Véronique (2)

1: INRA, France, CMH; 2: INRA, France, ALISS
marie.plessz[at]inra.fr, anne.lhuissier[at]inra.fr,
severine.gojard[at]inra.fr, veronique.nichele[at]inra.fr

Do food consumption patterns remain different across social class? This question has been vastly debated in the 1980s and 1990s. Updating the debate is urgent, tempting, yet difficult. It is urgent because after the eastward European enlargement and the economic downturn of 2008, one can hardly assume that every European household is affluent enough to buy whatever food they like. It is tempting because new theories of the social stratification of taste (the omnivore thesis) have yet to be fully tested as regards at-home food consumption; and because Eurostat is harmonising national Household budget surveys (HBS) and adopting a proper social class scheme, ESEG. It is difficult because HBS still raise a number of problems. Notably, the European Classification of individual consumption by purpose (COICOP), may not suit the interests of consumption sociologists. The authors of this presentation have been working at building a nomenclature of food products based on COICOP, that allows them to capture sociologically relevant processes such as distinction (through the difference between varieties of fruit or vegetables), convenience (ultra-processed foods), or adherence to nutritional norms (foods containing added fat, sugar or salt). The presentation will introduce the COICOP nomenclature and its critique, present our ongoing attempt at rearranging items into more sociologically meaningful categories, and first results on the French HBS 2011 data.

Barriers and Catalysts of Cultural Consumption: The Role of Family and School

Otte, Gunnar; Lübbe, Holger; Wingerter, Luisa

Johannes Gutenberg-University Mainz, Germany
gunnar.otte[at]uni-mainz.de, holger.luebbe[at]uni-mainz.de,
luisa.wingerter[at]uni-mainz.de

Tendencies of intergenerational transmission of cultural consumption are well established in sociological research. However, patterns of cultural mobility can also be found. There is not much systematic evidence of the detailed processes that stimulate the development of cultural taste and consumption patterns deviating from parental exemplars. Drawing on a large population survey on cultural education and participation conducted in Germany in 2018, we take a socialisation perspective on high and popular forms of cultural consumption. In contrast to many conventional studies, we collected quite detailed retrospective information on parents' taste and behaviour, their children's consumption patterns at

age fourteen and at present. We also investigate the cultural influences induced by curricular and extracurricular activities at school. Although indicators from several cultural domains are available, our presentation will have a special focus on the development of musical taste, consumption and (auto-) production.

Cultural Evaluation of Urban Space: Mixed Methods Study of University Students in Prague

Špaček, Ondřej

Charles University, Czech Republic
ondrej.spacek[at]fhs.cuni.cz

Study of taste and symbolic boundaries mostly focus on explicit cultural fields like music, movies or fashion, while specific urban locations of cultural consumption and taste inscribed in materiality of urban places are neglected or taken-for-granted. There are significant accounts of evaluation and production of urban places from perspective of producers or connoisseur users (e.g. Zukin 2010), however there is still little attention paid to more general evaluation of urban space approached in similar way as analysis of other cultural fields. This paper is based on mixed methods research focused on University students in Prague that combines large survey data of student population and in-depth interviews with photo elicitation. Study explores differences in evaluation of urban places in the context of students' cultural consumption. Preliminary findings show affinity between cultural capital axis of cultural space and preferences of alternative or 'hipster' cultural venues. On the other hand, mention of traditional Prague heritage spots could be considered as a sign of weak urban connoisseurship, as a cultural goodwill of students endowed with a low level of cultural capital. These issues will be further developed based on detailed analysis of in-depth interviews.

Meat Porn: Considering Practice / Discourse Formations

Wahlen, Stefan

Wageningen University, Netherlands, The
stefan.wahlen[at]wur.nl

This contribution is interested in practice-discourse formations. In the context of sustainable and healthy food consumption, I want to explore practice / discourse formations that relate to a particular type of meat consumption: the practice of barbecuing. I am interested in how the practice of barbecuing is influenced by societal discourses rendering food consumption as morally and normatively acceptable. The research question asks: how are ways of thinking about barbecuing in media debates contributing to normative and performative repertoires in practice / discourse formations? In the analysis I am drawing upon a monthly published magazine entitled "beef" and adjacent societal debates on barbecuing. The results underscore the interdependencies between the sayings of discourse shaping the doing of practices. The particular practice of barbecuing can be considered as relating to what I call meat porn, a way of rendering the preparing and eating meat as a particular masculine activity that is drawing upon normative repertoires of authenticity and the understanding of "proper" food.

The "Digitalization Of Food Practices (DiFPra) Project": Understanding How Digital Tools Intertwine With Daily Food Practices

Dyen, Margot

University of Neuchâtel, France
margot.dyen[at]gmail.com

Nowadays, seven in ten Europeans use internet every day. Plus, the use of digital tools like mobiles applications is increasing in different food practices: shopping, cooking, storing, balancing diet, etc. Digital tools can also be used to consume more sustainably, to be sure of a choice or even to opt for more convenience: How do food-related digital tools facilitate food practices? In parallel, digital tools can sometimes interfere with food practices (e.g. texting while sharing a meal, listening to a podcast while shopping, etc.): How do digital tools interfere with food practices? Our two questions aim at characterizing the use of digital tools to understand how they re-shape food practices (Choi and Graham, 2014), focusing on three dimensions of food practices: commensality, task sharing, health and sustainability. In view of the omnipresence of digital tools in our daily consumption, they can be considered as a mirror of the everyday life (Hine, 2015). This work will be a two-year project which will be submitted in September 2019. The authors would like to share this project with the RN05, to

validate that it will inform how technologies intertwine with daily (food) practices (Ruckenstein and Pantzar, 2015).

When Digital Devices Come Home for Dinner - Devising Food Consumption

Samsioe, Emma; Fuentes, Christian

Lund University, Sweden
emma.samsioe[at]ism.lu.se, christian.fuentes[at]ism.lu.se

Digital devices are increasingly intertwined with everyday life. Websites, web shops, social media, QR codes, smartphones, smart watches, and other digital artefacts are now incorporated into our ordinary consumption, replacing other entities and reconfiguring our practices. In the area of food consumption, digitalization has given way to a number of digital food platforms such as food box scheme, food sharing apps, and online food stores. These digital platforms are often presented as sustainable alternatives leading to the increased sales of ecological products (online stores), diminishing food waste (food sharing apps), or promoting healthy vegetarian lifestyles (food box schemes). In this paper we want to explore if, how, and under what conditions digital food platforms are able to "disrupt" household's food consumption and promote sustainability. Drawing on an ethnographic study of a food box scheme company, Årstiderna, which presents itself as promoting sustainable, healthy vegetarian food, and combining insights and concepts from practice theory and STS, we set out to explore what happens as these digital market devices enter the household. Preliminary findings show that this digital food platform disrupts and reconfigures household's food practices, taking over some of the tasks of food planning and food shopping, thereby decompressing time and creating pockets of time that can be used for cooking and eating. However, this "work transfer" comes at a price, as what is cooked, how and how it is enjoyed is now configured by the market device.

Food Bloggers: The Role of Immaterial Labour in Shaping Cultural Values Around Sustainable Food Consumption

Cole-Wright, Jennifer

University of Leicester, United Kingdom
jmc85[at]leicester.ac.uk

This paper explores the role of bloggers as influential figures who contribute to market understandings, shape values and influence consumer behaviour around sustainable food consumption practices. Blogs are increasingly read by a wide range of consumers, as both information sources and as forming part of leisure time. There is a general decline in reading traditional print media formats; instead, consumers are expressing a preference for the immediacy and convenience of online sources. Simultaneous to the rise of blogs, food as a genre in both new and established media formats is dominant and popular. Given the increasing public interest in food alongside growing concerns about food security and unsustainable food practices, blogs offer the potential to act as a significant source of influence. Despite the increasing number of consumers engaging with blogs, there has been little academic attention on the people who are producing this content. Blogs facilitate non-professional producers to take part in cultural production through meditating messages, which in turn is shaping cultural values and tastes. As such, it is essential to consider these new producers' roles in more detail. The paper, derived from interviews with food bloggers, will examine the motivations behind amateur bloggers and the practices they enact in the creation of their blogs. It also looks at how bloggers legitimise their work and value production, given the lack of formal credentials, or institutional authority to draw on. The research contextualises the work of creating and maintaining a blog as immaterial labour and uses this a lens to study how amateur bloggers are contributing to the production of cultural values around sustainable food consumption.

RN05_03c | Gender and consumption

Transgressing Traditional and Neo-liberal Expectations as well: Non-compliant Maternal Food Choices in the Italian Foodscape

Benasso, Sebastiano; Stagi, Luisa

University of Genoa, Italy
sebastiano.benasso[at]unige.it, luisa.stagi[at]unige.it

The paper focuses on mother blaming in relation to non-compliant maternal consumption choices in children feeding. We thus the explore the processes of cultural stigmatization of

mothers due to the supposed inadequate and/or deviant behaviors of their children towards food. In a context such as the Italian society, where the gender balancing of the family duties is still strongly uneven, the mothers are indeed considered the main responsible for the "correct" physical and social development of their sons and daughters, and the food choices plays a crucial role in the evaluation of the maternal performances. In order to observe dynamics of mother blaming, we take into account two different targets: the mothers of fat children and the mothers who adopt vegan or vegetarian diets for their offspring. Indeed, they both tend to be blamed for not complying with the mandates of the mainstream nutritional sciences (which in the neo-liberal societies play a pivotal role in the bio-political agenda), as well as for not reproducing the traditional Italian maternal foodwork model. As a consequence, by transgressing their charge of control and protections of their children's bodies, they end up being considered "improper citizens". Drawing on an empirical research carried out in the Northern Italy, we analyze the representations and the discursive strategies which inform the mother blaming about foodwork.

Using The Menstrual Cup. How Different Intimate Materialities Afford Different Socio-Cultural Experiences Of Menstruation.

Banke, Signe; Woodward, Ian

University of Southern Denmark, Denmark
signebanke[at]sam.sdu.dk, iawo[at]sam.sdu.dk

Based on a qualitative, ethnographic study we explore the embodied practices of using a menstrual cup. We find that the cup's material qualities and practical affordances allow users opportunities to renegotiate the cultural performance of menstruation. As experienced by the women in the study socially conditioned menstrual etiquette prescribes women to hide their period, yet pads and tampons often fail to satisfy this requirement. Moreover, for some women, they can promote feelings of disgust, alienating the women from their own body and period, triggering gendered social stigma. Differently, for reported reasons of effectiveness, comfort and practicality, the menstrual cup enables a 'successful' cultural performance of menstrual etiquette. Importantly, the cup as a material technology also affords a renegotiation of the meaning of menstruation, as women reported no longer feeling distanced or disgusted from their bodies during menstruation. Findings are based on a 9 month ethnographic fieldwork study in Denmark comprising more than 50 interviews with 23 women, combining in-depth interviews and a personal diary with both users and non-users of the menstrual cup, and an additional observation and interview component with 8 companies and experts. The paper suggests that the fundamental material-semiotic differences between conventional cotton products and the reusable medical silicone cup is the key to understanding how women differently experience and culturally perform menstruation. The paper theorises how intimate embodied technologies not only enable women to satisfy menstrual etiquette, but also enables them to question these and redefine aspects of menstruation.

Imagining 'Good' Sustainable Consumption: On Gender Normativities in Zero Waste Blogs

de Wilde, Mandy; Parry, Sarah

University of Edinburgh, United Kingdom
mandydewilde[at]gmail.com, sarah.parry[at]jed.ac.uk

Societies are currently transitioning to sustainable ways of consuming. More specifically, the zero waste transition looks beyond the current take-make-dispose extractive industrial model and aims to redefine products and services to design waste out. Having started as a zero waste movement around the millennium, and becoming institutionalised by means of circular economy-programs, zero waste living is now transforming into a popular consumer lifestyle in accordance with the exponential growth of zero waste blogs in the past five years. On the basis of a content and discourse analysis of today's most influential zero waste blogs we show which technologies (i.e. unpaper towels, beeswax wraps, low-flow appliances) and practices (i.e. cooking, cleaning, household organising) are predominantly imagined in these blogs. Doing so, we demonstrate that a particular notion of 'good' zero waste living is portrayed that intersects with gender normativities – in terms of time-intensity, the type of manual labour and direct engagement it asks from sustainable consumers. We find the reproduction of gender normativities through this sustainable consumer lifestyle troubling. Instead, we argue that transitioning to sustainable ways of consuming must simultaneously progress a gender politics organised around issues of fairness and equality.

Alcohol Consumption: Socio-environmental Context and Identity of Male Gender

Pakrijauskaite, Almane

Vytautas Magnus University, Lithuania
almane.pakrijauskaite[at]vdu.lt

In modern society, alcohol consumption is part of culture associated with a sense of pleasure, stress and anxiety, but at the same time an unwanted form of harmful behavior with many negative consequences (diseases, accidents, violence, crime, health risks, etc.). For these reasons, the use of alcohol in scientific discourse is studied in various ways. This paper introduces to the Socio-environmental Context Model (SECM) (Ward 2011), which is based on the widely used Theory of Social Norms. SECM allows identifying the environmental impact of alcohol consumption and social norms related to it. Social norms are distinguished into two types: injunctive norms (acceptance of behavior in a particular group) and descriptive norms (behavior specific to a particular group). The influence of the various environmental factors identified by SECM is revealed in four dimensions: physical-geographical, temporal, social and personal-historical, which interacts simultaneously. Other aspects of religion, social and economic status, and the formation of an individual's gender identity can be easily integrated into SECM. Therefore, this paper aims to

further expand approach to social norms by including a personal identity factor. Personal identity, especially for men, can be an essential part of alcohol consumption. The purpose of this paper is to construct a theoretical model based on SECM and the theoretical approaches of male identity, which would allow revealing a more comprehensive approach through various aspects of the environment and male identity.

RN05_04a | Stratification 2

Ascend Of The Herbivores, Decline Of The Carnivores? The Social Stratification Of Food Consumption Profiles In Italy, 1995-2014

Oncini, Filippo; Triventi, Moris

Department of Sociology and Social Research, University of Trento, Italy
filippo.oncini[at]unitn.it, moris.triventi[at]unitn.it

To what extent dietary patterns are socially stratified in the population? How did the patterns of social stratification of food consumption change over time? This research aims to contribute to the literature on cultural stratification and food consumption by identifying different food consumption clusters and investigating how these clusters are socially stratified by gender and education. Moreover, it analyses how both the clusters dimension and the social stratification gradients have changed between 1994 and 2014, by providing a unique long-term longitudinal perspective in the social stratification of food consumption profiles. We use data from the ISTAT Multipurpose Survey of Daily Life, a set of cross-sectional surveys with a randomly selected, nationally representative sample of Italian families, amounting approximately to half million cases. We have applied latent class analysis on a series of eleven items on the dietary habits of Italians to identify 6 clusters of food consumption profiles (herbivores, carnivores, enhanced Mediterranean, paucivores, omnivores, and unhealthy) and multinomial logistic regression to estimate social differences in the propensity to adopt different dietary patterns. Results point to a substantial social stratification of dietary patterns and show that, within a broad picture of persistence, gender, and parental education became more important in affecting the propensity of adopting specific dietary habits (e.g. herbivore).

Alternative Food as a Distinctive Way of Consumption: an Ethnographic Case Study of the reinvention of class boundaries in rural area

Malié, Anaïs (1,2)

1: Institute of Political Studies of Toulouse, France; 2: CESAER, INRA de Dijon, France
anais.malie[at]gmail.com

This paper approaches alternative food consumption as a reinvented way of distinction (Bourdieu, 1969; Paddock, 2014). Buying local and organic food, reducing dependency on supermarkets and the market as a whole through Community Supported Agriculture (CSA), cooperatives or gardening, does not solely nor necessarily depend on political “choices” but surely relies on socially situated tastes, social positions and trajectories. Within the context of a Southern France working-class and agricultural rural area where we conducted a 5-years ethnographic study, it is through the creation of a CSA and a cooperative that the highly educated middle-class members reinvent cultural and symbolic boundaries (Lamont, 1992). First, they draw cultural boundaries regarding low educated working-class members. Among other things, they consider those latter as “unable to” appreciate the “global” consequences of their daily practices. At the same time, they also dedicate themselves to working-class practices (gardening, home-made meats) that they combine with upper-class tastes (exoticism, contemplative view of nature). Alternative food also draws boundaries within cultural middle-class between mainly politicized public employees who distinguish themselves from those whom actions and expectations are driven by “profit” making and the freelance workers or private sector employees closer to the “market” or more reluctant to endorse a political dimension. The morals of solidarity between consumers and producers, the free markets, etc. implemented in the CSA and cooperative we study tend to reinforce those boundaries. Then, by approaching alternative food as a “metamorphose” of distinction (Coulangeon, 2011), we shed different light on both what motivates the adoption of such emerging practices and on the ongoing making of social groups.

Improving Ways to Determine Whether Cultural Stratification Is Strong or Weak

Purhonen, Semi

Tampere University, Finland
semi.purhonen[at]tuni.fi

Despite the ever-growing number of studies and publications, empirical cultural sociology focusing on cultural consumption and tastes and the way they are socially stratified has largely failed to provide systematic means to assess the degree to which findings from one study are different from others. While cross-nationally or temporally comparative studies are still rare and often suffer from limited measures, the more numerous national or cross-sectional studies are typically

incapable of saying much about the context-specificity (national or historical) of their results. Either way, the question concerns not only the lack of comparable data, but also the lack of instruments to answer the fundamental question of whether the observed patterns of cultural stratification are strong or weak. Answering these questions require either external points of comparison or shared evaluative criteria that are applicable across different empirical settings. In this paper, I critically review the field from this perspective and discuss, as well as tentatively propose and empirically demonstrate, different instruments that can be used for improving this situation and thus bringing the field of cultural stratification closer to the more established, adjacent fields such as the study of economic inequality. The instruments discussed represent either very simple measures allowing comparisons of the “degree” of cultural stratification across time and space or a more complex means for adding detail and comparability to the often imprecise speech that “class counts”. An argument put forward is that these, or other similar, shared instruments are needed to advance the systematic study of cultural stratification.

They're a Fan but They're Not a Stan: Stratification and Belonging in Digital Music Fan Communities

Buchanan, Sascha

Manchester Metropolitan University, United Kingdom
sascha.buchanan[at]stu.mmu.ac.uk

When global digital music fan communities dwell and consume in heterotopic online spaces (e.g. Twitter and Instagram) they appear to do so in a ‘free’ and deregulated space, where their intentionality is to enact utopic desires of belonging in what individual fans see as a collective community. However, in the context of the digital economy, spaces of belonging such as music fan communities have gone through a ‘neoliberal turn’ whereby these spaces become stratified by distinctions and uses of social capital. Along with this reconfiguration, mainstream media outlets actively produce competitive and hierarchical discourses in which fannish ways of being are inscribed with competitive individualism by harnessing expressions of enthusiasm. In turn, such discourse places cultural value on right and wrong ways of practicing fandom. Based on my own primary research, this paper will determine the extent to which practices of consumption, uses of language and reciprocal orders of interaction with the object of fandom, have culturally stratified the ‘fan’ identity to suit the neoliberal ecology of popular culture.

RN05_04b | (Not) eating meat

Effects Of A Documentary On Consumer Perception Of The Environmental Impact Of Meat Consumption

Bschaden, Andreas; Mandarano, Eduardo; Stroebele-Benschop, Nanette

University of Hohenheim, Germany
andreas.bschaden[at]uni-hohenheim.de,
eduardo_mandarano[at]uni-hohenheim.de,
n.stroebele[at]uni-hohenheim.de

Meat production causes a large amount of global greenhouse gas emissions, as well as other environmental problems. Regarding consumers' perspectives on sustainable consumption patterns, studies have shown that consumers underestimate the environmental impact of meat consumption compared to other issues such as packaging or food transportation. A video intervention was conducted to investigate the effect of information on consumers' perception and behaviour. One out of two didactically different videos about the environmental impact of meat consumption and a control video was shown to 189 participants. Ratings about the environmental impact of different food consumption patterns as well as corresponding individual consumption frequencies were obtained directly before and one week after the screening by self-report questionnaires. While the rating of the environmental impact of meat consumption is relatively high compared to other studies, it is still rated the second least important of the different food consumption patterns. In the first intervention group, the rating on importance increased significantly ($p=0.001$) after watching the video, while there were no significant differences regarding the other consumption patterns. There was no such effect in the control group, nor in the second intervention group. Self-reported frequency of meat consumption decreased significantly in both intervention groups, but not in the control group ($p=0.011$, $p=0.047$, $p=0.428$). The results of this video intervention suggest that a lack of knowledge more than the unwillingness to reduce meat consumption might be a reason for the underestimation of the environmental impact and the ongoing high consumption of meat. Didactically appropriate information campaigns could hereby help to reduce environmental impacts such as greenhouse gas emissions.

Purity and Imperfection: Re-Negotiating Vegan Identity

Giraud, Eva Haifa

Keele University, United Kingdom
e.giraud[at]keele.ac.uk

Veganism has gained attention both as a social phenomenon and subject of academic debate. There has been a sharp rise in the number of vegans in the Global North alongside the widespread availability – and fashionability – of vegan food itself. In the UK, for instance, The Vegan Society state the number of vegans has quadrupled from 2012-2017 and supermarket chain Tesco described it as 'the fastest growing culinary trend of 2018.' These developments have also led to increased criticism of veganism, including accusations that it is an instance of 'purity politics' (Shotwell, 2017): a moralistic form of consumerism that presents certain consumption choices as ethically correct. This paper intervenes in these debates drawing on both documentary analysis and ethnographic work with food activist groups, in order to re-situate veganism within a radical activist tradition. The first half of the paper focuses on examples from activist practice (including 'campaign caterers' Veggies Catering Campaign and The Anarchist Teapot) to examine how vegan activism has historically sought to enact a politics that articulates connections between food systems, environmental, and labour issues. The second half of the paper engages with recent concerns that contemporary 'lifestyle veganism' has marked a depoliticisation of vegan politics that undercuts these radical roots (e.g. White, 2018). The paper ultimately argues that while it is important to identify tensions that have arisen with veganism's shift from the political margins, it is also necessary to avoid labels such as 'purity politics' that oversimplify what vegan politics means to those who engage in it in the contemporary context.

Transformative Change towards a Sustainable Meat Consumption

Manik, Sacha

Roskilde University, Denmark
smanik[at]ruc.dk

Reducing our meat consumption is an essential part of the transition towards a sustainable western society (e.g. Bayley & Harper 2015; Wellesley et.al. 2015; Springmann et.al. 2018). Attaining a greater understanding of the sociological structures and mechanisms that support or challenge our way to a lower meat consumption is therefore of major importance. This paper provides insights into just that by analyzing the results of a survey conducted in the fall of 2018 among 1178 Danish flexitarian, vegetarian/vegan citizens, as well as omnivores in the transition towards a diet with less meat. The preliminary findings show that only 1.8% finds support in the public authorities. On the other hand, around half of the participants find that documentaries (53.6%) and their network (49.4%) have supported them in the process of change. However, 61% of the participants still struggle in one way or the other to eliminate meat from their diets; and even more so (74.4%) among the meat-eating participants. The reasons behind these perceived challenges are many. Nevertheless, social gatherings are found to be the most challenging (47.8%), particularly among the meat eaters (74.4%). Clarifying the supporting as well as challenging structures and mechanisms towards a diet with less or no meat, leads to an essential understanding of the social, institutional and political structures that are required to change, if we wish to underpin a greater transition of people's meat consumption practices in Denmark.

Everyday Meat Eating Practices as Multiple Relations of Care

Koskinen, Outi Hannele Marikki

University of Helsinki, Finland
outi.hm.koskinen[at]helsinki.fi

There is a paradox inherent in meat consumption. We overconsume meat, even though its (industrial) production is associated with environmental degradation, health risks, and unethical treatment of animals. In my presentation, I will analyse these everyday practices of meat consumption. I will produce new knowledge on how they mediate our relations to the people we share our daily lives with, the animals intertwined in food production, and the environment as the precondition for food production currently strained by its unsustainability. My approach is based on combining practice theories and feminist theories of care. Practice theories enable understanding food consumption as habitual, collective practices, which are simultaneously dynamic and internally differentiated. Care, on the other hand, refers to everyday practical doings, which include affective and ethico-political dimensions. Care is mundane, often underrated maintenance work, which nonetheless supports liveable relations in more-than-human worlds. By eating together, we take care of our relationships; by cooking for others, we express caring. However, caring is always permeated by power relations and

exclusions since it is not possible to care about everything. Studying everyday food practices as multiple relations of care thus ensures that meat eating opens up as a manifold phenomenon. Consuming meat can simultaneously signify caring for loved ones and distancing the contentious, unsustainable aspects of meat. I will discuss what elements are connected with caring for meat and its boundaries. I will also reflect on the potential contributions that food as a matter of care has to offer for the sociology of consumption.

Food that Matters: Exploring the Material-Discursive Boundaries Between Animal-Sourced and Vegan Food Practices

Hirth, Steffen

The University of Manchester, United Kingdom
steffen.hirth[at]postgrad.manchester.ac.uk

Today's agriculture in the Global North encourages diets high in animal-protein that depend on the use of fossil fuels. With agricultural policies becoming increasingly aware of the ecological consequences of intensive food production and the undesirability of further deforestation, forms of 'sustainable intensification' based on (bio)technology for doubling agricultural productivity by 2050 are now promoted in view of the rising world population. In need to 'feed the 9 billion', producing less meat and dairy is still largely overlooked as an alternative to further intensification. As keeping animals inevitably goes along with losses of nutritional energy when crops are converted into animal-derived foods, stockfree agriculture holds the possibility of rising productivity requiring neither more land nor further intensification. Theoretically drawing upon Karen Barad's (2007) relational, posthuman, and new materialist approach to material-discursive practices, this paper explores both animal-sourced and vegan food practices in the context of different foodscapes. Qualitative interviews and website analysis showcase how a 'vegan' supermarket maintains its customer-base by not calling itself 'vegan'; a vegan advocacy network certifies a vegan organic standard of production; a beef farmer converts to vegan organic vegetable growing; a dairy company justifies animal husbandry with the natural suitability of the land. Reading these cases 'diffractively' through another, the paper unravels resonances and dissonances to illustrate what actors are included and excluded in food mattering. By reconfiguring boundaries between animal-sourced and vegan food practices, these case studies inform debate about ways to materialise nutritional energy responsibly and, thereby, mitigate climate change and mass extinction.

RN05_04c | Consumption and space: Tourism, mobility and the urban

Smart Cars for Distracted Drivers

Degli Esposti, Piergiorgio; Parmeggiani, Paola

University of Bologna, Italy
pg.degliestposti[at]unibo.it, paola.parmeggiani[at]unibo.it

Distracted driving, the use of devices and social media has become the main cause of car accidents in the Western world. Digital technologies, social and technological transformation of cities such as platforms and ubiquity of devices are having a broad impact on the behaviour of drivers, cyclists and pedestrians. Repercussions can be seen on different social dynamics, such as security, surveillance, man-machine relationship, gamification, power of algorithm and, above all, presumption. Step by step, man has had to give up control over machines and both automotive industry and device manufacturers are also introducing limitations at the use of devices while driving, that will be analysed through ANT theoretical approach. This contribution is the result of a joint work between Italian Police and Department of Sociology and Business Law (UNIBO) with the objective of creating a mutual awareness of a reality in transition (the world of atoms and the world of bits merging). The project is addressed both to policeman and young drivers about how the digital technologies impact with our relationship with mobility. The methodology used consists in a visual analysis of several EU social and commercial advertising upon the topic, together with a theoretical reflection upon the main issues arose in our days related to the relationship between technology and mobility.

Living Labs and the Governance of Urban Sustainability

Silva Cruz, Isabel

Institute of Sociology, University of Porto, Portugal, Portugal
imsilvacruz[at]gmail.com

Living Labs are fields for experimentation of technological innovations regarding sustainable practices and promote new forms of governance of urban sustainability (Bulkeley et al., 2015, McGuirk et al., 2014, McCormick et al., 2013). In this regard, Living Labs are part of a broader experimentation policy engaging a diversity of stakeholders in innovations testing in order to overcome contemporary sustainable challenges and threats. By incrementing Living Labs, the municipalities aim to involve companies (startups), researchers, educational institutions and citizens in the definition and construction of co-creation processes promoting reflection on the issues of urban sustainability, testing and learning with innovation. According to Van den Bosch and Rotmans (2008) the learning process, in the scope of the "Transition Experiments", allows a multiplicity of social

actors to "develop new ways of thinking (culture), doing (practices) and organizing (structure)" through an "(inter)active process of acquisition and development of new knowledge, competencies or norms and values". How to engage different social actors in co-creation processes and how to evaluate the impact of technological innovations on changing consumers behaviour to sustainable consumption practices remains an issue to be improved by Living Labs (Gust Project; NESTA). The goal of this paper is to present and discuss how and which governance of urban sustainability is being defined and implemented by the "Living Lab Matosinhos" in order to promote sustainable lifestyle choices. Briefly, if community-led responses are being put or not at the heart of consumer's behavioural changes attending to the gap between values and practices (Theories of Practice).

Modes of Shopping Constituting a Local Street: A video-ethnography of shopping as a practice

Aslan, Devrim Umut

Lund University, Sweden
devrim_umut.aslan[at]ism.lu.se

In the last decades spatiotemporal manifestations of shopping are changed radically in conjunction with proliferation of car usage, internationalization of retail, and establishment of out-of-town malls. The social, cultural, and economic backgrounds of this axis alteration and its implication to the city life have been discussed thoroughly. However, the main empirical focus laid mostly on the mainstream and spectacular geographies of shopping. There is little literature on how shopping is enacted in "other" shopping geographies, particularly on local shopping streets. Södergatan, established as the main street of a working-class district in Helsingborg, Sweden, after going through modernization phases, today it mostly hosts so-called migrant entrepreneurship, service-based premises, and grocery stores. This study examines the major modes of shopping on this local shopping street in order to understand how shopping geographies outside of mainstream ensure their relevance. It contributes to the literature on shopping geographies from a cultural perspective, particularly on the co-constitutive interrelation between enactments of shopping and arrangements of shopping places. While doing this, the study engages in "practice theory", which supplies a profound conceptual vocabulary and dynamic epistemological gaze for concentrating on shopping as the main analytical unit. The major method employed in the research is video-ethnography, due to its capability to synchronically appreciate enactments of shopping, shoppers' reflections, the sensory and material environment of the street, and the movement within. The research shows that there are some major place-specific modes of shopping that are enacted in the street and in the district, and these modes of shopping, bundling with each other, materially and sensorially co-constitute the street into a meaningful, integral and convivial part of the city.

Pleasure vs Responsibility: Negotiating the Leisure-Volunteering Duality in Volunteer Tourism

Kahana, Netta

The Hebrew University of Jerusalem, Israel
Netta.Kahana[at]mail.huji.ac.il

Volunteer tourism is part of the wide trend of ethical consumption in that it allows untrained tourists to aid impoverished communities around the world, and thus express moral ideas and depict their moral sense of self via casual consumption. Volunteer tourism is positioned at the intersection of two seemingly conflicting pastime activities: travelling, which contains self-orientated aspects (i.e. leisure and hedonism), and volunteering, which contains society-orientated aspects (i.e. aid and altruism). This duality challenges the volunteer tourists' moral sense of self. Although this duality is inherent in volunteer tourism it received little academic attention. Drawing on the sociology of morality and pragmatic sociology this paper seeks to shed light on the topic by focusing on the different ways in which volunteer tourists perceive, evaluate and negotiate contradicting aspects of volunteer tourism. Findings from in-depth narrative interviews with volunteer tourists suggest that they position their volunteering acts in different social contexts. In each of the social contexts, the interviewees invoke specific ideas about the common good that justify and legitimize their actions on both self-orientation and social orientation levels. Invoking specific ideas about the common good in different social contexts allows them to manage the leisure-volunteering duality and maintain their sense of moral self. The study offers a powerful example of the different strategies volunteer tourists employ when facing contradictions in their actions in order to overcome the inherent duality in volunteer tourism.

RN05_05a | Eating in different cultures

Do we eat out ? : A socio-economic analysis for Colombian households between 1993 and 2014

Torres Pabón, Giselle

Pontificia Universidad Católica de Chile, Chile
giselletores13[at]gmail.com

The aim of this conference is to analyze the relation between the proportion of expenditure on Eating-out and the Colombian household's socio-economic conditions, between 1993 and 2014. The methodology is quantitative: a descriptive analysis and a linear regression model. The dependent variable is the proportion of Colombian household's expenditure on Eating-out. The independent variables are: presence of at least one woman in the household, age of the head of the household, educational and income levels, sector, region and some interactions between those variables. The data used is

from the National Survey of Quality of Life, conducted by the Colombian National Department of Statistics (Departamento Nacional de Estadística - DANE). The hypotheses are: (1) Eating out has increased in Colombian households and (2) There is an effect of the socioeconomic conditions of households on the consumption of Eating-out. The results have proved the hypotheses. Analyzing the results in the context, these allow to affirm the existence of diversification and distinction in the Colombian food practice, specifically on Eating-out.

Russia's Food Revolution: A Solution or Challenge for Food Security?

Trotsuk, Irina

Russian Presidential Academy of National Economy and Public Administration, Russian Federation
irina.trotsuk[at]yandex.ru

For the past two decades, the Russian government considered food security as national security and a state priority, which contributed to the fact that Russia is a relatively food secure nation though there are serious problems in the economic access to food. Two decades ago a significant percentage of Russia's population experienced food insecurity, today the majority of population is food secure in terms of the traditional definition of food security as an efficient production-supply linkage. However, one should consider not only food security ('quality' and 'quantity' of food consumption) but also everyday food practices for in Russia rather distribution-delivery points impact food security, and this issue should certainly be defined as 'food revolution'. Russia's contemporary food revolution is not just an increase in caloric intake but also changes in where urbanites eat and where they buy food (private retail food chains and supermarkets, private restaurants and cafes, fast food chains, and traditional farmer markets). The bimodal Soviet system of food distribution left consumers vulnerable, which was the national challenge until the system breakdown in 1990-1991. Today Russia's urban consumers are food secure not just owing to access and availability, but also because the food delivery system has multiple ways to deliver food. Russia's food revolution is mainly an urban phenomenon and is most pronounced in large cities, which creates new challenges for food security, changes cultural perceptions of food, leads to an emancipation of women, transforms social contexts of food consumption, and has discernible economic impacts.

Alternative food qualities and practices in Beijing and Guangzhou

Wahn, I-Liang

Feng Chia University, Taiwan
ilwahn[at]fcu.edu.tw

Farmers' markets and consumer cooperatives are being organized by some Chinese consumers in recent years as a response to food safety problems and environmental concerns. They have taken inspiration from alternative food movements in Taiwan developed 10 years earlier. The paper aims to understand how sustainable food as discourses and practices in another society facilitated the organization of social economy and consumption in a different context. It applies the Polanyian approach that sees "economy as instituted processes" to develop a framework on the organization of production, exchange and consumption. The framework is used to analyse farmers' markets and consumer cooperatives in Beijing and Guangzhou. The analysis illustrates how the borrowed idea of sustainable food from Taiwan rests on distinctive bundles of food qualification practices. Food quality guides farming practices and also enable exchange practices in the alternative food markets. The paper argues that the instituting of the social economies involves the organization and coordination of farming and exchange practices through shared knowledge and purposes along with specific competences. It also argues that due to different social context these networks struggle to reorganize consumption practices and create sustainable demand.

RN05_05b | Ethical consumption

Enabling Citizen Organising for Sustainable Transitions

Laamanen, Mikko (1); Forno, Francesca (2)

1: Royal Holloway University of London; 2: University of Trento, Italy
Mikko.Laamanen[at]rhul.ac.uk, francesca.forno[at]unitn.it

Opportunities for citizen-led initiatives to promote sustainability lie in the possibility to open up spaces for collective action to enact changes both at the personal-lifestyle level (altering mind-sets, moral justifications etc.) as well as at the structural/institutional level from the local, regional, and national context. We elaborate on the concept of collective action for sustainable transition discussing how grassroots groups organise their communities for reaching transformative goals. As the paper will argue, collective action for sustainable transition requires alternative forms of organising to build effective networks of different participants and resources. The paper reviews the principles of alternative organising, in particular their democratic and participatory method, and the effectiveness to achieve claimed outcomes. To exemplify differences between geographies, we illustrate findings from two extensive projects in Finland and Italy that differ in their

embedding within larger politico-economic realities (such as influencing the breadth and depth of austerity measures people are subjected to in their everyday lives). We approach the elusive sustainability outcomes within alternative organising contexts (Laamanen et al., 2018) where comparative studies between the European North and South are scarce. Our initiatives are practical vehicles for raising people's awareness about sustainability with manifold potentials for promoting meaningful social participation and positive environmental impact of local resourcing. Our approach answers the call for more comparative studies between the well-off European North and the austerity influenced European South (Lekakis and Forno, 2018) and whether these differ in their forms of political consumption.

Understanding Ethical Consumption in the Reshaping of Consumer - Producer Relations

Gram-Hanssen, Kirsten

Aalborg University, Denmark
kgh[at]sbi.aau.dk

Different parts of sociological theory have tended to see ethical or political consumption as either a moral question including visualising the global responsibility of consumption, as freeing the post-modern consumer and their creativity or as a consumer sociological approach where ethical consumption, in line with all other consumption, is seen as a question of distinction and class belonging. Others have questioned the adequateness of placing the responsibility of environmental and ethical issues on the individual consumer rather than focusing on the organization and structures of society. Political sciences has on their side asked, if ethical consumption is a new form of political activism, which is at the expense of the more traditional forms of political participation. Much of the basis for these understandings, however, tend to be within an economy with separate spheres of production and consumption. A relevant question is thus if questions of ethical consumption change with reconfiguration of the market. This paper has an explicit focus on energy consumption and the transition of the energy system where more renewable and thus fluctuating energy provision will be part of the future. This future energy system is likely to contain different parallel transitions including more liberalization, different versions of "presumption" with end-users producing their own energy in either an individualized or a community based approach. It is also likely to include more automation of consumption as well as a society where consumers buy services rather than products and resources. In any of these cases, it is relevant to discuss how different ideas of ethical consumption may change with different types of reconfiguration of the market.

Becoming a Reclaimer, Doing Reclamation: The Intersecting Lives of Practices, Practitioners and their (Un)wanted Things

Foden, Mike

Keele University, United Kingdom
m.foden[at]keele.ac.uk

Practice theory and its empirical applications have made a welcome contribution to understanding what people routinely do and how that changes, especially with respect to (un)sustainable or (un)healthy patterns of consumption in the home. At the forefront have been 'strong' articulations of practice theory, marked by their focus on the historical emergence, development and disappearance of shared social practices. They have helped counter a well-documented tendency to blame consumers for making apparently bad choices, advocating a shift in the locus of policy intervention away from individual attitudes and behaviours. While recognising the importance of this contribution, this paper contends that there are good reasons to also, sometimes, pay analytical attention to the trajectories of specific humans and material things that together accomplish concrete performances. In particular, doing so enables deeper practice-theoretical engagement with grassroots activism, broadly defined. First, it is likely to improve understanding of how practices recruit and retain practitioners, not least when change is politically contentious and its advocates have relatively little reach to ensure that others follow suit. Second, becoming an activist subject – cultivating the inclination, dispositions and competences to see, think, feel, act, and be in the world differently – can be understood not only as a means to an end, but an end in itself. It follows that investigating this process is intrinsically valuable. The interconnected careers of practices, practitioners and things are explored here through empirical research on reclamation practices: ways of acquiring, repurposing and using goods that would otherwise go to waste.

An Exploration of the Emancipated Nature of Ethical Consumption

Lee, MinHye

University of Winchester, United Kingdom
Minhye.Lee[at]winchester.ac.uk

Consumption is not just about the individual's rational purchase of products or services which is in line with the economic-materialist. Consumption is rather intersected with the social processes of meaning making in which individuals create and express meanings or emancipated signs. This study aims to re-construct the notion of ethical consumption by taking a socio-cultural perspective. This study explores how the members of a self-defined ethically conscious consumer group in South Korea perform their own ethical consumption practices and create discourses and meanings within and without their social world. By employing an ethnographic approach, this study conducts 30 semi-structured in-depth

interviews and 6 months of participant observation in South Korea. Ethically conscious consumers in this study develop their own understandings of ethical consumption, reflect them to various forms of practices, and disseminate their experiences to the society. 'Ethics' in consumption is not a definite and solid entity but it is more about getting closer for instance, more sustainable or less materialistic. Then ethical consumption is a situational and contextual compromise so that it cannot be put in any single and consistent way. Through the micro analysis of ethical consumer culture in South Korea, this study challenges and transforms the dominant view of ethical consumption contributing to explore the complex dynamics of ethical consumption.

RN05_05c | Food and taste

Unpacking omnivorousness: locating the British 'foodie'

Paddock, Jessica (1); Warde, Alan (2); Whillans, Jennifer (1)

1: University of Bristol, United Kingdom; 2: University of Manchester, United Kingdom
jessica.paddock[at]bristol.ac.uk,
alan.warde[at]manchester.ac.uk,
jennifer.whillans[at]bristol.ac.uk

For the last decade or so, the British foodscape has seen notable rise in the volume of cookery programmes, books, blogs, social media space dedicated to food. This offers an example of one of the multiple sites from which social actors across social cleavages derive pleasure from both convivial and solo eating events. Those who fervently seek out and are excited by the most authentic, exotic, and refined food experiences are what Johnston and Baumann (2010) - based upon their research conducted in a North American context - have called 'foodies'. Yet, in a British context, the term carries many different manifestations, protests of denial and accusations of snobbery. Theories of omnivorousness further complicates the relationship between broad engagement in culinary practices, and reproduction of class distinction. Drawing upon 31 qualitative interviews conducted in London, Preston, and Bristol (UK) as part of the project 'Revisiting Eating Out 1995-2015', we explore the meaning of the term 'foodie'. We ask ourselves, and indeed, we asked our interviewees: what is a foodie? Can foodies be detected among our sample, and if so, what are their characteristics? Finally, we consider whether there is merit in adopting the term foodie to describe the practice of our most distinctive of diners and reflect upon the politics of cultural difference at play in this field, and its implications for creating alternative forms of provisioning the goods and services that make main meals in Britain.

Emerging Patterns Of Food Taste In A Cross-Cultural Perspective: Some European Countries Under The Scrutiny Of TASC Survey

Onorati, Maria Giovanna (1); d'Ovidio, Francesco Domenico (2)

1: University of Gastronomic Sciences in Pollenzo, Italy; 2: University of Bari "Aldo Moro", Italy
m.onorati[at]unig.it, francescodomenico.dovidio[at]uniba.it

Food taste and habitus are undergoing an epochal change owing to the increasing human mobility (Sheller – Urry, 2005) and the proliferation of key sites production of new consumption styles and priorities. Digital activism has found a new ally in food (Johnston - Baumann, 2010; Reilly, 2006; Onorati - Giardullo, 2018), as has been shown by boosting recommendations in social media about food safety (Dillaway et alii, 2011), healthy eating (Schaefer et alii, 2016), food supply chains (EIP-AGRI, 2016), iconic cuisines (Everett, 2015), and gastro-tourism (Guzel - Apaydin, 2016). Regulations on the traceability of origin as a quality benchmark (Grunert - Aachmann, 2016) and the 2030 UN Agenda claim a global commitment with respective transparency and sustainable consumption. What are, then, the new determinants of food taste? Are these factors shaping a multidimensional “gastronomic” capital – comparable to the “culinary capital” devised by LeBesco & Naccarato (2013) – that works as a driver of new and discerning forms of consumption? The paper presents the first findings of a pilot survey called “TASC – Taste As a Social Construction” conducted on more than 500 people living in different European countries. The survey starts from the above research questions and aims at identifying the factors correlated with food preferences and measuring their performance in the main fields of practice in which taste is shaped. TASC accounts for old and new capitals by connecting the sociocultural characteristics that underpin eating practices, with media practices, foodstyles, and values (Schwarz, 2006), so as to outline accessibility, affordability, and priorities in food consumption. The Theory of Planned Behaviour (Ajzen, 2001) was used to check the influence of both subjective and collective sociocultural factors on consumption.

Taste, The Senses, And Cultural Openness. An Empirical Exploration Of The Role Of Embodied Affect In Multicultural Consumption Experiences

Smaniotto, Cristiano

University of Southern Denmark, Denmark
cristiano[at]sam.sdu.dk

This paper addresses the embodied, sensual practices and evaluations which mediate relationships to cultural differences in pluralistic societies. A dominant strand of research on openness revolves around its abstract expressions in relation

to boundary-drawing practices and also preferences for types of cultural goods. Yet, individual everyday encounters with the cultural Other in physical social spaces are often experienced through the body and its senses. This sensual dimension of cosmopolitan encounters remains understudied. The present article explores the role of the body and senses in shaping these encounters, and ultimately in forming boundaries which are essential mechanisms of social inclusion. Through a qualitative analysis of in-depth interview and focus group data drawn from a larger study concerning individual experiences of cultural difference in consumption practices (e.g., eating, travelling), we analyse expressions of cultural openness mediated through the work of the senses. Our informants express this openness in relation to the (dis)comfort provoked by bodily, sensory reactions to specific consumption practices (e.g., eating strongly-flavoured food). This sensual experience offers a basis for people’s framing of cultural difference – either reinforcing or weakening the boundaries between the individual and the cultural Other – and translates into taste evaluations. We find that taste as embodied practice mediates between the aesthetic surface and texture of things and the cosmopolitan imaginary of individuals. However, bodily (dis)comfort is not a direct indication of cultural openness. Conversely, it is in the acceptance of and openness to discomfort that we see multicultural consumption experiences becoming cosmopolitan performances.

Brazilian Chefs And Their Aesthetic Work: Mixing Popular Food And Global Patterns Of Taste

Lages, Mauricio Piatti

University of São Paulo, Brazil
murucopl[at]hotmail.com

Some recent transformations have highlighted the figure of the culinary chef as a ‘symbolic producer’ and no longer as a mere executant of traditional culinary techniques. This means that the cook now has also a largely conceptual role, acting directly in the circulation signs, images and tastes, which are culturally specific but at the same time rely on global aesthetic protocols. The intent of this presentation is to analyze the cultural tensions at play in the work of chefs from São Paulo, Brazil, based on the material collected in semi-structured interviews with chefs and local journalists. Many contemporary chefs are turning to the repertoire of “popular food” as the source of inspiration for their culinary creations and artistic dispositions, revealing a structural tension between innovation and tradition. Just like other so-called global cities, the city of São Paulo has been constructed and perceived as a privileged stage of dispute for the new symbolic and material meanings of food, and that is the context in which I will analyze the work of these chefs.

RN05_06a | Food and stratification

Healthiness And Food Practices Among Socio-Economically Disadvantaged: From Resources And Lifestyles Towards Navigating Contested Everyday Processes

Halkier, Bente; Holm, Lotte

University of Copenhagen, Denmark
beh[at]soc.ku.dk, loho[at]ifro.ku.dk

Poverty and socio-economic insecurity is related to ill health and inequality in health. This is well established in epidemiological studies and at population level (Phelan et al., 2010) and it is partly ascribed to social differentiation of food consumption and dietary health. However, the social processes in the micro-level foundations of the connection between socio-economic status and health status are decidedly under-researched (McDaniel, 2013). In this paper, we present a review of sociological literature on socio-economically disadvantaged citizens and their relations with food and health. The review represents parts of the first phase of a new empirical qualitative research project in Denmark, which addresses food practices among disadvantaged men and women and seek to understand how they link to dietary health. In two dominant perspectives in this research field the inequality is viewed in a resource and a lifestyle perspective, respectively. While acknowledging the analytical contributions of these perspectives, we suggest that a next step is to explore the potentials of a practice theoretical perspective (Warde, 2016) for analysis of the minute everyday life processes linking social disadvantage to dietary ill health. However, a practice theoretical perspective has some analytical challenges, which need to be addressed when applied to the research field of social disadvantage, health and food. This includes a more explicit incorporation of social inequalities and cultural hierarchy (Watson, 2016), a closer scrutiny of the gendering of practices and a stronger focus on the social interaction (Keller & Halkier, 2014).

Between Distinctiveness and Standardisation. The Various Sensual Landscapes of Buying and Selling Fresh Produce in Berlin

Hering, Linda (1); Fülling, Julia (2)

1: Technical University Berlin, Germany; 2: Humboldt University Berlin, Germany
linda.hering[at]tu-berlin.de, julia.fuelling[at]geo.hu-berlin.de

The advancing globalization and the associated infrastructures, technologies and institutions enable consumers to experience

a wide variety of different products from all over the world throughout the year. At the same time, this has been driving forward the standardisation of shapes, sizes, colours and varieties of fresh produce consumers can purchase. Grocery chains are displacing traditional local markets and owner-led stores and thus the social and sensual perception which are associated with them. However, our experience in sensing food is not reduced to the fresh produce itself but to the whole spatial-material environment of shopping, the different shapes and sizes of the buildings as well as the variety of products and prices on offer. Completely new and mostly standardised building structures (e.g. free stander) cause various spatial effects as they appear inclusive/exclusive or are associated with different forms of knowledge (e.g. about the expected prices/qualities). We compare four districts in Berlin, which differ in not only in the quantity and selection of different food retailers but also in their building structure and social composition. By applying an interdisciplinary research approach (sociological/geographical), we investigate the sensual experiences and related spatial knowledge of consumers and traders when buying and selling fresh produce. It turns out that the sensual experience when shopping for food in grocery shops is embedded into the neighbourhood in a very distinctive way and is charged with diverse social meanings by different types of consumers and traders.

The Relationship Between Socioeconomic Position And Fish Consumption In Finland During 1985-2016

Kähäri, Antti Kalle Akseli

University of Turku, Finland
akakah[at]utu.fi

Food consumption is related to socioeconomic position as measured by income, education and occupation. These factors reflect different forms of capital. Healthiness of diet is one dimension where socioeconomic groupings differ in opportunities and choices. This study uses fish consumption as a window to health and environment related consumption and assesses how the association of income, education and fish consumption has changed during the last 30 years in Finland. Data used are the Finnish Household Budget Surveys (HBS) from 1985 to 2016. The results show that, over time, income has become a more important predictor of fish consumption, while the association between education and fish consumption has remained stable. Results are discussed from the points of view of inequality, environment and public health.

Knowledge Production, Policymaking and Local Blurring of Food Production Practices

Reckinger, Rachel

University of Luxembourg, Luxembourg
rachel.reckinger[at]uni.lu

Alternative Food Networks (AFN) constitute a niche for cultural shifts through renewed forms of trust and community, reinforcing social and ecological justice. Heterodox actors in the transition to more sustainable food systems create new forms of knowledge, that are contested, co-constructed and potentially conflictual – particularly in regard to established, conventional and mainstream Local Food Systems (LFS) that also claim sustainability, animal welfare, authentic localism etc. for themselves. The political dimension of this knowledge production is also perceivable within the organic sector itself, where the ‘older’ generation feels a risk of fragmentation and lack of solidarity on behalf of ‘new’ initiatives such as permaculture, non-certified organic producers etc. that reinvent direct marketing and bypass established wholesale and supermarket retail paths. My analysis focuses on negotiations and interrelations among actors in a multifaceted foodscape, sometimes blurring distinctions between organic and otherwise sustainable productions. I view the interconnectedness and agency of niche innovations as well regime hegemonies in contemporary Luxembourg, by drawing on qualitative interviews with relevant stakeholders. How are dynamics of “knowing and growing food in a contested arena” (Goodman et al., 2014) negotiated? At the same time, two legislation periods with green politicians in the government (since 2013) have favored a self-perception of enabling policymaking for the governance of food systems and the explicit valorisation of their ongoing transformation by civil society movements, and by encouraging meeting spaces for multi-stakeholderism. What can we retain from those tensions in order to support relevant policies to solve current controversies within the food system?

Alternative Food Organizations in Geneva: At the Interplay of Market and Democracy

Huber, Johanna Clara; Lorenzini, Jasmine

University of Geneva, Switzerland
johanna.huber[at]unige.ch, jasmine.lorenzini[at]unige.ch

Citizens increasingly voice demands for more control over the food system. While popular initiatives aim at institutional change through the state, Alternative Food Organizations (AFOs) propose to transform society through direct action. The question we ask is to what extent do AFOs propose transformative goals and organizational structures that

contribute to societal change? AFOs are associations or social enterprises active in the food sector, which promote an alternative understanding of the food system. They are either oriented towards the market (e.g. participatory supermarket, food basket) or offer a non-commodified understanding of food (e.g. freeganism or food banks). Existing research tends to focus on case studies focusing on a single type of AFOs. This paper contributes to the literature through a comprehensive analysis of the Genevan alternative food sector. We use an original dataset of AFOs collected for the canton of Geneva in 2019. The dataset allows us to map all organizations active in the field and to compare the relative importance of democratic goals and aims to transform the market. We hypothesize a link between democratic goals and non-monetary actions – the organizations that promote the exchange, donation, or self-production of goods are more likely to establish horizontal and participatory governance structures. This paper shows how vibrant the food movement is but also the limited transformative goals that AFOs defend. Only few AFOs promote alternatives to the market that challenge both commodification processes and hierarchical decision-making in the food system.

Voluntary Simplicity in Consumer Capitalism

Dopierala, Renata

University of Lodz, Poland
renata.dopierala[at]uni.lodz.pl

In the paper I consider the tensions between Voluntary Simplicity assumptions and the logic of late capitalism and the consumer society. Voluntary Simplicity is analyzed as the reorientation towards post-materialistic values and it can be treated as an example of new spirituality - the need of individual growth, internal self-improvement and raising the consciousness to higher level. A specific contradiction arises here. On one hand, the dependency (or even correspondence) between the characteristics of new spirituality and the attributes of the consumer society, which contributed to its emergence. The growth of culture of subjective well-being is an element of the logic of the modern capitalism, which transforms not only experience and observations, but also spirituality into goods confined within consumer activity, characterized by decidedly commercial dimension. On the other hand the essence of the new spirituality is anti-consumerism and it should not be treated as a pillar of consumer capitalism - the popularization of simple life would have to led to questioning the imperatives governing the consumer society.

Collective Action, Consumption Practices And Prefiguration In The Animalist Movement

Courtin, Irène

Université de Genève, France
irene.courtin[at]unige.ch

In recent months, in France and Switzerland, actions aimed at damaging butcher shops have captured media attention and fueled debates, even within the animalist movement. At the centre of discussions is the classical opposition between a political and necessarily collective action, and ethical forms of consumption often associated with individualism. We argue that practice theory can be fruitful for studying both consumption practices and campaigning practices within a social movement, going beyond this dichotomy between political action and « lifestyle ». This proposed paper reflects on how theoretical contributions could further develop practice theory to better analyse « the roles of collective actors, strategic action and purposive collective projects in social change » (Welch and Yates, 2017), along with social movements literature on everyday politics and prefiguration, conceptualizing prefiguration as a configuration of practices (Yates, 2014). First, we review both the anglophone and francophone literature on veganism and the animalistic movement, focusing on the limits of conceptual approaches. Then, we propose a framework for studying the animalist movement in relation to prefigurative politics. We provide initial insights on how such an approach is useful towards going beyond the binary tension between ethical consumption practices and political activism. We conclude with a discussion around practice theory in relation to social change, relevant towards the study of other social and environmental movements. This project ultimately aims to demonstrate how what Carrié (2015) termed the « animalist nebula » is both a protest movement but also a configuration of practices towards societal transformation.

Are Political Attitudes Associated with Participation in Cultural Heritage? Lifestyles and Class Divisions in the UK And Continental Europe

Miles, Andrew Graham (2); Leguina, Adrian (1)

1: University of Loughborough, United Kingdom; 2: University of Manchester, United Kingdom
andrew.miles[at]manchester.ac.uk, a.leguina[at]lboro.ac.uk

There is a growing interest in understanding the underlying mechanisms that explain the relationship between political attitudes and cultural preferences. Recent studies have considered the relationship between cultural practices and the current political climate (including 'Brexit'), liberal-conservative values, party affiliation, and European identities. Although this body of literature agrees that being engaged in activities across the low-to-highbrow cultural divide is

associated with traditional right and left political values, it also draws a more complex picture, where fragmented views that suggest a reshuffling of the political spectrum interact with tensions around new and old class formations. Moreover, the possibility of generalizing such understandings is restricted by the lack of comparable frames of reference, methods and data. In response, what we propose that the notion of a correspondence between the cultural and political fields needs to be revisited. Here we review Bourdieusian concepts such as homology and field, and argue that by combining them with the use of multiple factor analysis we can better disentangle the complex relationship between political values and cultural participation. Our proposed framework and analytical strategy are applied to a study of Eurobarometer data (2017) on political attitudes, media consumption and cultural heritage. In particular, we address the following questions: Does the hypothesis of structural homology between the social space, political attitudes and cultural heritage hold in the UK? Is the strength of their association similar across Europe (North, South, East, Central)? What does this reveal in terms of the current political climate across Europe?

RN05_06c | Sociology of taste

Passionate Consumption: Becoming a Collector

Lee, Yu Ying

Yuan Ze University, Taiwan
yylee[at]saturn.yzu.edu.tw

The main concern of this paper is to investigate how a passionate consumer can transform to be a prominent collector. To become a collector represents those who can manage economic, social, cultural and symbolic capital to gain fame and fortune. In the contemporary consumer society, there are lots of collectors consume various collectibles, only a few become prestigious collectors. A wealthy collector can buy a piece of valuable art from auction house but the knowledgeable collector can enjoy the process of seeking "treasures" in the fleet market. Collection is a special form of consumption in the consumer society because most collectibles have no use value but sign value, such as antiques. Nevertheless, antique collectors are obsessed with the artifacts and eagerly want to possess them. There are so many fakes in the antique market; buying an antique is a high risky consumption practice. In order to differentiate genuine antique from the fake one, collectors/consumers have to acquire relative knowledge on antiques. Based on research of Chinese antique market and collection, this paper states that prominent collectors are those who can successfully change economic capital into social and cultural capital. In the realm of the antique collection, the knowledge/power interaction among collector/consumer, dealer, and connoisseur will be studied.

Soup Kitchens of the Written Word? Digital Divides and Dilemmas Facing Public Libraries

Leguina, Adrian; Mihelj, Sabina; Downey, John

Loughborough University, United Kingdom
a.leguina[at]lboro.ac.uk, s.mihelj[at]lboro.ac.uk,
j.w.downey[at]lboro.ac.uk

Libraries play a unique role in the UK cultural sector, providing support from cradle to the grave, as places for learning but also empowerment for those lacking opportunities at home. While library use and its benefits are often framed in terms of traditional high culture, policies recognize the importance of libraries as instruments for social cohesion, bridging the digital divide and increasing digital literacy. Libraries today are dynamic places serving multiple communities of users with different needs. However, current research and the library sector, we argue, have failed to reconcile the transformative power of new communication technologies and its impact on established and new cultural hierarchies. Our contribution, therefore, brings together the debates on digital divides and cultural consumption from the perspective of libraries. Empirically, we use British data from the Taking Part Survey (2005-17) to explore the evolution of access and technological provisions and the profile of contemporary library users across several practices. Our findings signal a broad range of potential benefits for people and communities, emphasizing the tension between in-house and remote digital engagement with library provision.

Male and Female Nudity in Artistic Photography - Gendered Patterns in Explicit and Implicit Categorization

Berghman, Michaël; Ho, Yu-Chin; van Eijck, Koen

Erasmus University Rotterdam, The Netherlands
berghman[at]eshcc.eur.nl, 410816yh[at]student.eur.nl,
vaneijck[at]eshcc.eur.nl

Previous research has argued that different societal norms apply regarding male and female nudity. Both male and female viewers prefer female over male nudity. However, it has also been suggested that the circumstances in which nudity is presented has a profound impact on how it is mentally processed. When categorized as artistic, nudity is stripped (at least partially) of its sexual meaning. However, some familiarity with the prevailing artistic categories seems prerequisite to recognize that nudity is indeed artistic. This leads to the expectation that viewers with more artistic expertise will differentiate less on the basis of gender in their reaction to artistic nudity, as they are supposedly capable to look beyond the sheer erotic connotations and appreciate nudity on aesthetic grounds. By contrast, people with sexually conservative attitudes may resist an aesthetic reading. However, why does categorization differ on the basis of social background? Do people deliberately adjust to social norms

that prevail in a particular situation? Or do they wield embodied categories largely unreflexively? To test this, we compare reactions to a set of black-and-white artistic nude photographs of both female and male models. Apart from viewers' explicitly uttered response, we also explore the cognitive processing involved. Based on the argument that reflexively monitored responses take slightly more time, we measure response latency to get insight in the cognitive deliberation that informs an opinion on artistic nudity. After a successful pilot-test, we are currently collecting data. At the conference, we will report on our final results.

Is Popular Culture the “Least Cultural Denominator”? A Dual Network Approach to Analyzing Fiction Readership in Russia

Sokolov, Mikhail; Sokolova, Nadezhda

European University at Saint Petersburg, Russian Federation
mikhail.m.sokolov[at]gmail.com, nsokolova[at]eu.spb.ru

In his now-classical paper, Paul DiMaggio (1987) claimed that popular culture in modern societies “provide(s) staff of everyday sociability”. It serves to bridge cultural holes between classes and other major social groups patronizing different artistic genres. Intuitively appealing, and grounded in a long tradition of theorizing on “mass culture”, the proposition that low-brow art serves as the “least cultural denominator” was scarcely tested empirically. We developed a dual network (Breiger) approach to testing this proposition. We use data on readership in St. Petersburg, Russia, from the city's municipal public library system (above 1.300.000 records) to reconstruct a network of 22.000 authors, through which we demonstrate that counter to DiMaggio, authors with a more educated readership are more likely to enjoy higher centrality in the cultural networks measured by weighted betweenness and weighted constraint. We interpret it as a sign that, at least as far as literature is concerned, relatively high-brow, rather than low-brow, artistic figures are more likely to serve as bridges across cultural holes providing themes for “culture talk” (Lizardo) across large social distances. We discuss three explanations of this fact: institutional (the central role of educational institutions in distribution of literature, in contrast to cultural products such as cinema), structural (arguably, centrality of high-brow tastes is implicated by Peterson's omnivorousness model) and taste (more educated audiences prefer cultural products transgressing traditional genre boundaries). The evidence points into the direction of a combination of institutional and structural explanations.

“This One At Least Means Something”: A Quantitative Approach On Studying Aesthetic Development Of Secondary School Pupils

De Baere, Mathijs; Lievens, John

UGent, Belgium

mathijs.debaere[at]ugent.be, John.Lievens[at]UGent.be

The current research contrasts two views on the development of aesthetic expectations: the first is derived from socialization theories of art perception based on Bourdieu's cultural reproduction model, the second from stage-models of psychological aesthetic development and neuroscience. Both views try to answer the question of which criteria are used to judge art, and what the interpersonal differences in these used criteria are based on. These alternative views are contrasted by studying the aesthetic development of secondary school pupils. Relevant aspects of art socialization, stage-perspectives on aesthetic development and art evaluation are combined in a quantitative multi-track model in which we disentangle complementary and superseding relations. We use survey-data of 346 Flemish secondary school pupils visiting an art museum in a school trip. This specific age category - 12 to 18 - is especially relevant to study early development in aesthetical expectations and evaluations. Aesthetic development is operationalized as three factors derived from eleven likert items measuring aesthetic expectations and evaluations: (1) a base-order track focusing on beauty, representation and harmony, (2) an emotional evaluation track and (3) a contemplative track consisting of the need for fantasy, novelty and reflection. Using MANCOVA, we, furthermore, assess effects on factor scores of sociodemographic variables, education level and prior art museum experience. The aim of this paper is to complement the class-based literature on aesthetic development by psychological and neuroscientific insights on this topic. This can deepen our understanding of aesthetic development, modes of art consumption and art education.

RN05_07a | Consumption and the family

Past Familial Experiences And The Interrelationships Between Consumers' Individual and Relational Selves Over Time

Karanika, Katerina (1); Hogg, Margaret (2)

1: University of Exeter, United Kingdom; 2: Lancaster University, United Kingdom

K.Karanika[at]exeter.ac.uk, m.hogg[at]lancaster.ac.uk

Consumer research has always acknowledged that family history, childhood experiences and parental figures influence consumption as individuals draw on the past-present-future nexus to construct their identities via consumption. However, consumer research has neglected to explore how memories of the past individual and/or relational self impact the current individual and relational self in consumption. A phenomenological study used the lens of consumers' ego-states to explore how consumers' experiences are affected by different time-bound views of the self. Middle-class consumers' experiences with their important possessions and consumption activities were examined in the two largest cities in Greece. In Greece the interplay between consumers' individual and relational selves over time may be particularly shaped by the recession and the weak welfare state which means that the family is the main support in coping with social risks. Our study sheds light on specific tensions between consumers' individual and relational selves over time. In some cases these reflected specific ego-states (Adapted Child, Critical-vs-Nurturing Parent, Natural Child-vs-Adult) and stimulated particular types of identity conflicts and consumption ambivalence. In other cases, different dynamics between individual and relational selves over time linked to specific ego-states [Natural Child, Nurturing Parent(vs-Adapted Child)] and promoted positive feelings in particular consumption experiences. Also, the study identified different types of self-expansion and self-reduction and different conflicts between self-expansion and self-reduction in consumption. The findings also revealed different person-thing-person trilateral trajectories (Belk, 1988) [other-thing-self, (self-vs-other)-thing, thing-self-other] that linked to familial interpersonal relationships and were based on different interrelationships between individual and relational selves. Keywords: self-identity, ego-states, ambivalence, family

Household Expenditure And Stage Of Family Life Cycle: An Empirical Study Of Italian Households

Diliberto, Simona; Tumminello, Michele; Lo Verde, Fabio Massimo

University of Palermo, Italy
simona.diliberto[at]unipa.it, michele.tumminello[at]unipa.it,
fabio.loverde[at]unipa.it

Household expenditure and consumption behaviour are domains investigated through a variety of approaches. Nonetheless, there is a lack of empirical studies that analyse the association between household spending patterns and stages of family life cycle, which is, actually, the aim of the present study. We analyse secondary data collected by the Italian Institute of Statistics (ISTAT) through the Survey on Household Consumption (time period: 2001-2013), which include yearly expenditure details on 279 categories of goods and services, for a sample of more than 20,000 Italian households every year. In the study, we consider i) nuclear families with offspring, stratified according to generation of children, working status of parents and their level of education, ii) nuclear families without children, stratified by the age of components, and iii) families without structure (people living alone), also stratified by the age of component. The system of households, expenditure categories, and family types is described as a three-partite network, and the associated statistically validated bipartite network is used to elicit the characterizing expenditure patterns of each family type. Results show that the budgetary allocation of households on the various categories depends on i) the presence/absence of children, ii) the generation of offspring, if leisure time expenditure is concerned, and iii) the stage of family life cycle (new-born, consolidated, and in later life). Our analysis also indicates that some dimensions associated with the income, like working status of parents and their level of education, also represent prominent factors to interpret, model and predict consumer choices.

Navigating Symbolic Pollution in Family Care Assemblages Through Symbolic Boundary Work

O'Riordan, Jacqui (1); Kelleher, Carol ME (1); O' Loughlin, Deirdre (2)

1: University College Cork, Ireland; 2: University of Limerick, Ireland
jacquior[at]ucc.ie, carol.kelleher[at]ucc.ie,
deirdre.oloughlin[at]ul.ie

In this paper, we explore how illness requiring care displaces family assemblages. Specifically, we illustrate how illness as a form of symbolic pollution transforms family relations and capacities necessitating symbolic boundary work to hold family assemblages together, which in turn, shapes both a sense of home and of family. Drawing on a qualitative study of twenty four family caregivers, who provide informal unpaid care to family members, we reveal how care for ill family members led

to a displacement of family relations, capacities and disruption of practices led to an altered sense of home and family. Specifically, we induce two forms of symbolic pollution: Home Unfixtures and Familial Strangers, which modulated meanings of home and family, as well as two forms of symbolic boundary work: Labors of Homing and Familying On, which sought to reconstitute a sense of home and family within evolving family assemblages. Our findings make three main contributions to the sociology of consumption. First, we reveal how illness, as a specific component and form of symbolic pollution, modulates family assemblages. Second, we reveal how illness precipitates ongoing processes of deterritorialization. We specifically demonstrate how illness transforms material capacities that typically provide a sense of home, denoting safety, comfort and welcome (homeyness) within family assemblages, into sites of surveillance and fortification. Third, we reveal that illness facilitates, stretches and alters relations and capacities with family assemblages, or a sense of family, which in turn necessitates symbolic boundary work. That is, illness contemporaneously de-constitutes and reconstitutes families. We conclude with limitations and an agenda for future research.

From A Grandfather Butcher To A Vegetarian Granddaughter: Practices Transformations Across Three Generations In Food And Mobility

Anciaux, Amélie

UCLouvain, Belgium
amelie.anciaux[at]uclouvain.be

What is the role of primary socialisation in the adoption of more sustainable practices? The objective of this contribution is to observe the evolution of consumption practices across three generations. Based on an original methodology using family trees of practices related to mobility and alimentation, this analysis includes 24 in-depth interviews: 11 with parents and 13 with young adults who have already left the parental home. The interviews involve eight families in which at least one interview with a young adult and one interview with a parent were collected in 2017-18. The theoretical framework of this research mainly draws on social practice theories (Schatzki, 1996; Reckwitz, 2002; Shove et al. 2012). To discuss these issues, the concepts of "reversed socialisation" (Bronfenbrenner, 1979) and "compartmentalisation" (Halkier 2001; Bartiaux 2008) as well as the effects of age, cohort, and period (Wunsch & Termote, 1978) borrowed from demography are used to better understand the role of the primary socialisation in the adoption of sustainable practices.

RN05_07b | Sustainable consumption and consumer behaviour

Transformative Practices and Socio-Cultural Change: The Case of Sustainable Food Consumption and Cultures

Hegnes, Atle Wehn (1); Amilien, Virginie (2)

1: Norwegian Institute of Bioeconomy Research, Norway; 2: Oslo Metropolitan University, Norway
atle.hegnes[at]nibio.no, viram[at]oslomet.no

Since the beginning of the 2000s the practice turn has evolved as a new approach in social theory and methodology. Within this paradigm practices are the fundamental unit of analysis and effort has been made to understand practices as 'dependent variables' and how they can be changed. Despite recent advances in practice theory, there are still important questions related to how practices connect and contribute to socio-cultural change. The interlinkages between change of practices and socio-cultural change are of increasing importance in the common goal to cope with the grand global challenges. In this paper we use sustainable food consumption as a case to describe and discuss the idea that the focus should be not only on the change of practices per se but also on how practices make or contribute to socio-cultural change. In this endeavour, we make a distinction between the ideal types of transformed and transformative practises and ask, how is, and should, socio-cultural change be accounted for in practice theory? Probing this question, we use substantive examples from studies on food and food culture to develop a typology of practices based on their transformative potential. We suggest that the role of changes in translations of meaning, social reorganisations and material transformations is of particular importance. Our conclusion is that understanding socio-cultural change requires an analysis of the dynamics of how practices may enable and contribute to such changes. Future studies on social and cultural change in sustainable consumption should therefore focus on such transformative practices.

Exploration of the Sociological and Cognitive-Affective Factors, And Medias on Unsustainable Consumer Behaviour

Maksimainen, Johanna; Wilska, Terhi-Anna

University of Jyväskylä, Finland
johanna.maksimainen[at]jyu.fi, terhi-anna.wilska[at]jyu.fi

There is a lot of research on sustainability and sustainable consumption, but current knowledge on the factors underlying

unsustainable consumer behaviour has not yet been broadly explored. This paper presents an interdisciplinary project that aims to provide comprehensive understanding of the impacts of socio-cultural and individual (e.g. attitudes, emotions, personality) factors, and news media use and information contents driving unsustainable consumption. The approaches from sociology, cognitive science, and journalism/media studies are going to be applied in the research. Our focus is on young males (18-25 years) with low education, as previous research reveals this group as the most unsustainable consumers. The research is divided into sub-studies: First survey data will be collected within conscripts in military service in order to cover the age group widely. The second phase includes the collection and analysis of visual and textual media contents. Media sources are going to be selected based on survey results. The final phase consists of intervention sessions including behavioural experiments. The objective is to spot cognitive biases regarding to climate change, sustainable consumption, and related issues. We explore the relations between the participants' media reading skills, and the impacts of new information to one's conceptions. Here, the mechanism of apperception is in the center of focus. The studies utilizes qualitative (e.g. semiotics, discourse analysis, visual analysis) and quantitative (statistical) methods.

Differences In Willingness To Change Consumption Patterns Between Consumer Groups When The Global Temperature Is Increasing

Tangelad, Torvald

Oslo Metropolitan University/SIFO, Norway
torval[at]oslomet.no

Unsurprisingly, the IPCC report "Global Warming of 1.5 °C" (2019) concluded that there is an urgent need to reduce greenhouse gas emissions on a global level. Such fast change will depend on active participation from all society sectors. Accordingly, researchers, policymakers and the media has debated to what extent consumers are willing to change their consumption patterns in a more sustainable direction voluntarily. In Norway, previous research has demonstrated that consumer attitudes towards the potential solutions to reduce global warming has changed. The annual SIFO-survey has measured levels of technology optimism and consumer responsibility amongst Norwegian consumers, showing that technology optimism has increased while consumer responsibility has been decreasing for several years, before an increase over the past few years. Furthermore, there is a negative relationship between technology optimism and reported level of reduction in consumption of clothes, meat, energy, air and car travel. Between consumer responsibility and reduction there has been a positive relationship. This paper aims to investigate the differences in willingness to reduce consumption levels between consumer groups in Norway. It builds on results from the 2019 SIFO-survey (N=1196). Findings from this research have implications for the political regulation of consumption in Norway, and in particular to understand how measures can be targeted at different consumer groups. It also contributes to the debate on sustainable transition pathways and limits to growth.

Saving The World With Meat Alternatives: Social Media Voices Between Material Change and Cultural Continuity

Rödl, Malte B

University of Manchester, United Kingdom
malte.roedl[at]manchester.ac.uk

The industrial production of animal meat is increasingly criticised in relation to environmental, ethical, and health-related issues, for which meat alternatives have emerged as a promising solution. The complex relations between consumers and these sustainability-enhancing products is investigated here on the basis of user-generated content on social media. Taste testing videos from YouTube and vegetarian-related theme weeks on Twitter are used complementarily to analyse both depth and range of consumer attitudes. The analysis focused on the frames used to describe meat alternatives and the specific meanings they attribute to meat. Three major frames emerge from the analysis, which describe (1) cultural continuity promoted through meat alternatives, with meat as a socio-cultural good; (2) material change as a solution to supply-chain issue in the food system, with meat as a consumable socio-technical entity; and (3) diversity of choice in the market place, with meat as a hedonic foodstuff. While the rise of meat alternatives benefits the issues associated with meat, it is argued that their affirmation of established cultural norms keeps dominant ideas about meat consumption intact; it is suggested that this allows for the rise of 'protein diversity' and 'less but better' approaches, which instill a less radical rhetoric but therefore may counteract a quick transformation. Based on this, the tensions emerging between cultural continuity and change for sustainability are discussed, as recommendations for other food-related sustainability issues are made.

Exploring The Temporal Ordering, Sequencing And Synchronization Of British Residential Energy Demand

Lórinicz, Máté

University of Reading, United Kingdom
m.lorincz[at]reading.ac.uk

Despite its 'wordless' and hidden characteristics, it within the everyday tasks, routines and rhythms that energy consumption takes place, from getting up every morning, having breakfast, going to work or school, having lunch, going home, having dinner, reading a book, surfing the internet, watching TV and probably doing similar things again and again. This presentation takes this background as a starting point to explore and to describe common patterns with regard to how individuals sequence their energy demanding activities —like eating, cooking, laundering—during course of the day. Our presentation will start with an overview of the existing research into the temporal characteristics of residential demand with particular focus on studies employing time-use data sets. This will be followed by our preliminary findings of

the UK Time Use Survey 2014-2015 diaries that are used to provide insight into the sequencing of residential energy demanding activities. This analysis is based partly on existing studies (e.g. social sequence analysis methods) as well on new research conducted by the author (e.g. dissimilarity-based discrepancy analysis). Finally, we will discuss our preliminary findings (a) on the way certain energy demanding sequences of activities occur at a specific time of the day and (b) how these common energy demanding sequences of activities are distributed across social groups. We consider that our presentation will generate discussion around the temporal order and sequencing of energy demanding activities as well some 'sociological critiques' of the use of time-use diary methodology to understand energy consumption patterns.

RN05_07c | Music and taste

Walling off Collective Effervescence: A Study into the Boundary Maintenance of Dutch Music Concerts

Vandenberg, Femke

Erasmus University Rotterdam, Netherlands
Vandenberg[at]eshcc.eur.nl

Every country has its national music, sung in its national language relating to traditional themes. However, in a time of increased globalisation and multiculturalism, what cultural meaning does this music authorise for its audience? Focusing on music made by national artists for a mass public, this project delves into three different aspects of the Dutch music scene: folk music, classical crossover and hardcore. Drawing on theoretical insights from Bourdieu as well as a Durkheimian approach to the ritualistic aspect of music concerts, it uses a cognitive sociological entry to classification and categorisation to analyse the self-definition and the construction of symbolic boundaries of these audiences. While Durkheim's notion of collective effervescence – a shared intensified mood drawn from collective assembly – has been readily used in research addressing national pride as well as concert experiences, little research has been done on the mental boundaries involved in the fostering of these feelings of collectively. On the basis of which criteria is an in-group constructed in the minds of audience members? In unearthing the symbolic and social boundaries produced and maintained at these music concerts, I aim to determine not only the cultural meaning of this music but also the social hierarchies and status negotiations at play.

“Isn’t Opera Where They Sing ‘I Love You, I Love You, I Love You’ Or ‘I Am Dying, I Am Dying, I Die Now’ And It Takes Them 10 Minutes To Do So?”: Operatic Institutions And Practices Of Inclusion

Laamanen, Mikko (1); Cappellini, Benedetta (1); Näsänen, Virpi (2)

1: Royal Holloway University of London, United Kingdom; 2: Hanken School of Economics, Finland
mikko.laamanen[at]rhul.ac.uk,
benedetta.cappellini[at]rhul.ac.uk, virpi.nasanen[at]hanken.fi

This paper describes early insights from a project on social capital, consumption practices and instituting taste in accessibility and outreach programmes by operatic institutions. Music is commonly considered creating distinction in consumption practice with its artistic institutions, such as opera, seen as an antithesis of everyday life for the non-bourgeois-elite (cf. Bourdieu, 1984; Leguina et al., 2017; Rössel, 2011). With taste and social capital traditionally providing a dialectical explanation of consumption in this setting, we follow Warde (2014) in seeking a practice-based explanation for consumer participation and inclusion. We start with the simple question, ‘How is opera made accessible’. This question refers to both the institutions, the ‘product’ on offer and the practices that the institutions engage in to establish social practice (cf. Maciel and Wallendorf, 2017). We review and combine literatures on social capital, practice, and equality and inclusion in consumption with a particular view on the establishment of taste practices. We then assess existing interventions in situ, namely, consumer education and outreach programmes by operatic institutions as well as innovative methods of increasing participation. We analyse the target setting, modes of operation, and outcomes of the various approaches. Finally, we consider the implications of our analysis of the programmes against the literature to provide a starting point for an ethnographic study of inclusion and participation in the context. Our paper proposes a new line of inquiry to institutional establishing of inclusive taste practices. We reintroduce the phenomenon of opera as both institution and performance into the literature of sociological research of consumption practice. Finally, our research has implications into considering the viability of cultural institutions’ interventions to change consumer / citizen tastes and practices.

A Feast for Melomaniacs: Embodiment of Cultural Capital and Implicit Fandom in Opera Festival Audiences

Bartoletti, Roberta (1); Gemini, Laura (1); Brillì, Stefano (2)

1: Università degli Studi di Urbino Carlo Bo; 2: Università IUAV di Venezia, Italy
roberta.bartoletti[at]uniurb.it, laura.gemini[at]uniurb.it,
sbrilli[at]iuav.it

The growing number of audience development projects for opera, ballet, and classical music demonstrates how encouraging access to genres that are typically regarded as highbrow culture (Katz-Gerro 2002), is still considered a priority by European cultural organizations. Despite this, researches on opera and theatre audiences often tend to legitimize the gap between popular and elitist forms of cultural consumption, by excluding the use of analytical categories developed in the study popular culture, such that "fandom" and "fan practices" (Hills 2018). This paper aims to address this gap, by analysing the relationships between the labor of incorporation of cultural goods (Bourdieu 1979; Lizardo 2008), modes of opera consumption (Rössel 2011), and fan behaviours in the field of opera. The object of our study is the audience of the Rossini Opera Festival, the most prominent international event dedicated to the Italian composer. More specifically, the study addresses two research questions: 1) How the appreciation for different aspects of a monographic opera festival relates to the accumulation of cultural capital? 2) Do the festival attendees configure as fanlike consumers? The research uses a multi-method analysis that combines a survey conducted on attendees of the 2017 edition, 20 semi-structured interviews with international enthusiasts of the festival and three focus groups with local spectators. The preliminary analysis of the results reveals the prevalence of melomaniac, voracious and philologist behaviour, that, on the one hand, shows an incorporation of cultural capital favoured by a privileged family/class condition, on the other hand, displays an emotional and communal intensity typical of more popular and "fannish" forms of cultural consumption.

Worse than Screaming Frogs or a Warm Blanket? The Impact of Repeated Listening on How People Experience Music

van Eijck, Koen; Michael, Janna

Erasmus University Rotterdam, Netherlands, The
vaneijck[at]eshcc.eur.nl, michael[at]eshcc.eur.nl

This study explores the self-reported experiences of people listening repeatedly to two different music pieces. One piece was determined by the researchers (first movement of Dvorak's 8th symphony), the other was chosen by the respondents themselves. How do people make personal connections with music? We interviewed participants about their preferences and listening habits and asked them to keep a listening diary during the process of listening to two pieces of music for seven times each. Previous research into repeated listening approached it mostly quantitatively and revealed interesting results regarding changes in cognition and affect. With our qualitative study we deepen our knowledge on how participants build relations with musical pieces and search for meaning in musical material. While some discover an increasing number of layers in music and build emotional attachment, others develop an increasing aversion to the same piece. Diaries have been identified as an effective tool for introspection. Keeping diaries about the listening experience enabled participants to capture their experience as close to in-the-moment as possible, gave them plenty of expressive freedom with their own emphasis and enriched interviews afterwards. We address theoretical accounts of response polarization and explore, how specific ways of listening are embedded in participants' lives. Further, the context of this experiment itself added to the multilayered experience of the music.

Unequal Households and the Management of Multiple, Complex and Conflicting Priorities in Everyday Food Practices

Head, Emma (1); Foden, Mike (1); Katz-
Gerro, Tally (2); Martens, Lydia (1)

1: Keele University, United Kingdom; 2: Manchester
University, United Kingdom
e.l.head[at]keele.ac.uk, m.foden[at]keele.ac.uk, tally.katz-
gerro[at]manchester.ac.uk, l.d.martens[at]keele.ac.uk

Everyday life in households is characterised by multiple, complex and conflicting priorities (Halkier 2010; Warde 1997). This is illustrated especially clearly in relation to everyday food practices, where consumers and cooks are always negotiating between a range of priorities, from concerns over value for money, health, taste and safety, through to matters of provenance, sustainability and broader questions that connect with a politics/ethics of food (Johnson et al. 2015; Meah and Watson 2012). In this paper, we explore the significance of wealth inequality for how domestic cooks negotiate between the different and multiple priorities that circulate in social life in relation to their food practices. In the context of growing food poverty in the UK (O'Connell 2017), we are especially interested in whether 'being strapped for cash' dominates over other food priorities. We also explore whether there is 'room' in the considerations of consumers for the priority of sustainable food (Johnson et al. 2015) and where food safety features in the concerns of consumer-cooks. We present a mixed-methods analysis, drawing on transdisciplinary qualitative fieldwork and survey questionnaire results on the food practices – from retail to fork – of UK consumers, which was carried out as part of the EU Horizon2020 project SafeConsumE.

Transdisciplinary Ideas On Cooking: How Theories Of Practices Can Help Solving The Societal Challenge Of Food Safety In Europe

Jacobsen, Eivind; Skuland, Silje

OsloMet, Norway, SIFO

eivjac[at]oslomet.no, siljs[at]oslomet.no

Transdisciplinary projects tend to bring together different disciplines, research traditions, ideals and conceptual and methodological toolkits. To some extent, they need to build on shared conceptual model of the problems to be studied that integrate and transcend these divisions. This paper ask how Theories of Social Practices can be used to guide transdisciplinary analysis of microbial and sociological data in order to research societal challenges of food safety in novel ways. Recent analyses from WHO estimate that bacteria, parasites, toxins and allergens in food account for about 23 million cases of illness and 5 000 deaths in Europe every year. The Horizon 2020-project, SafeConsumE, aims at reducing the health burden from foodborne illnesses by employing transdisciplinary methods. In all 75 households in five countries (France, Norway, Romania, Portugal and the UK) have been observed and interview while shopping, transporting, storage and cooking. This paper use data from cooking observation of 15 household in Norway conducted by microbiologist and social scientist in collaboration. The study brings attention to how differently social and natural scientists approach these questions and what it takes to cooperate. This paper thus argue that applying Theories of Practices enables the microbiologists to model how microbes grow or disappear in relation to the things, performances, skill and ideas of real people in their daily life. Similarly, shedding light on invisible microbes in kitchens, enable the social scientist to analyze how microbes are a part of shared social practices. Reducing the health-burden of foodborne illnesses needs to bring attention to how safe and unsafe food handling are contextually depended on everyday life.

Food Practices and trust: handling chicken in European kitchens

Truninger, Monica (1); Nunes, Cristina (1); Dumitrascu, Loredana (2); Nicolau, Anca (2); Skuland, Silje (3); Didier, Pierrine (4); Foden, Mike (5)

cristina.nunes[at]ics.ulisboa.pt,
loredana.dumitrascu[at]ugal.ro, Anca.Nicolau[at]ugal.ro,
siljs[at]oslomet.no, pierrine.didier[at]gmail.com,
m.foden[at]keele.ac.uk

This presentation refers to a transdisciplinary research conducted on food safety practices and food trust in families from 5 European countries and is based on qualitative and visual data collected under the European project – SafeConsume through 75 go along interviews (with the aid of a video camera) following consumers from shopping to the preparation of a chicken meal in their kitchens. The material collected revealed a common pattern in Portugal and Romania, different from the other three countries (UK, Norway and France): most families washed raw poultry meat before cooking. Microbiologists and health professionals advise against washing chicken due to the risk of campylobacter contamination, a controversial topic in this field. Poultry is highly consumed in all countries, but food safety campaigns advising the population to not wash chicken are unknown in Portugal and Romania, while they exist in Norway and the UK. Romanian families justified this practice as something they have learned with their parents (usually mothers). Portuguese families mentioned the lack of trust in hygiene practices of small butchers and the sliminess of the meat, whereas if the meat was packaged in plastic and bought in big food retailers, some did not see the need to wash the chicken as it was perceived as cleaned. This unveils a puzzling issue regarding the image of plastic in packaging, as despite its environmental burdens, it conveys an image of safety and hygiene for consumers, and of transparency of industrial practices in the chicken provisioning system. The paper contributes to debates informed by an institutional approach on food trust, consumption and food provisioning systems (Kjaernes, Harvey and Warde, 2007).

Food Safety in Domestic Kitchen In France, Norway, Portugal, Romania and The UK: The Social Practices Of Judging If The Chicken Is Properly Cooked

Skuland, Silje Elisabeth (1); Nicolau, Anca Ioana (2); Dumitraşcu, Loredana (3); Didier, Pierrine (4); Truninger, Monica (5); Foden, Mike (6)

1: Oslo Metropolitan University, Norway; 2: University of Galati, Romania; 3: University of Galati, Romania; 4: G-ESA, France; 5: University of Lisbon, Portugal; 6: Keele University, United Kingdom

siljs[at]oslomet.no, Anca.Nicolau[at]ugal.ro, Loredana.Dumitrascu[at]ugal.ro, pierrine.didier[at]gmail.com, monica.truninger[at]ics.ulisboa.pt, m.foden[at]keele.ac.uk

It is often said that domestic kitchens and home cooks are to blame for much of the occurrences of foodborne illnesses. Estimates say that nearly forty percent of foodborne outbreaks are caused in the domestic sphere. Still, how food risk is handled by home cooks has been remarkably absent in the research literature, despite the estimated impact. High levels of pathogens found on chicken meat makes it a risky food to eat, especially if not properly cooked. This paper employs theories of practices to investigate how food safety is handled when chicken is on the menu among families with young children, elderly and young single men in France, Norway, Portugal, Romania and the UK and discusses video data of cooking performances in 75 households from different food cultures and supply structures. Judging if the chicken is properly cooked was an ongoing activity during cooking and heating among the cooks in this study. Meanwhile, it involved various activities, techniques, skills, use of tools and sensory and mental capacities depending on engaging with various kinds of materials (e.g. the type of chicken meat cooked, access to and use of utensils and cooking appliances). The paper thus argues that judging if food is safe to eat is a social practice shaped by the food supply and by national food cultural traditions. Reducing the health-burden of foodborne illnesses needs to bring attention to how safe and unsafe food handling is embedded into everyday food practices and shaped by the socio-material infrastructure of food supply and by food cultural regimes.

Digital Cultural Consumption As 'Online' Cultural Capital. The Use Of Online Sources For Active And Receptive Cultural Participation

Willekens, Mart

Ghent University, Belgium
mart.willekens[at]ugent.be

This paper analyses digital cultural participation as a form of 'online' cultural capital. Cultural consumption is often used as an indicator of embodied cultural capital, because it requires appropriate interactions with different cultural forms. In Bourdieu's framework, these appropriate interactions are closely related to an aesthetic disposition acquired through primary and secondary socialisation in an environment with sufficient capital stocks. However, with the rise of web 2.0., many interactions with culture are currently happening online. On the one hand, this trend is often heralded as a new way to democratize culture. Cultural policy tends to describe digitization as an opportunity to broaden participation, because it makes culture 'accessible' for different social groups. On the other hand, research on the digital divide shows that access to online sources is far from equal and still requires specific skills, which suggests that digital cultural participation can be analysed as a derivative form of 'online' cultural capital. To test this argument, we use population data from the 'Amateur Arts in Flanders Survey - 2019' to analyse the effects of economic, social and (parental and institutionalized) cultural capital on the use of online sources for both receptive and active cultural participation. For receptive cultural participation, we focus on online interactions with existing cultural forms and for active participation, we focus on the use of online sources to make (or distribute) personal artistic creations. Next, we compare these new models for digital cultural participation with existing models for 'offline' receptive and active cultural participation.

Repair and Do-It-Yourself Urbanism in two Vienna districts

Jonas, Michael; Astrid, Segert

Institute for Advanced Studies, Austria
jonas[at]ihs.ac.at, segert[at]ihs.ac.at

In Vienna (as in other cities in Europe) tons of electrical appliances, furniture, textiles and other everyday items are thrown away even though they could frequently still have been used further had they been repaired or maintained. The resulting large quantities of garbage are the result not only of production and usage practices in the economic sphere or lifestyle and milieu specific consumption practices in the private and the public sphere, but also of the virtual absence of corresponding urban infrastructures. At the same time, a rise in sharing projects, recycling measures, do it yourself (DIY) activities and repair initiatives – subsumed under the label repair & DIY urbanism – can also be observed in many cities. Even if such phenomena are not established on a broad scale, repair & DIY urbanism is nonetheless attributed enormous potential when it comes to transforming non-sustainable urban areas and their infrastructures and dominant business and consumer practices into resilient ones – even if such claims are not yet based on validated knowledge. The proposed contribution will take up these observations and will give an overview of repair and DIY practices and actors in two city districts in Vienna investigated in a transdisciplinary R&D consortium comprising a sociological research group, an intermediary organization as well as commercial and non-profit practitioners. Based on extensive ethnographic fieldwork a typology of respective activities allows a deep insight into the configuration of the district specific Repair & DIY urbanism as well as its transformative potential with regard to the development of resilient urban districts.

In Constant Tension between Markets and Movements. A Field-Theoretical Perspective on Platform-Based Collaborative Consumption

Flick, Christian

TU Berlin, Germany
christian.flick[at]tu-berlin.de

In the following, I will propose to look at platform-based collaborative consumption from a field theory perspective (Fligstein/McAdam) with emphasis on the dynamics between social movements and market actors unfolding in three historical phases. Originating in social movement-like attempts of social transformation through platform-based modes of collaborative consumption, a new market, the so called sharing economy, has emerged. Private resources like apartments and cars, in the beginning of digital sharing used to provide social alternatives to markets (e.g. Couchsurfing) now have become market objects themselves. Due to practices of commodifying private resources by undermining regulatory frameworks said to cause negative social effects, incumbents such as Airbnb and Uber are increasingly facing criticism. In recent years, new

social movements established the idea of platform cooperativism to challenge the incumbents by re-organizing attempts of social transformation through embedding modes of collaborative consumption in cooperative structures. Applying a field-theoretical approach, platform-based collaborative consumption can be analyzed not just as a bundle of heterogeneous and dynamic concepts, but as a contested field in the sense of a political arena, where power relations and the ability to frame issues according to one's own agenda become crucial. Focussing on the complex and dynamic interplay between the constitution of market actors and social movements, the question of how collaborative consumption is embedded in organizational frameworks is key for understanding both the emergence of the sharing economy and its ambivalent character.

Consumption Patterns And A Relational Space Of Social Networks For Pre And Teenagers: To Be Popular On Tumblr

Martín-Lagos López, María Dolores (1);
Donat López, Marta (2)

1: University of Granada, Spain; 2: Instituto de Salud Carlos III Madrid, Spain
lmlagos[at]ugr.es, ma.donat[at]isciii.es

The objective of this paper is to analyse youth (11 to 15 aged) relational space of consumption in social networks. In *Consuming Lives* (2007), Bauman examines social networks as a social space known as a market. This market is characterised by both the vanishing of private life, and the necessary participation of the subject as a saleable product. According to the author, this is a mechanism of recognition and approval necessary for socialization. In this framework, being famous, desirable and desired is the summit against the insipid mass of faceless products. Based on his analysis, this paper presents the results of in-depth interviews with girls and boys aged 11 to 15. Together with the analysis of images, whose new codes and categorisations are used by young people to interpret the Instagram profiles, it used a bibliographic review. Among others, which brand to be Popular or Tumblr. Secondly, the extent to which they know brands and consumer objects through them and what networks of relationships they establish. Finally, if there is a discourse on critical and responsible consumption in which they are able to discern when there is subliminal advertising.

RN05_09c | Theories of markets and consumption

Sovereign Dupes? Navigating Cleanliness Conventions in Everyday Life

Jack, Tullia

Lund University, Sweden
tullia.jack[at]gmail.com

Conventions are part of everyday life; we are surrounded by representations of what we should aspire to from many different sources. If resource intensive practices are regularly represented as conventional, these potentially become naturalised and unsustainable consumption will increase. Understanding how conventions interact with everyday practices is thus fundamental in tackling unsustainable consumption. To gain new insights into how representations and conventions interact, this paper explores how people respond to cleanliness representations in Swedish media. Cleanliness is chosen as a case for its role in accelerating water and energy consumption (Shove, 2003), and Sweden as cleanliness activities are in line with this upward trend (Jack, 2017). In this paper focus groups read magazines, discuss content and how this relates to their lives. Participants perceive cleanliness as being intertwined with a host of co-conventions such as freshness, health, femininity, masculinity, self-presentation, sustainability, et cetera. Participants have strategies to receive and resist representations, and are especially averse to representations that they suspect are meant to increase consumerism. Dilemmas for participants do not arise from deciding when or how to receive or resist. The real dilemmas arise when trying to integrate conventions into everyday life given the multiplicity of meaning around cleanliness, as well as new challenges around social stratification and sustainability. Participants see conventions as influencing wider society, but see themselves as individuals critically interacting with discourse, a sovereign dupe juxtaposition. Sovereign dupes critically perceive conventions and conscientiously object to those that are deemed oppressive, but also desire participation in wider society to positively construct everyday life in their own and the world's best interests.

Exploring Lost Property And The Materiality of Absence

Holmes, Helen; Ehgartner, Ulrike

University of Manchester, United Kingdom
Helen.Holmes[at]manchester.ac.uk,
Ulrike.Ehgartner[at]manchester.ac.uk

Abstract notions of absence, nothing and loss are becoming increasingly intriguing phenomena for sociologists interested in the everyday (Scott, 2018). However, whilst their theoretical connotations are being progressively discussed, empirical investigation into these phenomena remains absent. This

paper presents the initial findings from a pilot project exploring lost property which seeks to translate the abstract notion of loss into an empirical and material focused study. Through qualitative interviews with: lost property offices; households; and museums, in Manchester, England, the project reveals how lost property connects debates on material culture and belonging with those on consumption, waste and sustainable resource use. Significantly, the research addresses both the sacred and the profane, paying attention to lost items of symbolic and sentimental value (e.g. jewellery), as well as those of a more ordinary nature (e.g. umbrellas, gloves). In particular, it is interested in unpicking the 'material affinities' (Holmes, 2018), people have with objects and how lost things are brought to life through their very absence; their agency, material qualities and sensory abilities becoming more pronounced through their missing. This involves understanding how lost objects are replaced or substituted with other objects, and how strategies to prevent and deal with potential loss are played out, such as buying cheaper quality goods. Similar attention is paid to objects which are found, be it by individuals or lost property offices, and the multiple pathways such objects may travel. Broadly, the project contributes to debates on the sociology of the everyday, developing an agenda which explores the importance of people's relationships to objects and the relevance of this for debates on consumption, everyday relationships and belonging.

The Public Interest Approach to Gambling Policy and Research

Sulkunen, Pekka

University of Helsinki, Finland
pekka.sulkunen[at]helsinki.fi

Evidence-based public policy usually requires proof of causality as its justification. The causes of problems must be identified and proof of the effectiveness of policy measures to alleviate them is a condition for their application. "What works?" is a standard requirement for regulation of problematic lifestyles or consumption. The requirement of causality is often in a strange contradiction with justice. In many lifestyle issues such as excessive eating, gambling, drinking or other behavioural problems causality usually cannot be demonstrated. We do not know, for example, whether poverty is a cause or a consequence of gambling, overconsumption of food, smoking, excessive drinking, substance use or other deleterious consumption patterns. On the other hand, negligence of policy in such lifestyle issues violates our sense of justice and common understandings of public responsibility. The presentation draws on key findings of a collective book on gambling policy and its empirical foundations.

The purity of dirt: Mary Douglas revisited

Ditlevsen, Kia; Andersen, Sidse Schoubye

University of Copenhagen, Denmark
kmd[at]ifro.ku.dk, sisan[at]ifro.ku.dk

Consumption, ingredients, and related risks have changed substantially since the 1960s, yet the interpretation and conceptualization of purity and danger has evolved only little since Mary Douglas' seminal work on the topic. In this study, we advance an empirically derived contemporary interpretation of purity and danger in relation to consumption and intake of food and dietary supplements. We do so by combining and examining qualitative interviews from two different recent research projects situated within the field of consumption and carried out in Denmark. We find that consumption of organic food products and consumption on behalf of one's children share important similarities related to issues of purity and danger – and naturalness. Our main conclusion is that consumption choices are motivated by a (diffuse) sense of danger, anxiety of bodily contamination, resulting in a striving for purity. But in contrast to what was observed by Douglas in the 1960s, purification strategies today do not emphasize hygiene and sterility but rather focus on naturalness, although "natural" products may include objectively dirty and non-sterile elements.

RN05_10a | Food sociology

Boundaries of Conscious Food Consumption – An Interdisciplinary Multi-Method Approach to Food Knowledge and Consumerism

Sept, Alexandra Maria

Technical University of Munich, Germany
Alexandra.sept[at]tum.de

Mixed Methods Design for Explaining the Nutrition Behaviour People of all age and gender consume unhealthy food in their everyday life although they communicate self- and social-expectant normative nutrition knowledge. This shows how objective knowledge is not solely leading to changes in nutrition behaviour. If we look at the nutrition market, the health policy and results from nutritional science, no reliable conclusions about the real motives for consumption are possible. Research shows that taste, socioeconomic status and habits are mentioned to be most important for the individual nutrition and food consumption. Also, status passages in life are relevant in their physical-emotional dimensions for the individual practices of nutrition. Within the project enable 2.0 FA6/2, we analyse how knowledge about own physical reactions on sensory effects combined with narratives of self-awareness on nutrition behaviour influences the individual buying patterns and consumerism of food. In an interdisciplinary and multi-method approach, we combine biographic interviews with consumer participation gained in

the field of technology design (dietary diaries) and natural science (measurements of brain activity (fMRI)) when being confronted with certain food smells and tastes in diverse gender and age groups. By that, we explore normative knowledge about nutrition that is acquired during lifetime and enlighten the boundaries of conscious food consumption. Besides, we figure out how insights into own body (via fMRI) influence participants, affect their food consumption nutrition and change consumerism. The project is part of the interdisciplinary research cluster "enable 2.0", founded by the German Ministry BMBF, therefore seeks to gain new insights in healthy food choices in all stages of life.

Resituating 'The Visceral' Within The Sociology Of Consumption: Examining The Case Of Alternative Food

Beacham, Jonathan

Lancaster University, United Kingdom
j.beacham[at]lancaster.ac.uk

This paper builds upon and extends recent work within human geography associated with the 'visceral turn' and related questions of embodiment (see particularly Hayes-Conroy and Hayes-Conroy, 2013). Drawing upon as well as taking a qualitative research project investigating alternative food practices as its starting point, this paper argues for the need to resituate this important concern with 'the visceral' within a (critical) sociology of consumption. In doing so, this paper offers a productive critique of the recent and increasingly pervasive trend towards practice-theoretical approaches both to food and consumption more broadly. I argue that whilst the diverse body of 'practice theory' has fairly tended towards recognising practices as profoundly and necessarily embodied, within the sociology of consumption more specifically it has tended towards offering a thin reading of 'the visceral'. That is, practice theory has tended to see embodiment as referential of other phenomena (e.g. class structures), whilst a differentiated focus on the visceral instead reveals a complex interplay of structural forces and political-economic tendencies which both shape and are shaped by the dynamics of this more intimate and sensory realm. In this sense, I argue that we need to synthesise these insights within an augmented practice theory alongside the need to resituate the visceral itself as a key locus of change within consumption practices. Finally, I conclude by outlining some new avenues of enquiry for sociology of consumption which build upon this synthesis, continuing with the example of food but also hoping to broaden it out for future lines of enquiry in other areas of consumption.

Questioning The Virtues Of Commensality: To What Extend Does Eating Together Improve Social Relationships And Well-Being?

Michaud, Maxime (1); Le Moal, Fairley (1,2,3); Bouima, Sonia (1,4,5)

1: Institut Paul Bocuse Research Center, France; 2: Centre Max Weber, France; 3: Université Lumière Lyon II, France; 4: Centre Maurice Halbwachs, France; 5: Institut National de la Recherche Agronomique, France
Maxime.Michaud[at]institutpaulbocuse.com,
Fairley.Lemoal[at]institutpaulbocuse.com,
Sonia.Bouima[at]institutpaulbocuse.com

Eating together, which can be named using the word “commensality” (Grignon, 2001 ; Sobal, 2000), has a lot of implications for human beings, as it is a way of expressing social relationships with others. Nowadays, commensality is often used with a positive connotation. Sharing food is supposed to have many virtues, like improving the nutritional content of meals (Gillman et al., 2000), fighting obesity (Mamun et al., 2005), fighting social isolation or improving family relationships (Larson et al., 2013). On the other hand, eating alone is generally associated with a lower quality of meals and several physical or social pathology (Pliner and Bell, 2009 ; Sidenvall, Nydahl and Fjellström, 2000 ; Torres, McIntosh and Kubena, 1992). However, some researches tend to temper this one-sided vision, underlying the difficulties commensality can also create (Sobal and Nelson, 2003). Following this cautious position, this presentation aims to question these different points of views, trying to understand the implication of such discourses in regard to scientific knowledge and empirical data. It relies on 1. a literature review on commensality in general, 2. a particular review on family meals, 3. an ethnographic work conducted in associations offering shared meals for retirees living at home, in France, during the last 3 years. It will allow us to better understand the way social and moral norms are underlying such a discourse, and to clarify the different forms and meanings the notion of commensality can take.

The Swedish Backstage of the Sociology of Food and Eating: Fractalization of Boundaries in Scientific Work

Neuman, Nicklas (1); Bååth, Jonas (2)

1: Uppsala University, Sweden; 2: Linnaeus University, Sweden
nicklas.neuman[at]ikv.uu.se, jonas.baath[at]lnu.se

In recent decades, sociologists have come to take an increased interest in food, institutionalizing “the sociology of food and eating” through British sociology of the 1980’s. From the 1990’s and onward, this strain of sociology has also developed and grown in the Nordic countries. Finnish and Danish sociology in particular, but also Norwegian sociology, have placed the study of eating, drinking and procuring food at the center of its disciplinary endeavors and several scholars have become influential in the sociology of consumption. But less so in Sweden, the largest Nordic country, and it is the aim of this paper to explore the reason(s) for this. In Sweden, social scientific approaches to food and eating have primarily been developed within applied food research, e.g. culinary arts and sciences, dietetics and nutrition. Here, sociological theory is often drawn upon in order to explain issues such as the development of food habits, foodwork and gastronomy, but with minimal or no ambition of sociological theory development. The “audience”, instead, has been the culinary and dietetic professions, the health sciences and public actors with an interest in consumer behavior related to food and eating. Analyzing the targeted debates and research questions posed in the sociology of food and eating in Sweden since the 1970’s, we thus explore the conspicuous absence of food in Swedish sociology, discussing possible paths for a Swedish sociology of food and eating to become as established as in Finland, Denmark and Norway. In particular, we suggest analyses of food industries, rural sociology, welfare state politics and the role of capitalism in shaping consumption through production.

Towards New Forms of Organizing the Production in Creative Industries

Sadeghi, Yasaman (1,2)

1: Grenoble Ecole de Management; 2: Univ Grenoble Alpes ComUE
yasaman.sadeghi[at]icloud.com

What is the relationship between what we know about the culture(al) products we consume and the intermediary actors in our decision making processes? The paper explores the challenges that digitally enabled forms of production and consumption imposes on organizing efforts in online platforms. Sociologically, the emergence of digital platforms has changed the dynamics of the creative industry. With recent shifts in asymmetry of information, 'consumers' have become empowered while intermediaries do not hold the same power positions as they did previously. However, as promising as such changes in the power dynamics seem to be, empirical evidence suggests that not all the new forms of production succeed. Sociologically this is important because it raises the question of how the digitally enabled forms of production and consumption might be differently organized? Aiming to draw more attention to organization of newer forms of production in culture industries, this paper focuses on consumption prior to production, as instantiated in settings such as crowdfunding and intangible products. With special focus on market-maker consumers, or the group of consumers who have the ability to shape the market, I explore how their decision-making can be guided when their collective thinking fails to yield determinate results. It may be difficult for market-maker 'consumers' to make sense of their environment, as it is difficult to assess the quality of cultural products, they often need to make decisions about them before they are available, and information is abundant and often uncredited. Moreover, the paper explores the extent to which intermediaries give sense to 'consumers', in terms of being able to project a general direction for the changing industry of cultural products.

Digitalization And Sociology – A Literature Review

Dulsrud, Arne (1); Bygstad, Bendik (2)

1: Oslo Metropolitan University, Norway; 2: University of Oslo, Norway
arned[at]oslomet.no, bendikby[at]ifi.uio.no

The emergence of digital ecosystems such as Google, Apple and online platforms has challenged both traditional businesses and established theories of consumption.. At the same time, established role structures related to consumption, work, production and political governance are challenged. Discourses about this take place in different academic arenas, but they are too a large extent disconnected from each other. The purpose of this paper is therefore to present a broad

review of the research on digital ecosystems and platforms. Through a systematic review of the literature, we identify four research streams: - A critical political / economic, - One with the main emphasis on economics, multisided markets, marketing and network theory - A technology, with the emphasis on digital architectures. - A person-oriented, focusing on consumption, privacy and the user perspective We analyze each stream for the central insights and limitations, and identify the most important sources of inspiration. Then we assess the relevance of classical and modern sociological theory to understanding digital ecosystems. At the same time, we observe that sociological theory is strongly present in micro-level relational approaches to digitalization with an emphasis on the vulnerable consumer, worker, user or child. On the other hand, very few focus on institutional and macro-level effects of digitalization, such as political economy, new forms of organization in business and private life and the division between the private, public and economic life. We therefore discuss some elements of a research agenda for sociology – and sociology of consumption in particular - in the field of digital ecosystems.

The Reflexive Mediatization of Consumption

Eisewicht, Paul

Technical University Dortmund, Germany
paul.eisewicht[at]tu-dortmund.de

It is still somehow controversial what the new is about the new media and how social phenomena change exactly when they happen in the digital world. The thesis of this contribution is that this difficulty is related to the fact that primarily media effects are considered in research and thus social change is often attributed to technical innovations. The argument is that change in digital fields can only be understood from the point of view of actors who understand media technology offerings, define situations and act according to their own motives within this media technology framework. To this end, the classical perspective of social change through innovations in media technology will first be discussed. This concerns above all the argumentation of the spatiotemporal and social dissolution of boundaries in digital spaces, which is negotiated in consumer sociology with the implementation of platform shopping. This perspective is complemented by the focus on the adaptation of action orientations and courses of action by people to media technology conditions. In view of how people understand and adapt media technology frameworks, it becomes clear where consumer action is transformed in digital fields. This is discussed in the empirical case of complaints in online shopping. On the basis of changed expectations, orientations and actions on the part of providers and consumers, the reflexive effects of digitally mediated social change will be highlighted. The aim is to contribute to the understanding of consumption as an action problem and online shopping as a reflexive practice.

Domesticating Home-IoT – A research Framework for Studying Connected Homes

Sletteemeås, Dag; Storm-Mathisen, Ardis

OsloMet, Norway
dags[at]oslomet.no, ardist[at]oslomet.no

Digital technology is interweaved into the very fabric of society in the era of Internet of things (IoT). Homes become data-rich environments that are connected to larger digital infrastructures. Security systems, household appliances, smart home hubs and wearables make homes into “mini-IoT environments” or “connected homes embedded in connected habitats”. While promising seamless assistance, this abundance of smart devices can also be seen as “Trojans” that threaten to challenge the protective boundaries of the home and its moral and material possessions. These issues are central to a research project that the authors are involved in. The key ambition of this paper is to revisit the domestication theory framework and its key analytical concepts in the era of IoT. How can such a theoretical perspective, affiliated with sociology of consumption and media studies, and that emanates from studies of traditional media technology and ICT, inform studies on smart, autonomous technology in connected homes? Domestication theory emphasizes human agency and the household moral economy as central in processes of taming, controlling and domesticating technologies as they are brought from the market and converted into familiar and acceptable domestic artefacts. However, in the era of home-IoT, connected devices constantly communicate with the outside world, making households active nodes in digital networks. This generates new challenges and complicates the boundary maintenance efforts of domestic dwellers. The paper will discuss the applicability of domestication theory in studies where households have to navigate and negotiate this landscape of constant connectedness.

Representations vs Actions in Online Behavior: First Results from an Academic Online Panel of Internet Users

Montargil, Filipe M. (1,2); Ruiz, Cristian (1,2); Di Fátima, Branco (2)

1: School of Communication and Media Studies, Portugal; 2: Centro de Investigação e Estudos de Sociologia (CIES-IUL)
geral[at]llmcp.pt

This communication discusses the first results of the comparative analysis between representations and actions in online behavior using results from an academic online panel of Internet users. This comparative analysis uses two information sources: answers to questions posed to panel members using methods of sociological inquiry and data gathered through a software application that monitors online behavior. The current version of this application is based in a Google Chrome extension that gathers information from the web browser history, for each participant in the panel, allowing to analyse in detail online behavior. Methods of inquiry are used to explore representations and motivations, for these same panel participants. Differences between representations and actions are discussed since the early years of Sociology and systematically researched in the Social Sciences at least since the 1930s (LaPiere, 1934; Bryman, 2012). The very limitations of short and long-term memory to remember everyday events (Foddy, 1996; Roberts, 1985) lead, among other factors, to differences between what people claim to do and what they effectively do. Our panel is still at an early stage, receiving its first Internet users in December 2018. However, it has already about 300 registered members, in a sample that includes female and male users with different working conditions, marital status and age groups. Developing methods for mapping online behavior is a pressing challenge, especially in our dynamic societies, when we spend more and more time connected.

RN05_10c | Practice Theories

Contentious, yet Compatible: Review of Social Practice Approach and Multi-level Perspective in Research on Sustainability Transitions

Keller, Margit

University of Tartu, Estonia
margit.keller[at]ut.ee

Multi-level perspective (MLP) and social practices approach (SPA) have been considered two of the most relevant approaches (Sovacool & Hess 2017) for studies of socio-technical change. They share several assumptions: a processual orientation seeing change as a co-evolution of elements involving multiple actors constrained by routines and a focus on tensions between reproduction and change (e.g. McMeekin & Southerton 2012). The present paper systematically takes stock of existing work co-applying MLP and SPA and identifies gaps leading to further conceptual development. A literature review is conducted in the databases of Scopus, Web of Science, ScienceDirect, (a sample of 95 works from 2010-19). The preliminary results suggest that full merging of the approaches has not been embarked on due to some underpinnings that the “strong” practice theory considers irreconcilable (Schatzki, 2011). The papers fall into two categories: 1) empirical analyses (mostly on food, energy and mobility) drawing on both frameworks without building further conceptual tools; 2) papers (predominantly within consumption studies) aiming at theoretical development. Here three somewhat distinct sub-groups emerge: analyses of intersections between transitions in practices and in regimes focusing on lock-in (e.g. Hargreaves et al 2013, Seyfang et al 2019); comparisons of practices on niche and regime levels (e.g. Crivits & Paredis 2013) focusing on (consumer) agency and systems of practices approach focusing on interconnections (e.g. Watson 2012). Preliminary analysis indicates that there is a lack of research on professional and industry practices and on the “junction” between consumption and production. The regimes and practices intersections analysis can provide a worthwhile avenue for applied intervention design and policy implications.

Automatic For The People. What Happens To Practice Theory If The Practice is taken over by machines?

Strandbakken, Pål; Heidenstrøm, Nina

Oslo Metropolitan University, Norway
pals[at]oslomet.no, ninah[at]oslomet.no

The proposed paper is based on a study of air-to-air heat pumps and heating practices in Norwegian households, with 9 households being interviewed before and after installing an air-to-air heat pump. When thermal comfort becomes automatic, much of what we have called domestic heating practices disappear; that is they disappear from consumers' everyday life. Business is taken care of by other agents. With a focus on technological possibilities, on “real”, that is institutionalized knowledge and on consumers' engagements we had expected an active use of control panels and an enthusiastic and ‘active’ heat practice to be developed. Instead, we observed that these very rapidly developed habits tended to make thermal comfort into a non-practice. This might partly answer E. Shove's question: how do practices, expectations and ways of life become naturalized? (Shove, 2003: 9). It seems as if people are quick to adjust to improvements and rising standards, taking the new good life for granted. With services being delivered automatically, we tend to forget them. We expect the light to come when we turn the switch and we expect hot water when we enter a shower, and we adjust very fast to a situation where indoor thermal comfort is just something that is there. New practices quickly become ‘bodily’ habits. Automatic indoor thermal comfort is convenient. Perhaps the most convenient of is to have a practice taken over by technology? Is it still meaningful to call it a practice? Something happens when a piece of technology enters the social field.

Consumption And Consumer Practices: An Overview Of Conceptual Uses And A Formation Of These Terms As Analytical Tools

Lallas, Dimitris

National Centre for Social Research, Greece
lallasdimitris[at]gmail.com

Even though the term “consumption” would seem clear and easy to understand at first glance, nevertheless its various conceptual uses that one can find in scientific discourses of different disciplines, such as economic theory, political theory, critical social theory, sociology, cultural studies, and anthropology, induce confusion around its conceptual clarity and, subsequently, questions about the analytical adequacy of this term. In this paper, I intend to present basic etymological versions of the word “consumption” in Greek, English and French language, and then to move on the designation of basic conceptual/analytical uses of this term (e.g.: Consumption as waste: Productive and anti-productive waste of resources/goods, Consumption as spending of desire: Thirst erasure, Consumption as (re-)production of productive subject, Consumption as practice of moral corrosion, Consumption as practice of social distinction, Consumption as practice of socio-cultural reproduction: Rituals and mythologies, Consumption as strategy of (individual) survival, Consumption as “mechanic process”, Consumption as practice of active appropriation). Afterwards, drawing upon theories of practice, I attempt to propose a conceptualization of “consumption”, which will be conceptually concrete and analytically suitable, by positing the integral factor and boundaries of consumer practices. The conceptualization of consumption as a practice, or a set of practices, enables us to avoid a priori positive or negative evaluated significations. This conceptual perspective recognizes the necessity of studying of consumption practices as complex practices concerning their motives or/and predispositions, dependencies (economic, social, sentimental, cultural, political), and their repercussions.

Social Movements, Everyday Practices and Political Economic Transformation

Yates, Luke

University of Manchester, United Kingdom
luke.s.yates[at]manchester.ac.uk

Theories of practice are increasingly used to study social transformation in a way that accommodates the dynamics of daily life and everyday economic activity. Sociologists studying consumption are also becoming more interested in larger scale change, politics, and political economy motivated (for example) by studying environmental sustainability, inequalities, societal transitions, modes of provision and financialisation. Application of practice based approaches to studying change has been uneven, but theoretical advances suggest avenues for integrating the insights that the approaches allow into questions of governance, advocacy, activism and other modes of collective contentious action. This presentation surveys the use of practice theories in relation to the politics of social change. It argues, based on recent social theoretical developments and a range of compatible and ‘friendly’ theories from social movement studies, for further cross-fertilisation between fields. It proposes some empirical and theoretical domains that may progress this work, and it makes reference to the author’s current empirical work on the platform economy to illustrate the perspective.

Disrupting Authoritarian Populism In The European Union. Cracks And Fissures Of A Post-hegemonic Mode Of Governance

Huke, Nikolai

Eberhard Karls Universität Tübingen, Germany
nikolai.huke[at]uni-tuebingen.de

Authoritarian populist parties and movements dominated public debates and political agendas in many countries of the European Union in recent years. In government, authoritarian populist agents fight for cut backs in gender equality and anti-discriminatory regulations, restrictions of the border regime and attacks on workers' rights. Following the works of Stuart Hall and others, the presentation in a first step outlines three main causes of the rise of authoritarian populism: 1) a systematic failure of democratic representation under capitalist conditions due to a limited fiscal and steering capacity of the state; 2) experiences of powerlessness vis a vis capitalist dynamics and an erosion of solidarity at the workplace and in everyday life 3) the persistence of ultra-conservative narratives and ideologies. In a second step, the presentation traces cracks and fissures of authoritarian populism arguing that post-migratory diversity, social protection and gender equality are in many European countries deeply anchored in everyday practice. Despite the aggressive mobilisations of conservative actors, the legitimacy of authoritarian populism is continuously undermined and subverted on a day to day basis. However, the forms of 'invisible' everyday progressive politics do not necessarily translate into organised resistance towards authoritarian populism. Authoritarian populist governments are therefore able to strategically isolate and attack different segments of society ("divide and conquer"). Furthermore, the build-up of resistance is in many cases slower than the shock measures of authoritarian populist parties dismantling civil liberties and democratic rights. These theoretical considerations on authoritarian populism are exemplified in the presentation with findings from a case study on refugee solidarity in Germany that is based on qualitative interviews conducted in the research project "Welcome culture and democracy in Germany".

Exit Lexit, Enter Rosa: The meaning of internationalism today

Worth, Owen

University of Limerick, Ireland
Owen.worth[at]ul.ie

Recent events such as the 'nationalist' turn seen with the election of Trump & Bolsonaro, the Brexit vote and the political failure of social democracy have stressed the need to re-think the idea of left strategy in the contemporary era. One of the key concerns here is how we should understand 'internationalism', which has remained a central feature of left-wing politics. Many (such as Samir Amin before he died) called for a new 'internationalism' based on the sum and parts of national-units in the traditional manner. Others take this further and argue stress the importance in returning to the 'national' in order to distinguish it from the global, which is tied with the forces of capitalism. In response to this, this paper urges a new way of understanding internationalism that looks to solve the spatial riddle of how best to respond to economic neoliberal globalisation not by looking towards 20th century models of the sum of nation-state but by looking at forms of strategic expression that move beyond it. In particular, it looks to re-visit the classical arguments by Rosa Luxemburg in the Second International where she rejected the right of national self-determination in order to look to facilitate a dialectical approach geared towards moving 'beyond' the possible. In re-visiting this, this piece looks to engage seriously and critically with the commitments of what it means to be 'internationalist' in the current era.

What Work Capability Assessments Tell Us of the Post-2008 Conjuncture

Fourton, Clemence Lucie Elise

Caen University, France
clemence.fourton[at]unicaen.fr

This paper offers an anatomy of one device of the British welfare regime, in order to isolate the defining features and contradictions of the post-2008 conjuncture. It first focuses on the Work Capability Assessment from a public policy perspective, and then focuses on the experience of welfare state users. The paper draws on doctoral research submitted in 2018, which includes a mixed-method inquiry targeted at anti-austerity disability activists. As a tool of social security budget management, the WCA is part of the broad trend of welfare retrenchment and privatization which has characterized the neoliberal era. As a device of social administration, the WCA brings together long-lived dynamics of state-sanctioned suspicion towards the poor and the disabled, and neoliberal dynamics of discipline targeting the same social groups. The device is buttressed by conceptions of disability and work which uphold the rationalization and quantification of individual abilities rather than socially informed approaches of bodies at work. As far as welfare state users are concerned, the WCA induces major material difficulties in line with the effects of austerity, as well as psychological distress. But it has also been contested both individually and collectively: welfare users have opposed in turn the existence of the WCA, its ways and means, and its results. They have resorted to legal action, protests, hacktivism, and have also formed - under the banner of Disabled People Against the Cuts or others - a network providing support, knowledge and skills to undermine the workings of the WCA. The WCA is therefore also an object of dissent, whose politicization is characteristic of the recent trends regarding social welfare movements and their criticism of neoliberal social policy institutions.

RN06_02 | On the Materiality of Ecological Challenges

Un-making The World In Struggles For Socioecological Transformation

Feola, Giuseppe

Utrecht University, The Netherlands
g.feola[at]uu.nl

Societal transformations toward sustainability imply a disruption of modern, capitalist socioecological configurations that inform destructive modes of interaction with the natural environment. Radical civil society initiatives prefigure alternative ways of knowing, being and doing, and may hold the potential for such transformations, but it remains unclear if they can generate transformative change at 'societal' level. Innovation and transition theories, which inform most sustainability policies, have usually assumed that the disruption of the dominant order is an automatic impact of innovation, and have therefore largely undertheorized this aspect of transformational change. They have postulated that change toward sustainability would occur within existing systems, exploit supposed 'windows of opportunity', or await the 'natural' decay of existing configurations. On the other hand, those scholars who have investigated forms of disruption, have made strong assumptions on how change comes about (e.g. class struggle in Marxist studies), and have failed to uncover the diversity of social change processes demonstrated by existing radical civil society initiatives. This paper discusses the notion of 'unmaking': processes to deliberately 'make space' (temporally, spatially, materially, and/or symbolically) for radical alternatives that are incompatible with dominant socioecological relations. The paper mobilizes and originally integrates literature from across studies of resistance, refusal, anarchism, degrowth and political ecology. Its findings are distilled in five propositions: (i) unmaking is a combination of emergent, situated processes; (ii) processes of unmaking involve both symbolic and material deconstruction; (iii) unmaking is a contradictory personal experience; (iv) unmaking is often hidden, but can be used strategically; and (v) unmaking is generative. Therefore, this paper underscores more proactive, disruptive, political and potentially conflictual transformation pathways than usually postulated in sustainability theories and policies.

Water Struggles in the Web of Life: Social Reproduction, Ecology and Capitalist Accumulation

Bieler, Andreas

University of Nottingham, United Kingdom
Andreas.Bieler[at]nottingham.ac.uk

Since the global economic crisis of 2007/2008, austerity and neoliberal restructuring have continued unabated in Europe. This has also included pressure on privatising public services including water. Greece and Portugal, for example, were asked to privatise their water companies as part of a bailout agreement during the Eurozone crisis. And yet, resistance to water privatisation remains strong with broad based alliances of trade unions, social movements, environmental and developmental NGOs organising across civil societies at the local, national and European level. This paper focuses on the role of trade unions and social movements in the resistance to capitalist exploitation. I will first discuss how we can conceptualise these broad-based alliances. Rather than treating them simply as interest groups, competing with others over influence on government policy, I will argue that we need to conceptualise the way water privatisation reflects capitalist exploitation across the spheres of production and social reproduction. Hence, capitalist accumulation does not only depend on exploiting wage labour in commodity production but equally on appropriating unpaid work by humans in the sphere of social reproduction as well as unpaid work by extra-humans in the wider ecology. In a second step, I will then focus on key examples of water struggles in Europe. Analysing these struggles through a focus on class struggle allows me to unravel the internal relations between class agency and the structuring conditions of capitalism, providing us with a clear understanding of why some struggles are successful, while others are not.

Resisting Hierarchical Governing Through Constructive Resistance: Consensus, Consentient And Circulation Of Power In Worker- Owned Cooperatives

Wiksell, Kristin

Karlstad University, Sweden
kristin.wiksell[at]kau.se

This presentation explores how consensus-driven worker cooperatives in Sweden practice resistance to hierarchical governing in work organizations associated with traditional capitalism. Through constructive resistance of enacting the desired future in the present, co-ops oppose hierarchical governing by enacting a social order desired by the collective characterized by collective self-government with participatory democracy, in line with arguments of anarchistic voluntariness and freedom. This resistance extends beyond the borders of the co-ops in so far that the desired organizational form are articulated as a sought ideal for the society at large in

opposition to hierarchical, exploitative capitalism. In line with the work by Foucault that emphasis the interconnectedness of resistance and power, the present analysis of interviews with member of five Swedish worker co-ops shows how resistance to one form of power opens up for different ways in which power is being circulated. The joint self-government of the co-ops involve certain relations between the individual and the collective which, on the one hand, is attempted for respecting the complete inviolability of the individual, but, on the other hand, necessitates members' subordination in relation to the collective deliberation through a form of consentient collectivity. This means that individual members in organizations practicing consensus-driven direct democracy have to balance their enhancement of their own views vis-à-vis the unity of the collective. Thereby, the article contributes to resistance studies and research on co-ops by showing how resistance in co-ops entail other constructions power similar to the form of power that is being resisted.

Energy, Sustainability, and State- Society(transnational)-Capital Complexes: the Enemy within and Hostage Labour "Aristocracy"

Yurchenko, Yuliya

University of Greenwich, United Kingdom
yy04[at]gre.ac.uk

Climate politics discourse is moving ahead while politics, policies and politico-economic transformations are lagging behind, global emissions are rising and optimistically only 12 years are left to halt the irreversible anthropogenic climate change (IPCC 2018). EU fancies itself a champion of sustainability reform yet in reality 2020 and 2030 targets have been widely criticised for being ill-conceived, ill-prescribed and insufficient, especially in the context of internationalised production and consumption of emissions. In this paper I draw on EPSU commissioned research into 20 years of EU energy sector marketisation to draw a historical materialist analysis of contradiction that arise in the state/society/capital complexes (Yurchenko 2018) on local, national, and global levels due to entanglement of transnational capital accumulation interest with state and labour in an uneven geography that reinforces climate inequality between states and classes globally. I show that transnational capitalism and state capitalism e.g. state-owned TNCs such as EDF and Vattenfall, is paralysing for progressive sustainability politics in a combined way. First, optimal allocation of public services i.e. energy, cannot be achieved in capitalist markets (Sen 1993) that they actively reproduce. Second, viability of state-owned capitalist enterprise is directly linked to labour as wage-earners and as benefactors of the budget contributions of the state asset TNCs making climate inaction a problem of 'labour aristocracy'. I argue that energy democracy advocated by NGOs and trade unions is unachievable without (1) national and local public form of ownership of energy (generation and supply) and (2) a poly-centric mode of governance (Ostrom 1990, 2010).

RN06_03 | Finance, Debt, Bubbles, and Critical Theories of Money

The Changing Nature Of Money And The Role Of The State

Latimer, Robin

Independent researcher, United Kingdom
robinwlatimer[at]yahoo.com

The relationship between the state and money is at the heart of the crisis of our times. The dominant current of economics in the last 40 years has been based on ideas from the 18th century. It advocates that money should be separate from the state and markets independent of government influence. The unique contribution of this paper is to describe how money today differs from the commodity money used in the 18th century. The paper describes how and why the money in common use has changed in the last three centuries making use of the insights of archaeology and sociology. Money today is largely created by banks. But its value depends on the credibility of nation states. The 2007/8 global financial crisis demonstrated that nation states are the ultimate guarantor of banks. In contrast, 18th century money, which largely influences monetary theory, depended on the value of precious metal. As money is now a liability of individual nation states, the role of states in the market has radically changed. Much current monetary theory is based on the commodity money of the 18th century and is obsolete. Obsolete monetary theory has contributed to an increasing frequency of financial crises, the global financial crisis of 2007/8 and the Euro-crisis. As nation-states are the ultimate guarantors of money today, they need to take a greater role in creating and managing the money supply. Generally they should increase the money supply by creating money and spending it into existence.

Monetary Policy as Usual? The Class Characteristics of the Bank of England's Exceptional Monetary Policy Since the 2007 Global Financial Crisis

Evemy, John (1); Yates, Edward (2); Eggleston, Andrew (3)

1: University of Birmingham; 2: The University of Sheffield, United Kingdom; 3: University of Manchester
evemyjfs[at]gmail.com, edward.yates[at]sheffield.ac.uk, andrew.eggleston[at]postgrad.manchester.ac.uk

The 2007 global financial crisis triggered a revolution in the central banking world, as pre-crisis inflation targets were abandoned in favour of new and exceptional monetary policy. In the UK, the Bank of England's exceptional monetary policies have been three-fold: a commitment to historically low

interest rates, the use of Asset Purchase Facility to drive up the price of financial instruments, and the use of funding subsidies to lenders via the Funding for Lending Scheme and Term Lending Facility. This paper argues that when viewed from the perspective of labour these developments in monetary policy are not 'exceptional'. Rather, they are the intensification of a long standing strategy by capital and the UK state to discipline labour through wage restraint and increased indebtedness. This paper interrogates the relationship between exceptional monetary policy and labour through an analysis of domestic markets for housing and labour in the UK. The unique contribution of the paper is the foregrounding of labour as an analytical category, which reveals how 'exceptional' monetary policy has served to shield financial capital from the costs of crisis by increasing the current value of claims on the future incomes of UK workers and subsidising the cost of funds to UK businesses. Meanwhile a combination of austerity and permissive inflation targeting served to devalue labour, increasing the competitiveness and profitability of UK capital. This paper argues that this strategy is now reaching its limits as the rising cost of household debt is driving up the effective minimum price of labour and thus monetary policy makers now face a choice between a new wave of defaults, rising wage inflation or the increasingly elusive gains to productivity.

Currency Internationalization and Monetary Dependency

Jäger, Johannes (1); Belfrage, Claes (2); Kaltenbrunner, Annina (3); Nilsson, Adriana (2)

1: University of Applied Sciences BFI Vienna, Austria; 2: University of Liverpool; 3: University of Leeds
johannes.jaeger[at]fh-vie.ac.at, C.Belfrage[at]liverpool.ac.uk, a.kaltenbrunner[at]leeds.ac.uk, a.nilsson[at]liverpool.ac.uk

Monetary dependency represents a serious obstacle to development. This paper seeks to analyse recent efforts to increase the regional and international use of semi-peripheral currencies. Those efforts are taking place against the background of changing global geography of production and the related transformation of the so-called Dollar-Wall Street Regime. The Chinese Renminbi and the Brazilian Real represent two contrasting but related cases which are studied in depth. Based on a critical international political economy framework, the dependency approach and on post-Keynesian perspectives we show the reasons for the upscaling of peripheral currencies and the emergence of a new regional (and global) geography of money, its central implications, and also its limitations. It is concluded that the different national (and regional) social relations of production, related growth regimes and (trans-)national (class) struggles are crucial to explain the specific types of currency internationalization and the related changing geography of money which have the potential to contribute at least in part to overcome monetary dependency.

What We Can Learn About Platform Capitalism from Past Speculative Bubbles

Watson, Steven

University of Cambridge, United Kingdom
sw10014[at]cam.ac.uk

A speculative bubble involves rapid asset price inflation driven by increasingly bullish investment which draws in further investors looking to secure profits. A historical analysis suggests they are a social cultural economic singularity, where the strongest business models and practices survive through brutal market-based selection. While bubbles are short lived, they have a lasting effect on the culture and practices of speculative and debt capitalism. I consider two pre-industrial and pre-technological (Tulip Mania, 1634-1637 and the South Sea Bubble, 1720) and two technological bubbles (Railway Mania, 1844-1847 and the Dot-com bubble, 1995-2001). They all feature advances in finance, debt and the way in which investors are encouraged to speculate; each bubble represents a progress in the financialization and socialisation of speculation. The later technological bubbles motivate speculators through imagining unlimited potential from technology, this is particularly evident in the nineteenth-century railway bubble. The Dot-com bubble goes beyond this, there is a sophisticated debt-based speculative economy, strong belief in the limitless transformative power of technology and the emergence of platform businesses as intermediaries which monopolise aspects of human attention and action and use collected data through artificial intelligence to influence behaviour. Platform capitalism emerges where there is a debt-based speculative economy. It is the speculative-bubble event that results in changes in practices and that allows platforms to become embedded into daily life. The speculative energy, innovation and the opening up of the public imaginary leads to changes in habits and practices. Importantly, we can see how a speculative bubble, like the Dot-com bubble, creates a Darwinist evolutionary moment for the adaptation of technology where successful forms survive because they are adapted to new habits and practices.

RN06_04 | Comparing Capitalisms: Industrial Policy, Progressive Protectionism, Fiscal Stability to Overcome Asymmetries?

Helping To Generate Optimisms Of The Will In Dystopian Times?
Reflections On A Decade Of Comparing Capitalisms Teaching
Bruff, Ian

University of Manchester, United Kingdom
ian.bruff[at]manchester.ac.uk

This presentation reflects on a decade of teaching on the subject area of comparing capitalisms in the global political economy, mostly as a taught postgraduate module. The module has evolved significantly during the past decade, through four distinct periods: (1) Choose your capitalist model?; (2) The emergence of a hybrid approach; (3) New directions in comparing capitalisms; (4) The politics of comparing capitalisms. The module has become increasingly critical and global in nature, which in turn has produced an approach to teaching that is explicitly cross-disciplinary and which foregrounds the political nature of researchers (i.e. students and academics), when making choices about what to study and how to study it. While this process has largely been beneficial and has led to a more satisfying teaching experience, it raises a number of questions. For example, the module is subject to regulations on credits, programme structures, and module length and duration, which are significant constraints; what has been the impact here? Moreover, by moving some distance away from the aims and scope of the 2009 version of the module, and thus away from many classical literatures and debates on comparing capitalisms, what happens to those students who genuinely wish to see a better world but understand this in line with the soft social democratic outlook embodied in the classical publications? On the other hand, how are different critical approaches brought into dialogue with each other, and with the module's aims and scope, when many downplay the notion of capitalist diversity as interesting in itself? And finally, can critical political economists help generate optimisms of the will among students, given the dystopian aura enveloping contemporary capitalism?

Progressive Protectionism – An Oxymoron Or A Viable Strategy To Reduce Uneven Development In Europe?

Eder, Julia

Johannes Kepler University Linz, Austria
julia_theresa.eder[at]jku.at

Since the beginnings of the first industrial revolution, advocates of free trade and protectionism have been in a constant struggle. However, the dominant viewpoint as well as the political orientation backing it have changed over time. In the wake of the global financial and economic crisis of 2008, the neoliberal ideology with its rhetoric insistence on free trade was increasingly challenged by calls for protectionism from the far Right. Confronted with these nationalist tendencies in the European Union and the USA, the majority of the European Left has been struggling to find a coherent position that defies free trade and its social consequences through dirigist measures, but does not fall into the 'nationalist trap' of defending 'national economic interests' against external actors. However, is trade protectionism necessarily a right-wing approach? Could we imagine a progressive protectionism for Europe under the current circumstances of transnational globalization or could the latter be partially reversed to establish a more solidary mode of living? Building on Hines' (2017) proposal regarding progressive protectionism, this paper reflects which shape this could take in today's Europe. Deviating from established positions, we will not argue that protectionism is progressive when it supports catch-up development, while it is reactionary when it seeks to prevent a nation's decline in the global division of labour. Rather, we argue – drawing on arguments of the debate on self-reliant development led in the Global South in the 1960s and 1970s – that protectionist policies are progressive when they aim for the re-regionalisation of economic cycles, particularly those related to basic needs. As a case study, we discuss the experience of the city of Preston in the British Midlands.

A Cultural Political Economy Of Fiscal Stability and Growth: The Role Of The State And The Transformation Of The Economic Sphere In Spain

Calvo, Nagore

King's College London, United Kingdom
nagore.calvo[at]kcl.ac.uk

The main focus of the paper is on understanding the role of the state as a key agent of crisis management and the transformation of the austerity state within the context of Southern Europe. While the development of the austerity state (Jessop 2016) in the Southern periphery has been largely imposed it cannot be understood only by reference to external forces and without taking into account the political dynamics within national states. Drawing on Spain, the paper analyses

how the adoption of austerity in Spain opened up the opportunity for the restructuring of the political economic process (Stanely 2016) and for a redefinition of state-market relations. Furthermore, the paper also argues that these transformations are at the centre of the political crisis associated with a crisis of the federal state form characteristic of Spain. Building on cultural political economy (Jessop and Sum 2013), the paper will explore the meaning making and material practices of the growth and stability programme adopted by the Spanish government under the conservative party, People's Party (PP), in Spain (2011-2015). Specifically, it will discuss the development and adoption of the Law on the Guarantee of Market Unity (2013) as a case study of the transformation of the state, the roll-over of new market institutions, and the dismantling of the 'State of Autonomies'. The paper will ask how and why the unfolding of the austerity state in the context of Spain is contributing to redefine the institutional boundaries of the economy and in turn, the contours of 'regional' Spain.

EU Industrial Policy in Dystopian Times: Why and how Smart Specialisation and Digitization European Industry exacerbate economic structural asymmetries within and beyond the EU

Schmitz, Luuk; Wigger, Angela

Department of Political Sciences, Radboud University, The Netherlands

[l.schmitz\[at\]fm.ru.nl](mailto:l.schmitz@fm.ru.nl), [a.wigger\[at\]fm.ru.nl](mailto:a.wigger[at]fm.ru.nl)

Asymmetries in inter- and intra-EU economic development have sharply increased in the wake of the 2007/8 economic crisis. Various EU institutions seem to realise that increasing North-South and East-West divides are posing major challenges not only to economic, social and territorial cohesion, but also the political project of EU integration. Therefore, a new common industrial policy has been adopted, heralding a 'European Industrial Renaissance'. Facilitating the transition of EU manufacturing to innovative Industry 4.0 technologies, mostly through leveraging private investments, takes centre stage. However, contrary to the proclaimed and much needed economic convergence, the EU Smart Specialisation programme, one of the Industry 4.0 pillars, builds on a one size-fits all approach, which exacerbates the unequal core-periphery value-chain dynamics, rendering an upgrading into higher value-added and innovation intensive activities a pipedream for rapidly de-industrialising EU regions. Although industrial upscaling receives more consideration in the Digitizing European Industry initiative, also here, the reliance of private investments entails a structural bias towards technologically advanced high-value added industrial production. Adopting a historical materialist perspective, the paper explains the (variance) of the content, form and scope of the Smart Specialisation and Digitization European Industry initiatives by revealing the political interplay of driving and contesting agents and the pivotal role played by the EU institutions. Locating the findings against the backdrop of a world-wide comeback of industrial policies, the paper critically discusses why and how the uneven and combined capitalist development recalibrates untenable debt-led accumulation structures and inequalities within and beyond Europe. Contributing to an emancipatory politics, the paper outlines the contours of an alternative industrial policy and what it would take for it to emerge.

RN06_05 | A Critical Political Economy of Finance-led Accumulation

The Good Financial(ised) Citizen? 'Resilience' As A Disciplinary Mechanism In The Financialisation Of The Welfare State

Donoghue, Matthew

University of Oxford, United Kingdom

[matthew.donoghue\[at\]spi.ox.ac.uk](mailto:matthew.donoghue@spi.ox.ac.uk)

Financialisation has become central to contemporary liberal welfare states. The embedding of asset-based welfare and social investment strategies has emphasised focus on maximising the number of potential consumers, alongside reducing the welfare state's economic liabilities as much as possible. A central component of this is shifting risk from state to citizen, individualising risk. The efficacy of this process rests on individuals internalising this risk shift, and accepting the premise that they are entirely responsible for their own economic wellbeing, regardless of the social conditions in which they live. In this paper, I argue that the concept of 'resilience' facilitates this internalisation, which helps to explain its relatively rapid uptake in the social policy of welfare regimes such as the UK. In particular, I argue that 'resilience' can be understood as a disciplinary mechanism that assists with both legitimising and enforcing the financialisation of everyday life through the welfare state. To be a 'resilient' citizen presupposes a number of characteristics that centre around self-sufficiency, entrepreneurship and 'gritty' citizenship (Donoghue and Edmiston, 2019) that internalises navigating the volatility of late capitalism as a 'way of being'. Resilience as a social policy agenda can therefore be used to stabilise and legitimise the further financialisation of welfare capitalism, demonstrating the subordination of social policy to economic policy (Dowling, 2018). This paper draws upon previous research into resilience, social policy and the welfare state, and makes a contribution to the literature through providing the first substantive attempt to demonstrate the role resilience as a social policy strategy may play in maintaining the longevity of financialised welfare capitalism and furthering the financialisation of everyday life.

The Financialisation of Car Dependency

Haines-Doran, Thomas

SOAS, United Kingdom
633467[at]soas.ac.uk

New financial products to aid the purchase of cars have emerged, the aim of which has been to advance credit to consumers, whose falling income has suppressed demand for new cars. Many countries have witnessed the rise to dominance of 'personal contract plans' (PCPs), by which consumers finance the depreciation of the vehicle without committing to full ownership. This paper argues that the rise of PCPs has important implications for efforts to make transport systems environmentally sustainable. I use a Systems of Provision approach to understand the 'material cultures' of car consumption. I argue that a particular culture of consumption has been created around personal car ownership, in part reflecting the economic conditions and contradictions inherent in car manufacturing. Cars are most people's second biggest area of expenditure, and yet, in contrast to housing, their exchange value depreciates rapidly. This is partly because of a car culture that favours novelty and luxury, which maintains demand for new, high specification, vehicles. But cars also provide an 'indispensable' use value to individuals. Consumers' reliance on their car reduces the risk of them reneging on lease agreements, thus aiding securitisation within the financial sector, producing low rates of interest. In short, we are witnessing the rapid financialisation of car culture. PCPs facilitate cash-strapped individuals to participate in car culture, by allowing them access to vehicles formerly outside of their price range, and more frequently. The result is a greater ownership of new and more luxurious cars, increasing short term profitability for manufacturers and financiers, but also increased financial insecurity for consumers. This seriously mitigates efforts to address car dependency and the social and environmental damage that it brings.

Compact with Africa – the German Contribution to Liberalization of Investment and Financialisation in Africa

Banse, Frauke

University of Kassel, Germany
frauke.banse[at]uni-kassel.de

I will discuss the Compact with Africa, the G20 initiative under the German presidency in 2017. In the public debate, the CwA is portrayed as an important contribution for development in Africa. A closer look at the document reveals a harsh approach to investment liberalization and radical suggestions to restructure African financial markets and modes of public finance. In a first step, I will argue, that the CwA allows the EU to introduce measures through the backdoor that it was so far not able to include in the existing Economic Partnership Agreements (investment, public procurement, services – so

called WTOplus issues). Furthermore, the CwA goes beyond the goal of these free trade agreements; it aims to structurally change African financial markets and modes of public finance. The goals of the CwA are rooted in G7 policies, taken up by the G20 after the financial crisis, with the aim of strengthening the 'resilience' of global financial markets. Following Daniela Gabor (2018), Germany is playing a key role in these G7 and later G20 policies, especially in seeking to establish local currency bond markets in (semi-)peripheral countries. Therefore, it is not only important to discuss the single policy suggestions contained in the CwA, but to contextualize the CwA in the geopolitical shifts and interests that have been emerging since the global financial crisis. Accordingly, I will discuss the CwA as a WTOplus initiative as well as (and strongly linked to this) an important puzzle piece concerning the question how the G20 aims to strengthen the 'resilience' of the global financial markets. A special focus will be on the German role and German interest in these processes.

Revisiting the M-Pesa 'market miracle': a historical materialist analysis of the Financialisation Of Remittances In Kenya

Maisenbacher, Julia Kristina

University of Lausanne, Switzerland
Julia.Maisenbacher[at]unil.ch

Remittances have become a key source of financing for development. During the last decade, many developing countries have witnessed the increasing significance of financial markets in sending and investing remittances – a process also considered as the financialisation of remittances (FOR). In Kenya, one key element of the FOR is the 'success story' of the well-known microfinance and mobile payment system M-Pesa. Often praised as a 'market-miracle', M-Pesa is the expression of a pure market-driven approach to harness the developmental potential of remittances. Poor people without a bank account can use M-Pesa to send and receive remittances cheaply and to take up microloans which often result in different forms of self-employment. At the same time the finance industry benefits from a growing consumer base. So far, the literature on M-Pesa has often echoed this win-win promise on the basis of a problem-solving approach. This article follows a different route of enquiry. It aims to fully understand the political dimensions of the FOR in Kenya. It draws on a historical materialist theoretical framework to analyse the FOR against the background of conflicting socioeconomic forces and their contradictory interests, which emanate from capitalist production relations. The paper identifies two state-capital alliances which have promoted different approaches of how remittances could be linked to finance in order to promote development. It illustrates how since the introduction of M-Pesa the dominance of the finance capital fraction has become challenged by an alliance of state-business actors that promotes more cooperative forms of remittance investment from which productive capital fractions may benefit. A historical materialist approach helps to understand the political contestation of the FOR, and also allows us to identify alternative approaches.

RN06_06a | A Feminist Political Economy of Precarisation and Indebtedness

Gendered Experiences of Debt and Labor in Greece and Turkey

Kilincarslan, Pelin

Koç University, Turkey
pkilincarslan[at]ku.edu.tr

The topic of debt needs almost no introduction today. Since the financial crash of 2008, there has been a growing interest in the alarming figures of household debt and their political-economic underpinnings in the context of advanced capitalist countries. Critical scholars argue that easier availability of financial means, weak schemes of social protection, increased commodification of reproductive work, and growing inequalities have all played a role in the growth of reliance on debt. However, very little of this scholarship has paid attention to the gender dimensions of indebtedness and the deepening of debt, not necessarily in securitized forms, in non-core contexts. Locating indebtedness in the nexus of power, production, and social reproduction from a feminist perspective, this study explores how indebtedness shapes women's labor within or beyond the household and how women's experiences connect to the broader political-economic context and are informed by local, cultural practices. It draws on in-depth interviews with women who are residents of indebted households in Athens, Greece and Istanbul, Turkey, two countries with the highest rates of household indebtedness growth and household consumption in the OECD but different from one another in terms of gender inequality patterns. These cases show that indebtedness affects the ways in which women undertake reproductive work and participate in informal and formal employment, and these experiences are altered by welfare and employment regimes, labor market structures, and hegemonic gender norms and practices in the household and the society.

Precarious Social Reproduction In Greece: Households, Utility indebtedness And Gendered Subjects

Koutlou, Alik

University of Manchester, United Kingdom
aliki.koutlou[at]postgrad.manchester.ac.uk

In the aftermath of the global financial crisis and the proliferation of austerity policies, we are witnessing a deepening of what feminist political economists term a crisis of social reproduction. An important consequence of this crisis is the increasing inability of households to cover their needs without falling into debt. While household debt accrued

through credit has been widely studied by feminist political economists, there is another form of household debt that remains under-researched: utility debt. This paper enquires into utility debt from a feminist political economy lens and seeks to unearth the ways in which social reproduction and utility indebtedness intersect. Starting from a conceptualisation of the household as the infrastructure of social reproduction, the paper argues that utility indebtedness is both a macro-structural phenomenon emerging from the structuring of social reproduction by states and markets and a lived or embodied phenomenon which is experienced by household members in different ways. By drawing from empirical research in Greece, the paper situates the reorganisation of social reproduction in its increasing privatisation. It also suggests that this process renders households increasingly responsible around the organisation of social reproduction at a material and a symbolic level. The symbolic responsabilisation of households operates through the proliferation and consolidation of a neoliberal common sense. This neoliberal common sense coupled with logics of austerity and debt structures the ways in which household members, and particularly women, understand themselves as utility indebted and shapes the ways in which women align to specific subject positions.

Bad Debts, Good Profits: A Feminist Political Economy of Distressed Debt Markets in Europe

Metz, Caroline

Sheffield Political Economy Research Institute, United Kingdom
c.j.metz[at]sheffield.ac.uk

In the post-2008 period, Europe has witnessed rising levels of consumer debt defaults. European policymakers and financial regulators fear that these 'non-performing loans' (NPLs) will affect banks' profitability, and financial stability more broadly. To deal with this, they propose to facilitate and promote the sale and securitisation of NPLs — in other words, the financialisation and marketisation of distressed debts. In this paper, I focus on the emergence of European distressed debt markets which involve large European banks and US-based private equity firms, as well as loan servicing firms in charge of collecting and enforcing debt payments. Combining insights from social studies of finance interested in the construction of markets with feminist materialist accounts of the financialisation of social reproduction and the gendered dynamics of debt defaults and debt collection practices, I explore how recent EU regulatory developments aiming to promote these markets and bolster the role of cross-border loan servicers have conflicted with debtor protection rules. Overall, I argue that distressed debt markets constitute not only a source of profit for financial firms specialised in the 'bad debt business', but also a threat to consumers and borrowers. The intensified state-backed financialisation of social reproduction in the era of austerity is thus set to continue to fail the majority while benefiting the few.

The Italian Feminist Movement And The Challenge Of Intersectionality

Panighel, Marta (1); Dambrosio Clementelli, Alina (2)

1: Università degli Studi di Genova, Italy; 2: Independent researcher
marta.panighel[at]gmail.com, dambrosio.alina[at]gmail.com

This paper aim is to study the application of the concept of intersectionality in Italian contemporary feminist movement. From the Argentinian movement Ni Una Menos, to the US #MeToo, from the referendum on abortion in Ireland to the protests of female workers in India, in the last three years feminism has experienced a new renaissance. In Italy, the movement Non Una Di Meno is claiming struggles' intersectionality as one of the fundamental components of its activism. This claim marks a radical gap between Non Una Di Meno and the historical Italian feminism, which focused for a long time on sexual difference theory. The combined lecture of gender, race and class' oppression as interlocking categories – building and enforcing each other – seemed far-sighted and necessary at a time when the alliance between a neoliberal restructuring of work and the advance of the far-right is increasingly evident. In a country that has not yet fully come to terms with its colonial past, how has the concept of intersectionality entered the vocabulary and imaginary of Italian feminists? In the light of the criticisms of Black, Chicana, decolonial and postcolonial feminists of the so-called "white feminism", how does the Italian feminist movement theorize its belonging to a transnational movement without falling into the false myth of "universal sisterhood"? Through the lens of Intersectional Feminism, Postcolonial Critique and Public Sociology, this paper questions the possible theoretical and practical contribution that a non-Eurocentric Sociology can offer to what appears to be one of the strongest contemporary social movements.

RN06_06b | Science Fiction and Alternatives to Trade Wars, Inequality and Transnational Production Networks

The Role of the State in the Genesis of Social Structure: the Resource-Integrational Model

Vastagh, Zoltán

Hungarian Academy of Sciences, Hungary
vastagh.zoltan[at]tk.mta.hu

The presentation focuses on the theoretical description of a new social structure model, but also contains some empirical

evidence from the field of income distribution in Hungary. This new approach, called Resource-Integrational Model, is based primarily on the notions of K. Polanyi's schemes of economic integration and G. Esping-Andersen's welfare regimes, and it considers economic and political power as equal factors in the genesis of class positions. The theory builds on the fundamental differences between the concepts of market and redistribution, and between state and capital, and arguing that class positions can be traced back to the principles of legitimacy, and to the laws that guarantee and enforce them. The theory presupposes a systematic combination of the specific types of welfare regimes and the specific patterns of social structure which is the result of the interplay of state, capital, market, and redistribution. The first empirical results show that the role of the state in defining social structures is decisive even in the globalized economy and show as well that the class approach can be revitalized in the 21st century. The Resource-Integrational Model may be useful for international comparisons of developed countries, in the analysis and interpretation of temporal changes and spatial differences of macro-level income inequalities, and also in investigating income distribution and income-flows among classes at macro and micro level. Finally, it may not only be useful for purely scientific purposes, but it might provide arguments in distributional struggles for social movements against capital and government.

It's Not Democracy, It's The Market!

Albertson, Kevin

Manchester Metropolitan University, United Kingdom
k.albertson[at]mmu.ac.uk

Democracy is unwell, so it is said. In America, and other leading democracies citizens are apparently increasingly critical of the concept of liberal democracy. We argue this is a misdiagnosis; that citizens are not critical of liberal democracy – it is the lack of democracy which is the problem. There is reason to suppose the so-called democratic nations of the west lack legitimacy to the extent that they lack democratic accountability. There is reason to suppose the governments of so-called democratic nations lack democratic accountability. Over recent decades policy decisions, rather than being taken in accordance with the needs and preferences of the populace, increasingly reflect global neo-liberal (market based) incentive structures. This has impacts ranging from inequality to national unsustainability. Citizen's are attracted to strong leaders, ones which are prepared to challenge the prevailing system, not because the distrust democracy, but because the prevailing system is fundamentally undemocratic. The solution is not further to limit democracy for fear of "strong" leaders, but rather to increase democratic accountability, and therefore legitimacy.

The New Trade Wars. International Trade Theory as Social Science Fiction

Ventrone, Oreste

Università degli studi di Napoli Federico II, Italy
oreste.ventrone[at]gmail.com

One of the main tenets of Donald Trump's rhetoric in the US presidential campaign was the defence of US workers from globalization, either by bringing jobs back from abroad or preventing migrants from entering the country. Once in office, he soon adopted some classical protectionist measures which, a few years earlier, would have been considered completely unthinkable in the country that used to be the main sponsor for globalization. And Trump, albeit the most powerful, is not the first or the only politician to have recently reconsidered the virtues of protectionism. Indeed, the argument is an important element of the political discourse of the new wave of nationalist movements in Europe, brexiteers included. Inspired by the works of historical sociology and global political economy, this paper aims to analyse the recent literature on the subject, stressing the theoretical, methodological and historical deficiencies, as well as to offer suggestions for alternative research programs. While we recognise the appeal that these topics can exert in the electoral muscle flexing, the results of our analysis show how the eternal "liberalism vs protectionism" debate, while still very lively, is profoundly flawed at the theoretical level. Moreover, such debate appears largely anachronistic - at least since the development of transnational production networks as the most advanced form of manufacture in the 20th century - and cannot constitute the basis of any serious trade policy in the present world.

How Inequalities Affect The Stability Of Urban Youths In Sidi Bouzid (Tunisia)

Dutour, Julien

University of Versailles Saint Quentin, France
julien.dutour[at]gmail.com

Sidi Bouzid is located in the center of Tunisia, at the heart of the governorate bearing the same name, a periphery dominated by the Tunisian coasts, Tunis and Sfax. In the 1980's, Bourguiba implemented economical specialization policies, strongly reinforced by the Structural Adjustment Plan (1986). These capitalist policies shaped inequalities between central and coastal governorates. During the tunisian revolution, the slogans about the massive unemployment of the young people highlighted the lack of professional possibilities which the region, economically specialized in agriculture, was suffering. Through individual and collective paths (Fillieule, 2001) and the biography (Passeron, 1990) of young people from Sidi Bouzid, we will analyze some key issues underlined by this economical instability. Youssef, Ahmed, Jalel or Tarek are all from Sidi Bouzid. They perceive themselves as poor and unemployed even though their personal or professional situations are different. Dealing with a situation of personal blockage, they were forced to create some strategies (activism for instance), in order to have an income and to avoid a predetermined social

condition. Regardless of their academic levels, they come from working class or modest economic backgrounds. The search for alternative solutions, acting as an appropriation of one's own future at the expense of the Power, can be made with its blessing (for instance, through State funding, or the creation of many private firms within the governorate, Bayat, 2013). This mobilized capital was internalized and applied during the uprising of December 2010. This study is based on qualitative surveys realized in Sidi Bouzid, interviews with activists, social entrepreneurs, unionists or politicians, and quantitative data from the National Institute of Statistics of Tunisia.

RN06_07a | Resisting Authoritarian Neoliberalism

Allied Against Austerity – A Network Analysis Of Transnational Cooperation Among Anti-austerity Initiatives In Europe

Bonfert, Bernd

Roskilde University, Denmark
bernd.bonfert[at]gmx.de

The imposition of austerity programmes across Europe following the financial and economic crisis of 2008 has sparked a transnational social movement wave whose impact is still palpable. The contestation of European austerity has become widely diversified, from grass-roots activist groups and protest platforms to solidarity infrastructures and leftist governments. The development of these initiatives differs across regional and politico-economic lines, and most of them are squarely focused on their own domestic context. In spite of this fragmentation, there have been a number of efforts to connect anti-austerity activities across Europe, from transnational campaigns, summits and protests, to the establishment of transnational activist organisations. Anti-austerity initiatives are evidently willing and able to create alliances across borders and carry their contestation to the European level. The question we need to ask is: Under what conditions do they do it? This contribution aims to answer that question. Based on a Social Network Analysis of hundreds of activist initiatives and the dozens of transnational projects they engaged in, it identifies which specific groups of actors cooperate with each other, and characterizes the content, form and scope of their cooperation. Triangulating the evidence with qualitative analyses of activist publications and interviews, it then determines the activists' concrete reasons for cooperating, as well as the successes and challenges they encounter. Using a Gramscian theoretical framework, the results are ultimately discussed in regard to how the transnationalisation of social struggles corresponds to the variegation of neoliberal capitalism and the erosion of its hegemony.

Political Economy, Social Strain, and Alternatives to Austerity and Neoliberalism

Bailey, David (1); Lewis, Paul Christopher (1); Shibata, Saori (2)

1: University of Birmingham, United Kingdom; 2: Leiden University, Netherlands
D.J.Bailey[at]bham.ac.uk, p.c.lewis[at]bham.ac.uk, saori1973[at]hotmail.com

The post-2008 period has been marked by austerity, stagnation, but yet the stubborn persistence of a neoliberal consensus. During the same period, the prominent prospective alternatives to neoliberalism have also changed, passing through: a brief period of Keynesian hope during 2009; the prospect of radical horizontalism during the public square movements of 2011; efforts to 'occupy' the institutions of democracy, as witnessed by the movement parties of Podemos and Syriza; and now what appears to be a populism of both the left and the right, committed to some kind of re-nationalised alternative to neoliberalism. This paper argues that attempts to explain these developments require a political economy of dissent: a framework through which to understand contemporary capitalism, the contested social relations which constitute it, and the forms of resistance and reaction that have emerged from it and which have subsequently congealed into a variety of (unstable) political settlements. This requires a combination of critical political economy, institutional analysis, and social movement studies. In developing a political economy of dissent, therefore, the present paper sets out to describe, understand and explain the different trajectories of capitalism and its contestation, and the unstable institutional outcomes in which these have resulted, during the so-called 'age of austerity'. This enables the identification of different sources of social strain as they have developed since 2008, and therefore highlights the potentials for change to the state-market-society configuration in the present. Empirically, it focuses on concrete developments in the UK, US, Spain, Germany and Japan.

Extinction Rebellion and Civil Disobedience

Berglund, Oscar

University of Bristol, United Kingdom
oscar.berglund[at]bristol.ac.uk

Extinction Rebellion (XR) has played a central part in raising the concern for climate change in the UK and other countries in recent months. Whilst no social movements are as spontaneous as they are often presented, XR's political strategy appears particularly elaborated. This paper explores XR's practices and discourses of civil disobedience and disruption. It analyses these in relation to the history of political law-breaking with its different anarchist, autonomist and liberal roots. The paper further interrogates the roles of capitalism, liberal democracy and legitimacy in XR's discourse and justifications of its law-breaking.

Establishment Populism and the Politics of Internal Devaluation: The Case of Croatia

Zitko, Mislav; Ostojic, Jelena

University of Zagreb, Croatia
mislav.zitko[at]gmail.com, jelenaost[at]yahoo.com

The countries of the postsocialist bloc that formed the last two waves of eastward enlargement were never good candidates in terms of support and advocacy for Social Europe. After the initial effort to ground their political legitimacy around the accession process and subsequent EU membership, the political classes in some countries have made a profound turn toward authoritarian rule driven by nationalism and euroscepticism. Nevertheless, the discourse that posits the European Union as a progressive force remains strong. The first part of the paper aims to analyse this discourse, provisionally labelled as establishment populism, and its internal mechanisms in the case of Croatia, last country to join the EU. In particular, we will attempt to highlight the displacement of class relations and conflicts over distribution through the excessive focus on clientelism, corruption and other features of the so-called crony capitalism. The establishment populism uses these deviations in order to counterpose them to rule of law provided by the EU institutions, thereby forming a narrative in which the antidote for deficiencies of the EU is "more Europe". The second part of the paper brings the class analysis back in and indicates the factors and mechanism that led to deterioration of the position of labor in the period of illusive prosperity before the crisis and in the recessionary times during the crisis. Thus, we will focus on the interplay between internal (domestic) aspects (wage policies, labor legislation, political representation of labor etc.) and external ones, mostly related to the mechanisms and procedures of the European Union, inasmuch as they form a particular variety of neoliberalism.

RN06_07b | Prefiguring Real Life Utopias in Dystopian Times

Good Societies

Basu, Laura Shanti

Utrecht University, Netherlands, The
l.s.basu[at]uu.nl

This paper will present a new project that envisions possible future societies. Organised around the principles of ecological and social justice, it attempts to answer the central question: What would a 'good' society look like? It approaches this overarching question through pursuing a series of six interlocking sub-questions: - What economic models would a good society have? - What political systems would a good society have? - What family structures and education systems would a good society have? - On what scale would a good society operate? - What media and communications systems would a good society have? - How do we get there? A range of possibilities will be explored under each theme, from more modest reform proposals to ambitious transformations. The intention is to bring into dialogue diverse intellectual traditions, including strands within Marxism, anarchism, feminism, radical social democratic perspectives, eco-criticism and others. For example, the sub-question on economic models could include discussions from universal basic income, automation and the reduction of the working week, to participatory economics, to ideas around the commons and so on. The 'scale' theme tackles the role of – and alternatives to – the nation-state, and whether and on what terms 'good' globalisation would be possible. The project combines research and civil society aims, and sits alongside a new Amsterdam-based community project: goodsocieties.org. The paper will present the aims and objectives of the project, the hybrid theoretical and methodological approach, and some of the key ideas for alternative social structures thrown up by the research so far. This year's ESA conference, and RN06 in particular, seem to be the ideal forum in which to share and develop this endeavour.

Property as a Fiduciary Relationship and the Extension of Economic Democracy: What Role for Basic Income?

Casassas, David; Mundó, Jordi

University of Barcelona, Spain
dcasassas[at]ub.edu, jordimundo[at]ub.edu

Economic democracy requires that relevant doses of bargaining power be distributed among individuals and groups, which, in turn, demands the social dispersion of many kinds of resources. This implies that Blackstonian ideas of property as the despotic and excluding dominion over external objects be put in question and presented as only one of the

multiple forms of control over resources human societies can harbour. In contrast to such view, the republican idea of property as a fiduciary relationship states that private appropriations of resources are only acceptable if these resources are used in a way that preferentially guarantees the coverage of the needs of the whole (present and future) population. This paper shows that this view on property rests on the underlying assumption that wealth is a social product which does not come from individual merit only, but it is a heritage from past endeavours and many forms of socially intertwined efforts. Therefore, there is need for institutional designs guaranteeing the democratization of the control over (the use of) such wealth. This is very much in keeping with what the idea of property as a fiduciary relationship ultimately aims at offering, namely: a collective decision-making process on how property rights and economic arrangements are shaped. This paper makes the case that universal basic income constitutes an appropriate tool to guarantee individuals' and groups' socioeconomic existence and bargaining power, which should enable all of them to democratically co-determine the nature and running of social and economic environments within contemporary societies.

"I Just Want More Time To Do Stuff I Enjoy": Understanding Push-Pull Factors And Trade-Offs In Transitions To Reduced Hour Working Schedules

Balderson, Ursula (1); Burchell, Brendan (1); Kamerāde, Daiga (2); Lidmark, Hugo (1); Coutts, Adam (1); Wang, Senhu (1)

1: University of Cambridge, United Kingdom; 2: University of Salford, United Kingdom
u.balderson[at]cbr.cam.ac.uk, bb101[at]cam.ac.uk, d.kamerade-hanta[at]salford.ac.uk, hugo.lidmark[at]hotmail.com, apc31[at]cam.ac.uk, sw768[at]cam.ac.uk

An interest in reduced hour working schedules is a frequent response to the pressures of high intensity working environments common to neoliberal capitalism. If, as has been predicted, machine learning and robotics cause a widespread reduction in job availability, a reduction in average working hours may be one way to avoid the social harm of mass unemployment. As such, this research project has identified a broad spectrum of people who are actively choosing to limit their earning capacities and are instead prioritising an increase in free time. This paper explores some of the push and pull factors that influence decision making around this topic. As well as some of the perceived advantages and disadvantages once a revised working schedule has been implemented, the research finds that trigger events such as illness or deaths can jolt people into the realisation that time is finite and needs to be wisely spent. In addition, life cycle factors such as the reduction (or active limitation) of financial commitments can make people more willing to exchange income for an improvement in their quality of life. Pre-existing commitment to a particular hobby or pastime was not a prerequisite for working time reduction preferences, as this can emerge organically once an increase in free time has been achieved.

Modernizing Agents: Intellectual Property Experts and Their Subjectivities in Modern Day Turkey

Demir, Ferhunde Dilara

Rutgers, the State University of New Jersey, United States of America
dilara.demir[at]gmail.com

World Intellectual Property Organization (WIPO) diffuses models of intellectual property and its valuation around the world through national workshops, trainings and conferences all around the world, mostly targeting "developing" countries to promote innovation. Some scholars argue that this diffusion happens top-down except few local cases affecting and changing international regimes (Chorev 2012). In this paper, I argue that experts' subjectivities at local contexts are key to understand diffusion processes in the making. By shifting, the object of study from institutional diffusion toward actual agents diffusing knowledge, I would like to understand why and how certain "technical models" of IP valuation are socially disseminated in a specific context even if these models might not have any economic impact with respect to increasing innovation within the country. I did a qualitative study by conducting in-depth interviews with the patent experts in December 2013 and December 2014 in addition to document analysis. First, I identified IP valuation process models prescribed by WIPO in the country reports, national workshops on Innovation Promotion and Technological Transfer in 2012 in Istanbul and in 2013 in Ankara, Turkey. Then, I analyzed how these experts made sense of these models from in-depth interviews. I argue that the patent experts whose main responsibility is to comply with global standards of patenting at a domestic level on paper, perceive themselves as "modernizing agents" of the globe, while tying themselves to the political status of the country and its place in a globalizing world. Dissemination of these models into universities and schools within Turkey gave them a special "global" status and a moral role in "modernizing" society through promoting "innovator mentality" as well as distinguishing themselves from the rest of the society promoting "copier mentality". Postcolonial theoretical framework and valuation studies allowed me to understand socio-historical processes affecting expert subjectivities.

RN06_08 | Capitalist Crises, Elites, Experts and the Role of the State

On The Political Value Of The Concept Of Elites Under Capitalism

Moran, Marie Kathryn

Equality Studies, UCD, Ireland
marie.moran[at]ucd.ie

The aftermath of the global financial crisis has seen an explosion in discourses of elites and anti-elitism, recently augmented by the rise of new populist politics across Europe and the US. On the right, the discourse of anti-elitism has been put to powerful use within the successful campaigns for Brexit in the UK, and the election of Trump in the US. Despite this, there seems to be an assumption in left-wing politics that an emphasis on elites is warranted and useful, as evidenced by the consistent reference to elites by left-wing politicians; new forms of activism challenging the 'one-percent'; and the revival of a critical elite studies within the social sciences. But what are the grounds for such faith in the concept of elites? How does such an emphasis relate to traditional left-wing concerns with exploitation, inequality and social class? And to what extent can the concept be usefully deployed in critiques of and practical challenges to class inequality under capitalism? This paper addresses these questions by evaluating the theoretical and practical value of an emphasis on elites. Reviewing the conflicting contemporary uses alongside a scholarly history of the term, it reminds us that the concept of elites was originally developed as an alternative to Marxist conceptions of the 'ruling class'. It builds the case that if concept of elites is to be of political value to left wing thinking and politics, it must be distinguished from right wing uses; and specifically, it must not replace but be rendered compatible with class analysis. The paper concludes by sketching briefly what this might look like.

The Disciplinary Ways of BEPS-Related Technical Assistance: a Critical Analysis of the Integration of Developing Countries in the BEPS Inclusive Framework

Vet, Cassandra

University of Antwerp, Belgium
cassandra.vet[at]uantwerpen.be

As corporate capital structures financialized in Global Wealth Chains (GWC)'s, financial operators found leeway to play with the categorizations tax authorities need to raise fiscal revenue. Consequently, the G20 endorsed the dominant tax-governing body within the OECD to amend the global tax regime so that tax administrators could increase their reach on these GWC's. Hence, the G20/OECD BEPS Project. In contrast to apolitical approaches, the purpose of this paper is to critically assess the political economy of technical assistance in Base Erosion and Profit Shifting (BEPS) for Sub-Saharan Africa. It is widely recognized that international corporate taxation holds a distributional bias towards advanced economies and that developing countries only play a marginal role in tax governance-making. Yet, it is the ambition of both the G20 and the OECD to integrate developing countries in the BEPS inclusive framework. Moreover, several rule-making bodies design programs to assist developing countries in the implementation of BEPS projects. Still, the overall mode of integration continues to be on implementation and advanced economies overruled concerns on the legitimacy of the OECD as a global tax governance platform at the third Financing for Development Conference. Regardless of capacity constraints in developing countries, the question remains what the disciplining character is of this mode of integration. Building on insights from the literature on transnational power elites and club model governance, and collected press releases and meeting minutes from the UN and OECD Tax Committees on BEPS, this analysis underlines the implicit politics of technical assistance in global governance.

Configuring Contemporary Neoliberalism in Unusual Ways: A Comparative Study of the New Business Elite in India and Turkey

Nartok, Esra Elif

The University of Manchester, United Kingdom
esra.nartok[at]manchester.ac.uk

This paper suggests that there is a need to focus on different strategies that enable neoliberalism to move forward on a global level. As the rise of the populist right in the West has become a prominent issue in world politics, it has finally set the stage for paying attention to similar processes around the world. Building on a Neo-Gramscian approach within critical IPE, my paper highlights that neither does neoliberalism work in one way nor it takes one form; rather, it is variegated and open to various strategies through various intellectual projects. By presenting two different religion-based business forums - one from India (World Hindu Economic Forum) and another from Turkey (International Business Forum) - it focuses on different ways of configuring contemporary neoliberalism. The two global knowledge-sharing platforms for Hindu and Muslim businesspeople are parts of a new elite formed around religious identities and relations of power in the respective countries as well as transnationally-oriented capitalist classes. Drawing upon semi-structured interviews with businesspeople and a broad analysis of the forums' documentation, the paper compares how these different intellectual projects play a critical role in bringing together different actors (businesspeople, technocrats, intellectuals, etc.) and configure contemporary neoliberalism by constructing neoliberal common sense through religion. As such, I suggest that a diagnosis of current problems of neoliberalism is only possible through understanding how it actually works in different contexts.

RN06_09a | Coercion, Surveillance and the Disciplining of Labour under Authoritarian Capitalism

'Cheap Logistics' – Value Chain Management And The Corporal (Re-)organisation Of Labour And Struggle Engelhardt, Anne

Kassel University, Germany
engelhardt00[at]googlemail.com

Raj Patel and Jason Moore (2018: 3; 22) claim in their book 'A history of the world in seven cheap things' that the 'Capitalocene' requires 'cheapness' as a 'set of strategies' to accumulate capital. While their work illustrates the very fascinating historical developments of physical and corporal exploitation from colonialism to today, their approach is rather descriptive: It does not explain 'how' cheapness could become so vital. Using the arguments of this book as a starting point, this paper employs a Marxist lens to analyse the atom of capitalist accumulation: the commodity. I argue (using Cowen, Harvey, Marx) that the use value of commodities creates a need for an ever-increasing velocity and volume in capital circulation. This allows cheap logistics and requires a constant restructuring and advancement of the global value chain management. This constant process of technological development creates and requires 'cheapness' of food, energy, work, care and lives, while also reshaping the corporal organisation of labour: It concentrates workers at new facilities such as amazon warehouses and in other sectors atomizes or 'uberizes' their working structures. The paper argues with Bahnisch, Kanngieser, Federici, Fracchia and Orceck that this recent restructuring process has an impact on labouring bodies, reproductive work and social struggles. While it changes eating habits and traffic density, it also expands the working day, decreases social and communal life and requires new flexible strategies for trade union and social movement activists to organise and fight back.

Global Flows of Goods and Everyday Violence: The Port-city of Buenaventura, Columbia

Jenss, Alke

Arnold-Bergstraesser-Institut, Germany
alke.jenss[at]abi.uni-freiburg.de

Buenaventura is Colombia's biggest, bustling port on the Pacific. Yet the city, particularly the area surrounding the port, has also seen waves of extreme violence. By way of focusing the linkages between local violence and the political economy of the port, this contribution asks: In what ways do the global interconnections of the port economy shape Buenaventura as

a site of violence? How does everyday violence shape spatial practices within the city, particularly movement? How do every day coping strategies, reacting to a violent context, produce an urban, yet global space? I suggest an analysis that links the production of urban space through everyday practices (Lefebvre 1991) to the notion of violence as inherent to urban power relations (Coronil/Skurski, 2006) on the one, and to the role of global flows of goods in critical logistics literature (Cowen 2014, Khalili 2015) on the other hand. The main argument is that, global interconnections through the port are not decoupled from, but rather constitute a condition for violence in Buenaventura. By looking more closely at the city's next-to-port spaces, we can understand Buenaventura's urban as a space both constituted by daily violence and by stretching along global supply chains. Both violence and the secured, off-access port spaces shape, transform and limit inhabitants' movement, while they enable global flows. I identify coping strategies such as accompaniment, adaptation of movement to zig-zag patterns, and organized spatial strategies. The article contributes to recent debates on violence and the everyday, and urban space shaped by a coercive global economy.

Surveillance And Capitalist Accumulation: Putting Capitalism Into Surveillance Capitalism

Kienscherf, Markus

Freie Universität Berlin, Germany
markus.kienscherf[at]fu-berlin.de

Shoshana Zuboff's recent book on surveillance capitalism's dispossession and commodification of users' personal data provides a compelling critique of the political economy of digital surveillance, but ultimately fails to relate surveillance capitalism to the totality-in-contradiction of capitalist accumulation. Surveillance capitalism has, after all, emerged has a central mode of accumulation that now massively encroaches but still ultimately depends on other modes of accumulation. Yet, Zuboff's critique of surveillance capitalism is ultimately driven by a desire to return to 'forms of information capitalism that reunite supply and demand in ways that are genuinely productive of effective life and compatible with a flourishing democratic social order' (Surveillance Capitalism, 395). But what if surveillance capitalism itself emerged as a fix to a general contradiction between capitalist production and circulation? What if the rationalities and practices of surveillance that surveillance capitalism broadened and deepened on an unprecedented scale are themselves products of capitalist accumulation in general? Is there a return to (information) capitalism without surveillance capitalism? This paper will, first of all, show how rationalities and practices of surveillance arose in response to the requirements and contradictions of capitalist accumulation. Secondly, based on a better understanding of how concrete rationalities and practices of surveillance capitalism relate to the requirements and contradictions of capitalist accumulation the paper will locate surveillance capitalism within the unity-in-contradiction of capitalism. By way of a tentative conclusion, the paper will then discuss some of the political implications of the contradictory relations between surveillance capitalism and the capitalist mode of production in general.

China: Towards digital authoritarian capitalism?

Rolf, Steven

Aston University, United Kingdom
s.rolf[at]aston.ac.uk

In order to address debates surrounding corporate and state power in the global political economy, this paper explores China's 'new economy' and its relationship with China's intensifying authoritarian mode of governance. Exploring the rise of digital technology firms and the increasingly politically repressive nature of the party-state, it argues that these two relatively independent trends are converging to both power domestic-oriented economic growth and intensify political authoritarianism. Liberal theorists have long seen the development of capitalism in China as a potential vehicle for both democratisation and a further opening of the economy. Special economic zones formed a precursor to a substantial opening of the field for investments in manufacturing and some service sectors; under 'going out', large SOE firms have struck out to invest abroad (currently undergoing a huge expansion with the BRI program), while the stock connects, flotation of the currency and listings of firms on overseas stock exchanges have permitted some limited financial liberalisation. Politically, China certainly became somewhat more open and its bureaucracy became accountable, competitive, predictable and limited in its jurisdiction. But for the most part, observers expecting this to happen have accepted the disappointing result that China has remained intransigent in the face of internal and external pressure toward political-economic liberalisation. And today, views convergent around Carl Minzner's thesis that the 'reform and opening' period is over. What is driving this trend? This paper explores some major trends in digital technologies and how they are being mobilised by the party-state (through direct investment and co-optation of elites) to stabilise the power of the CCP.

RN06_09b | Lumpenproletariat, Artistic Precariat and the Radical Left

The Concept of the Lumpenproletariat in Marxian Political Economy

Barrow, Clyde W

University of Texas Rio Grande Valley, United States of America
clyde.barrow[at]utrgv.edu

The concept of the lumpenproletariat has been largely neglected by Marxist political economy on grounds that the term does not refer to any clearly defined social group which has a major socio-political role. Over the last 50 years, various scholars have dismissed the concept as ambiguous, foggy,

dubious, undeveloped, unclear, inconsistent, and invalid as a substantive concept. Consequently, some scholars have recently argued that the term should be jettisoned from Marxist political economy. However, these assessments of the concept are based on Marx's and Engels' historical 'political writings', such as *The Communist Manifesto*, *The 18th Brumaire of Louis Bonaparte*, and *The Peasant War in Germany*, where the term appears most frequently. In contrast, this paper argues that the two most important examples of Marx's and Engel's analysis of the lumpenproletariat are contained in *The Condition of the Working Class in England (1845)* and *Capital, Vol. I (1869)* and that these two works provide a refractive lens for understanding the use of this concept elsewhere in their 'political writings'. The paper suggests that the failure to incorporate these two texts into the debate about the concept of the lumpenproletariat has led to numerous misunderstandings of the concept and a failure to see the lumpenproletariat's significance to the long-term development of capitalist social formations.

The Autonomy of the State, Radical Left and Karatani's Capital-Nation-State: The Turkish Left in 1960-1971 Oncu, Ahmet (1); Ulus, Ozgur Mutlu (2)

1: Sabanci University, Turkey; 2: Acibadem Mehmet Ali Aydinlar University, Turkey
aoncu[at]sabanciuniv.edu, ozgur.ulus[at]acibadem.edu.tr

The purpose of this paper is to provide an account of how leading radical left movements of Turkey in 1960-71 conceptualized the state in political debates on the structural features of capitalist social formation in Turkey. The analytical framework draws on the mode of exchange scheme developed by Kojin Karatani. Karatani argues that modern capitalist nations are composed of a mutually interdependent tripartite system of capital-nation-state which operates as an interlocking, self-reinforcing, independently autonomous system creating a Borromean knot. From Karatani's capital-nation-state scheme we critically assess the theoretical premises of the Turkish Left in connection with the concepts of capitalism, the state, social classes and nation. The Turkish Left discussed the political role of bureaucracy and the relative autonomy of the state based on the dominant mode of production. However, the Turkish Left was unable to theorize the autonomy of the state, the construction of the nation as an imagined community, and the importance of popular resistance against the state's destruction of traditional communities. Right-wing political parties filled this vacuum with the populist discourse of "nation" that targeted the state's oppression over the ethnically-religiously based communities and minorities (e.g. Kurds and tarikats). The proletarians in the name of the nation supported the Right's call for "democracy," and did not show much interest in the Left's cry out for a socialist revolution against "fascism". Thus, the Turkish Left conceded its social base to right-wing parties and hence lost the opportunity of winning political efficacy.

The Artistic Precariat: Commodification and Counter- Movements

Marques, Joana S. (1,3); Veloso, Luísa
(1,2,3)

1: Centro de Investigação e Estudos de Sociologia (CIES-IUL); 2: Instituto Universitário de Lisboa (ISCTE-IUL); 3: A3S, Portugal
joanamar[at]live.com, luisa.veloso[at]iscte-iul.pt

The paper investigates the formation of an 'artistic precariat' in Portugal and Brazil, through the analysis of the double movement of work commodification in the artistic sector and the struggles for de-commodification through different dynamics of collective organization and action, inspired by Polanyi's seminal work (1944) and by Wright's emancipatory social science (2010). The research design involved the comparative analysis of theatre collectives in Portugal and Brazil based on historical, statistical and documentary sources in order to contextualize the artistic work in both countries; conducting a survey of theatre collectives in order to map their working conditions, organizational structure and collective action dynamics; interviews and participant observation to deepen two empirical cases. The research results corroborate the literature that highlights the artistic work as precursor of contemporary forms of work hyper-flexibilization. However, despite their strong precariousness and lack of representation in traditional forms of workers' collective organization (unions), the research has also identified multiple resistances among artist-workers who envisage other forms of collective action and utopian visions for making a better world. On the one hand, the counter-movements of the artistic precariat are restrained by the submission of national regimes to the constraints of global capitalism. On the other hand, it is possible to observe experiences where they join forces in their social struggles that perhaps are not enough to make a new 'great transformation', but contain elements of resistance with a transformative potential.

Spain: One Decade Through the Looking Glass

Moreno Zacarés, Javier

University of Warwick, United Kingdom
kvkz_7[at]hotmail.com

Spain went into the global financial crisis as the posterchild of European neoliberalism and came out on the other side as one of its most resounding failures. For a decade now, the country has been afflicted by multiple convulsive crises. After the implosion of the most destructive property bubble to date, the working class has been ravaged by the highest levels of unemployment in the continent and by brutal austerity cuts. The political class has been tormented by permanent corruption scandals that have resulted in the break-up of the old party system. The constitutional order inaugurated by the death of Franco has undergone a severe legitimacy crisis, under fire by radical anti-austerity movements and by regional separatism in Catalonia. Until recently, Spain was the only major European country to escape the spectre of the far right

– not anymore. The point of this paper is to make sense of this events from a Marxist political economy perspective, charting how the political turbulence of the last decade is traversed by the crisis of Spanish neoliberal capitalism. The paper traces how the collapse of a financialised residential apparatus, underpinned by the now familiar trade-off between mortgage-backed debt and asset-price speculation, has brought down two central pillars of the Spanish social order: (1) the clientelist symbiosis between the political elite and construction capital, and (2) the ideological consensus of 1978, which had previously succeeded in suspending the historic tension between a revolutionary left and a reactionary right.

RN06_10 | The Political Economy of Neoliberal Transformations

Theorizing Cities and Neoliberalism: Accounting for Systemic vs. Contingent Aspects of Neoliberal Transformations

Piletic, Aleksandra

Erasmus University Rotterdam, Netherlands, The
piletic[at]iss.nl

Over the past several decades, a great deal of urban studies and political geography research has touched upon the different ways in which cities have been impacted by and reconfigured under neoliberalization. A number of endeavors, particularly in recent years, have also tackled specific aspects of urban neoliberalization from an IPE perspective. This has produced a rich and diverse body of scholarship that has immensely advanced our understanding of present-day urban transformations. At the same time, this literature has made it increasingly difficult to speak of neoliberalism in a unified sense, due to the very diverse ways in which it is manifested. I argue that, in order to establish a comprehensive, comparative understanding of neoliberalization of cities, it is necessary to account both for the systemic and the contingent ways in which neoliberalism is articulated. In this paper, I therefore focus on the theoretical and methodological aspects of studying the neoliberalization of cities. I build on existing contributions in critical IPE literature to expand the understanding of neoliberalism as a process, to situate its various stages in time and to investigate the role of cities in its articulation. In particular, I draw on the French Regulation school and its understanding of institutions, which I embed within Margaret Archer's morphogenetic approach and its conception of the dynamic interplay between structure and agency. In this way, I argue that it becomes possible to identify both the systemic aspects of neoliberalism (that allow us to talk about it as a unified mechanism) and the contingencies that arise depending on the city (based on various path-dependencies and geographical and institutional specificities).

Toward a Political Economy of Policing under Authoritarian Neoliberalism

Laub, Malte Michael

King's College London, United Kingdom
malte.laub[at]kcl.ac.uk

This paper aims to present a political economy framework of policing under authoritarian neoliberalism. It maintains that while an expanded understanding of authoritarianism is necessary to analyse contemporary neoliberalism(s), 'traditional' accounts of authoritarianism focusing on coercion and force must not be neglected and have indeed been crucial for the (re)production of neoliberal order-also in the Global North. Based on PhD research, including fieldwork in South London during a time when austerity measures on many levels, cuts to policing, and the so called 'knife crime epidemic' dominated the UK's headlines, the paper shows how intertwined everyday policing and neoliberalism are and how this relationship manifests itself in London. The paper explores this reciprocally constitutive yet at times contradictory relationship and introduces a historical perspective on the role of policing. It argues that, while policing has always been a crucial factor in the making of capitalism, it has been particularly relevant for processes of neoliberalisation. Political economy analyses of neoliberalism therefore need to be informed by an appreciation of the role of policing.

Back to the Village. Undisciplined Notes on Ordoliberal Communitarianism

Nicoletta, Gerardo Costabile

University of Naples Federico II, Italy
kostabile[at]gmail.com

Through the case study of Italian southern regions, the paper argues that technologies of classification and administrative devices promoted by European Union multi-level governance have tremendously empowered new socio-political alliances between regional bureaucracies, EU regulation professional experts, economic experts, export-oriented national firms and transnational investors. The paper shows how local development policies have been progressively transformed into a diffuse laboratory for ordoliberal governmental practices actively encouraging new waves of commodification of territories mobilizing local communities in the creation of new processes of valorization. An undisciplined and profane transnational historical sociology informs the empirical research based on interviews to local professional economists, discursive analysis of institutional documents and ethnographic inquiry in Italian southern regions 'local' contexts. Firstly, the paper retraces a genealogy of subsidiarity and communitarianism in the Italian and continental ordoliberal thought contextualized the broader transnational socio-political conflicts. The second part analyses economic experts discourses and practices in valorizing territories within the broader EU strategies for local development and subsidiarity. The analysis shows how neo-communitarian identities, normatively committed to growth imperatives, are discursively and institutionally produced as a strategy to compete in the global economy while the export-oriented agro-business and transnational investors, attracted by the institution of new economic spatialities, such as Special Economic Zones, continue to dominate political agendas. Finally, the paper highlights cracks and limits of these governmentality offering a narrative of everyday sabotaging practices and resistance experiences to ordoliberal neo-communitarianism, paying particular attention to ethical, epistemological and political concerns in the academic studying these practices.

RN07 | Sociology of Culture

RN07_01 | Sociology of Culture: Place and territory

From the “What” and “How” to the “Where”: Class Distinction as a Matter of Place

Koehrsen, Jens

University of Basel, Switzerland
jenskoe[at]gmx.de

Research on the symbolic boundary work of upper- and middle-class actors has placed a greater emphasis on the “what” and “how” of cultural consumption than on the “where”. However, the spaces where actors move are important: the “what” and “how” of marking distinction vary according to national class cultures and cultural fields. The presentation focusses on the “where” arguing that interaction settings shape actors’ boundary work. Based upon research on Argentinean Pentecostalism, the study shows that middle-class Pentecostals switch between distinction-marking and “omnivore” performances of Pentecostalism depending on the social permeability of the spaces where they move. The research sheds a critically light on established concepts such as “middle-class tastes”, “snobs” and “omnivores”, given that how actors present themselves varies in different interactional contexts. These insights suggest that the contextual conditions in which actors present themselves as “omnivores”, “middle class” or “snobs” deserve more attention.

Do Cultural Practices and Cultural Offerings Define Territories Differently?

Luckerhoff, Jason; Lapointe, Marie-Claude

Université du Québec à Trois-Rivières, Canada
jason.luckerhoff[at]uqtr.ca, marie-claude.lapointe[at]uqtr.ca

Cultural practices are sometimes viewed in terms of territory (Lapointe 2016). The province of Quebec is divided into 17 administrative regions. Although this division was established from the notions of growth poles and zones of attraction (Léveillé, 1973), it serves as a basis for comparisons for cultural practices. To compare practices between regions, the ministère de la Culture et des Communications du Québec [Quebec Ministry of Culture and Communications] and other cultural stakeholders classify administrative regions using a typology of regional spaces established by Harvey and Fortin (1995) based on cultural offerings. The regions are grouped into four categories (central, peripheral, intermediate and remote) and are located near the major urban centers of Montreal and Quebec (Dalphond, 2007). Our aim is to determine whether these regions fall into the groups established by this typology when examined through the prism

of cultural practices rather than from that of supply. To this end, we analyzed the data from the Survey of Cultural Practices in Quebec, applying multivariate analysis techniques (principal component analysis and multiple correspondence analysis). Results show that depending on the cultural practices being studied, the grouping is not always congruent with Harvey and Fortin’s typology. They reveal widely heterogeneous practices, a situation which does a disservice to maintaining consistency in regional groupings. In the final analysis, although there is a relationship between cultural offerings and cultural practices adopted by citizens, we question the relevance of a typology based on offerings to understand cultural practices from a territorial perspective.

“The Giants? They Came And They Were Great, But Then They Were Gone!” The impact of Liverpool 2008 European Capital of Culture on local cultural participation and engagement

Crone, Stephen (1); Neiva Ganga, Rafaela (2); Atkinson, Michael (1)

1: University of Liverpool, United Kingdom; 2: Liverpool John Moores University, United Kingdom
Stephen.Crone[at]liverpool.ac.uk, r.neivaganga[at]lmu.ac.uk, Michael.Atkins[at]liverpool.ac.uk

Increasing the level of cultural participation locally was regarded by Liverpool European Capital of Culture (ECoC) 2008 not just as an intrinsically desirable objective in itself, but also as an outcome that had the potential to generate instrumental ‘spill over’ value in unrelated policy spheres. Impacts 08, the original evaluation of the ECoC, which concluded in 2010, was able to point to the sizeable engagement ‘footprint’ left by the ECoC event programme (Impacts 08, 2010). Ten years on, Impacts 18 has questioned the longer-term effects of the event on cultural participation and engagement, with a focus on four representative Liverpool neighbourhoods: Aigburth, Kirkdale, Knotty Ash and the City Centre. Drawing on, and updating, the methodology adopted by Impacts 08 between 2007-2009, the study consisted of a door-to-door survey of 750 Liverpool residents; an online survey of 2,006 UK residents (excluding Liverpool); semi-structured interviews and focus groups in each neighbourhood; and secondary data analysis. Secondary data analysis displays little to no evidence of positive developments at the local level in terms of cultural engagement 10 years after the ECoC. However, primary data, in agreement with the Impacts 08 reports, does offer an indication that the Liverpool ECoC opened new doors to local cultural engagement for at least some individuals and communities at a local level. Though, residents demonstrate mixed feelings towards the event-led cultural policy of the city as a legacy of ECoC, claiming the provision of funding for small community organisations that assets for people’s everyday cultural participation in the neighbourhoods. This paper will discuss the main findings and the lessons to be learned from this study.

What Can(Not) Culture Do for the Sustainable Development Of Cities: The Cold Winter of the Bulgarian ECoC Plovdiv 2019

Hristova, Svetlana Hristoforova

South-West University "Neofit Rilsky", Bulgaria
sv.hristova[at]swu.bg

Although the topic of sustainable development is getting increasingly hot in the European urban agenda since the last 30 years, there is still vague and superficial understanding of the possibilities of culture to enable sustainable development of cities in Europe. For this reason, it is worthwhile to analyse the politics and practices of urban sustainable development in the EU, exemplified in one of the most enduring cultural programs European Capital of Culture, by focusing on the following questions: (1) how different understandings of culture have led to different urban policies aiming at sustainable development of city as ECoC; (2) what visions of urban development are incorporated in European policies for ECoC? The analysis will be based on a desk research of official EU documents, civic urban initiatives, secondary analysis of existing urban studies, and insights from the first 6 months of the ongoing Plovdiv European Capital of Culture 2019.

RN07_02 | Sociology of Culture: Music

Afrobeat Music: How to Re-think Belonging and Political Action

De Feo, Antonietta; Tota, Anna Lisa

Roma Tre University, Italy
antonietta.defeo[at]uniroma3.it, annalisa.tota[at]uniroma3.it

In the last decades music is probably the aesthetic language around which a great variety of perspectives has been explored. Among these, music sociology has focused on the way music performs a constitutive action, in other words on the crucial elements that enable individuals to experience the reality and the social relations. Here, the emphasis is on the practical dimension of culture, how culture works in its socio-material aspects. Tia DeNora has been at the forefront of a new research agenda, where music is conceived as an artefact with its own agency and its ability to exert power. More precisely, music can act as a technology of the self, enabling subjects to act and to think of themselves in particular ways. This standpoint can be very useful to further investigate questions of collective belonging and the relationship between identity and community. Within this research direction, our contribution analyses music as a form of political participation and as an identity claim. Through the historical case study of Fela Anikulapo Kuti's afrobeat music we analyse how music helps us to consider political discourses as material and operational. In this respect, we not only consider the lyrics, but also and especially the rhythm, the sounds, and the

performances with which Fela Kuti shapes the strategies of political resistance to military authoritarianism and Western neo-colonialism.

The Construct 'Popular Music' Institutionalised: The Creation Of The IASPM

Villanueva Capella, Xavier

Universitat Autònoma de Barcelona, Spain
xvxaviervillanueva[at]gmail.com

The IASPM (International Association for the Study of Popular Music) was created in 1981 by a group of academics from various disciplines and by professionals from different music environments with the aim of deepen in the study of so-called popular music. Taking into account that the academic review 'Popular Music' was also born in 1981, we can consider this year as a step stone in the institutionalisation of 'Popular Music Studies' (Cloonan, 2005). But what are the causes that originated its institutionalisation? Which is the role of the agents involved? What are the implications of its use as an academic category? Popular Music Studies and popular music are labels originated by social constrictions and not by purely musical arguments (Martí, 1990). This research wants to analyse the precise conditions in which IASPM was born through the study of the pioneers who made it possible and through the ideational and structural conditionings which shaped it. The goal here is double: to provide a critical history of the association and to understand the role of the construct popular music through the process of its institutionalisation. Related archives are going to be analysed as well as secondary analysis of documents and 15 in deep interviews are going to be done. Our preliminary results are that these social constrictions will allow the understanding of popular music construct as a cultural setting and its idiosyncrasy as a knowledge category.

The Concept of “Popular Culture” in Brazil and the Indie Rock Scene in Fortaleza

Menezes, Pedro Martins

University of Porto, Portugal
pedromenezes89[at]gmail.com

The concept of “Popular Culture” is the object of an endless dispute in Brazil. The idea of “Brazilian popular culture” has been frequently confused with the very definition of “Brazil” itself. Thus, the debates regarding the definitions of this notion are as ancient as the European discovery of the country. If we intend to organize, according to weberian ideal types, the various acceptations the term “popular culture” has acquired throughout the Brazilian intellectual history, we will likely find the following picture: “Traditional-popular”, understood as the folkloric cultural inventory we inherited from the past. The “miscegenated-popular”, which would be the result of African, European and indigenous hybridizations. “Enlightened-popular”, the culture of a non-ideologically engaged working class, capable of expressing its political demands. “Massified-popular”, synonym of majority, the production of the cultural industry that provides its symbolic goods to a population regarded as consumers. “Poor-popular”, the inventory of senses shared by economically unprivileged social classes. “Populist-popular”, an image of the people, forged by an authoritarian and nationalist State. “Erudite-popular”, an allegedly polite and sophisticated version (or appropriation) of the signs of nationality consumed by the educated Brazilian middle class. Using the history of this theoretical debate to enlighten interviews I’ve conducted, this research deals with the indie rock scene of Fortaleza – a very regionalistic Brazilian metropolis, marked by a local tradition of which rock music is not a representative element – and intends to grasp the roles and usages of this typology in that community. That is, would indie rock music be “popular culture” in Fortaleza? If so, according to which definition? What does “popular culture” mean to the indie rock scene in Fortaleza?

From Musical And Culinary Orders To Orders Of Sounds And Flavours

Darmon, Isabelle

University of Edinburgh, United Kingdom
Isabelle.Darmon[at]ed.ac.uk

In music and cuisine, specific instruments, works, or dishes have been the ‘carriers’ of particular styles, movements, regions, generations and epochs. Weber famously hailed the piano as carrier of the Bourgeois turn of Western music, whilst in Antonin Careme’s system, Béchamel became a key carrier of modern French cuisine. Indeed music and cuisine can be defined as compositional arts (even when sonic matter ceases to be the chief material used by composers as pointed out by G Douglas Barrett), which makes individual sounds and flavours unlikely carriers of their logics. Yet a series of 20th and 21st century artistic, industrial and technological ruptures have led to the conception and design of sounds and flavours, as quasi autonomous units, as ‘forms of reference’ (Lehmann

2011). This paper proposes a mapping of some of the key 20th century movements (musique concrete, electronic music, sound studies, molecular gastronomy, slow food), as well as technological and industrial developments, that shaped sound and flavour into autonomous physical, acoustic, acousmatic, and chemical beings, and even ‘micro-worlds’ of their own (Boehmer 2004, Berenstein 2018, Ulloa 2018). The purpose of such mapping is to sketch out the autonomisation logics at play, and to put forward the analysis of contemporary orderings of sounds and flavours as a cultural sociological task.

RN07_03 | Sociology of Culture: Theory and concepts

Culture Of Peace As a Theoretical And Practical Problem Of The Development Of Modern Society

Akhmedova, Muslimat Gazieva

Finance University affiliated to the Government of the Russian Federation, Russian Federation
muslima11[at]rambler.ru

For thousands of years, human civilization has evolved on the basis of the culture of war. Modern civilization has embarked on the path of increasing, increasingly acute intraspecific struggle for existence. The development of the global market, which is a great hope in solving social and economic problems, expands the possibilities of arms proliferation, including nuclear. The situation is compounded by the fact that weapons are delivered to terrorist groups and organized criminal groups. It follows that the world community must decide on a strategy for the development of a culture of peace. The basic of the concept of a culture of peace should be at the present stage - the struggle for peaceful coexistence of States, against the subordination of some States to others, against the production and development of new types of weapons, for the reduction of weapons, since the manufacture, use, storage and destruction of weapons require the highest costs of energy and matter and are accompanied by the most powerful pollution and destruction of the potential of the environment.

For a New Sociology of Literature: Befriending Sociology and Aesthetics

Vana, Jan

Masaryk University, Czech Republic
jan.vana[at]mail.muni.cz

When analyzing literary fiction, sociologists still tend to the well-accustomed boundaries between the literary and the sociological, thus leaving literature dissected and stripped of its aesthetic qualities. Instead, I focus on the process of meaning-making as it occurs within the interaction between the reader and the novel. In return, it allows me to capture those aspects of understanding of social experience that are usually 'lost in translation' between fictional and sociological genres. My major claims are that, first, when referring to social reality, both sociological and literary texts employ aesthetic function to mediate understanding for the reader. Second, within literary genre, the aesthetic function operates on a much larger scale, which makes the texts especially suitable to communicate the existential and emotional aspects of social reality. Third, to maximize the benefit from the sociological inquiry of literature, we must treat the aesthetic function with due care, that is, we must be particularly sensitive towards the subtlety and ambiguity of meaning mediated by the aesthetic function. The research model I propose for a 'new sociology of literature' adopts the concept of landscape of meaning developed by Isaac Reed in combination with aesthetic structuralism of Czech linguist Jan Mukařovský. This model will be demonstrated through an analysis of the Czech novel *Sestra* (published in English as *City Sister Silver*) by Jáchym Topol.

(Re)viewing Culture and Academic Anxieties

Ridley, Simon

Université Paris Nanterre, France
simon.ridley[at]hotmail.fr

This paper offers a critical examination of academic anxieties and proposes the definition of the concept of "(re)viewing culture". Drawing on a post-Writing Culture perspective, I wish to further Marcus' developments on multi-sited ethnography and go beyond the "three sets of methodological anxieties" that he identified. Indeed, I believe that academics are faced with different layers of anxieties in a context marked by the commodification of everyday life, digital capitalism, and new technologies of information and communication that deeply affect the way we conduct research and construct theory. These anxieties are particularly heightened for young scholars facing precarity and professional uncertainty. The identity of academic disciplines is locked in a reoccurring crisis as the lack of unity makes it difficult for the humanities to fend off attacks from the outside as well as from the inside. This ongoing crisis leads me to review the "canon debates" and the "culture wars" of the 1990s in order to propose a renewed way of defining the humanities. If complex reviews were necessary for the construction of social science, and still are today, they are faced with the increasing challenge of simple viewing. With the rise of alternative media, facts, and realities, E-learning and iWars, we must recognize that we are faced with new forms of

digital anxieties. I would like to further this discussion by questioning the effects of digital culture on academic life and even on ourselves. Paying attention to the way new technologies affect the self means reviewing academic culture itself, and I argue that we need to allow for renewed "technocritical" perspectives of the classical humanist questions to resonate with contemporary marginal groups.

On Clines and Classes, Contradiction and Coherence: reflections on the status of culture

Bailey, G

Manchester Metropolitan University, United Kingdom
g.bailey[at]mmu.ac.uk

Just as genetic science fundamentally undermines the idea of 'races' as discrete bounded populations with shared DNA (while saying nothing about racism), so the study of culture undermines ideas of 'ethnicities', 'communities' or 'peoples' as discrete bounded populations with shared 'cultures'. Following long-term research on 'community cohesion', migrant integration, extremism and counter-extremism, and thinking about extremist groups as subcultures (see also PISOIU 2015), I identify a number of challenges which help us rethink how we describe and analyse human cultural difference. Following Vaisey (2010) I do not argue for culture only as a seamless web, or instead as a cultural toolkit of components that can be put in any combination, but for both at the same time. First, I argue for the transfer of the concepts of clines from genetic science, such that the relationship between an individual and a cultural component is probabilistic, but with odds that change over time and space, forming patterning (see CAULKIN 2001). These clines are potentially infinitely dimensional, as culture is only limited by our imagination. Second, I argue that, like genes, clinal components of culture are 'expressed' in relation to context, and may not express at all. In many circumstances, not only does the cultural component differ, but also the salience of the component. Third, for any individual, interaction, or group, cultural components are 'inherited' separately but interact collectively. It is here that coherence and contradiction appears, potentially creative and destructive, doing the work of creating new cultural forms (see ARCHER 1995).

RN07_04 | Sociology of Culture: Migration, ethnicity and origin

The Enigma of Origin: The Notion of “Leitkultur” (Guiding Culture) and its relation to ideas of “Heimat” (Homeland) in the Current Discourse about Migration in Germany

Ahrens, Jörn

Justus-Liebig-University Giessen, Germany
joern.ahrens[at]sowi.uni-giessen.de

Regarding current migration into Germany, the public discourse is largely characterized by anxieties about the foreignness of refugees. In this context ideas of a German “Leitkultur” (guiding culture) have become relevant to the discourse. Borrowed from political scientist Bassam Tibi, conservative politician Friedrich Merz most influentially introduced this term to the public debate in 2000. Leitkultur, then, expresses the idea of a dominant culture especially with regard to cultural performativity and practices of sociation. After a longer period of absence from the public discourse, the idea of Leitkultur was taken up again by various politicians between 2015 and 2017. The topic reached its climax in April 2017 with the theses on Leitkultur launched by at-that-time German minister of the interior, Thomas de Maizière. In my presentation I will firstly reconstruct the socio-political epistemology of the idea of Leitkultur. Second, and predominantly, I will map out in how far this idea rather successfully serves as an argument for social exclusion in the German debate about (im-)migration. Leitkultur boldly communicates a relation of power between the dominant and prevailing culture at place that seemingly receives its legitimacy from a longstanding origin as Heimat in the particular cultural area in question (in this case: Germany). Whereas any other cultural background migrating into Germany is then required to abandon its former mode of cultural self-understanding. Thus, the idea of Leitkultur does not express a demand for mere integration, but for complete assimilation; and it also expresses massive prejudice against any notion of otherness.

Crossing Ethnic Boundaries: Nonindigenous Undergraduate Students’ Development of Intercultural Sensitivity

Chang, Ju-Hui; Wang, Chien-Lung

Taitung University, Taiwan
s04390[at]gmail.com, wcl2019[at]gmail.com

In Taiwan only 2% of the population of 23 million people is indigenous and belongs to the Austronesian language-speaking groups. By contrast, in Taitung County, 30% of the population of 220,000 people is indigenous. Therefore, developing nonindigenous undergraduate students’ intercultural sensitivity to aid them in appreciating cultural differences from an ethnocentric orientation to a more ethnorelative worldview is crucial in a multicultural society. This study attempted to develop the intercultural sensitivity of nonindigenous undergraduate students majoring in digital media by creating electronic picture books about the culture of the Puyuma tribe in a workshop. The intercultural sensitivity development process of these students was analyzed on the basis of Bennett’s Developmental Model of Intercultural Sensitivity. The study began in January 2017 and ended in October 2017; the methods included participant observation, personal interviews, and works analysis of students’ electronic picture books. The results revealed that the attitudes of the undergraduates could be classified as the stage of minimization of cultural difference; the students assumed that the elements of the Han Chinese cultural worldview were experienced as universal when they created the outline of the picture book in the beginning. After literature review and participation in tribe life, the students developed the attitude of acceptance and adaptation toward cultural differences; that is, they became respectful toward cultural differences, recognized indigenous people’s worldview, and acted in a culturally appropriate manner. Finally, they formed multiple cultural frames of reference to reconstruct their identity and achieved the final stage of integration of cultural differences.

Pomaks At The Junction Of Different Experiences

Kirtıl, Melek

Istanbul University, Turkey
mlkgunes[at]gmail.com

The Muslim and Turkish Pomak population in Balkans was the most urgent problem for the new nation-states that wanted to get rid of heterogeneous identities. Pomaks living in Bulgaria, Greece, Macedonia, and Albania began to migrate to Turkey after the 1877 Ottoman-Russian War because their identities were transformed into a field of conflict through cultural interventions and they were exposed to political and cultural discrimination. Despite the fact that the Pomaks living in Turkey for almost 150 years state that they have not suffered any discrimination in these lands which are the continuation of the Ottoman Empire, Turkey's experience of modernization and nation-state-ization has led to the differentiation of the cultures of the first migratory Pomaks from the cultures of the Pomaks who migrated after the First World War. These two separate Pomak communities feel a sense of belonging on different levels; they claim that they do not resemble each other and have built their cultural integration in Turkish society in various fields of religion, language, family structure, and tradition. This research, which was conducted by qualitative research method in Pomak villages in Kirklareli, which receive intensive Pomak migration from Bulgaria and Greece, focuses on these different Pomak communities, which constitute two main cultural lines. Pomaks, who are objectified in the middle of the debates about who they are, have been positioned as a subject in this study without an attempt to give them an identity. Moreover, they have been the interlocutors of the question of what they feel in a historical and cultural context. In a nutshell, the present study mainly focuses on how cultural coercion has shaped Pomaks' ties of belonging.

Culture Wars in Serbia

Cveticanin, Predrag

University of Nis, Serbia
pcveticanin[at]gmail.com

The notion of "culture war" (Kulturkampf) originated at the end of the XIX century to designate the conflict between the German government and the Roman Catholic Church. The notion was given a wider meaning in the US during the XX century, implying the conflict between those who held conservative world-views and those with liberal world-views, and entered wide circulation with J. D. Hunter's book "Culture Wars: The Struggle to Define America" (1991). Although the main issues which have been debated in the US (and other countries) include abortion, gun politics, values in public education, homosexuality, and censorship, the culture war is in fact, as Hunter rightly states, about power – a struggle to achieve and maintain the power to define reality. In that sense, it is close to the conceptions of symbolic struggles in society – the concept of hegemony (Gramsci, 1948-1951) or the concept of classification struggles (Bourdieu, 1979). The drastic changes that the society in Serbia has been undergoing from the 1990s to this day have been accompanied by intense symbolic struggles – primarily between the members of the

"patriotic" block on the one hand, and the cosmopolitans and anti-war activists on the other. But cultural wars have taken place on three additional "fronts": between highly educated and uneducated groups; between the urban and rural groups, and between the European North and Oriental South of the country. The reports from these symbolic battlefields provide the basis for this presentation (discourses, rhetorical strategies, argumentation). It is based on the data from 75 semi-structured interviews carried out as part of the project "Fields of symbolic contestation in Serbia" and "Struggles on Symbolic Boundaries".

RN07_05 | Sociology of Culture: Cultural consumption and stratification

Cultural Capital and Emerging Culture: The case of meditation, yoga, and vegetarianism in the UK

Gemar, Adam

Durham University, United Kingdom
adam.j.gemar[at]durham.ac.uk

Yoga and meditation have experienced a boom in Western appropriation in recent decades and consistently grow more culturally ubiquitous. Likewise, rates of vegetarianism are quickly rising. However, little scholarly work has been produced around these newer forms upon the cultural landscape. Even less adopts a sociological perspective. This paper seeks to remedy this fact. It aims to advance understandings as to the patterns of consumption regarding newer cultural forms, with yoga, meditation, and vegetarianism as case studies. Proceeding with the UK as the field of study, this paper presents an original national survey. It performs regression analyses with the survey data to accomplish an analysis of interaction with these cultural forms. From the results, this paper asserts that objectified cultural capital is still salient for social distinction of these forms. This paper also suggests criteria by which emerging forms of culture may establish more quickly as high status cultural objects in an age of globalisation.

Canon Formation in a Polarised Cultural Elite - Results from a Social Network Analysis

Kristóf, Luca; Kisfalusi, Dorottya; Vit, Eszter

Hungarian Academy of Sciences, Hungary
kristof.luca[at]tk.mta.hu, kisfalusi.dorottya[at]tk.mta.hu,
vit.eszter[at]gmail.com

Since 2010, the Hungarian cultural field has experienced significant changes. The populist/illiberal governmental elite has been gaining increased influence and power over other elite groups, such as the economic and cultural elite. In the field of culture, the incumbent political elite has aspired to eliminate old cultural structures in order to redistribute cultural positions and resources. The symbolic dimension of this fight is cultural canon formation, which is in the focus of our inquiry. Hungarian cultural elite is deeply polarised. While the positional elite (i.e. leaders of public cultural institutions) is generally supportive of the government; the reputational elite (i.e. the most acknowledged artists and intellectuals) tend to be more critical. Our survey was carried out among the cultural elite (N=458). It combined positional and snowball sampling, which allows us to study the production and distribution of cultural reputation in the elite. According to the votes of our respondents, we compiled the list of the most prominent cultural actors and included them in our sample. We used exponential random graph models to detect the social network structure of the elite, and to show how political polarisation (controlling for other relevant variables such as gender, age, cultural genre, education and public intellectual activity) affects the personal network and the cultural recognition of elite members. Our results show that even in this divided structure, the structural network positions of the reputational elite reveal the stability of contemporary canon, despite the government's attempts at controlling the cultural field.

The Constituents of Audience Affordances: A Cultural Sociological Approach to the Success of Turkish Soap Operas in Croatia

Petric, Mirko; Zdravković, Željka

University of Zadar, Croatia
mpetric[at]unizd.hr, zdravko[at]unizd.hr

The paper discusses one specific instance of the success of Turkey's export of scripted TV content, which has since the early 2000s become second only to that of the USA. "The Balkan craze for Turkish soap operas" has been interpreted in popular accounts as a sign of the audience's recognition of the world represented in the TV products at stake. Likewise, the typical audience for such products has generally been taken to be "women" (viewed as an undifferentiated category). The paper attempts to offer an explanation of the success of Turkish soap operas in Croatia that would go beyond facile popular accounts centred on "cultural proximity", but also beyond a cultural studies-style textual analysis centred on the

"images of women" or "images for women". An empirically based approach to the constituents of audience affordances was designed as an explanatory sequential mixed methods study. First, a two-step cluster analysis of nationally representative data on women's gender equality attitudes was performed. Following that, the resulting typology was used in purposive sampling of interview and focus groups participants. Integration attempted both at the methods as well as the interpretation and reporting levels results in a broader picture of the researched topic, which includes a structural component. This research was carried out within the Croatian Science Foundation funded project on gender modernisation (GENMOD, HRZZ 6010).

Political Power Of The Private: Celebrity Discourse And Deserving Elites

Luthar, Breda

University of Ljubljana, Slovenia
breda.luthar[at]fdv.uni-lj.si

In the popular journalistic discourse the elites are overwhelmingly represented as controversial, corrupt and unjustified in occupying a high position in society, and therefore, the anti-elite discourse and celebrity discourse seem contradictory. Yet, I would like to argue that both discourses contribute to the growing normalization and individualization of inequality and, at the same time, to the populist egalitarian invocation of "the people" that involves the displacement of question of class at the expense of the national mobilization of "proto-national" sentiments, radical egalitarianism and anti-intellectualism. The central concern of this contribution will be the role of celebrity discourse, and the discursive processes of celebrification in the populist mystification of class distinctions. By focusing on the analysis of representation of Melania Trump ("a slovene bride" as she is often lovingly called in local popular media), I will try to explain how representation of femininity in celebrity narratives, which are in themselves narratives about social distinctions and class, necessarily involves "doing" nation. The discourses on nationality, class and gender intersect in stories on Melania Trump, a celebrity, that is at the same time local and ours and global and foreign. Through the humanization of local celebrities (as deserving elites) popular media establish cultural myth of social egalitarianism and culturally constructing the mythological "community of sameness" by displacing the question of class as a key stratifying principle.

RN07_06 | Sociology of Culture: Wine

Wine, Women and Globalization: Borders, Barriers or (Cultural) Belongings?

Almila, Anna-Mari

University of the Arts London, United Kingdom
a.almila[at]fashion.arts.ac.uk

Globalization processes often operate in ways that are highly gendered, and many of the consequences of these processes are unpredictable and unintended. One interesting consequence of the increasing interconnectedness of wine worlds across the planet has been the rise of women inside the wine industry. When wine-making operated as a solely or primarily agricultural, traditional, and earth-bound practice, it remained highly bound by localized patriarchal structures. While many such structures (as well as new forms of gender discrimination) abound, yet various changes in the processes of wine production, distribution, mediation and consumption have created new opportunities for women to operate in wine worlds and cultures. In this paper, I draw together different factors to do with wine and gender, which today are thoroughly bound up with globalization processes. How do women drink wine or are expected, allowed, or not allowed to drink it? How are women supposed to taste wine and how do they choose wines? How is wine marketed to women? And how does gender operate in wine mediation, such as in the case of the sommelier, which as a professional category is highly globalized and exists across locations and national contexts? I argue that many female wine experiences are both enabled in the first place and also shaped by forms of mobility: geographical, social and cultural. As cosmopolitan women travel, move abroad, and claim new spaces and experiences in globalized wine worlds, they cross boundaries, counter barriers, and, eventually, create forms of belonging.

Towards A Cultural Sociology of the Global Grapevine: Understanding what Wine Labels and Globalization Reveal About Each Other

Inglis, David

University of Helsinki, Finland
David.Inglis[at]helsinki.fi

The contemporary wine industry is both a multi-billion Dollar enterprise, is strongly globalized in multiple ways, and is thoroughly intertwined with much wider trans-national social, economic, political, legal and cultural processes. Geographers, anthropologists and other social scientists are very well aware of this. Yet wine attracts relatively little attention from sociologists in general and cultural sociologists in particular. This paper contributes to the creation of a broader cultural

sociological approach to the study of globalized wine production, distribution and consumption by focusing, in the manner suggested by Georg Simmel, on an apparently trivial but acutely deeply significant phenomenon: the wine label. Wine labels do not only express various aspects of globalization, they also variously picture, dramatize, disguise and help bring into being manifold aspects of a complex cultural economy of liquid pleasures. Examples of wine labels from different parts of the world are analysed from a cultural sociological perspective, so as to bring out both their more and - especially - less obvious capacities, affordances and ramifications within globalized and trans-national networks and flows. The ambiguities and contradictions of constructions of oenological locality and globality are highlighted. So are attempts to create cosmopolitan profiles while accentuating the hyper-localised and autochthonous nature of one's wine offerings. (Sociologically-inflected tasting notes may be provided, and anthropologically-sensitive suggestions for food pairings offered.)

Symbolic and Social Boundaries in the Field of Natural Wine in Italy

de Benedittis, Mario

Università degli Studi di Milano, Italy
mario.debenedittis[at]unimi.it

The paper i'm proposing results from a research on the wine field in Italy, and try to reconstruct the subfield of "natural wines" in Italy, combining a Bourdieusian approach and practice theory. The research was conducted (and still is) with a plurality of methods (In-depth interviews and life stories, surveys, ethnographies) moving from a posture of enactive ethnography, as - during the years - a Sommelier AIS, a Committee member for the "Gambero rosso" wine guide 2018 (therefore in 2017), a wine selector for a national distribution, a member in a Whatsapp group composed of journalists, producers, bloggers, wine enthusiasts who organize at least one tasting per week. First of all, the paper identifies the field actors and boundaries: winegrowers, associations, journalists, distributors, specialized wine fairs, and questioning what is the position of the subfield of natural wine in the whole wine field in Italy. Then, it tries to reconstruct not only the various positions in the field, but also the positions-taking: how is "naturalness" defined by discourses and in production practices? To which other practices naturalness is opposed? Which kind of producers declare themselves natural? Are there trajectories that are common to producers who declare themselves natural and, by homology, distributors and trade fair organizers? What is the capital composition of the actors of this field? It seems to require a high rate of cultural capital and less consistent life trajectories than the "conventional" ones.

RN07_07a | Sociology of Culture: Cultural production

Learning to Do Business: How Second-Generation Chinese Capitalists are Reproduced through Cultural Production

Mei, Xiao

Chinese Academy of Social Sciences, China, People's Republic of
meixiao[at]cass.org.cn

An 'enclave model' for family business succession is gaining popularity in China. It allows the second-generation enterprisers to on the one hand start their own business, thus engaging in cultural production that distinguishes them from their parents, and on the other hand succeeding their parents' advantageous social positions. The dynamic process of cultural production thus has distinctive structural consequences. Moreover, cultural production contains not solo actions carried out by the second generation, but is deeply embedded in intergenerational relationships, as both generations constantly negotiate conflicts and make compromises during the succession of family business. This paper shows how the cultural production carried out by second-generation enterprisers reveals the agency of their cultural practices, and at the same time contributing to the reproduction of a capitalist class in the making. Cultural production is not the monopoly of the underprivileged class, but key to the social reproduction of economic elites in China.

Fielding Cultural Resistance: Understanding the Making of Kurdish Publishing in Turkey

Mulayim, Gokhan

Boston University, United States of America
gokhan[at]bu.edu

This paper aims to explore the making of Kurdish publishing in Turkey by asking how that field emerged and has been developed under the conditions inimical to the use and reproduction of Kurdish literary language. My exploratory journey into that terrain focuses on both the diachronic development of the conditions of possibilities underlying its emergence and the synchronic dynamics characterizing its conditions of existence. Drawing on both the secondary data collected through archival research and the qualitative data collected through ethnographic one, I argue that Kurdish publishing is situated not simply at the intersection of culture and economy, but rather at the intersection of culture and politics as a form of cultural resistance. Rather than taking this form of resistance as a monolithic one, I use Bourdieu's conception of the field to frame the complexity of the dynamics constituting that form of resistance, and I define two

moments characterizing the making of that field: struggle and competition. While the former moment denotes the relations of antagonism between the Kurdish publishers and the state, the market imperative and the predominant public perceptions, the latter one stands for the relations of agonism among the publishers making that field.

The Avant-garde Meets the People. How Cultural Hub WORM has become an Experimental Community Center

Michael, Janna; Bisschop Boele, Evert

Erasmus University Rotterdam, Netherlands, The
Michael[at]eshcc.eur.nl, e.h.bisschop.boele[at]pl.hanze.nl

Quickly changing and gentrifying neighborhoods such as Rotterdam's neighborhood Cool-Zuid and its associated ventures such as music venues, cafes and pubs can pose a serious challenges for the Dutch ambition to be an inclusive society. WORM, a center for Rotterdam's music and performing arts, is attempting to redefine its role in the neighborhood and explore what meaning it can have for the diverse inner city area. To understand how the role of the cultural institution is changing, we study three of WORM's initiatives to actively engage with the neighborhood: an audio book of a local barber, monthly dinners with elderly people that got extended with other activities, and series of light graffiti workshops for children. These projects are rather diverse in their target groups as well as the involved artists. However, they tell us a lot about the variety of roles artists can take up in engaging with local communities, how connections with the neighborhood are being formed and potentially sustained. Specifically, we are interested in dialogical relations and co-creation between artists and neighborhood residents and explore the possibilities thereof in a variety of project-constellations.

Narrating Humiliation in Entertaining Way: The Convergence of Hedonism and Nationalism in Chinese Television Dramas

Huang, Zhuojun

Hong Kong University of Science and Technology, Hong Kong S.A.R. (China)
zhuangbj[at]connect.ust.hk

Television dramas in China have long served ideological cultivation, as cultural production is under close surveillance by the state. The dramas representing the Anti-Japanese Fascist War (1937-1945) and Civil War (1945-1949) in Chinese modern history, which are called “revolutionary dramas”, are the major symbolic resources for the ruling party to claim legitimacy and galvanize nationalism, therefore set with fixed narratives of TV and film representations to guarantee that the marketized production keeps consistent with the orthodox ideology. However, some subgenres emerge recently with innovative representations that transplant typical characteristics of other genres (e.g. crime, detective and Chinese martial arts) into the shell of nationalist narratives, as a result, entail online and offline fermented dispute about the narrating of history. Through analysis of the most discussed drama texts, the reception of the audience and the cultural policies, this study argues that the unorthodox representations are the unintended consequence of the state’s meticulous control of cultural production which constantly squeezes out a number of popular genres, while promotes the revolutionary one. The pooled-together elements of popular genres located in the revolutionary background serve as the entertaining stimulus, substituting nationalism originally signified by the genre. While some audiences insist on nationalism as the righteous way to narrate history, others anchor their sense of identities on divergent discourses mingled in the new representations, where there is ideological rupture inside. Consequently, the narrating of history is double shadowed by the officially encouraged nationalism and hedonism voiced out by the caged market.

RN07_07b | Sociology of Culture: Cosmopolitanism and heritage

'Cosmopolitan Memory' Revisited: Examining the Boundaries of the Utilization of Memory in Political Rhetoric

Adams, Tracy

Hebrew University of Jerusalem, Israel
tracy.adams625[at]gmail.com

Is the memory of the Holocaust articulated as an occurrence within an ongoing course of events, or is it formulated as a single, isolated memory? This project attempts to answer this question as part of the overarching query of the boundaries of memories and the utilization of past events in political rhetoric. Qualitatively analyzing ongoing, everyday, non-commemorative political speeches of heads of state in Israel, Germany, and the United States over seven decades, this project not only examines the utilization of the memory over time and across nations, but also the coupling of the memory of the Holocaust, its relationship and relativity (entanglement) with other national and foreign past events to sociologically unpack Levy and Sznajder’s (2002) concept of ‘cosmopolitan memory’. This project shows that although limited by natural and cultural borders, not to mention having to confront the danger of being reduced to a symbolic and iconic ‘essence’ or a global icon, this memory has managed to remain at the forefront of political discourse, not only by means of analogy and metaphor but by embodying the very values that guide and govern each of the chosen countries in their everyday communications. Thus, returning to Levy and Sznajder and their claim of universality, this research shows that the nuanced utilization of the memory of the Holocaust transcends that of a global and homogenous mnemonic trope and instead enhances the prismatic and heterogeneous national-oriented understanding and perception of the past.

'Citizen of Nowhere': Cosmopolitan Belonging and the Accusation of Rootlessness

Skovgaard-Smith, Irene

Anglia Ruskin University, United Kingdom
irene.smith[at]anglia.ac.uk

The sociology of cultural cosmopolitanism has long emphasised that cosmopolitan and national identities are not mutually exclusive. Cosmopolitanism is 'rooted' as Appiah (1997) argued in his attempt to answer the charge against cosmopolitans as parasitic and rootless. However, this emphasis on countering the accusation of rootlessness means that exploration of the discourse of cosmopolitans as deviant has been neglected. Historically the 'rootless cosmopolitan' label was used to derogate those supposedly lacking national allegiance and attachment to a particular land, for instance in the totalitarianisms of Nazi Germany, Fascist Italy and Stalinism. In the wake of the Brexit vote in 2016, the British prime minister Theresa May drew on a similar discourse as she proclaimed: 'If you believe you're a citizen of the world, you're a citizen of nowhere'. The cultural conservatism of political commentator David Goodhart similarly brands so-called 'anywheres' as lacking rootedness, community and solidarity. It is this contemporary mobilisation of the 'rootless cosmopolitan' discourse and its counter reactions that I explore in this paper. May's 'citizen of nowhere' statement for instance caused widespread controversy and has since inspired cultural and political debate, theatre productions, blogs, twitter hashtags (#citizenofnowhere), badges, t-shirts by independent artists etc. The aim of the paper is to contribute to the sociology of cultural cosmopolitanism by exploring the 'rootless cosmopolitan' discourse and the role it plays in current identity politics and in the construction of cosmopolitan forms of belonging.

Re-defining Heritage and Making Sense of Brexit in the European City of Culture

Popov, Anton

Aston University, United Kingdom
a.popov[at]aston.ac.uk

In 2017, Coventry has won its bid for the European City of Culture 2021. This victory has ultimately raised a profile of the city in the UK and internationally. It also came at the time when the very meanings of Europe (as a political and cultural project) and Britain were contested. In the 2016 EU membership referendum, people of Coventry voted 'leave'. What does it mean to be a European city of culture in the context of Brexit? The question of cultural identity is ultimately about how the local history and cultural heritage are re-defined to project a vision of the city as a community in the future. While the bid's campaign acknowledging the city's industrial heritage, as a cradle of British manufacturing, and its post-WWII history of being symbol of peace and reconciliation in Europe, it puts forward the image of Coventry as a culturally vibrant and

divers place. Set against the background of the UK cultural policy, the paper draws on ethnographic research in the city's two culture and heritage institutions representing an established mainstream museum and an innovative performance theatre. In particular, the paper focuses on how by embedding migration and cultural diversity into representation of Coventry's identity, heritage practitioners in those institutions make sense of complex social, cultural, economic and political processes that led to support of Brexit in the city and nationally. The paper is based on research conducted as part of the Horizon 2020 Cultural Heritage and Identity of Europe's Future (CHIEF) project.

Practices of Cosmopolitanism and new Forms of Political Participation: Individualization and Belonging

Camozzi, Ilenya; Leccardi, Carmen

University of Milano-Bicocca, Italy
ilenya.camozzi[at]unimib.it, carmen.leccardi[at]unimib.it

Belonging within globalized societies is a key issue of sociological debate. Scholars deal with both the effect of the weakness of Nation-States on citizens' sense of belonging, and the impacts of cultural phenomena – for instance, the increase of consumption, the spread of ethno-diversity, and the expansion of ICTs – on social actors' identities. Scholars are also interested in belonging with respect to the strength of social ties in times of individualized biographies and everyday practices. Research on these topics, however, commonly assumes an inverse relationship between globalization and individualization processes on the one hand, and the strength of social ties on the other. Moving towards a non-dualistic perspective, our paper suggests that the relationship between individualization and social ties is not necessarily conflictual. On the contrary, we contend that they are complementary. Our hypothesis is informed by research conceptualising practices of cosmopolitanism and political participation in recent social movements as new forms of belonging in contemporary societies. In our view, cosmopolitanism instead of being considered either an individual inclination to difference or a source of belonging, can represent both. Analogously, political participation can be conceptualised as an adoption of new tools and repertoires for political action based on an individualistic approach, too. Thus, we contend that practices of cosmopolitanism and new practices of political participation can be also understood simultaneously as new forms of individualism and belonging. Finally, we will argue that these two kinds of practices – cosmopolitanism and contemporary participation in social movements - can be considered two forms of subjectification within which belonging and individualization coexist.

RN07_08 | Sociology of Culture: Theory

Affect-Mood-Meaning: Theoretical Reflections on the Constitution and Analysis of Culture in the 21st Century

Schellewald, Andreas

University of Edinburgh, United Kingdom
andreas[at]schellewald.com

The paper will engage in a critical reflection on how the field of cultural sociology today understands its central term of discussion. (1) In a first step, present developments of an individualized, mediatized, digitized, and aestheticized society will be outlined. Confronted with these changes in the spatio-temporal organization of contemporary social life and structure, the ways classical conceptualizations of identity and belonging are rethought within cultural sociology and beyond will be reconstructed. Herein the paper takes a particular focus on works that return their attention to affective, emotional, material, and pragmatic dimensions of social and cultural life. (2) In a second step, having worked through and synthesized current debates, the paper is then going to develop a simple and broadly-applicable methodology (Affect-Mood-Meaning) along which these dimensions can more efficiently be used to adjust classical understandings of culture for contemporary societies. Understanding classical meaning-structures such as roles, tastes, or expectations as constituted in signifying and narrative practices, in symbolic representations, the proposed methodology is going to add a core dimension of embodied experiences such as feelings and emotions to this constitution. From a humanistic and phenomenological perspective, cultural moods are outlined as reoccurring patterns of being affected by one's surrounding socio-material environment. Herein mediating between reason and emotion, moods create a feeling of aliveness and constitute a sense of place. Henceforth setting people's affective engagements as an analytical starting point, the paper closes with reflections on the theoretical, analytical, and political consequences for constituting culture as generative, dynamic, and creative process.

Beyond Diversity: A Critical View from and on the Sociology of Culture

Gaupp, Lisa

Leuphana University of Lueneburg, Germany
gaupp[at]leuphana.de

Diversity – understood as multiple social belongings – is now one of the hot topics in sociology. Intersectional approaches repeatedly criticize discrimination processes disregarding the overlapping social identities of individuals. Other approaches with more deconstructed notions of diversity, focusing on processes of interweaving and interconnectedness, have given

a further boost to concepts such as hybridity, cosmopolitanism or transculturality. Still other important approaches in the sociology of culture explore socially and habitually incorporated as well as spatially, aesthetically or globally constituted practices of diversity. The paper critically outlines these different concepts of diversity, their underlying assumptions and their epistemological foundations in the sociology of culture. In a second part, drawing on empirical studies in the fields of music and the performing arts, the economic and organizational power relations involved in the production of cultural structures and processes of diversity are discussed. While global art worlds are presented as borderless and diversity is almost considered a value in itself, at the same time these art worlds are criticized for being “too international”, for standardizing an international canon that largely excludes, for example, “refugee” artists. So is diversity a “white word”? Thus, this paper explores the origins of diversity in art worlds from different sociological perspectives, asking what traditions, assumptions and habits have emerged from the concept of diversity and, in turn, what impact they may have had on the concept itself.

Against Culture: Sharing, Sameness And Belonging

Van Loon, Joost

Catholic University of Eichstätt-Ingolstadt, Germany
joost.vanloon[at]ku.de

How do sociologists understand collectives? From their earliest inceptions, sociological reflections have associated the formation of collectivities with the sharing of values and beliefs, for which the term culture often functions as a short cut. Anthropologists have subsequently extended this with the notion of “shared practices”, as these give more a concrete, empirical sense of actual manifestations of the collective life of particular groupings of human beings (also referred to as communities). The emphasis on shared is extremely important here, but a fundamental question can be raised: does sharing require c.q. engender sameness? This is furthermore important because the move from sharing to sameness is capitalized by a third concept: belonging. This paper offers two theoretical interventions in the Sociology of Culture: Firstly, we must continue to conceptually differentiate between sharing, sameness and belonging and resist the temptation to amalgamate then into one by means of the concept of “culture”. By exposing this move as a false abstraction, a plea will be made to keep our conception of culture empirical and thus practice-based. Secondly, the differentiation between sharing, sameness and belonging enables us to avoid the idealist pitfall of conflating “collectivities” to mental projections of desires and beliefs. Following Tarde, Simmel and ANT, it can be shown that desires and beliefs defy the dualism between the mental and the material, and instead shift our focus to practices of objectivation in terms of experiences and prehensions that form the basis of sharing, that may or may not engender sameness but are certainly not confined to an assumed primordial necessity of belonging.

Theorising Aesthetic Value Judgements: In the Moment and Over Time

Stewart, Simon

University of Portsmouth, United Kingdom
simon.stewart[at]port.ac.uk

In this paper, I theorise aesthetic value judgements at micro and macro levels and consider ways in which these judgements can be analysed sociologically. At a micro level, value-judgements are dependent on a number of contextual factors that extend from the interaction between habitus and field to the layout of the room and the presence of other people. Studying the interaction between individuals and cultural objects 'in the moment' throws up all kinds of problems. For a start, not all value judgements are immediately apparent even to the individuals making them. Furthermore, if we ask individuals about their value judgements, we rely on their retrospective accounts. If we study aesthetic value judgements at a macro level, we are confronted with something huge and seemingly intangible: a supra-critical voice that extends its reach over time as tastes are transferred from one generation to another. This supra-individual voice is heterogeneous and full of contradictions. It is cumulative and derives from all those who make value judgements in the field of culture. Inevitably, some voices are louder than others and macro-level judgements are consolidated by institutions, by awards and prizes, but they are also contested and what was once prized fades into obscurity. Just as in Simmel's view, society is the sum total of interactions, I argue that this supra-individual voice is nothing but the sum total of all micro-level judgements but it seems to take on a life of its own.

RN07_09a | Sociology of Culture: Appropriation and othering

Appropriating 'Balkans': Dubious Nostalgia for Yugoslavia in Independent Slovenia

Stankovic, Peter

University of Ljubljana, Slovenia
peter.stankovic[at]fdv.uni-lj.si

Slovenia has in 1991 proclaimed independence from the former multi-ethnic Yugoslavia. When several other republics followed the suit, a bloody civil war broke out. One of the most important reasons for the destructive breakup of the country was growing influence of nationalisms. It should be pointed out, however, that there were also several social groups in the former Yugoslavia, which have actively opposed the growth of nationalisms. One of these was the culture of Yu-rock music (Yugoslavian rock), which has with its universal allegiances helped to preserve at least a degree of sane distance from the

feverish outbursts of nationalisms among the significant part of the country's youth. The case of Slovenian nostalgic 'Balkan-scene' from the 1990s and early 2000s, however, shows that various appropriations of Yu-rock music and culture did not necessarily have simple positive political effects. It is true that listening to the Yu-rock music and appropriation of what was at the time perceived as typically 'Balkan' life-style by large segments of the Slovenian youth represented an important symbolic challenge to the official Slovenian nationalist discourse, but this opposition did little to abolish the stereotyped understanding of the 'Balkans' as such. Just as in the official discourse, there was little recognition among the nostalgic Slovenian youth that 'Balkans' is actually comprised of rather different ethnicities, cultures, histories, religions, folkways etc., which means that their enthusiastic appropriation of 'Balkans' only reproduced the dominant Slovenian understanding of peoples from the other former Yugoslavian republics as complete Other.

Different Concepts Of Culture – Different Barriers To Inclusion

Marmer, Elina; Sylla, Cornelia; Seukwa, Louis Henri

University Of Applied Sciences Hamburg (HAW), Germany
elina.marmer[at]haw-hamburg.de, cornelia.sylla[at]haw-hamburg.de, louishenri.seukwa[at]haw-hamburg.de

This paper presents results from a thorough policy and literature review within the international EU-project "Cultural heritage and identity of Europe's future (CHIEF)". It was conducted in nine different countries to identify national and international concepts of "culture", "cultural heritage", "cultural identity", "cultural literacy", and cultural education in order to facilitate more inclusive notions of European cultural heritage as a site of production, translation and exchange of heterogeneous cultural knowledge. Here, we will focus on the German case study but use the other national case studies as confrontational material for the discussion. German policy papers as well as academic literature on cultural education are using three different basic concepts of culture: 1. in the sense of aesthetic production and consumption, 2. as a set of shared values and practices, and 3. as commemoration of the specific German past. Based on these dominant discourses we will discuss how differences in cultural concepts shape the lines of inclusion. While the first concept leads to educational attempts that generally aim towards participation in high and mass culture, the second has a strong normative aspect, which can lead to exclusion. The third however focuses on certain aspects of history while leaving out others, like colonialism, which could be seen as equally significant. By failing to reflect on this historical legacy, cultural knowledge associated with colonialism is effectively reproduced, which contributes to manifestation of structural racism and discourages participation of those, whose history is not considered.

Cultural invasion or cultural engagement? An investigation of the Confucius Institute (CI) in British universities

Cai, Liexu

School of Education, University of Glasgow, United Kingdom
liexucai[at]gmail.com

The rapid development of the Chinese economy requires the Chinese government actively to engage with others as the benevolent stakeholder on the world stage. Similar to the purposes of the British Council, the Confucius Institute (CI) was established for Chinese language learning and cultural exchange overseas in 2004. However, the high extensibility, intensity and velocity of CIs over the last decade (Gil, 2017), as well as unique joint ventures with local universities were viewed with some suspicion in liberal western narratives. By contrast, if there are any peripheral voices from the CI itself, they are not heard. In this sense, the critical intercultural communication approach by Nakayama and Halualani (2010) was applied as the conceptual framework for my study, which takes the macro context of power asymmetries as well as cultural, ideological and political differences along with the micro context in CIs into consideration. In doing so, the study attempts to address the following questions: 1) What do the CIs and Chinese staff endeavour to do in order to establish the visibility and search for recognition in Britain? 2) To what extent do power differences shape the cultural interaction forms of CIs? 3) Are CIs successfully making an impact on British society? If so, in which direction? It is worth highlighting that although CIs aim to search for recognition and cultural communication in the Western context, the power asymmetries and the internal limitations lead to a more conservative role, which could achieve limited impact in British society.

How Visual Messages Can Show An Injustice Against The Other

Jarecka, Urszula

IFIS PAN, Poland
ujarecka[at]ifispan.waw.pl

This paper is devoted to analysis of chosen barriers in social life, and protests against the cases of injustice against "the strangers" manifested in the social sphere. It means analysis of murals, sticker art, photographs used as posters, and prepared by the well-known artists and anonymous performers. Emanuel Levinas' concept of the Other and moral responsibility in the interpersonal and social relationships could be employed here to interpret some context of visual messages in public space, based on photography and the other images. The first part of the paper focused on the visible and invisible barriers between two worlds, legally and politically approved, though, not always easily identified. Visible barriers, like that on the state borders or at the airport, are easy accessible, and visualization can say a lot about the official understanding of a given border. However, some borders and

invisible barriers excluding the Other from our sterile world couldn't be portrayed directly and understood without any comment. A story behind the picture could add new factors to understand the crisis of humanity in a given case. Chosen examples will be discussed here. The second part of paper is focused on the usage of photography and other images to show the injustice in different cases concerning "strangers" (including immigrants). The research material is collected from the existing visual data (gathered to show some the media background of analyzed cases), and from my own photographs taken during the last two years in Greece, Portugal, Hungary, and Poland.

RN07_09b | Sociology of Culture: Media and digitalization

Digital Identity and Self-presentation on the Internet: A Case Study of the Dark Fetish Network

Pejković, Kristina

University of Novi Sad, Serbia
pejkovick[at]yahoo.com

This paper presents a case study of the social networking website Dark Fetish Network through the approach of internet ethnography, and that is realized through the Gofman's theory of social dramaturgy. The Dark Fetish Network is a specific phenomenon because users of this network have "dark" fetishes and fantasies that include criminogenic actions such as murder, cannibalism, and so on, and it exists on Google, the legal part of the Internet. The vital question of this paper is how the registered users at Dark Fetish Network behave and communicate in the online sphere on this platform. The basic hypothesis of this work is that Dark Fetish Network users point out certain information in the foreground, that points to their fetish or fantasy, and in that way, they play "desired" roles. That means that they manage the impressions of other users (their audience) by highlighting information about themselves that will attract users with similar fetishes or at least compatible (for example, sadism and masochism). This work is based on a biennial ethnographic analysis of the users' profiles, textual and audiovisual content that is shared by them and the ways in which they are grouped.

The Role of New Media in the Transmission of Culture

Lapointe, Marie-Claude; Luckerhoff, Jason; Prévost, Anne-Sophie

Université du Québec à Trois-Rivières, Canada
marie-claude.lapointe[at]uqtr.ca, jason.luckerhoff[at]uqtr.ca,
anne-sophie.prevost[at]uqtr.ca

According to many authors (e.g. Donnat, 2004), culture is initially transmitted or influenced by family, friends and teachers. In addition, there are sources of influence other than family and school, such as media and the Internet (Bellavance, Valence and Ratté, 2004; Dortier, 2002). Varied cultural content, which may be different from what individuals have been exposed to in their immediate family or school sphere, coexist in the same environment. Increasingly trendy, young people have the opportunity to be introduced to a variety of cultural genres. Our attention is focused here on agents of socialization: Are they always the same? Do they play the same role? How do young people perceive the influence of social media and celebrities on their cultural choices, tastes and consumption? We conducted 52 qualitative interviews with young Quebecers on different themes (travel, reading, music, movies, television series, social networks, video games and food). We then submitted a summary of the results to thirty young people in three group interviews. The results show the ever-present influence of family, school, life partners and friends. They also highlight the influence that one cultural practice can have on another, and that social networks are a means by which young people are influenced by people they know, and also by influencers and algorithms. These influences can be unidirectional, bidirectional, intergenerational or trans-generational and they are part of a trajectory.

Communicating European culture: Cultural value orientation and media usage in Europe

Kristensen, Nete Nørgaard; Verboord, Marc

Erasmus University Rotterdam, Netherlands, The
neten[at]hum.ku.dk, verboord[at]eshcc.eur.nl

Given the current European political climate, we argue that it is an important question how Europeans view their cultural heritage and, more broadly, cultural value. This paper maps these patterns, and examines how perceptions are related to their media usage. Drawing on data from the Eurobarometer in October 2017, we examine which cultural value orientations are most prevalent at the moment in European Union countries, and how these are related to using traditional and online media, trust in journalists and other institutional actors, and the media system in which users find their news. The data contain information on 28 EU countries and are analyzed using multilevel analysis. From the empirical results we can distinguish three distinct types of cultural value orientation among Europeans: valuing cultural heritage, valuing cultural exchange, and skepticism towards European culture. At the individual level, all types of media usage positively influence the first two orientations. Trust in journalists and other experts

also leads to more attributed value, and it negatively influences skepticism. At the country level, results are somewhat counter-intuitive: larger shares of public broadcasters and print media does not foster valuing heritage or exchange. Larger social inequalities in a country (Gini index) are associated with more value and less skepticism. As the paper aims to contribute new knowledge to the study of Europeans' cultural value orientations by incorporating the media context, it draws on three strands of research – cultural sociology, cross-national media audience research, and journalism studies.

Digitalization Practices and Their Effect on Nationalization and Transnationalization in National Museums – a Theoretical Framework and an Outline of a Research Project

Spurina, Maija

Latvian Academy of Culture, Latvia
maija.spurina[at]lka.edu.lv

Advancement of digital technologies and connective media provides an opportunity to get rid of institutional, disciplinary, and also national boundaries. This connectivity potentially might result in identity narratives that challenge conventional national frameworks and broaden the range of imaginable. Yet, how this potentiality is realized is an empirical question that can be answered only through a close look at digitalization as it is practiced by institutions of culture, such as museums. The paper provides an overview of the relevant theoretical and empirical literature on digitalization and transnationalization of collective memory and outlines a comparative empirical research project of digitalization practices museums. It is a presentation of the results of the first stage of a three-year long research project "Digitalization Practices and their Effect on Nationalization and Transnationalization in National Museums" at the Latvian Academy of Culture, funded by the European Regional Development Fund. The purpose of the project is to compare digitalization practices in three national museums and to address two current issues in cultural sociology of memory: first, how digitalization affects the social structure and practices of memory, and second, how transnational memory frameworks are formed and how they interrelate with until now prevalent national frameworks.

RN07_10a | Sociology of Culture: Morality and struggle

The Barriers Of Young People's Moral Socialization

Kirilina, Tatiana

State Educational Institution of Higher Education Moscow Region «University of Technology», Korolev, Russian Federation, Russian Federation
tykirilina[at]gmail.com

The collapse of universal morality, universal values and norms; chronic anomie, focus on new, often opposites to existing forms of knowledge, behaviour, aesthetic self-expression in the society are the distinctive features of modern society. Moral socialization is a process of moral norms and principles adoption, moral categories and society values internalization by the individual. The study of moral socialization problems argues that the moral socialization realization involves overcoming certain obstacles to this process that we identified as barriers to moral socialization. They differ, however, in the level at which distributed in space: at the global, national or at the level of youth as a social group. The modern state of culture is characterized by the collapse of the universal "moral arch", which values and norms are gradually losing imperative and validity, becoming the object of reflexive awareness and an individual choice. New barriers to young people moral socialization at the state level create the following factors: refusal of the purposeful formation and maintenance of human values; the absence of universally accepted social and cultural, including moral, criteria, on the basis of which it would be possible to assess the completeness of the process of young people socialization. Barriers of young people moral socialization at the level of social groups are: the transition, the propensity of young people to unnecessary risk; the infantilization of young people, undermining the ethics of responsibility. Youth Moral socialization cannot be managed by itself, this process requires the active and purposeful activities of the various actors (family, school, University, media, etc.).

Icons of Moral Disturbance

McCormick, Lisa

University of Edinburgh, United Kingdom
lisa.mccormick[at]ed.ac.uk

In my previous research, I explained how international music competitions could become public forums where civil competence could be displayed, representations of civil relations could be broadcast, and an expansion of the public could be imagined. This potential, while important, is only rarely realised; competitions produce controversies with much more regularity. This paper seeks to understand the causes and consequences of chronic moral upset in the music world to produce general insights that will broaden and strengthen the

cultural theory of scandal. My analytic framework features a typology accounting for scandals of varying magnitudes. I also consider their effects. By examining a case of an iconic music scandal, I reveal the potential hazards of re-enchantment and the fallout from symbolic condensation. The upshot of the analysis is a critical challenge to cultural sociology to attend to situations of moral ambiguity and the dark side of iconization, not just to enrich our inquiry, but because it is a matter of increasing urgency.

Conceptualising Social Types and Figures: From Social Forms to Classificatory Struggles

le Grand, Elias

Stockholm University, Sweden
elias.legrand[at]buv.su.se

The analysis of social types, such as the stranger, the marginal man and the folk devil, has a long, significant history in sociology and related fields. Although the social type concept currently enjoys a rather marginal status, in recent years the related concept of figure has been increasingly deployed in research. Extending research on figures and the sociology of moralisation as well as Bourdieu's work on classification, this article draws on a case study of the hipster type to advocate a critical approach to the study of social types in which they are conceived as social identities tied to classificatory struggles over meaning, value, recognition and resources between differentially positioned social categories or groups. This argument is developed through a critical reading of studies on social types and figures, tracing the development of research from the classic work of Simmel, Benjamin and the Chicago School, via post World War studies by Schütz, Klapp and scholars in the moral panic tradition, to contemporary analyses of figures in cultural and feminist studies as well as in urban anthropology.

The Only True Philosophers: Performances and Boundary-Work of Unofficial Philosophers in Communist Czechoslovakia

Zelinsky, Dominik

University of Edinburgh, United Kingdom
dominik.zelinsky[at]ed.ac.uk

This paper focuses on the case of ‘unofficial philosophy seminars’ in communist Czechoslovakia. Unofficial seminars were clandestine enterprises in which intellectuals, marginalised from official academic life due to their unwillingness to accept the dominant Marxist agenda, secretly studied and taught philosophy, humanities, and social sciences. In 1979, they established a connection with philosophy staff at Oxford University, which began supporting the Czechoslovak dissidents, and organised trips of dozens of world-class academics to Prague, Brno, and Bratislava – among them Jurgen Habermas, Jacques Derrida, or Paul Ricoeur. On the basis of interviews, research in the archives of the secret police, and textual analysis of samizdat publications, this paper uncovers the processes of performative boundary-work by which they assumed the particular epistemological and symbolic position of ‘true’ philosophy against polluted official production. Challenging the existing scholarship on Eastern European dissidents, I argue that the ‘truth’, based on perceived existential authenticity of its producers, was not inherent to the dissent but a constructed, historically conditioned epistemological position, which provided both a meaningful framework for the Prague philosophers, motivating their struggle, and effective symbolic for communication with supportive parties such as Oxford University.

RN07_10b | Sociology of Culture: Events and identity

Boundaries by Design: Design Careers and Navigating Multiple Fields

Braden, Laura E.

Erasmus University Rotterdam, Netherlands, The
braden[at]eshcc.eur.nl

Design has evolved from a perfunctory business activity to an essential competitive advantage in today’s markets. Having paved new aesthetic standards for the 21st-century, designers are at the intersection of art, business, social engagement, and science and technology. Yet, multidisciplinary intersections typical of design practice pose difficult symbolic and professional contradictions as professional fields offer different value measurements and rewards. Consequently, careers that intersect fields face greater challenges to long-term economic and status achievements. Given post-recession demands on creative workers, interdisciplinary approaches are increasingly stressed—yet little is known of the effect on these

workers. Studying designers can offer broad insights into creative work and shifting professional and cultural values. This research seeks to understand how design professionals make sense of and navigate the increasingly fluid boundaries between overlapping fields and what consequences this fluidity has for design careers. I examine the careers of 1,535 graduates from Design Academy Eindhoven (NL) from 1966 to 2017. Using sequence analysis, I analyze the general career patterns taken by these designers. Results indicate designers are adapt at “boundary-spanning,” allowing them to jump professional fields and increased professional options result in longer employment periods. The research findings specifically responds to recent calls to examine how multiple, interacting boundaries shape professional identities (Pachucki et al. 2007), how creative workers manage ambiguity in developing artistic identities (Lingo and Tepper 2013), and how legitimating aesthetic ideologies disseminate and achieve consensus (Ridgeway et al. 2006, Baumann 2007).

Community, Difference and Symbolic Boundaries: The Case of a Moors and Christians Festivity

Ribeiro, Rita; Araújo, Emília Rodrigues

CECS - University of Minho, Portugal
rmgr[at]ics.uminho.pt, era[at]ics.uminho.pt

In the Northwest of Portugal, near the city of Porto, a traditional popular festival is held annually on St. John's Day, encompassing the whole community of Sobrado (Valongo). It is a symbolically dense and complex celebration, of which only one of its facets will be addressed. In multiple performances of dance, music and drama, the ‘Bugiada e Mouriscada’ celebrates an old legend that puts in dispute the Christian people of the region and the Moorish army in a struggle for the miraculous statue of St. John the Baptist. Despite being unique in Portugal, festivities celebrating the Moorish and Christian conflict are common in Europe, especially in Spain, and Latin America. Unlike similar festivals, in Sobrado the superiority of the Christians is not evident and there is no conversion of the Moors to the enemies' faith. In fact, the Moorish army is victorious and only the intervention of a mythological serpent avoids the subjugation of the Christians. After the battle, both groups resume their positions and perform the last dance of the holiday. What role has this type of cultural expression today? How is it interpreted by the local community and visitors? How does it contribute to the rethinking and reimagining of the symbolic boundaries between different cultures and religions? The plasticity of the festival allows diverse interpretations and has the potential, in the context of growing cultural heritage tourism, to re-signify the symbolic conflict and produce a pedagogy of tolerance and otherness.

Belonging beyond Boundaries: Investigating Social Interactions in Popular Culture Events

Marques, Lenia (1); Borba, Carla (2)

1: Erasmus University Rotterdam, Netherlands, The; 2: Federal University of Pernambuco, Brazil
marques[at]eshcc.eur.nl, carlaborbasilveira[at]gmail.com

The personal experience in events has been recently focus of attention (de Geus et al., 2015; Richards, 2017; Marques and Borba, 2017). There are different dimensions to this experience, which has been evaluated through the Events Experience Scale (EES). However, literature also points out to the importance of social interaction (Nordvall et al, 2008; Rihova, 2013; Rihova et al. 2013). In the social processes of events, Rihova (2013) points out the both aspects of “belonging” and “detaching”, which are the two poles of different levels of social interaction configuring the events social experience. Taking a widely celebrated popular culture event in Brazil, São João, this paper seeks to consider these different levels of social interaction. A quantitative approach has been taken, and 645 survey responses have been gathered between 2016 and 2017. Ultimately, this paper will contribute not only to a better understanding of the social dimensions of popular culture events, but also to develop methodological tools which can be used for future research. Geus, S. D., Richards, G., & Toepoel, V. (2016). Identity and Its Questioning: Social Struggle, Self-Critique and Group Psychic Processes

Kotouza, Dimitra

Independent Researcher, United Kingdom
d.kotouza[at]inventati.org

This paper presents an approach to analysing social struggle by focusing on the problematics of identity and the development of self-critique in movements. By ‘identity’ I refer not to ‘identity politics’, but to the formation of group identities in the process of struggle, which are associated with subject positions within existing—but discursively and ideologically mediated—social power relationships. Thus the problem of identity is not only relevant to movements and politics of gender, race and sexuality but also to labour, class and nation, and processes of self-identification and subjectivation. I draw on three relevant strands of the critique of identity: Adorno's

philosophical critique of identity-thinking; the critique of the subject developed by Foucault and theorists who extended his work; and psychoanalytic approaches to subject formation, group relations and critical knowledge. I propose that ‘negative moments’, which appear as moments of defeat and identity disintegration, are simultaneously productive moments, a precondition for a self-critical process and the development of new forms of collectivity and transformative practice. I illustrate by drawing on examples of my research on movements in Greece.

RN08 | Disaster, Conflict and Social Crisis

RN08_01 | Comparative Perspectives on Socio-Economic Crisis

Exploring Solidarity Practices in Times of Crisis in Greece: Applications of Mixed Method Designs

Kalogeraki, Stefania

University of Crete, Greece
kaloge[at]uoc.gr

Between 2015 and 2016 Greece became one of the epicentres of the refugee crisis whereas concurrently the country was experiencing the hardest recession in its modern history with devastating socio-economic impacts on people's lives. A plethora of both formal and informal groups/organizations have played pivotal roles in responding to the negative consequences of the recessionary economic conditions on citizens' working and living conditions as well as to the unprecedented migrant influx. The paper using data from two EU-funded projects and applying mixed method sequential designs portrays specific features of the organisations providing solidarity actions to individuals affected from the recent economic crisis and to migrants entering the country. The quantitative analysis portrays the main features of social solidarity and migrant organisations (such as organisational structure, main and supplementary activities, ultimate aims etc) whereas the qualitative data sheds some light on how solidarity is framed in the context of the economic and refugee crisis. The paper contributes to related research on the potential transformations of the civil society at times of crisis and methodologically points to the value of mixed method designs to acquire a deeper understanding of the phenomenon under study.

The Refugee Crisis In Greece: Early Narratives On Social Disasters Through The Daily Press

Tsiganou, Joanna (1); Gkougkousis, Grigoris (2); Tournidas, Dimitris (3); Varouxi, Christina (1); Vagia, Ifigeneia (2)

1: National Centre for Social Research, Athens, Greece; 2: Panteion University, Athens, Greece; 3: National Kapodistrian University of Athens, Athens, Greece
jtsiganou[at]ekke.gr, greggougousis[at]hotmail.com, dimitris.95[at]windowslive.com, cvarouxi[at]ekke.gr, ifivag95[at]hotmail.com

Since 2015 Greece has experienced an unprecedented influx of large groups of displaced people escaping from persecution, conflict, violence, or human rights violations alone, arriving in Greek State's northern but especially in its eastern frontiers. The scope of the proposed paper is to present qualitative research results on the early narratives produced through the daily press on the refugee crisis. The aim of the study is to unravel myths and realities associated with certain aspects of human and social disasters. It is also in the aims of the study to examine whether the narratives promoted, helped to activate the collective conscience and the collective memory of the Greek nation, a nation with a long history of migration waves into the country but also of Greek emigration flows abroad. In the context of our research study the narratives of the daily press seem to reproduce an endless but gradually intensified «conflict» between «hospitality» vis a vis «hostility» approaches. The unravelling of past and present relevant «traumas» and emotions, omnipotent in the relevant narratives always underline and, on occasion, surpass official policies. Our case study may deepen our understanding of the possibilities and the processes the present refugee crisis may be overturned from narratives of social and human disasters to prospects of successful inclusive realities.

Migration Crisis in Europe as a Test for Resilience of European Societies?

Pasamonik, Barbara; Duch, Danuta

The Maria Grzegorzewska University, Poland
pasamon[at]aps.edu.pl, danutaduch[at]gmail.com

The European migration crisis of 2015 and migrant-related events such as terrorist attacks in Paris and Brussels or sexual harassments on New Year's Eve in German cities, have challenged European countries. We chose to analyze the migration crisis using the concept of resilience. Resilient communities are perceived as adaptive, flexible having ability to deal with crises and the capacity to learn. We used data from eight rounds of the European Social Survey to illustrate differences between social and political responses to the migration crisis in different countries. All four Visegrad countries jointly opposed relocation of refugees. In contrast, Germany allowed for immigration of about million people in a single year. Both responses exerted strong impacts on societies and internal politics in these countries. Surprisingly, the political impact was stronger in Poland, which refuse to host refugees, but in which the liberal political wing lost parliamentary and presidential elections, than in Germany, in which Merkel remain in power. This may suggest stronger resilience of German society, but one has to admit that this is the liberal perspective only. The right-oriented researcher may notice that Germany has not learn its lesson allowing for settlement of immigrants that pose threat to its citizens. The researcher may give even the UK example, the first EU country that allowed for massive Polish immigration, which after years shifted British society towards Brexit. Thus, the concept of resilience, adequate to valuate responses to local natural disasters, is ambiguous when applied to more complex threats.

International Humanitarian Aid Operations in the Protracted Refugee and Migration Crisis in Greece since 2015

Dittmer, Cordula; Lorenz, Daniel F.

Disaster Research Unit (DRU), Freie Universität Berlin, Germany
cordula.dittmer[at]fu-berlin.de, daniel.lorenz[at]fu-berlin.de

The influx of hundreds of thousands of refugees and migrants into Europe in 2015/16 overwhelmed the capacities of responsible services in several European countries, resulting in multiple humanitarian and political crises. Responses to these crises in varying European contexts differ significantly due to a great variety of actors with very different principles and their un-intended interplay. Being confronted with multiple crisis situations (INGOs needed to carry out their largest operations in many European countries under the umbrella of international humanitarian aid involving respective practices, standards, and funding which created an unprecedented hybrid situation. While national authorities "managed" the crisis situation predominantly as an issue of border security and control, the Directorate-General for European Civil

Protection and Humanitarian Aid Operations (DG ECHO) of the European Commission responded with new approaches and instruments to tackle the increasing humanitarian needs on the ground. In particular in Greece, where after the closing of the Western Balkan Route thousands got stuck on their way to North and Central Europe without any support in a state in which hardly any formal support services existed after the Greek financial crisis, the first international humanitarian aid operation within the EU was carried out from 2016 until 2019. The paper investigates the unprecedented situation and responses of UN organisations, EU institutions, Greek authorities, (I)NGOs and grassroot volunteer organisations in Greece. The paper is based on qualitative field research (interviews and participant observation in camps) in Northern Greece, Lesbos and Athens in August 2017 as well as January/February 2019.

RN08_02 | Disasters, Traumas and Opportunity?

Cultural Traumas, Human and Sustainable Development. The 1980 Earthquake in Italy after over Thirty Years

Mangone, Emiliana

University of Salerno, Italy
emangone[at]unisa.it

Italy's history has often been marked by natural disasters (especially earthquakes and floods), last but not least the earthquake on August 24, 2016, in two regions: Lazio and Marche. Such a phenomenon requires overcoming mundane interpretations since it encompasses numerous complex experiences and ways of life (different stories, personal events and conditions), which together represent one of the most significant expressions of the social sphere. Catastrophes lead to an array of consequences and economic, psycho-social and cultural transformations, whose significance has not yet been sufficiently investigated, despite they causing a real fracture (trauma) in the structure and life of the affected communities. In this proposal, our attention is focused on the Laviano area, a little village in the province of Salerno, in Southern Italy. The town was completely demolished by an earthquake on November 23, 1980, which caused over 300 dead. The earthquake destroyed not only houses, but also the area's "common identity", already in crisis due to massive emigration. However, the community does not seem to surrender, and it strives to rebuild a new identity focusing on young people born and grown after the earthquake. The research "Laviano Restored" is based on the idea that a "soul restitution" to the Laviano population could still be possible through the recovery of collective memory, starting from an interactive 3D virtual reconstruction and a scale model of the town before the 1980 earthquake, in order to reinforce the territorial sense of belonging.

Trust, Social Determinants, and Resource Distribution after a Catastrophic Typhoon

Lee, Hsiang-Chieh (1,2); Deng, Chuan-Zhong (1); Chen, Hongey (1,2)

1: National Science and Technology Center for Disaster Reduction, Taiwan; 2: National Taiwan University
hchieh[at]ncdr.nat.gov.tw, dengcz[at]ncdr.nat.gov.tw, hchen[at]ncdr.nat.gov.tw

This study investigated the effects of social determinants and resource distribution after a catastrophic typhoon on trust in various levels of government. The first and third waves of the Social Impact and Recovery Survey of Typhoon Morakot of the National Science and Technology Center for Disaster Reduction in Taiwan were analyzed. The first and third waves were conducted 1 and 3 years after Typhoon Morakot, respectively. Multivariate analysis of variance was the statistical method adopted. We suggest that trust in the central government is relatively low immediately after a major disaster but rebounds over time. We determined that the trust in lower levels of government was higher than that in higher levels of government, particularly immediately following a disaster. The pattern remained over time; however, the gap eventually decreased. Among the five social determinants tested, ethnicity was more prominent than age, education, gender, and income. We determined that minorities trusted governments more immediately after a disaster, controlling for resource distribution. However, in the long term, minorities trusted governments less than do the majority, as suggested in the literature. Additionally, in contrast to the conservation of resource theory, which suggests that resource loss is the most prominent concern, we determined that resource match, a concept we propose, and resource gain are prominent concerns. Resource match is particularly crucial immediately after a disaster. This study determined that an updated post-disaster model of trust must prioritize ethnicity and resource distribution. We also suggest that further research should include data on pre-disaster trust.

Are You Willing to Stay in Public Emergency Shelter? The Factors Influence Households' Sheltering plan for Flood and Slope-land Disasters

Yang, Hui-Hsuan {Phoetion}

National Science and Technology Center for Disaster Reduction, Taiwan
phoetion[at]ncdr.nat.gov.tw

In order to find the factors influence households' choices of sheltering and estimate the needs of public emergency shelters (PESs) for flood and slope-land disasters in Taiwan, a nationwide social survey was conducted in Aug. 2018. Considering the risk is vary in different areas, 368 towns of whole country were aggregated into 9 risk (level) zones (LL/F2~F5/ D2~D5). Each risk zone is sampled and analyzed

separately. The factors of survey are education, social networks, wealth, disaster and sheltering experiences, family structure, age, and disability etc. The total of respondents are 4,802, Several Results showed as follows: (1) Households without "other self-owned residence" or "residence offered by relatives/friends" have higher opportunity willing to stay in public shelters when a severe flood or slope-land disaster occurs. (2) In F5 zone (high risk zone of flood), it also shows that "lower education" and "no disaster experience" were significant factors of households' willingness to stay in PESs. (3) Households of D5 zone (high risk zones of debris-flow) who had had experience to stay in PESs had lesser opportunity willing to stay in public emergency shelter again. (4) D4 zone shows "no cars/motors" and "lower family income" were more willing to stay in PESs. Models of each zone were established for estimating the amount of people who may choose to stay in PESs, and the number of needs such as food, water, clothes, equipment, spaces, manpower etc. when a severe disaster occurs. It's a useful tool for local governments to prepare what they need before disasters, also helps disaster managers to do better resources distribution.

Can Natural Disaster Be An Opportunity? Studying De-Population Of Central Italy Rural Communities After The 1997 Earthquake

Fantechi, Federico

Gran Sasso Science Institute, Italy
federico.fantechi[at]gssi.it

Socio-Natural Disasters are a global issue but, being the intersecting result of an uncontrollable nature and a complex society, they cannot have a unique global solution. Similar hazards could indeed result in different (or none at all) disasters depending on the affected territorial and social context. Italy presents itself as an interesting and peculiar context and case study. Due to its particular geographical characteristics, three out of four major seismic event of the last decades, affected the country rural areas, in particular around the Central Apennines. Rural communities, inhabiting this area, are burdened by decades-old processes of ageing and depopulation but, by controlling and taking care of the territory, they are important strategic resources for all Italian society. After the last major Socio-Natural Disaster a question has arisen: are rural communities of Central Italy sentenced to be completely abandoned? Through the framework of Community Resilience, the study envisions a time-sensitive quantitative analysis functional to observe resilience's dynamics over different degrees of rurality in Central Italy. We adopted a quasi-experimental strategy, making use of the communities' internal population variation as a proxy for community resilience, and a suitable control group to isolate - and individuate - the effect of the Community Resilience triggered by the disaster. Our results highlight a stabilising effect, where the affected communities depopulate with slower rates in comparison with the control group. Moreover, we observed that different degrees of rurality in the affected area are not directly correlated with better or worse performance in population variation.

RN08_03 | Disaster Management and International Responses

Boundary Work to Conduct Business as Usual: Interaction at the Boundary Between the Affected Organization and Emergency Responders

Oscarsson, Olof

Mid Sweden University, Sweden
olof.oscarsson[at]miun.se

The goal of this study is to examine the interaction when a workplace suffers an emergency and the emergency responders temporarily deploy their workplace inside the affected workplace to address the emergency. The research is based on semi-structured interviews with personnel from fire and rescue services and personnel from schools and eldercare centers. A total of 16 interviews were employed in three different municipalities in Sweden. A multiple-case study approach is employed. The multiple-case study approach fits particularly well since the analytical aim is mainly descriptive and exploratory and the focus is on understanding 'how and why' the interaction was conducted. To study the interaction a theoretical framework of boundary work is applied to find boundary work practices that govern the interaction. Four different boundary work practices are salient: emergency containment, division of responsibility, division of labor and crossing the boundary. These boundary work practices provide structure and enable both parties to concentrate on their own work. It also enables support over the workplace boundaries. Thus, the interaction may be described as a cooperation mutually accomplished by both parties.

International Deployments and Organized Crime

Fernandez Otegui, Diego R.

University of Delaware, United States of America
dotegui[at]udel.edu

This article explores a troublesome and generally unnoticed consequence of the international convergence of large numbers of humanitarians in the aftermath of a disaster. The loss of lives, the destruction of infrastructure and large economic losses are widely recognized consequences of disasters. Poor economies additionally suffer from structural weaknesses such as weak border controls, high levels of corruption, political instability and an inefficient public machinery. The disruption generated by a disaster combined with these local conditions usually develop into a permissive environment that is porous to unwanted foreign elements, including organized crime. In this article I discuss how some aspects of current international humanitarian practice affects and sometimes even worsens pre-existing structural insecurity

of a post disaster context. I do this by overlapping organized crime theory and international convergence theory and analyzing past deployments through the lens of institutional logics. The data was collected through in-depth interviews with top officials at large humanitarian organizations. Using a deductive approach, I analyzed the extent to which these officials were conscious about how international humanitarian action can be used to the benefit of organized crime. I discovered that humanitarian officials in charge of making decisions about international deployments interpret information in a very narrow way and that they fail to perceive, let alone understand, the intricate ways in which their interventions might facilitate the development of criminal activity. I finish the article discussing the benefits of establishing stronger regulations for those organizations operating overseas as an alternate policy tool to increase the overall cohesiveness of the humanitarian system.

Build-Back Better? How Post-Disaster Emotions Hamper the Use of Resilience in the Reinstatement of Damaged Homes and Businesses

Harries, Tim (1); Lamond, Jessica (2); Twigger-Ross, Claire (3)

1: Kingston University, United Kingdom; 2: University of the West of England, United Kingdom; 3: Collingwood Environmental Planning, United Kingdom
t.harries[at]kingston.ac.uk, jessica.lamond[at]uwe.ac.uk, c.twigger-ross[at]cep.co.uk

This paper will suggest that the emotionally loaded nature of post-disaster recovery limits the possibilities of increasing resilience. The post-disaster period is in many ways the ideal time for improvements to the physical resilience of damaged buildings, for the additional cost and disruption is less than it would be at other times. However, this opportunity is rarely taken up. The paper argues that one reason for this is the emotional response generated by disasters. Firstly, an emphasis on emotion-focused coping amongst occupants means that they will only favour resilience measures if they perceive them as emotionally safe: i.e. as reliable and/or normal – which most are not. Secondly, for the professionals involved in the reinstatement of affected properties, the lack of a dispassionate, problem-focused building-owner adds relational complexity to a situation already ridden with technical, financial and inter-organisational challenges. This deters them from adding yet further complexity by promoting the topic of resilience. Thirdly, the presence of these emotions undermines trust. Being poorly equipped to deal with the level and type of emotion that is present, professionals tend to shy away from the emotional content of the situation and, rather than using empathy to build trust, focus exclusively on practical matters. This makes it harder for them to nudge occupants into more problem-focused modes of coping and win support for the introduction of physical resilience measures. The paper draws on government funded research with reinstatement professionals and owners of flooded UK properties.

Navigating the European Landscape of Disaster Risk Reduction – The Case of Data and Socioeconomic Factors

Sparf, Jorgen

Mid Sweden University, Risk and Crisis Research Centre, Sweden
jorgen.sparf[at]miun.se

The social landscape throughout Europe displays huge differences in politics, economy, welfare and integration. Similarly, the threats levelled against the continent vary both in nature and in magnitude. Each state is responsible for its own disaster risk reduction (DRR) strategies; however, the common European community is a salient convergence for knowledge exchange, agreements, and collaboration. Increasing the capacity of individual European countries as well as the continent as a whole necessitates that we be aware of the common challenges European countries face. To this end, E-STAG* has undertaken a study titled Data for resilience and Socioeconomics for DRR based on document studies and interviews with the Sendai National Contact Points. Access to relevant data, their quality and compatibility are important issues when it comes to the quality of decisions governments make regarding DRR. It is for this reason that the research community and data-owning organizations must know what kind of data are needed, in what format they should be delivered, who will have access to raw data and how and whether the aggregations of them should be further disseminated. Further, socioeconomic factors are important for the implementation of disaster risk reduction and the study has investigated the particularities in a variety of economic, social, human, and political resources. This paper presents the main results and conclusions from the study that was launched in a report at the UNISDR global platform in Geneva in May, 2019. * E-STAG is the European Science and Technology Advisory Group, jointly organized by the United Nations Office for Disaster Risk Reduction (UNISDR) and the European Commission through the EC Joint Research Center.

RN08_04 | Disaster Planning and Practice

Disasters And The Forces At Work Within Communities

Marsh, Graham Lewis

Coventry University, Australia
g.marsh[at]coventry.ac.uk

While this paper deals generally with Communities in relation to disaster management, one cannot ignore the developments occurring in the wider world which are having a major impact on the increasing number of disasters, on their severity and on their consequences on communities and even whole countries. Within this changing world, there are many residents currently excluded from a community's development, and the consultation processes that are

generally in place. These effects are often the consequences of Globalisation. Trends I have noted in research into demographic changes and subsequent vulnerability in communities in Australia, which are just as applicable to countries across the globe, are covered in this paper and these trends can only worsen if global warming leads to an increase in sea levels, droughts, floods, massive storms and fires with the subsequent displacement of whole communities. The emphasis of this paper then in the light of such changing circumstance, is that it is even more important in the 21st Century that disaster management agencies, whilst recognising that in any one locality there may be any number of 'community of interests' who may not have much in common with each other, need to take more account of local community assessment of risks and local priorities if agency prevention, preparedness and training programmes are to effectively engage with the community in developing appropriate remediation strategies. This engagement is of relevance particularly where recovery is too often influenced by large private companies, with vested interests, anxious to benefit in the long term from the disaster and where emphasis in recovery discussions is on the views of male elites to the exclusion of those of female residents.

The Case of Västmanland: Unaffiliated Volunteers Use of Private Networks to Gain Acceptance

Kolmodin, Sophie (1,2)

1: Mid Sweden University, Sweden; 2: Risk and Crisis Research Center
sophie.kolmodin[at]miun.se

There is a growing expectation that volunteers of different kind will have a greater role in disaster management in the future compared to the past. Research shows that volunteers sometimes are regarded as a problem, they often lack relevant knowledge, education and an understanding of how crisis management work "normally is done". However, a big part of Swedish-context based research only include emergency personnel or managers (police, military and fire brigades), or highly organized voluntary organizations that have a close connection to the official response operation such as the Red Cross and The home guard (national security forces). As a result, there's a lack of studies using a bottom-up perspective, focusing on the narratives of unaffiliated volunteers. Building on interviews with eleven unaffiliated volunteers that were active during the forest fire in the county of Västmanland in Sweden, the study aims to investigate how volunteers relate to the official response operation. Following a network perspective I discuss how volunteers used private networks to get approval to act and access information during the fire crisis. The analytical result show that different types of unaffiliated volunteers take on different type of tasks and that their use of private networks are highly dependent on the type of tasks being performed, distance to the official rescue service, place attachment and need of information and acceptance.

The Ladies Came With Cookies. Gender Norms In Crisis Management

Danielsson, Erna (1); Eriksson, Kerstin (2)

1: Mid Sweden University, Sweden; 2: RISE Research Institutes of Sweden
erna.danielsson[at]miun.se, kerstin.eriksson[at]ri.se

In this study we highlight the labor of women during the forest fire in the Swedish province of Västmanland 2014. The aim is to investigate what women do in a crisis situation and how this work is talked about by both men and women. Crisis management often reflects the traditional gender patterns that exist in society; women are "helping" mostly with service such as taking care of the home and children, while men are struggling with the fires, doing the hard work. This is reflected in the stories that are told after the fire, and recreate such a division of labor. In this article we tell stories about the labor of women that both follow and break these norms, and disclose what women gain or lose by following the standards. The result show that still, women are praise when they follow the traditional norm and bake cookies and are downgraded when performing what are seen as male coded tasks. The stories reveal norms about what a woman is or is not, focusing on their age and clothing and directly or indirectly questions their ability and authority. The norms are also made visible by the positive attention women get when describing their resources (a tractor), as "real stuff", as the unique and different in the description of women.

RN08_05 | Social Dimensions of Disaster Preparedness and Response

Emergence and Volunteerism in Disaster Response Operations

Johansson, Roine (1); Danielsson, Erna (1);
Kvarnlöf, Linda (1); Eriksson, Kerstin (2)

1: Mid Sweden University, Sweden; 2: RISE The Research Institute of Sweden
roine.johansson[at]miun.se, erna.danielsson[at]miun.se,
linda.kvarnlof[at]miun.se, kerstin.eriksson[at]ri.se

The actions of unaffiliated volunteers in disaster response operations are often regarded as a form of emergence, which is frequently considered a relatively spontaneous and context-free phenomenon. Recently, analyses of emergence have been criticized for not acknowledging the pre-conditioned aspects of social life, such as power, networks and community attachment. In the present study, such conditions have been included in the analysis of emergence in a disaster response context. The aim is to investigate under what conditions emergence occurs. What kind of emergent actions take place in response to a disaster? Can just anybody get involved in emergent response activities on a voluntary basis? What kind of social relations do emergent volunteers develop with other

volunteers and with other actors? Interviews have been undertaken with people who made voluntary contributions, outside the official response operation, to the response to a large-scale forest fire in Sweden. Results show that emergence is not as context-free as earlier assumed. Our study shows the importance of strong ties to the community, with friendship or professional connections between local people. In some cases, the emergent nature of voluntary actions decreased over time: some emergent activity became more organized and was included in the official response operation.

Disasters, Invisible Citizenship and the Role of Victims' Associations

Mendes, José Manuel

University of Coimbra, Faculty of Economics, Centre for Social Studies, Portugal
jomendes[at]fe.uc.pt

The forest fires in 2017 were one of the worst disasters to affect Portugal, with more than 275.845 hectares burnt, 119 dead and hundreds of injured people. Communities and landscapes were devastated, houses, livelihoods and businesses destroyed. The main conclusion to draw is that the victims from Portugal's forest fires of 2017 were not caused by social isolation. The main cause for the 2017 forest fires victims was the material, symbolic and political distance to decision centres and to those responsible for citizens' safety. That is a consequence in what we have been calling, in our studies with disaster victims' associations, invisible citizenship. To contravene this invisible citizenship, the response from civil society was relevant. There was an unprecedented wave of solidarity by citizens, corporations and other institutions, and also thousands of spontaneous volunteers alongside structured volunteer networks by corporations, non-profit organizations and NGOs. Most importantly, the immediate creation of victims' associations in a society with low civic mobilization after catastrophes or extreme events, fostered citizenship rights and "the right to have rights", and the production of collective memories and personal identities that allow for the commemoration of the traumatic event and the creation of "affective communities" that are visible in the public arena. Also, they strive for processes of memorialization and narrative building in the relation between personal experience and ongoing formation of a social, collective memory.

Adaptation to Climate Change: Instrumentalisation and Narratives

Gobert, Julie (1); Rudolf, Florence (2)

1: Ecole nationale des Ponts et Chaussées, France; 2: INSA, Strasbourg, France
julie.gobert[at]enpc.fr, florence.rudolf[at]insa-strasbourg.fr

The INTERREG project Clim'Ability aims to enable companies in the Upper Rhine to understand risks and opportunities in the context of climate change. Climate change could be seen as a long-term crisis, which has already visible impacts on biodiversity and then the natural resources employed by human activities. The contributors to this communication have particularly studied the wood and forest sector in the Parc Naturel des Vosges du Nord to tackle scientific and operational questions: How to deal with uncertainties at the local level for a specific business sector? Which kinds of adaptation face to the climate change consequences? Consequently, they conducted a series of semi-structured interviews with the stakeholders involved in forest management, the wood transformation, the building industry or architecture. They also read the grey literature and attended different meetings between actors. Adaptation can be very variously conceived: as a means to resist again a hostile environment, to draw new pathways of acting and producing, to transform activities.... Authors from different scientific disciplines have analysed this term and the forms of action/reaction it induces. Some have provided general principles and broad strategies for adaptation, others have identified opportunities for and barriers to adaptation. Different analytical framings have then emerged: livelihoods-based, focused on social and institutional processes, on social learning... This communication targets to outline how climate change may be instrumentalised for different goals which illustrate diverging or converging narratives about adaptation: protecting forest biodiversity and multifunctionality, promoting wood products in the building sector, endorsing the employment of local feedstock...

Municipality. The data is collected from a representative sample of 40.000 households from all sub-districts of İstanbul through conducting face to face interviews with a household member between the ages of 18 and 70. The aim of the research was to identify the indicators of social vulnerability of households in the likelihood of disasters, like earthquakes, floods, landslides in İstanbul city center. Indicators have been socio-demographic factors, length of urban experience, socio-economic factors, access to health services, social solidarity and networks, risk perception, values and risk behaviors. The survey results were analysed to identify a social vulnerability scale and an SES scale at the household level. It is notable that, although socio-economic status and social vulnerability level are assumed to be highly correlated in the literature, in the case of İstanbul, factors such as risk perception, values and socio-demographic factors like age and length of stay in urban, play a more important role than occupation, education of income. Especially the degree of risk perception and values have a very high significance for resilience. Hence the indicators of resilience are highly correlated with cultural values in the household level. This research gives us clues about why the policy makers are slow in structural reforms for building a resilient society.

The Missing Link in Building Resilience for Disasters: Social Vulnerability

Kalaycioglu, Hediye Sibel (1); Celik, Kezban (2); Turkyilmaz, Sinan (3); Celen, Umit (4); Mentese, Emin Yahya (5); Kara, Sema (6)

Effects of Military Conflict on Combatants, Internally Displaced Persons (IDPs) and their Relatives in Ukraine

Veira-Ramos, Alberto (1), Liubyva, Tetiana (2)

1: Universidad Carlos III de Madrid, Spain; 2: Institute of Sociology of the National Academy of Sciences of Ukraine
aveira[at]polsoc.uc3m.es

Since 2014, the majority of Ukrainians have been affected by the hybrid war in the Donbas region in different ways. Some were forced to leave their homes and business and others were called or volunteered to engage in military actions. Many of these persons, whether combatants or Internally Displaced Persons (IDPs) had friends and relatives living elsewhere in Ukraine who indirectly were also affected by this trauma. The Ukrainian Society Survey, conducted on a biannual basis by the Institute of Sociology of the National Academy of Sciences of Ukraine, has gathered in its 2018 field survey data which serves to identify these individuals and to measure the degree to which they have been affected by the war (subsample varies from 400 to 850 respondents depending on the nature and level of implication in the conflict). It is possible to distinguish those who suffered personally the loss of a relative or a friend or had to abandon their houses or business from those who report to have a relative or a friend who endured such circumstances. Our research explores to what extent these persons differ from those Ukrainians who do not report to have suffered personally the impact and consequences of the war. We plot the different levels of involvement in the conflict (combatants, IPDs, victims and relatives or close friends of victims) against those items from the survey that measure attitudes towards the war, possible solutions for the conflict and what direction the future of Ukraine should follow. Moreover, a set of indicators of personal well-being are also considered to measure stress and resilience of those most affected by the war.

Value Consequences of the Armed Conflict

Yusupov, Musa Movlievich

Chechen State University, Russian Federation
musa_y17[at]hotmail.com

In the modern world, the economic, technological, informational links and relations are intensively developing, international and domestic conflicts in some regions are periodically sharpened. Armed conflicts arising in different parts of the world pose a threat to regional and world security; their consequences need a sociological understanding. Subject: peculiarities of the social and cultural consequences of the armed conflict. Objective: To identify the general and particular consequences of military conflicts in different regions. Method: The study used conflict and sociocultural approaches, methods for quantitative analysis of sociological and statistical indicators, the principle of comparative study of the consequences of armed conflicts in different regions and countries. Result. Armed conflicts arise for various reasons, but their common symptom is the devaluation of human life. In conflicts, the right to life, dwelling, and movement is violated, arbitrariness is committed, violence against the defenseless layers of the population is allowed. The external side of the conflict and its consequences are human losses, the destruction of the economy, livelihoods, cultural monuments, environmental pollution, the flow of refugees. The deformation and destruction of the social structure, civil institutions, the change in the hierarchy of sociocultural values should be recognized as an internal or latent side. In a society, the level of faith in justice, trust in each other and in government is decreasing. Conclusion. In a post-conflict situation, social and cultural values, post-traumatic injuries are inevitable, state and international complex programs for the population rehabilitation and revival of the region are necessary. Keywords: conflict, war, values, security, adaptation, refugees.

Prevention of the Risk of Radicalization of the Second-generation of Islamic Migrants through Strategies of Communication

Ceccherelli, Alessio (1); Volterrani, Andrea (1); Iezzi, Domenica Fiordistella (1); Di Pasquale, Laura (1); Gola, Elisabetta (2)

1: University of Rome Tor Vergata, Italy; 2: University of Cagliari
ceccherelli[at]scuolaiaid.it, andrea.volterrani[at]uniroma2.it, stella.iezzi[at]uniroma2.it, lauradip[at]yahoo.com, egola[at]unica.it

The paper presents the first results of the analysis on the application of the four phases (prevention, knowledge, incorporation, change) that compose the Communication Model of Prevention (Volterrani, 2017) within the "Oltre" project (funded by DG Home of the European Union) whose aim is to prevent the radicalization of the second generation of migrants of Islamic origin. The application of the model has been preliminarily focused on the analysis of the phenomenon of radicalization (perception phase) through in-depth qualitative interviews and focus groups in seven Italian cities, together with an analysis of Facebook, Instagram and Twitter profiles. Subsequently, through the Theater of the Oppressed methodology and specific laboratories on social communication, the contents of the prevention of radicalization (knowledge phase) have been deepened. Finally we started the third and the fourth phase of the model (incorporation and change), by the action research methodology and the direct involvement of the recipients of the analysis (second-generation young migrants of Islamic origin) in the communication campaign (Volterrani, 2018). The first results confirm the validity of the prevention communication model, especially for what concern the perception and knowledge phase. The last two stages need more time for an adequate evaluation of the impact on second-generation young people. References Volterrani A., (2017), From perception to change. A model for prevention communication, Proceedings of the 3rd World conference on Media and Mass Communication, vol. 3, pp. 82-90 Volterrani A. (2018), Participation and Communication in the Time of Social Media: A Chimera or an Opportunity, Sociology Study, May 2018, Vol. 8, No. 5, 213-219, doi: 10.17265/2159-5526/2018.05.002

RN08_07 | Resilience: Concepts and Perspectives

Infrastructure Resilience and Energy Systems Integration

Silvast, Antti (2); Abram, Simone (1)

1: Durham University, United Kingdom; 2: Norwegian University of Science and Technology
antti.silvast[at]ntnu.no, simone.abram[at]durham.ac.uk

To limit the impacts of climate change, energy infrastructures are facing a progressive closure of fossil fuel plants and increasing deployment of renewable energy resources. These renewable resources - such as solar and wind - are essentially intermittent, dependent on the weather and season. Due to this, many experts now envision that more flexible energy systems have become necessary in the future. Over the past five years, an important line of thinking has argued that this flexibility increases by integrating various different energy systems i.e. Energy Systems Integration (ESI); such as gas supplies, electricity, heating, electric vehicles and cross-border exchanges between national energy systems. This presentation develops an interdisciplinary social science perspective on this subject and draws upon participant observation, expert interviews and document analysis that were carried out within a large five-year UK research consortium on ESI. The goal of this consortium is to develop computer models, real demonstrators and conceptual understanding of ESI and our task has been to analyse their working practices ethnographically. In the presentation, we present some of these key practices and draw out our overarching observations on how energy integration relates to the reliability of energy infrastructures and their ability to 'bounce back' after the impacts of different risks and disasters. We suggest that experts see unique possibilities for infrastructure resilience by increasing coordination between energy systems that often have very different physical characteristics, geographical scales and temporalities and hence undiscovered synergies. On the other hand, in terms of disaster, conflict and crisis, energy integration also gives rise to more interconnected and complex energy systems, whose possible implications for systemic risks, responsibilities and security of supply we discuss in the presentation.

Strengthening Resilience of German Emergency Responders

Schuchardt, Agnetha; Kroeling, Sophie

Freie University Berlin, Germany
agnetha.schuchardt[at]fu-berlin.de, sophie.kroeling[at]fu-berlin.de

Emergency responders have to face various stressful situations. Based on psychological stress theories, resources and different coping strategies can be helpful to cope with these events and to build up resilience. This contribution focuses on how emergency responders in Germany cope with stressors like emotional proximity in duty and how resilience can be improved. A quantitative survey of more than 700 emergency responders has been conducted and a regression model has been analyzed. Relevant resources and successful coping strategies, predicting resilience, were identified. Results show that emergency responders in Germany are exposed to stressors that occur on deployment-related and organizational levels. A lack of information are e.g. perceived as very stressful. Emergency responders possess individual, social and organizational resources and coping strategies that enhance their resilience: Problem-focused coping e.g. is found to increase resilience whereas emotion-oriented coping however seems to be negatively related to resilience. Individual resources, especially self-efficacy and ambiguity tolerance hold special esteem in explaining resilience. Suggestions for the improvement of the emergency responder's resilience through strengthening individual resources will be given and it will be discussed how this can make a contribution to strive for civil protection. Results will be incorporated in prospective trainings for emergency responders.

Security Targets for Critical Infrastructures

Hartmann, Jennifer; Schuchardt, Agnetha; Kox, Thomas

Freie Universität Berlin, Germany
jennifer.hartmann[at]fu-berlin.de, agnetha.schuchardt[at]fu-berlin.de

Preventing or mitigating both natural and man-made disasters is an important goal of security research. We focus on protecting critical infrastructures (CI) – such as the energy or food sector – as they allow for the functioning of a society. Failure of these facilities can lead to long-lasting supply shortages and security disturbances. CI protection is a task of both private operators and public authorities. While the latter have the obligation for protecting CI, they lack necessary resources and expertise because they are not involved in the daily business of e. g. the food industry. However, private operators (mostly large companies) have all required assets, but they do not perceive protective measures as their responsibility. We propose a solution for this issue: Security targets. They establish common goals for different stakeholders who are involved in CI and their protection. Security targets describe a desired status that has to be maintained during or after a crisis. They are the basis for

preventive and responsive measures that should be implemented in a centralized manner. In Germany, however, only few security targets have been defined so far. One rare example is the legal specification of 15 liters of drinking water that have to be provided for each person in a crisis. Until today, many questions remain unanswered: Who has to define security targets? Who is in charge of their implementation? How should the negotiation process be structured? In our contribution, we will present guidelines and answers to these questions on the basis of a literature review, an expert workshop (30 participants) and an online expert survey (more than 300 participants). The food sector serves as an example.

How (not) to Develop Resilient Societies? – Conceptual and Empirical Remarks on the Social Aspects of Resilience

Balogh, Peter

University of Szeged, Hungary
balogh[at]socio.u-szeged.hu

In the presentation I wish to (I.) argue that when intended to comprehend the social background and agency of a resilient society it might be fruitful to differentiate between two mechanisms or particular types. The (1) formalized/institutionalized and the (2) socially embedded forms – or rather aspects – of resilience reflect that both the macro-level and structural conditions, and the micro-level with the key element of individual action play an important role when a society is challenged by certain crises or threats. I offer an approach that compound and effective resilience capacity emerges if the problems of cooperation and coordination of various resources are properly disentangled. In order to empirically shed light on resilience when challenged under real circumstances I (II.) demonstrate a case study investigating the migrant/refugee crisis in Hungary. By analysing data from various sources and applying both social network analysis and descriptive statistical methods the case study reveals a noteworthy capacity of the social sphere (e.g. emergence of solidarity groups, volunteer activities) to respond to the challenge and foster resilience. However, these social initiatives – due to the polarized structure of the society – prove to be rather dissonant considering their objectives, target groups and practical activities, therefore a fragmented pattern emerges. Furthermore, the two, conceptually distinguished forms of resilience seem to unfold parallel in time but in contrary direction, resulting in a less robust resilience and an essentially counterproductive pattern. Accordingly, it might be acknowledged that social resources can be utilized effectively in a challenging situation, but in the absence of a common perception and in a dominantly polarized social context it might be rather complicated to achieve resilience.

From 9/11 To Dorotea: A Story Of How The War On Terror Ended Up In A Rural Municipality In The North Of Sweden

Andersson Malmros, Robin

University of Gothenburg, Sweden
robin.andersson[at]gu.se

Dorotea (approximately 2400 inhabitants) is a quiet municipality in the cold, depopulated and rural north of Sweden. Despite having no extremist groups or activities in the municipality, the council of Dorotea chose to adopt a policy to prevent violent extremism (PVE) on the 10 of August 2016. This aim of this paper is to understand why Dorotea, and many comparable Swedish municipalities, did so. Three questions are posed: (1) How do representatives of the municipality of Dorotea describe the rationality behind adopting a PVE-policy? (2) How did the PVE-field emerge in Sweden and how were municipalities mobilized to the field? (3) What stages and mechanisms constituted the structuration of the field? To inform the analysis, qualitative data is collected from national PVE-policies, media content and interviews with national PVE-policymakers and local stakeholders in Dorotea. To understand and conceptualize how the field was structured and municipalities mobilized to it (e.g. Dorotea), the paper departs from organizational neo-institutional theory and in particular the concept of fields. The paper maps out the stages and mechanisms by analyzing how the institutionalization of the field, the institutional elements and framing(s) of the problem of violent extremism changed over time. Attention is also given to the role of disruptive events of importance had (e.g. terror attacks), the key actors involved and the field-configuring events that contributed to structuring the field. Theoretically, the paper contributes with an integrated framework for understanding state mobilization of new sets of actors to emerging issue fields in order to deal with a societal grand challenge.

RN08_08 | Disaster Management Policy

Legionella, vulnerabilities and mistrust - a Portuguese case

Guerra, João

University of Lisbon, Portugal
joao.guerra[at]ics.ulisboa.pt

Despite the sometimes-effusive discourses of sustainable development, its attainment continues to be threatened by environmental degradation both in a more global way – e.g., climate change – and through more limited ecological breakdowns – e.g., industrial accidents. The outbreak of Legionella in the municipality of Vila Franca de Xira and, above all, its consequences, offers a particularly interesting case study of localized ecological breakdown, with serious social, economic, and public health consequences. To reflect on this event, the participatory workshop here presented, brought together more than three dozen people grouped in four deliberation tables: 1) affected men, 2) affected women, 3) affected youth, 4) unaffected citizens. The central objective of the workshop was to clarify where the chain of sustainability interdependencies has been broken or reinforced, despite the need for the simultaneous promotion of environmental quality and quality of life has been proclaimed from the earliest stage. The results point to a social context that would have claimed for greater proactivity of administration institutions to encourage local public involvement and mobilization. After all, a committed application of the Aarhus Convention's triad – i.e., access to information, public participation in decision-making and access to justice in environmental matters – might have contributed to the quashing of institutional momentum that, inevitably, as in other contexts, tended to feed on the failures of monitoring and on inaptitude of managing the crisis. After all, from the fears and misunderstandings arising from the outbreak of Legionella.

Inter-organizational Institutional Learning of Public Authorities and Security Organizations on the Example of the “Refugee Crisis”

Schütte, Patricia M. (1); Frommer, Jana-Andrea (2); Schönefeld, Malte (1); Werner, Andreas (2); Fiedrich, Frank (1); Zoller, Gustav (2)

1: University of Wuppertal, Germany; 2: German Police University, Germany

[schuette\[at\]uni-wuppertal.de](mailto:schuette[at]uni-wuppertal.de), [Jana-Andrea.Frommer\[at\]dhpol.de](mailto:Jana-Andrea.Frommer[at]dhpol.de), [schoenefeld\[at\]uni-wuppertal.de](mailto:schoenefeld[at]uni-wuppertal.de), [Andreas.Werner\[at\]dhpol.de](mailto:Andreas.Werner[at]dhpol.de), [fiedrich\[at\]uni-wuppertal.de](mailto:fiedrich[at]uni-wuppertal.de), [Gustav.Zoller\[at\]dhpol.de](mailto:Gustav.Zoller[at]dhpol.de)

Between late summer 2015 and spring 2016, public authorities, aid organizations, and private actors faced circumstances that were labelled as the “refugee crisis”. Due to the peak of an increased refugee movement from the Middle East to Central Europe, in particular to Germany, relevant stakeholders instantly operated at full capacity and formed inter-organizational ad-hoc networks to tackle the extremely challenging situation. They faced severe issues to provide sufficient security, housing, or medical support for the refugees. According to press reports some of these ad-hoc approaches worked well while others failed. However, in retrospect, this was not the first time German institutions had to face a situation like this. In the 1990s, a high number of refugees arrived in Germany in several similar situations. But back then no institutional structures were installed to learn from good and bad experiences for the future. Regarding these issues, scarce empirical material and scientific literature can be found about the way the situation was managed. Therefore, it seems self-evident that science in close collaboration with security stakeholders need to explore to prevent for similar situations in the future. The cooperative research project “Security Cooperation and Migration (SiKoMi)” addresses this gap: “How and what could public authorities and security organizations learn from the past and how could they institutionalize this new knowledge for the future?”. By focusing on assumptions depicted from literature reviews, first results from a qualitative media analysis and the research design, we will present suggestions on how to develop preventive inter-organizational measures for similar social crises in the future.

The Organizational Conflicts Impacting the Emergency Medical Services in Mass Gatherings: A Case Study of the Hajj

Al Ruwaithi, Abdulhadi A.

University of Delaware, United States of America
[aar\[at\]udel.edu](mailto:aar[at]udel.edu)

The Hajj (or pilgrimage to Mecca) is one of the largest annual mass-gathering events, with a considerable international attendance. Over its long history, the Hajj has been prone to many documented risks, which require high-performance emergency medical services (EMS) systems. This study investigates the organizational factors that shape or impact the EMS delivery process within the Hajj mass gatherings. Nineteen semi-structured interviews were conducted with key informants, ambulance teams and police officers. Also, non-obtrusive observations for selected segments of mass gatherings in the Hajj was performed. A thematic qualitative analysis was applied to the data retrieved from the interviews and the ethnographic notes. The qualitative analysis reveals different issues affected the process of delivery EMS to the attendees of the Hajj mass gathering. The most reported obstacle hindering the EMS delivery is traffic control points managed by the police. The variations on police and EMS systems’ priorities lead to conflict significantly delaying EMS. The police focus on crowd disaster preventive measures, whereas EMS systems focus on response to urgent medical care calls. It was also noted that some patients deprioritize their medical needs as they focus on completing their ritual duties on time. Working on resolving issues highlighted by this study should promote the EMS services in the Hajj. The current study could inform future research on mass gathering medicine and crowd disasters about the necessity of considering the potential conflicts impacting the EMS response rather than a sole focus on medical demands or preventive measures.

Tourism and Disaster – Effects and Causes of the “Himalayan Tsunami”

Lorenz, Daniel F.; Dittmer, Cordula

Disaster Research Unit (DRU), Freie Universität Berlin, Germany

daniel.lorenz[at]fu-berlin.de, cordula.dittmer[at]fu-berlin.de

In 2013, extreme rainfall and a bursting glacial lake triggered massive flooding in the Indian Himalaya. Many mountain villages were completely devastated and approximately over 15.000 people lost their lives. The disaster was covered nationwide in India as a great number of people on the holy pilgrimage Char Dham as well as a highly symbolic Hindu temple were affected. For the local population small disasters are frequent events, but the catastrophe of 2013 was much bigger in scale. Climate change, human interventions in the sensitive environments of the Himalaya, but also highly contested development policies such as transport and tourism infrastructures are seen as contributing factors that made this calamity possible. Building on a literature survey and ethnographic field research our analysis of the long-term effects shows that there are multiple vulnerabilities to be found that materialize very differently due to diverse social and cultural contexts. At the same time the predominant patterns of tourism with massive financial support of international investors like the World Bank seem to be the uniting force in the back producing these diverse vulnerabilities. This proves not only to be most important to understand the production of the "Himalayan Tsunami" in 2013, but also for disasters to come. The same kind of tourism contributing significantly to the disaster in 2013 is still or perhaps even more seen as panacea to overcome the effects of the disaster of 2013. At the same time tourism is nearly uncontested due to its religious foundation. Given a region of natural hazards, that are likely to increase due to climate change, the paper describes how the alleged coping with one disaster aggravates future disaster risks.

Using 3D Technology to Increase Effectiveness of Communication in Crisis Situations

Banerski, Grzegorz; Abramczuk, Katarzyna

National Information Processing Institute, Poland
grzegorz.banerski[at]opi.org.pl, k.abramczuk[at]gmail.com

Common problem in crisis situations is unwillingness of the local communities to undertake individual safety measures when the threat is known to be serious but it seems abstract to members of the public. For example when water reaches critical levels a swollen river might seem like an interesting thing to see, but people will often have problems imagining what might follow, believing that the threat is real, or considering their own responsibilities. Putting it simply, they are not motivated to act. We study whether their motivation can be increased if 3D technology is used for visualization of the potential scenarios. We were interested in two questions. First, we wanted to know whether this type of communication increased people's willingness to act. Second, we wanted to know whether it enhanced or undermined the ability of the audience to remember what preventive actions should be undertaken. In cooperation with service members experienced with flooding threat we composed a message containing warning about flooding threat and instructions for people in endangered area. We ran an experiment with three version of this message. In one of them we used 3D technique to visualize the consequences of flooding. The remaining two served as two types of baselines. We showed these messages to a random sample of people living in flood prone areas in Poland. The video was followed by a questionnaire on their motivation to act (based on Protection Motivation Theory) and on what they were able to recall from the instructions given.

Searching for the Development of a Crisis-Resilient Operational Definition of Social Innovation in Short Food Supply Chains

Petropoulou, Eugenia (1); Iliopoulos, Constantine (2); Theodorakopoulou, Irini (2); Petousi, Vassiliki (1)

1: University of Crete, Greece, Greece; 2: Agricultural Economics Research Institute Hellenic Agricultural Organization-DEMETER
petrope[at]uoc.gr, iliopoulosC[at]agreri.gr, theodorakopoulou[at]agreri.gr, petousiv[at]uoc.gr

The current economic and social crisis that certain European states face leads to varied forms of risk and uncertainty within the agri-food supply chains. Short food supply chains are supposedly correcting market failures in the form of imbalanced bargaining power within the chain. But as socio-economic and environment volatility increases, only having capabilities to manage short food supply chain risks may not be enough, resilience factors also need to be integrated into daily operations. Social innovations are usually hypothesized to provide, among other things, resilient tools and means for addressing these market failures. Yet, we lack a concise, operational definition of social innovation that would enable researchers to measure it and thus test the above-mentioned hypotheses. Our paper fills this knowledge gap by undertaking a systematic literature review on resilience factors in short food supply chains by proposing an operational definition of social innovation that will help to minimize risk and uncertainty in short food supply chains. In a companion paper we use this operational definition to measure social innovation along several dimensions and test previously stated hypotheses on the role of social innovation in short food supply chains. This paper will thus contribute to the development of a crisis-resilient operational definition of social innovation for short food supply chains.

Planning Across Borders: Exploring the Emerging Ethics of Information Technology for Transboundary Disaster Preparedness

Petersen, Katrina

Trilateral Research, United Kingdom
katrina.petersen[at]trilateralresearch.com

Crises, along with their environmental and societal needs, are increasingly made sense of using maps and centralised tools called common information spaces. These are built upon new data technologies that can compile information from a range of sources and are intended to act as tools to build collaborative insight into the situation beyond what any individual organisation can know. This paper explores how tools like these work when managing transboundary crises, where planners and responders have to engage with data from

other organisations, based in different data frameworks, socio-political priorities, goals, and cultures of environmental risk. Drawing on the societal and ethical analysis of cross-border collaborative crisis planning platform developed in the 3-year long European Commission funded IN-PREP project (in-prep.eu), this paper examines how the classification and ontological work necessary to bring the data together influences how preparedness and planning needs are understood. Grounded in action research that aims to directly engage the design work, this talk aims to better understand the ethical debates about who has the authority or responsibility to define a crisis and which social and environmental security measures are justified.

Domestication Theory and ANT as Theoretical Tools for Research on Digital Everyday Risks in connected households

Storm-Mathisen, Ardis; Slette-meås, Dag

Oslo Metropolitan University, Norway
ardist[at]oslomet.no, dags[at]oslomet.no

This paper discusses the potentials of combining Domestication theory and Actor Network Theory as tools to analyze digital everyday risks of connected households. Prior research makes evident that techno-material and socio-practical aspects of everyday life are central to the understanding and management of risks. This is not least the case for digital consumer risks in modern connected households as these are constituted through the interconnection of technical, social and human elements into complex ecosystems. This paper is an attempt to build a framework for analytical investigations and conceptualizations of what the integrated complex of material resources, reflexive projects and enactments of actors and their discursive and non-discursive knowledge of digital devices and infrastructures produce of risks in connected households. We discuss the fruitfulness of using domestication theory to conceptualize how specific digital technologies are passed from the market to the private and “tamed” by users (through processes of appropriation, objectification, incorporation and conversion) and how ANT perspective can be used to analyze how people, technologies, infrastructures, objects and products co-shape new associations and security risks in the context of the home.

RN09 | Economic Sociology

RN09_01 | Economic Sociology and Social and Economic Inequality I

The Role of Wealthy Elites in Financialisation and Escalating Inequality in Britain

Carmichael, Donna

London School of Economics, United Kingdom
D.Carmichael[at]lse.ac.uk

Inequality is one of the defining issues of our times, with the wealthiest 1% owning nearly 25% of Britain's wealth, while the poorest 50% have less than 5% of the national wealth. Numerous causes of escalating inequality have been proposed: declining share of labour versus capital, skyrocketing executive compensation, reduced power of unions and collective bargaining resulting in increased negotiating power of owners/executives, globalization, privatization, and the rise of finance-driven capitalism, or financialisation. Finance plays an increasing role in the economy, and recent scholarly research concluded that expansion of finance has contributed significantly to rising inequality in many countries. Lin and Tomaskovic-Devey (2013) concluded that "the rise of finance is one of the driving forces behind growing income inequality and the concentration of income at the very top." (p.1313). Income is becoming concentrated within a small group of High Net Worth (HNW) individuals, who are deriving an increasing proportion of wealth from financialisation. HNW's are increasingly channelling their capital into private equity (PE) investments. Of the \$4 trillion in private equity assets globally, HNW's are investing about 30% of their portfolio in PE funds, making them the highest contributors to PE investments. The bankruptcy of several major PE-owned companies in the UK has incited accusations of predatory and immoral behaviour, including asset-stripping, exorbitant management fees, aggressive tax avoidance practices, etc. This paper will review current research on the link between HNW's and their contribution to rising inequality via investment patterns through a sociology of morality lens.

Creditworthiness seekers. The case of Swiss franc mortgage borrowers in Poland

Wechta, Przemysław

Adam Mickiewicz University, Poznań, Poland, Poland
wechta[at]amu.edu.pl

Creditworthiness becomes an important category of social differentiation in modern capitalism. The extent to which it is

entitled to consumers determines their positions in the economic, cultural and prestige hierarchies. Hence their striving to increase their creditworthiness becomes a measure of their success in life. The case of Swiss franc mortgage borrowers in Poland who took out loans in 2004-2008 explicitly reveals this motive of their behavior. In Poland, they are the subject of continuous public discourse due to the persistently high CHF/PLN exchange rate and the lack of institutional solutions to the debt problem and the resulting consequences for the financial condition of some households. On the one hand, mortgage borrowers are accused of excessive greed and, on the other, of the naivety in choosing Swiss franc as the settlement currency of the loan. I would like to analyze their credit decisions in terms of behavioral economics: bounded rationality (H. Simon), perspective theory (D. Kahneman, A.Tversky); new economic sociology: relational accounting (V.Zelizer, F. Wherry). Ultimately, I will focus on the reconstruction of their strategy to increase their creditworthiness in terms of human capital and economic capital.

Perceived Tax Burdens and Preferences for Redistribution – Evidence from a Survey Experiment

Kalleitner, Fabian

University of Vienna, Austria
fabian.kalleitner[at]univie.ac.at

Taxes are an important indicator of the redistribution potential of the welfare state. Since the 1970s, seminal theoretical models considering individual income as main determinant suggest that more inequality should lead to more redistribution. Empirical studies only find mixed support for this mechanism. However, does this mean that the majority of citizens reject more redistribution and, if so, why is this the case? Besides considering further determinants as explanatory factors (i.e. fairness norms), the mediating factor of information becomes more prominent as studies could show that individuals are only partially informed. Using data from an experimental survey with information treatments, conducted in Austria in 2018, the study asks how information on (i) the relative position of one's personal income and (ii) the present structure of the tax burden influences subjectively preferred tax levels. The research will enrich the existing literature in three ways: First, by focusing on differences between perceived and actual taxation, second, by measuring tax-preferences on various income levels and, third, by connecting the debate about the impact of information on tax perceptions with current research that stresses the importance of fairness norms for preferences over redistribution. First results indicate that on average respondents overestimate tax differences between the poor and the rich but underestimate the actual tax burdens of all income levels. Information on the actual tax burdens leads respondents to adapt their tax preferences to the current taxation. The appreciation of different distributive justice norms affects the preferred distribution of the tax burden.

Forms of Social Capital in the Field of Economists. Between Scientific and Worldly Powers

Rossier, Thierry (1,2); Benz, Pierre (1)

1: University of Lausanne, Switzerland; 2: Copenhagen Business School, Denmark
thierry.rossier[at]unil.ch, pierre.benz[at]unil.ch

Economists are among the main producers of discourses legitimating market-based ideologies, defending the particular interests of a capitalist class. They are involved in various networks, which lead to the detention of social capital. This presentation investigates the structure of social capital in the field of economists in Switzerland. To do so, we use an original biographical database of all University professors between 1980 and 2000 (n=200). We focus on their positions at the top of academic and scientific organisations, big corporations and the higher civil service, and as elected MPs; their inter-personal networks (scientific collaborations; PhD supervision of future economic, political and administrative “elite” members; local and international networks); and their networks of scientific recognition through citations and publications in “prestigious” scientific journals. To study these networks, we use an innovative methodology by combining multiple correspondence analysis (MCA), class-specific MCA and cluster analysis. First, we identify two main oppositions within the field, according to the volume of worldly (external and local) social capital, and to the volume of scientific (internal and international) social capital. Second, we show that scientific social capital gains in importance in the very recent period, despite the fact that worldly social capital constitutes the dominant form of resources along time. Finally, we identify seven particular uses of social capital according to various forms and combinations of network logics. We show that sub-groups that detain scientific social capital obtained through national networks are the most powerful within the “scientific” fractions, while the most influent “worldly” fractions are able to concentrate every form of social capital related to external networks. Also, concentration of both powers goes through various forms of inter-personal networks.

RN09_02 | Economic Sociology and Social and Economic Inequality II

The Effects of Debt on Subjective Well-Being

Henchoz, Caroline (1); Coste, Tristan (1); Wernli, Boris (2)

1: University of Fribourg, Switzerland; 2: FORS (Centre of Expertise in the Social Sciences), University of Lausanne, Switzerland
caroline.henchoz[at]unifr.ch, tristan.coste[at]unifr.ch, boris.wernli[at]unil.ch

The consequences of debt, particularly in terms of subjective well-being (SWB), remain little studied in Switzerland and elsewhere in Europe. Yet it is a socially relevant question. The subjective perception of the economic situation is indeed considered as an indicator to identify situations of over-indebtedness. In addition, the effects of a difficult financial situation on well-being do not only concern the family and individuals but can have wider consequences (productivity and absenteeism for example) We will use data from the SHP, a multi-thematic Swiss longitudinal survey, to monitor other parameters that have an influence on the SWB and to study the issue in a causal perspective over the long term. We include 3 indicators of debt: arrears, monthly payments for a credit and assessment of household income and expenses and 2 dimensions of SWB : evaluative (life satisfaction in general) and affective (negative and positive feelings). Our analyses are conducted using longitudinal fixed-effect models. In addition to the effect of the three debt indicators mentioned above and an overall assessment of household income and expenditure, our analyses are controlled by different parameters (gender, age, education, etc.). The introduction of time-invariant variables, normally ignored in fixed-effect models, will be achieved by integrating interaction terms, or separate models for certain social and demographic categories. Our longitudinal analyses show that the various debt indicators do have a negative effect on SWB, especially for the lowest income groups. It is the arrears of payments that have the most unfavourable impact, which attests to the different consequences of indebtedness. Finally, debt has the largest impact on overall life satisfaction, while the emotional aspects of SWB are less impacted.

Evolution of Wealth Inequality in Spain by Social Class and Education, Before, During and After the 2008 Crisis

Castellanos Quintana, Juan Vicente (2);
Veira-Ramos, Alberto (1)

1: Universidad Nacional de Educación a distancia; 2: Universidad Carlos III de Madrid.
juicastel[at]polsoc.uc3m.es, aveira[at]polsoc.uc3m.es

The Financial Survey of Families is carried out every three years by the Bank of Spain. In a sample of more than 6,000 households, information is collected about the sources of income, financial and real estate assets and debts of each member of the selected households. An analysis of this database from 2002 to 2017 has allowed us to observe the evolution of the wealth of Spanish households according to the social class of the two heads of family; before, during and after the crisis. We have also been able to pay attention to intra-class differences between people with different levels of education. Particularly interesting has been the monitoring of Spanish workers with professional training, a minority group in Spain, although very important in other European countries. We have also paid attention to the differences within the group of University graduates, between those who obtained a degree in humanities or social sciences and those who obtained a degree in hard sciences. All this has allowed us to observe the differences in wealth and income that occur between these categories of workers during a time of economic prosperity and another of crisis. Likewise, we have also been able to observe which groups are benefiting most rapidly from the incipient process of economic recovery.

Attitudes Towards Inequality Of The Top 10% Of Income Earners In Four European Countries

Gonzalez Hernando, Marcos

Think tank for Action on Social Change (TASC), United Kingdom
marcosghernando[at]cantab.net

As many have noted, for the past decades inequality has been on the rise across Western countries. This has been particularly the case after the 2008 global financial crash. According to the OECD, although the real income of the bottom 90% of households has all but stagnated since 2008, that of the top 10% have grown exponentially. Furthermore, that top 10% has accrued most of the benefits of economic growth since 2008. Previous research has also shown that the policy preferences of the top 10% are more likely to coincide with official policy than those of the rest of the population. Given this backdrop, it is important to understand the social characteristics and attitudes of that segment of society, as doing so has important implications for policymaking. After all, this group is perhaps the most likely to seek to maintain inequality, or even increase it. This paper presents some preliminary findings of an international research project that undertakes a comparative

analysis of the composition and attitudes towards inequality and redistributive policies of the richest 10% of the population across Ireland, Spain, Sweden, and the UK. In cooperation with the Foundation for European Progressive Studies (FEPS) and a host of local think tanks, this research – and drawing from in-depth interviews (30 per country) and statistical analysis (EU-SILC/LFS, ESS) – the ultimate aim of this project is to devising policy recommendations at a national and European level that this segment of the population might be able to support, or at least be less likely to overtly oppose.

Changing Market Logics? The Pressure from Foreign Institutional Investors

Lee, Shi-Rong

Sciences Po, France
Shirong.lee[at]sciencespo.fr

This research examines how the logic of financialisation diffuse from shareholder capitalisms to a stakeholder market, i.e. Taiwan in this case, and how conflicting market ideologies interact with each other. Specifically, this paper investigates how the global force that encourages the maximising shareholder value discourse interacts with the local institutions, such as family business, and how they influence corporate governance behaviours and shareholder value strategies over time. This research adopts an institutional approach and argues that transnational actors and finance are the drives for the institutional change of firms in a stakeholder market. However, local institutions may also exercise their agency vis-à-vis the pressure from the global institutional investors. Using panel data of public firms listed on the Taiwan Stock Exchange from 1996 to 2016, the primary findings suggest that foreign institutional investors as shareholders increase the likelihood of mergers and acquisitions of firms and shareholder corporate governance strategies. Second, compared with firms that are controlled by families or alliances, corporations supervised by professional management are more inclined to adopt mergers and acquisitions. Finally, the educational and career experience of board members also plays a role. This research, therefore, contributes to the literature on institutional change and the mechanism of the diffusion of shareholder values and its consequences.

What Role Does Communication Play In Financial Product Development?

Kollner, Sonia

Uppsala University, Sweden
sonia.kollner[at]soc.uu.se

According to recent approaches within the Sociology of Finance, the development of financial products can be understood as a variety of epistemic practices, whereby the analytical focus lies on the technological and material aspects of knowledge production. This presentation shifts the focus towards the communication practices by which product developers envision the future financial product and negotiate its feasibility with colleagues, superiors, business partners and clients. Applying Goffman's dramaturgical approach, this contribution asks: How are the financial products rendered meaningful? How is a shared understanding of the financial product established? This presentation utilizes findings from an ethnographical study conducted during 3 months in a private bank's product development department that focuses specifically on the construction of individualized investment products for High Net Worth Individuals. Through participant observation in the department's office, document analysis and expert interviews with a financial product developer, this study has shed light on the everyday communication practices of financial product developers, which entail working out the construction of the products, developing simulations and product presentations as well as engaging in e-mail conversations as they seek to establish trust in their products. The findings of the study suggest that the product developer's communication practices in this respect can be regarded as an example of what Goffman calls the practice of 'framing'. Through the analysis of the ways in which the financial products are made sense of throughout the communication process, this presentation understands communication as a key aspect of financial knowledge practices and argues that the role of communication needs to be better understood in the context of financial product development.

Can Local Currencies Enhance Recycling Practices And Breathe New Life To Local Commerce?

Lima Coelho, Sandra

Católica Porto Business School, Portugal
scoelho[at]porto.ucp.pt

Fevre (2003: 5) argues that when economic rationality extends beyond the economic field and expands to other dimensions of social life, morality tends to contract and to interfere less with economic behavior. But does economic behavior have moral ends, or are we tainted by the values of economic rationality to the point where all our behavior is motivated by economic ends? We looked for answers to this question in an exploratory study about the project "Pago em Lixo", created by the Campolide Parish Council, in Lisbon, which implemented a local currency – Lixo - with the aim of involving the community in recycling waste. This action has a moral purpose: raise citizens' awareness to the need of recycling waste and to

contribute to maintain public spaces clean. However, this project also aims at improving local commerce dynamics, as the local currency can only be used at local traditional shops. In this presentation, we expose the modus operandi of "Pago em Lixo" and discuss the motivations of the Parish Council to implement this project. An analysis of information collected in a semi-directive interview with the President of this council, interviews with participants in the project and data collected through direct observation of two of the project's actions is also provided. Results demonstrate that the use of this local currency contributes to strengthen community ties while simultaneously encourages the adoption of greater civic awareness behaviors, reflecting an ersatz morality.

"African Money in the Heart of Europe": Bitcoin and Monetary Pluralism Within Central-European Economy

Tremčinský, Martin

Charles University in Prague, Czech Republic
martin.tremcinsky[at]fsv.cuni.cz

Bitcoin is a new digital technology of exchange which re-introduces into western societies monetary pluralism. Bitcoin is designed in order to overcome the central control of third parties - such as central banks or national states - over economic exchange and as such it is quite resistant towards state-led institutionalization. This puts bitcoin into an ambivalent position which plays crucial role in its practical uses; i.e. sometimes it is treated as money, sometimes as commodity; sometimes the prices for goods and services are fixed in fiat currencies, sometimes in bitcoins. Such situation of "monetary anarchism" resonates with monetary practices of west-African popular economies as described by Jane I. Guyer in "Marginal Gains". Guyer analyses asymmetrical monetary conversions, where statuses of money-objects are being shifted in order to allow gains for one of the exchanging parties. Based on ethnographic fieldwork in two Bitcoin communities in Prague and Bratislava this text argues that bitcoin allows for a similar kind of conversions. Such strategies enable some members of the bitcoin community to deal with volatility of bitcoin's prize while fully embracing its ambiguous character and treat the "monetary anarchism" as a resource of its own. In conclusion this analysis aims to discuss a process Achille Mbembe calls "Becoming Black of the world" and its relation to inter-linked developments of late capitalism and digitalization, stressing the possibilities of analyzing newly emerging digital economies via popular economic practices from the so-called margins of modernity.

Money Knowledge or Money Myths? Results Of A Population Survey On Money And The Monetary Order

Kraemer, Klaus; Jakelja, Luka; Brugger, Florian; Nessel, Sebastian

Department of Sociology, University of Graz, Austria
klaus.kraemer[at]uni-graz.at, luka.jakelja[at]uni-graz.at,
florian.brugger[at]uni-graz.at, sebastian.nessel[at]uni-graz.at

People are using money in everyday life in ubiquitous ways. And they know that money has quite multiple meanings in different social contexts, depending on the situation in which it is used. However, what do people know about money, money creation, money backing and the institutional foundations of the monetary order? To close the blatant research gap on people's knowledge about money and the institutional foundations of the modern monetary system, we carried out a standardized population survey (n = 2000) in Austria in autumn 2017. Firstly, we review literature on the sociology of money with special regard to money knowledge and monetary institutions. We argue that the sociology of money made progress in analysing the usage of money and the institutions, which produce money but neglected an analysis of ordinary people's knowledge of the monetary order. Secondly, we review a strand of Financial Literacy research which has empirically assessed people's knowledge about mathematical and financial issues but not about money or monetary institutions. Thirdly, we suggest a definition of money and give an outline of central institutions to understand the monetary order. Fourthly, we explain our methods and data. Fifthly, we present central descriptive, bivariate and multivariate empirical findings of people's knowledge of money and monetary institutions with regard to socio-demographic and socio-economic factors (gender, age, education, employment status, household income). Finally, we discuss our empirical findings against the backdrop of existing studies. We conclude by arguing that it is money myths and not money knowledge that may explain the widespread usage and acceptance of money in everyday life.

Saving informally: An examination of local "gün" meetings in Turkey

Aslan, Remziye Gul

Bogazici University, Turkey
gul.aslan2[at]boun.edu.tr

ROSCAs (rotating savings and credit associations) are informal microfinance groups particularly popular among the developing countries. Their popularity is explained as a result of formal institutions' lack of capacity to meet financial needs in such countries. The popularity of these informal organizations is also explained by their relatively easy entry and exit options, low transaction costs and tax-freeness due to

informality and the smallness of their scale. "Gün" is a type of ROSCA particularly popular among women in Turkey. In güns, a funding pool is formed by the equal contributions of participants in each meeting and the money collected in each round is taken by a participant. This research aims to understand the underlying reasons behind women's participation in gün groups. This research will present a descriptive analysis of semi-structured interviews conducted with 32 currently participating women and 8 former participant women from three gün groups. During these interviews, I primarily question their motivations for joining a gün group. Although other studies mainly put emphasis on güns as forced saving mechanisms for low-income households, this research indicates that high-income women also have significant financial motives for participation. Preliminary results also point that women with stronger financial motives than non-financial ones (e.g., socialization, status-marking etc.) are more likely to keep on participating güns for longer durations. Therefore, güns can also be interpreted as a manifestation of the lack of saving culture among women in Turkey besides being an outcome of formal financial institutions' incapacity. KEYWORDS: ROSCAs, informality, microfinance, saving culture

Risk Relations Between Financial And State Fields

Lange, Markus

Freie Universität Berlin, Germany
markus.lange[at]fu-berlin.de

Financial industries and states can be considered as strategic action fields (Fligstein/McAdam) that deal with social risks and at the same time contribute to the formation of these risks. Recent economic, legal, and political transformations, e.g. due to the subprime and European debt crisis or Brexit suggest a relational perspective on the construction of risk in these fields: First, although these fields frequently anticipate identical risk events, they rely on different practices to manage these risks. Financial fields tend to generate margins and provide liquidity whereas state fields secure power and enforce collectively binding decisions and regulations. Second, risks also arise due to the substantial economic, fiscal, regulatory, and political interdependencies and entanglements between these fields. States, for example, use regulatory policies to set the rules for finance, but at the same time use financial logics when issuing government bonds to fund expenditures. In contrast, financial actors have to comply with regulatory policies, but at the same time acquire government bonds to either strengthen security in their balance sheets or add risk premiums to generate margins. Conceptualizing these field-inherent practices and cross-field interactions as "relational risk" (Boholm/Corvellec), the paper compares how financial and state actors construct "risk objects" as dangers and "objects at risk" as valuation practices to match their respective field logic. For this, a qualitative study is conducted with 53 interviews and ethnographic fieldwork in the German financial sector, the federal parliament, and federal financial supervisory authorities. It is investigated how risk practices emerge, including forms of self-understanding and other-awareness, and how financial and state actors construct one another as risk objects, whereby each field retains its distinct objects at risk.

Global Financial Regulation: From Risk to Uncertainty?

Loyning, Trond

University of South-Eastern Norway, Norway
trond.loyning[at]usn.no

The question investigated in this paper is to what extent the regulatory reforms after the financial crisis of 2008 entail changes in how risk is perceived and regulated. The efforts undertaken to develop sophisticated regulatory standards in the decades leading up to the financial crisis of 2008 were to an increasing extent based on a “risk-sensitive” approach – regulation was based on the belief in the usefulness of precise measurement of risk taken on by financial actors, and much regulatory efforts were focused on the methodology of doing this. Financial actors and regulators alike had confidence in the institutions supporting such an approach to risk, from the organization of the financial markets in general, to the specific role of rating agencies, and the models used to analyze risk. This belief was shaken during the financial crises, and post-crises regulatory reforms seem to question the earlier approach. The paper discusses the Basel III reforms using the Knightian distinction between (measurable) risk and (un-measurable) uncertainty as a starting point. The final version of the Basel III standards, published in 2018, and debates regarding these standards, are the empirical material. It is argued that while the reforms during the whole period since the financial crises have been characterized by attention to problems of the methodology of measuring risk, it is the final version that most explicitly discusses and take into account these problems. A regulatory consequence is greater reliance on standardized regulations and requirements, applicable to all financial actors.

RN09_05 | Markets, Digitalization and Innovation

“Herif/Dude”: Personifying High-Frequency Trading in an Emerging Stock Market

Karakaya, M. Fatih

Istanbul University, Turkey
zinderud[at]gmail.com

In the Turkish stock market, Borsa Istanbul (BIST), from time to time since February 2016, a mysterious trader has been making the market. As this mysterious trader acted like “a giant bull in the china shop” and doubled the daily volume of the market, it attracted the attention of all relevant parties in the BIST. The Turkish observers named this mysterious trader as “Herif (the guy)” while non-Turkish observers coined the term “Dude.” After a growing “guess who game” on the identity of this mysterious trader, the broker firm revealed that it was actually an automated computer-based high-speed trading technology (so-called high-frequency trader (HFT)) acting in the market. Yet, the name “herif/dude” has prevailed. In an environment as the stock exchange that, in Simmelean sense, is supposed to be the most clear and emphatic expression of the flexibility and anonymity of money, an automated trading tool executing selling/buying orders according to certain algorithms was personified. In spite of the fact that the sociological enquiries on the transformation of stock markets from trading pits to click/screen trade (Baker, Abolafia, and Zaloom) and to the HFT (by MacKenzie, Knorr-Cetina, Preda, Lange, and Borch) provide an alternative track that diverge from a purely anonymous, de-personified and objective stock market, “Herif/Dude” case provides a real story that points a sociological understanding of HFT in an emergent stock market. This study analyzes “Herif/Dude” case in terms of post-social relationship, (de)personification, anonymity, subjectivity, masculinity, mundane politics of emergent financial markets, and the (new) role of brokers and traders based on the data derived from in-depth interviews with the relevant parties of BIST.

Towards Platform Pluralism? Professional Organizations, Regulation Struggles And The Development Of Corporatist Platforms

Balsiger, Philip (1); Cianferoni, Nicola (1);
Jammet, Thomas (1); Surdez, Muriel (2)

1: University of Neuchatel, Switzerland; 2: University of
Fribourg, Switzerland
philip.balsiger[at]unine.ch, nicola.cianferoni[at]unine.ch,
thomas.jammet[at]unine.ch, muriel.surdez[at]unifr.ch

The rise of platforms as "new digital intermediaries" (Srnicek and De Sutter 2017) has shaken up many markets and industry sectors in recent years. Financially powerful and technologically sophisticated platforms such as Uber, Airbnb, or Deliveroo act as profiteers organizing new markets (Kirchner and Beyer 2016). Doing so, they pose challenges to the actors who so far dominated the markets – often organized professions such as taxi co-ops or associations of hotel owners, who risk losing control of market access and coordination, leading to reactions by professional organizations. The outcomes of the ongoing struggles over regulation of platforms differ. But even if platforms get regulated, the digital "logic" of organizing markets through digital marketplaces has wide-reaching consequences. Many observers speak of an inherent trend to monopolization characterizing platform economies. Yet one also sees counter-trends towards platform pluralism. In this paper, we will focus on one of the ways professional organizations have tried to reclaim their control of markets: through "corporatist platforms" - i.e., platforms developed and managed by an organized profession or industry sector. While the rise of alternative platforms has been discussed under the label of "cooperative platforms" (Scholz 2016), we suggest the term corporatist platform to grasp the ways professional organizations act in the contested platform economy. Based on a research project on regulation struggles and professional organizations in the platform economy in Switzerland, we propose an analysis of the development of such a platform in the Swiss hotel sector. The study shows that the development of corporatist platforms faces strong technological and cultural obstacles in contemporary platform economies.

Contractless Cooperation on Anonymous Online Markets. Why Actors Choose Advance Payments

Munksgaard, Rasmus (2); Tzanetakis,
Meropi (1)

1: University of Essex, United Kingdom; 2: Université de
Montréal, Canada
rasmus.munksgaard.andersen[at]gmail.com,
meropi.tzanetakis[at]univie.ac.at

Cryptomarkets offer anonymous environments wherein the use of digital technologies allow exchange partners to conceal their identities in order to complicate law enforcement interventions and facilitate illicit online commerce. The anonymity reduces the potential for interpersonal trust and provides ample opportunity for cheating, which are mitigated through the institution-based feedback system and an escrow payment system. Despite these safeguards, many customers still choose to transact with vendors by paying for products in advance, an option known as finalizing early (FE). Advance payments go beyond informal institutionalized standards offered by cryptomarkets and leave little leverage in case of conflict. Therefore FE appears as an unfavorable social practice. Little is known about the reasons why customers choose to pay sellers in advance. To fill this research gap, we analyse market data on 30.000 transactions gathered via web scraping from two cryptomarkets. Regression analyses are used to examine the social mechanisms behind offering and choosing FE payment over/next to centralized escrow payment. The analyses emphasizes the relation between drug categories, price, shipping countries, customer feedback, seller's reputation, and the buyer's previous interactions with the sellers. The study provides new insights into the practices that promote, stabilize or weaken social cooperation on anonymous online markets. It reveals cross-national, reputation-related and substance specific differences in extra-contractual relationships between sellers and buyers.

Risks and Innovation In Public Procurement

Osorio, Luis (1); Serrano, Maria Manuel (2); Neto, Paulo (3); Urze, Paula (4)

1: ISEL - Engineering Institute of Lisbon, Polytechnic Institute of Lisbon, POLITEC&ID; 2: University of Évora – Department of Sociology, CICS.NOVA, SOCIUS/ISEG-UL and UMPP; 3: University of Évora – Department of Economics, CICS.NOVA, CEFAGE-UÉ and UMPP; 4: FCT, Nova University, CIUHCT_ InterUniversity Center for the History of Science and Technology
lo[at]isel.ipl.pt, mariaserrano[at]uevora.pt, neto[at]uevora.pt, pcu[at]fct.unl.pt

The purpose of this paper is to design a conceptual model for the assessment of public procurement procedures. The proposed model is structured on a set of analytical dimensions, aiming at accomplishing public procurement processes which are aware of risks and fostering innovation. The research is developed with contributions from sociology, economy and engineering domains towards an integrated assessment framework. Low-risk options of selecting larger bidders guide decision-making practices overlapping merit proposals. Social and economic pressure for quality and reliability, have entailed decisions that are usually made on brand value and persuasion capabilities. The existing imbalance between risk/trust of large companies and small start-up/spin-offs evidence unbalanced business opportunities. In this context, it is of paramount value that a conceptual tool for public procurement aimed at balancing both large and small company opportunities in public tenders. We hypothesize that by reducing public expenditure, more value can be given to small and medium-sized companies provided they comply with the definition of standards, the design of reference models guiding product construction and impartial metrics, aimed at measuring competencies and product quality. The existing asymmetry is an obstacle for public procurement for innovation to create new opportunity and reduce risk and constraint. Hence, the importance of creating systems of assessment and monitoring of strategic public procurement. However, assessment of procurement is a complex undertaking and struggles with challenges related to standardization, data collection as well as to methodological issues. As a result, assessment and monitoring still present critical gaps and still call for improvements.

RN09_06 | Morality, Sustainability and Responsibility

Moving Beyond Corporate Social Responsibility Towards Sustainability: Evaluation Of The Social Impact of Businesses

Mara, Liviu-Catalin (1); Elboj Saso, Carmen (2)

1: University Rovira and Virgili (Spain); 2: University of Zaragoza (Spain)
liviucatalin.mara[at]urv.cat, celboj[at]unizar.es

Sustainability is a vital issue for Europe and humanity amidst the expansion of capitalism and the economic crises and social inequalities derived from it. Corporate Social Responsibility is a regulation developed by the business actors themselves that has not been able to resolve the sustainability challenges that the economic systems pose to our societies. For this reason, scientific research must move beyond this concept and propose useful tools to guide scholars and private actors alike in the quest for sustainability that is compatible with economic interests. This research builds on the findings and outcomes of the FP7 research project "IMPACT-EV. Evaluating the impact and outcomes of European Social Sciences and Humanities research", by introducing the concept of social impact in economic sociology research and establishing a theoretical framework and the elements needed to highlight the research on businesses that incorporate sustainability as just another dimension of their development model. Thus, this research can promote further social impact by disseminating these experiences for the entire society. This communication brings to the fore the latest contributions that Sociology brings to tackle the issues of inequality, social exclusion and other negative aspects of the economic systems through promoting responsible and sustainable business models.

'Everyone should Know the Price of Our Water': Moralization and its Implications in Development Practices in Batken, Kyrgyzstan

Rudzite, Liga

Tallinn University of Technology, Estonia
liga.rudzite[at]taltech.ee

Development cooperation sector has long been criticized for promoting neoliberal capitalist agenda and moralities globally. The recent financial crises and the (re)emergence of new development donors, some believe, have shaped a new paradigm, challenging the 'traditional' development tools and narratives. Yet the common features within Western and non-Western aid, and their implications, remain under-explored. This paper proposes to look beyond the Western and non-Western aid divide and examine the similarities in development practices of the diverse donors. As the focus on private sector as a driver for development and the use of managerialism in aid delivery take the centre stage across development practices, this paper explores the moral narratives that they promote. Drawing on a case study of rural development initiatives in Batken, which has for a long time been a highly 'aid responsive' remote region in Kyrgyzstan, this paper explores the role the international donors play in changing entrepreneurial moralities of recipients of development assistance and their contribution to responsabilizing recipients of aid into neoliberal subjects tasked with ensuring economic growth of the region through their participation in markets.

Corporate Volunteering from the Perspective of Nonprofit Organizations – An Institutional Logics Lens

Domnanovich, Julia

University of Vienna, Austria
julia.domnanovich[at]univie.ac.at

Societal challenges become more and more complex because they not only transcend national borders but also call for combined efforts of multiple actors from different societal sectors. This study examines corporate volunteering (CV), a specific form of cross-sector collaborations, from the point of view of nonprofit organizations (NPOs). While the peculiarities of cross-sector collaborations have been widely investigated, an understanding of how the broader institutional environment might affect the collaboration process remains limited. Therefore, an institutional logics lens on CV was applied in order to better understand how the institutional embeddedness of the participating NPOs and corporations affect the collaboration. To this end, sixteen semi-structured interviews were conducted with staff in NPOs responsible for CV. The findings show that the collaboration process accommodates societal sector logics of both the nonprofit sector (i.e. a community logic) and the profit sector (i.e. a

market logic) simultaneously and that the specific materialization of both institutional logics is contingent on the stage of the partnership. Surprisingly, the respective collaborations do hardly involve conflict arising from the domination of a market logic. The project managers responsible for CV in the NPOs were able to selectively couple practices from both societal sector logics in a manner that helped generate value for the partnering organizations while at the same time minimizing the potential for conflict during the partnership. The structural characteristic of the NPO (e.g. size) as well as previous partnership experiences with corporations represent further important contingencies of how the societal sector logics play out in the collaboration process.

Sustainability as an Indicator in Trade Credit Insurance Risk Assessment

Terracher-Lipinski, Audrey

Martin-Luther-Universität Halle-Wittenberg, Germany
audrey.terracher-lipinski[at]soziologie.uni-halle.de

So far, the responsibility to implement and regulate sustainable management on a wider scale is thrust upon politics. Regulations regarding sustainability include multiple topics such as social, environmental and governance issues all having an impact on the socio-economic development of companies and countries. The insurance market, other than the financial market, has not been of much interest for sociological research. The way insurances can lead to new developments for their customers should therefore be further investigated. A very specialized and rather small field within the insurance market are so called trade credit insurance (TCI). TCI are business insurances only and cover the trade credit one companies gives another by delivering goods to it without previous payment and significantly reduces the risk of insolvency. In order to cover such risks, TCIs have a risk management assessing the companies in question, similar to rating agencies. The risk assessment takes a lot of economic indicators into account. So far, sustainability does not officially belong to the assessment criteria, preliminary interviews with risk managers have shown though that ecological risks such as earth quakes or tornados are part of the country risk indicators. Taking the above mentioned into account, the idea of including sustainability as an indicator in risk assessments could trigger a step towards a more sustainable management in companies as the ranking of TCIs is extremely accurate in order to have a minimal risk of loss.

RN09_07a | The Study of Labour and Labour Markets

A Turntable Towards Entrepreneurship? Examining the Influence of Migration upon Romanian Returnees' Entrepreneurial Practices

Croitoru, Alin (1,2)

1: Lucian Blaga University of Sibiu, Romania; 2: University of Bucharest (CeSMig), Romania
alin.croitoru[at]ulbsibiu.ro

During the last decades, Romanian migration gained increasing momentum which led to over three million citizens living nowadays in other European countries (EUROSTAT 2018). Romanian migration is marked by heterogeneity in terms of destinations, motivations for emigration and return, as well as the length of time spent abroad (Sandu et al. 2018, Vlase and Voicu 2018). As a consequence, various forms of return migration to Romania receive increased attention from national policy makers (Șerban and Croitoru 2018) and scholars interested in certain effects of the Romanian return migration (Anghel and Cosciug, 2018; Croitoru 2018; Sandu et al. 2018). In this paper, we set out to develop a theoretical framework at the intersection of the return migration scholarship and entrepreneurship research (Ilahi 1999; Black, King, and Tiemoko 2003; Ammassari 2004; Lianos and Pseiridis 2009; Liu et al. 2010; Reiner and Radu 2012; Kenney, Breznitz, and Murphree 2013; Sabar and Pagis 2015; Sinatti 2015; Mayer, Harima, and Freiling 2015). Against this theoretical background, we make use of empirical data collected from Romanian returnees who lived for a while in other EU countries. Combining survey data and in-depth interviews, we analyse the role of migration experiences in shaping individuals' occupational trajectories. On the one hand, the presentation provides a general outline of Romanian returnees' propensity towards entrepreneurship. On the other hand, attention is paid to several types of capitals used by entrepreneurs in conducting their businesses upon return (economic, human and social capital). This multi-dimensional approach allows us to understand who are the return migrants who turn into entrepreneurs as well as the intricate complexity of individuals' labour decisions upon return.

Theorizing Labor Markets in Economic Sociology. A German Perspective

Weingärtner, Simon

Helmut Schmidt University Hamburg, Germany
weingaertner[at]hsu-hh.de

Despite an observable increase of theoretical publications on labor markets in recent years, there is yet no systematic discussion on labor market theories in contemporary sociology. In order to fill this gap, the aim of this contribution is to collect and systematize sociological and socio-economic theories which implicitly or explicitly describe labor market structures from different perspectives. The selected approaches draw on a variety of theoretical traditions and shall be systematized in three analytical dimensions. First and utmost, the different approaches are classified according to their basic theoretical assumptions (whether they prioritize economic or sociological explanations/logics; whether they focus primarily on structural or agency aspects). Secondly, the selected theories are examined regarding their middle-range-assumptions on the driving forces of labor market inequality (e. g. actors, institutions, discourse orders) – which of course are linked to the basic assumptions. The third element are the proposed hypotheses on the structure of contemporary labor markets and possible trajectories of change (e. g. precarization, segmentation, dualization). As a result of the systematization, it can be shown that a middle-range-comparison of very heterogeneous concepts is possible and that all selected approaches can be assigned to four distinct theoretical fields or “families”. In order to demonstrate the yet widely untapped analytical potential of contemporary sociological theories on the subject, a particular focus will be given to approaches in “field IV” (structure / social logics) which emphasize the significance of political power structures and discourse orders for the (trans-)formation of labor market structures. This contribution is based on prior research on (mostly) German language publications (Weingärtner 2019) but selected international contributions are addressed as well.

Youth Employment in the IT Sector in Cluj-Napoca - Using the Perspective of Employers and Lecturers

Székely, Kinga

Corvinus University of Budapest, Hungary
szkinga2003[at]gmail.com

The aim of the present paper is to give an answer to the research question: Is the IT sector dependent on youth? In case of a supportive answer the paper will examine: Which are those factors that affect the demand for youth labor? We answer these questions with using qualitative research in Romania, in the 2nd biggest IT center of the country, in Cluj-Napoca. The research is based on interviews with two target groups. First, lecturers of the two biggest universities in Cluj-Napoca were interviewed, who presented the role of the higher education and their tools to reduce labor shortage. Secondly, private companies were interviewed about How do they recruit their workforce? And which are the leading skills that result in employment at their companies? According to the lecturers, the results show that strong rudiments are more important than specific technological user experience in finding a good job in the IT sector. At the same time, they urge stronger cooperation between the faculties of higher education institutions, state and companies in order to fight against labor shortage on long-term. According to the employers, different recruit methods lead to success, depending on the position level or the position type. Internships and mentor program claim for prior cooperation between student and employer, they are the best recruit methods for junior positions. Professional knowledge is a necessary condition, but not sufficient to find a good job. Employers highlight besides the importance of soft skills in the IT sector.

Flexible Work: Tracing the Ambiguity of a Concept

Boult, Jacob

University of Manchester, United Kingdom
jacob.boult[at]postgrad.manchester.ac.uk

Flexible work and labour market flexibility are ambiguous and contested concepts, in themselves and in the relations between them. The first part of the paper seeks to draw out these conceptual ambiguities. First, by discussing a range of contrasting working practices commonly described as flexible, and second by demonstrating how the identification of flexible work with labour market flexibility is a false one. Given that flexible work is used to describe practices more often categorically separated across virtually the full range of working arrangements observed under contemporary capitalism (from any arrangement divergent from the 'standard employment relationship' to some practices within it, from flexible-precarious work to flexibility at worker-discretion) the meaningfulness of the concept is called into question. The first part of the paper begs the question, why have flexible work and labour market flexibility come to be

ambiguous and contested concepts? Drawing primarily on the work of Nancy Fraser, Luc Boltanski and Eve Chiapello an explanation is offered by framing the rise of flexibility in work and labour market policy as a response to, resignification and ultimate forsaking of two sets of bottom-up demands emanating from the Fordist era. These are worker's demands for greater creativity in less hierarchical and bureaucratic organisations, and feminist critiques of the 'male breadwinner model'. The paper closes with preliminary reflections on definitional approaches to disambiguating the more human working practices associated with flexibility at worker-discretion, from flexibility at firm-discretion. The paper presents work-in-progress toward a section of the theoretical framework of my PhD.

The Degradation of the Labour Market in Southern Italy, Resulting in Precariousness and Exploitation

Mostaccio, Fabio; Farinella, Domenica

University of Messina, Italy
mostaccio[at]unime.it, domenica.farinella[at]gmail.com

In the last three decades policies of neoliberalism have influenced the world economy including that of Italy, which has set up an economic pattern based on accumulation by dispossession (Harvey: 2006). This results in value extraction due to the redistribution or expropriation of value that was made by others (Mazzucato: 2018), as often happens when financial accumulation or labour exploitation leads to increased profit maximization (Foundation Economy Collective: 2018). Subsequent consequences are income loss and social inequalities, which affects those who live in already disadvantaged areas. In Southern Italy, where public sector jobs reduced unemployment and increased incomes, neoliberal solutions, following a spending review and the privatisation of public services, created at least three interconnected outcomes: a) a transformative demotion of the labour market as a effect of shadow economy growth resulting in changes in job roles and less job security for workers; b) a permanent growth of the migration of Italian people present statistical data is similar to the time of trente glorieuses; c) a significant increase of socio-spatial polarization, between social classes as well as Northern and Southern Italy. Within this framework, the paper aims to present the results from two different long-term research projects carried out in Messina concerning the precariousness of the job market between 2008-2015, which analysed, using qualitative methodologies such as "in-depth interviews", the degradation of the labour market in marginal areas. Moreover, it proposes to engage with the on-going debate that in recent years has been introduced by Foundational Economy studies.

The Coupling of Money Grids - On The Political Dimensions of Money from a Relationist Perspective

Sahr, Aaron

Hamburg Institute for Social Research, Germany
aaron.sahr[at]his-online.de

The political dimension of money is commonly identified with a conflict over purchasing power, i.e. the value of money. This position is held by representatives of both commodity theory and credit theory of money. From a sociological perspective, however, this framing does not exhaust the potential of credit theory. This paper attempts to develop the economic credit theory into a sociological research perspective and shows, using the TARGET2 debate as an example, how the conceptualization of the euro as a political institution might be expanded by this. The paper follows a relationist perspective that examines money as a web of interdependent creditor-debtor relationships. In contrast to traditional research on money, a relationist sociology of money is not concerned with the value of money (purchasing power), but with the social, cultural, and political conditions and effects of the continuous creation, maintenance and dissolution of risky and politically integrated credit relationships that form and reproduce the "money grid" (P. Mehrling). The paper hopes to offer least two helpful insights about money as a political institution. Firstly, the European single currency can be described at the social level as an attempt to link national money grids only partially. The concept of 'coupling' is proposed for this socio-political connection. Secondly, the political dimension of this coupling isn't exhausted by making liquid assets exchangeable through exchange rates. Rather, it is the content of the claim that is politically negotiated; i.e. the nature of the relationships that couple the national currencies. In a more explorative concluding section, an attempt will be made to extend the relationist perspective on monetary conflict to other 'coupling mechanisms', such as currency swap lines.

The Sociology of Economics Revisited: From Performativity to Utilization Studies

Sparsam, Jan

Ludwig Maximilians University Munich, Germany
jan.sparsam[at]soziologie.uni-muenchen.de

The sociology of economics has been established as new research field in economic sociology. It mainly comprises two strands: first, the analysis of the institutional and epistemic order of academic economics. Second, the impact of economics on the real-world economy. The second strand is

dominated by performativity studies in the vein of Michel Callon and Donald Mackenzie. Performativity studies claim that academic economics (co-)constitutes economic phenomena. But they have also been criticized for insufficient empirical verification of the actual effect of economic knowledge on the real-world economy. Sharp critics find fault with performativity studies presupposing what should be proven in the first place. The presentation discusses the desiderata of performativity studies and offers methodological propositions for the study of the utilization and impact of economic knowledge. On the one hand, I will argue that the relationship between scientific representation and intervention has to be framed in terms of a theory of action that is mindful of the motivations, interest and backgrounds of the actors utilizing economic knowledge. On the other hand, I claim that the economy has to be understood as more than just a passive area of application for knowledge stemming from economics. I will give examples from the social studies of finance and the sociology of central banks to show that the utilization of economic knowledge is always integrated in a production process of field-specific knowledge. The presentation concludes with providing a general approach for the analysis of the utilization and the impact of economic knowledge.

New Economic Sociology Linked to Mechanism Approach

Maurer, Andra

University, Germany
andrea.maurer[at]uni-trier.de

The invention of new economic sociology in the 1980s was inspired by theoretical debates starting in the 1970s in the US and Europe by emphasizing theoretical issues. Central theoretical challenges in the 1970s in sociology came from the dominance of macro theories on the one hand and that of economic theory on the other hand. Both approaches were criticized for their lack of taking ongoing social relations as well as individual's meanings into account. The paper reconstructs how sociologists, such as Mark Granovetter, Ronald Burt, Harrison White and James Coleman, started to overcome the shortcomings of standard sociological and economic approaches by inventing the concept of action-based explanations. New economic sociologists as well as theorists from different fields have worked on action-based explanations since then. Based on this, the developments and tools established in the action-based program in sociology in general and economic sociology in particular are described. Last but not least, mechanism approach, a central newcomer in theoretical debates, will be linked to economic sociology and discussed as a promising way of going further.

Work Alienation: Theoretical Reflections on Hidden Dimension of Current Market Societies

Gerbery, Daniel

Comenius University, Faculty of Arts, Slovak Republic
Daniel.Gerbery[at]uniba.sk

In the last thirty years, economic sociology has produced plausible theoretical diagnoses of the market economy trajectories and their consequences, including financialization of the economy, increasing social inequalities, or rise in the precariousness of paid employment. The paper argues that when trying to understand the nature of market economy and its impact on human conditions, labour and world of work should be at the heart of theoretical thinking, as they represent the fundamental channels through which market economy touches our lives and through which we connect to other human beings. To do so, the paper pays attention to an "intimate" relationship to work and to self as a "labour", by focusing on the concept of alienation. Based on critical reading of Marxist and post-Marxist ideas, as well as refusal of managerial and "technical" concepts, the paper identifies conditions under which the concept of alienation can be used for better understanding of contemporary world of work. Alienation is understood as a relational concept, referring to relationships to other human beings as well as to the objects and products of labour. It reveals deeply rooted tensions, processes of breaking of ties, isolation, meaningless that call into question neoliberal understanding of paid work (employment) as a universal solution to all societal and personal problems. The paper tries to answer the following questions. Why it is useful / necessary to think work in terms of alienation? How we can grasp alienation in contemporary market societies? Can we talk about hidden inequalities or social divisions related to alienation from work? How does this concept relate to other core concepts of critical theory and post-polanyian economic sociology?

RN09_08 | Theoretical Perspectives in Economic Sociology II

"Versuchsstation des Weltuntergangs": Viennese Origins of the Debate on Capitalist Decline in Schumpeter, Polanyi and Hayek

Ebner, Alexander

Goethe University Frankfurt, Germany
a.ebner[at]soz.uni-frankfurt.de

This paper addresses the Viennese intellectual origins of the debate on the decline of contemporary capitalism in the key works of Joseph A. Schumpeter (1883-1950), Karl Polanyi

(1886-1964), and Friedrich A. von Hayek (1899-1992). Their contributions stand for specific paradigmatic visions in the social sciences. In reiterating crucial commonalities, one might outline the parallel publication of their most popular works, namely Schumpeter's "Capitalism, Socialism, and Democracy", Polanyi's "Great Transformation", and Hayek's "Road to Serfdom", during World War II. Each of these books addressed the crisis of Western societies with its key ingredients of the interlinked domains of market and democracy under attack by authoritarian forces. Moreover, in terms of their intellectual biography, Schumpeter, Polanyi and Hayek originated from the former Austro-Hungarian Empire. All of them experienced their academic education under the critical influence of the Viennese School of economics, they were exposed to the contemporary ideological challenges of Marxism, and they witnessed the political dissolution of the Empire after World War I. All of them went on to seek academic positions in the United States, by doing so bridging the intellectual worlds of European traditionalism and American modernity. Their cultural scepticism was characteristic of the Viennese intellectual milieu of the late Austro-Hungarian Empire, resonating with a contemporary Zeitgeist of the Austrian epoch of early modernity that has informed the labelling of Vienna between the turn of the century and World War I as "Versuchsstation des Weltuntergangs" – experimental station of world demise – by Viennese satirical writer Karl Kraus (1874-1936). This term was meant to address a certain mindset that would view the long-run perspective of cultural decomposition and demise as an inevitable outcome of modern affairs.

Markets, Liquid Modernity, and the Crisis of Moral Embeddedness

Reale, Filippo

Goethe-University Frankfurt, Germany
reale[at]soz.uni-frankfurt.de

The normative embeddedness of markets is not simply a pertinent topic in Economic Sociology but one of the defining concepts of the discipline as a whole. Economic sociologists, however, have made this convincing argument during a time when it was still safe enough to suppose a coherent and comprehensive set of norms and values in society. At most, they had to admit differences between a small number of competing, "agonistic," yet clearly distinguished value spheres, "orders of worth," or milieu-specific "habitus." The question is, what does the Economic Sociology of moral embeddedness make of the challenges that recent social change is undoubtedly posing? The point is that late capitalist societies are characterized by trends of "hyper-individualization" wherein subjects drift between local, sometimes contradictory epistemologies and normativities. The most basic criteria of scientific evidence lose their legitimacy and the distinction between fact and fiction is being blurred in contemporary "post-truth" or "post-fact" political-cultural space. Norms and values come and go "ad hoc," elusively, and irrationally - the strength of anti-vaccine movements despite robust evidence from epidemiology is just one case in point. The presentation thus discusses possibilities for Economic Sociology to conceptually come to terms with the fact that markets are decreasingly "embedded" but, if late capitalist social structures are indeed "liquid" (Bauman), drifting in individualized, "post-truth," post-moral currents.

What is Value in the Higher Education Industry: Commodification, Assetization and Enclosing Universities' Future

Komljenovic, Janja

Lancaster University, United Kingdom
j.komljenovic[at]lancaster.ac.uk

This paper focuses on the higher education industry consisting of diverse, multiple and variegated markets in which universities are both, sellers and buyers of things and services. The number of different actors, markets, commodities and transactions in this industry is fast growing. Much has been written on marketisation, commercialisation and privatisation of universities as sellers. Less has been written on these processes considering other actors in relation to whom universities are buyers. This paper will examine markets in higher education in two moves. First, it will compare market-making processes in these two sides of the higher education industry (universities as sellers and universities as buyers). Recognising that this comparison still contributes to thinking about valuation processes in the context of 'commodification', the paper then moves on to analyse the 'assetization' processes in these new markets. Particularly, it will examine what kind of future is constructed for the sector via (new) companies and (changing) universities' assets defined in the way as they are. Moreover, the contribution will discuss the various and often contradictory processes of value construction and management in higher education markets.

Pricing Activities: Bridging the Performativity - Coordination Divide in Economic Sociology

Bååth, Jonas

Linnaeus University, Sweden
jonas.baath[at]lnu.se

A fundamental question for economic sociology is: how are prices set? In economic sociological theory, a price is generally conceptualized either in terms of the performative construction of economy (e.g. a market device), or in terms of co-ordinational effects of power relations between buyers and sellers (e.g. the effect of social structures and institutions). In this paper, I set out to show how these two theoretical approaches may complement each other, making the argument that the practical activities involved in pricing are constitutive of intertwining products, values, and power-relations in market contexts. Prices are, in other words, both performative and co-ordinational outcomes. Pricing activities are therefore more informative than prices themselves when it comes to explain how specific markets work. The argument rests on extensive ethnographic materials from three interlinked markets in the Swedish meat supply chain. These materials are used to highlight the relevance of both performative and coordinative (or, structuralist) theories of pricing, distinguishing "pricing activities" as an explanatory concept for how prices configure, and are configured by, social reality. The paper further suggests two types of pricing

activities: vertical and horizontal. The paper's contribution is, in short, an empirically grounded, theoretical conception of price formation, which solves a number of problems embedded in existing sociological theories of pricing.

Prediction games: Predictions and metapredictions in Swedish mineral exploration

Olofsson, Tobias

Uppsala University, Sweden
tobias.olofsson[at]soc.uu.se

How do actors assess the potential correctness of predictive accounts? Despite the recent resurgence of interest in the sociology of the future and the increasing volumes of insightful sociological work on the future, prediction making, and expectations, few studies have made in-depth inquiries into the interactions that take place between a predictor and they who assess the qualities of the predictions made. This paper aims to fill part of this gap by outlining how this interplay between prediction makers and assessors play out in mineral exploration. In doing so, the paper builds on empirical work carried out within Swedish industrial mineral exploration where mining permits require explorationists to prove that explored mineral deposits are minable. Predictions of minability need to demonstrate that the mineral deposit is likely to be economically exploitable in the future, and that the areas in question are appropriate for exploitation in a socio-environmental and industry-technical sense. The paper describes the processes through which mineral explorationists in Sweden make and communicate predictions on the future minability of mineral deposits and how these predictions are assessed for their potential correctness by the Mining Inspectorate of Sweden. In discussing the prediction work carried out first by explorationists and later by agency officials, this paper introduces "prediction games" as a conceptual framework for analysis of the processes through which predictions are made, communicated, and in turn predicted upon. The paper combines interviews with explorationists and agency officials, ethnographic work within the field of industrial mineral exploration in Sweden, and exploration materials, mining permit applications, and agency rulings.

Regimes or Differences of Consumer Policy in Europe? An empirical assessment of 28 European Member States in four dimensions

Nessel, Sebastian

University of Graz, Austria
sebastian.nessel[at]uni-graz.at

Most comparative accounts of capitalism(s) have analysed and distinguished European countries from the perspective of production regimes (Varieties of capitalism approach, Hall/Soskice 2001). Only few studies have distinguished European countries from the perspective of the demand side of capitalism(s), that is the embeddedness of consumer-producer relations by consumer policy (Varieties of Consumerism, Trumbull 2006). This talk will further analyse the legal and political embeddedness of consumer-producer relations influenced by consumer policy. It shows how consumer policy between the 28 European Member States varies and identifies some consumer policy regimes in Europe by means of statistical analysis. The first part of this talk will briefly call into mind some findings of previous studies in the tradition of Varieties of Capitalism and Varieties of Consumerism approaches. The second outlines the methodological framework to measure consumer policy in all Member States in a legal, social, enforcement and associational dimension as well as the empirical data for measurement. The third presents empirical results in form of indices in each subdimension and for all countries and statistically tests previous suggestions of potential consumer policy regimes in a spatial, legal/institutional and temporal dimension using Kruskal-Wallis, Mann-Whitney and associated post hoc tests. The final part discusses the empirical results and argues for combining Varieties of Capitalism and Consumerism approaches to better account for and distinguish different forms of the national embeddedness of the economy in general and consumer-firm-relations more specifically.

Reconstructing The Global Political Economy

Andersson, Erik Martin

University of Gothenburg, Sweden
erik.andersson[at]globalstudies.gu.se

Stamped climate change and global inequality call for a reconstruction of the global political economy. All along the ideological scale, from Financial Times columnists to Friends of the Earth, there is concord that we need a profoundly different global political economy if we shall reach the goals of the Paris Climate Accord and ameliorate inequality. This book presents analytical inroads to how such change can be designed in six dimensions of the global economy: everyday economic life, global economic institutions, global trade, economic development, global finance, and global industrial production. Vital and contested issues are presented first for each dimension, and after that inroads are presented so that both problem solving and transformative analysis are

conceptualized. This is not utopian reasoning. The global economy has been changed by political fiat several times over the last century, most notable is the construction of the Bretton Woods institutions and the GATT at the end of World War II. But also waves of uniform national changes, such as Structural Adjustment Programs in the South and the deregulation of financial markets in the North during the 1980s, have brought about global uniform reconstruction in fairly short periods. These reconstructions have been most efficiently achieved and institutionalized after severe crises, (such as World War II or the Southern debt crisis) which is why we need to start planning for the aftermath of the next global crisis and the increased global policy space that will be available then.

RN09_10 | New Empirical Studies in Economic Sociology

Looking Up Or Down? An Analysis Of Reference Point Formation For Income Comparisons

Lehr, Alex

Radboud University, Netherlands, The
a.lehr[at]fm.ru.nl

I analyze the impact of income comparisons on people's satisfaction with their income and life. Income comparisons occur when people evaluate their own earnings relative to those of others. Such comparisons violate an important assumption of standard economic theory, namely that preferences are independent. Moreover, income comparisons are argued to significantly influence peoples' satisfaction and evaluation of fairness, leading to disutility from economic inequalities and even social conflicts. Empirical studies suggest that income comparisons indeed affect people significantly, often linking them theoretically to social comparison mechanisms. However, as the pool of others with whom to compare is virtually infinite, the study of the impact of income comparisons crucially depends on knowing how reference points for comparisons are formed. By combining insights from sociology and economics, I develop a framework that details a) the salience of different social categories of others as reference points, and b) the role of the positions of one's own income relative to potential reference incomes. I fielded innovative questionnaire items in a large, representative cross-section of employed persons in the Netherlands, and statistically tested the impact of comparisons to various reference points. My findings suggest that a) reference point formation is driven by incomplete information about one's value on the labor market rather than envy, and that b) disadvantageous comparisons have a stronger impact than advantageous comparisons.

Early Users of New Transport Technologies in Russia

Nefedova, Alena

National Research University Higher School of Economics,
Russian Federation
anefedova[at]hse.ru

Due to the general course on environmental management and the development of energy-saving technologies, one of the main policies pursued in European countries is the promotion of 'green economy'. Global warming has caused a significant change in the consumer ideology of developed countries: the population is actively switching to the 'green technologies', choosing car-sharing and electric cars in particular. Until now, there are little research has been done on factors that influence an individual's intention to adopt new transport technologies. The aim of this study is to identify personal characteristics as well as values influenced on the intention to try electric cars and car-sharing technology in Russia. We used data collected in 2015 as part of the next wave of Monitoring Survey of Innovative Behavior of the Population held by National Research University Higher School of Economics.

Exploring Philanthrocapitalism from a Social Theory Perspective: Gifts versus Exchange

Degens, Philipp

University of Hamburg, Germany
philipp.degens[at]uni-hamburg.de

This contribution takes a social theory perspective to contribute to our understanding of philanthrocapitalism, specifically by exploring reciprocal relations between donors (foundations) and beneficiaries (e.g. NPOs). The logic of the gift is contrasted with the logic of self-interested exchange, and it is shown how, in philanthrocapitalism, one logic is transformed into the other. In a broad sense, philanthrocapitalism refers to "the increasing adoption of business thinking and market mechanisms by charities and foundations" (Edwards 2010). Conceptually, in this new era of philanthrocapitalism, social or ecological impact goes hand in hand with actual financial return on investment; doing good and doing well come together. Boundaries between civil society, market, and the state, between collective good and self-interest seem to blur. Following McGoey (2012, 2015) in applying a gift-theoretical perspective to philanthro-capitalism, this contribution explores the underlying social relations between those actors who give and those who receive (i.e. donor/foundation; beneficiary/NPO). This better helps to understand the very transformations the philanthropic sector has undergone. The following argument will be developed in more detail and illustrated by empirical cases: In philanthrocapitalism, the previous vertical relation between giver (e.g. foundation) and receiver (e.g. NPO) is transformed into a formally horizontal relation between two transaction partners that both give and receive simultaneously. This simultaneous exchange should not be understood as a gift relation anymore. Instead, it takes the form of unequal exchange, since negotiating power is

distributed unequally.

Cooperatives In Local Communities - Weaknesses And Resilience

Laznjak, Jasminka; Matic, Davorka; Žažar, Krešimir

University of Zagreb, Croatia
jlaznjak[at]ffzg.hr, dmatic[at]ffzg.hr, kzazar[at]ffzg.hr

Cooperatives as alternative economic model can be found everywhere around the world. Recently, with the growing demand for investments in cooperatives due to increasing global competition, some of them have gone through transformation toward big agro - industrial corporations. Despite long and rich tradition of cooperatives, Croatia shares with other neighboring transition countries many negative experiences associated with cooperatives from socialism and early transition period. Cooperatives as alternative economic model are nowadays oriented toward local community and social needs of unprivileged population in risk of poverty. Their development in the direction of social entrepreneurship is particularly interesting in offering efficient models of new systems of social welfare. In Croatia, the cooperatives mostly operate as fragmented units, have no export orientation, nor are they approaching to more efficient co-operative models. In the paper are presented the findings from two projects: "Role of Local and Regional Self-Government Units in Cooperative Development" and "Factors of Success and Models of Cooperative Cooperation" that are specifically focused on developing a networking model at the local level, which provides a better environment for small, poorly developed Croatian co-operatives. Data from 43 interviews and on-line survey based on the sample of 600 cooperatives are analysed with the focus on detecting the weaknesses and resilience in economic performance as main factors of cooperatives' sustainability.

Change in Young People's Educational Aspiration Profiles within Secondary Education

Kalalahti, Mira; Varjo, Janne

University of Helsinki, Finland
mira.kalalahti[at]helsinki.fi, janne.varjo[at]helsinki.fi

The educational aspirations of young people are often multi-layered and sometimes paradoxical. Abstract ideas about education and the transition to work do not always correspond with the specific expectations and options available. Additionally, migrant background and other structural factors bring about ideas and expectations of upward mobility, perceived returns to education, and experiences of discrimination that affect educational aspirations. (Jonsson & Rudolphi 2011; Hegna 2012; D'hondt et al., 2016.) The overall aim of this study is to analyse the change in educational aspirations and attitudes during the first educational transition in the Finnish education system. Our mixed-method research draws on a three-year follow-up survey (N = 198) and two sets of thematic follow-up interviews (n = 45 + 45). The follow-up began when the students were making their first post-comprehensive choices (from 9th grade of basic education to upper secondary education) and ended when they were facing post-secondary choices. With the survey data, we prepared profiles of the young people twice – in the final year of basic education, and secondary education – and interpreted the changes in educational aspirations and attitudes in relation to individual factors (school engagement and achievement) and structural factors (immigrant background and gender). The storylines from the follow-up interview data (linked interviews from 2015 and 2018) will give a more extensive and detailed understanding of the implications and resolutions of the quantitatively measured background factors, with a special focus on immigrant background.

Out Of Reach And Out Of Control. Does Futility Culture, Futility And Self-efficacy Mediate School Composition Effects On Higher Education Enrolment?

Vandelannote, Isis; Demanet, Jannick

University Ghent, Belgium
isis.vandelannote[at]ugent.be, jannick.demanet[at]ugent.be

Although higher education attendance rates have increased over time, social inequality in higher education enrolment and University attainment still persists. Given the benefits of possessing a University degree, it is crucial to investigate barriers – encompassing individual and secondary school determinants – that prevent students from enrolling in higher education or academic bachelor programs. This study investigates whether socio-economic composition affects higher education enrolment and the attended program (academic or professional bachelor). While previous research failed to explain how secondary school composition affects higher education enrolment, we investigate students' self-efficacy, sense of futility and futility culture as underlying mechanisms. Research showed that low SES schools are characterized by higher futility cultures, and their students by higher futility feelings and lower self-efficacy beliefs. Additionally, academic futility and self-efficacy affect students educational careers, hence, we expect that these factors are consequential for post-secondary education pathways, and therefore may mediate secondary school composition effects on higher education enrolment and the attended program. Logistic multilevel analyses were carried out on data (2013-2017) from 943 Flemish students, across 30 secondary schools, who were followed throughout secondary education and in their post-secondary situation. Preliminary results showed that students from high SES schools were more likely to attend higher education because these schools were characterized by low futility cultures. In contrast, self-efficacy was more important than sense of futility or futility culture in predicting whether students attended academic bachelor programs. Educational policies should aim at increasing a sense of control over educational outcomes among students, especially among disadvantaged students.

Educational and Career Choice of Russian School-leavers

Minina, Elena; Pavlenko, Ekaterina

Higher School of Economics, Russian Federation
evminina[at]hse.ru, epavlenko[at]hse.ru

Using interview data provided by Russia's longitudinal study of educational trajectories of young people (TrEC), the presentation identifies and describes several decision-making strategies employed by Russian high school students in their choice of occupation. Drawing on the careership theory developed by Hodgkinson and Sparkes, we investigate the logics young people draw on in deciding their future careers and in describing their emerging professional identities. We further identify a number of classed cultural narratives imbedded into the decision-making strategies. We find that school children of higher socio-economic background overwhelmingly reply on the narrative of a higher education degree serving as a basic 'pass' to the labour market and a 'guarantee' against unemployment in the future, whilst children of disadvantaged backgrounds tend to draw on the narrative of vocational education as a 'fast track' to adulthood. We further demonstrate that the narratives of all groups of Russian school-leavers are characterised by a high degree of serendipity, low professional ambition, lack of information about the labour market and over-reliance on academic achievement in certain school subjects in the choice of profession. Guided by blind faith in higher education, the majority of teenagers tend to prioritise access to higher education by all means, often at the expense of a preferred occupation/academic programme. The analysis draws on a sample of 111 16- and 17-year olds representing Russia's various regions. The methodological approach adopted within this study is discourse-analytic and grounded. The findings are contextualised within the studies of educational inequality and state-of-the-art career counselling frameworks.

A Search for the Determinants of Educational Expectations of 10th Graders in Four European Cities: The Role of School SES Composition and Student Engagement

Van den Broeck, Laura (1); Blondal, Kristjana Stella (2); Markussen, Eifred (3); Elias, Marina (4)

1: Ghent University, Belgium; 2: University of Iceland, Iceland; 3: Nordic Institute for Studies in Innovation, Research and Education (NIFU), Norway; 4: Autonomous University of Barcelona, Spain
laura.vandenbroeck[at]ugent.be, kb[at]hi.is, Eifred.markussen[at]nifu.no, marina.elias[at]uab.cat

Social inequality in youngsters' educational expectations, a well-known predictor of future educational attainment, differs substantially between countries. In Europe, educational opportunities are less unequal in the Nordic countries

compared to other European countries, indicating the need to transcend the traditionally studied effects of individual level variables on students' educational expectations. This article seeks to increase the contextual understanding of social inequality in expectations to attend higher education by focusing on school composition effects cross-nationally, based on data of four cities in four European countries - Barcelona (Spain), Ghent (Belgium), Bergen (Norway), and Reykjavík (Iceland) - with varying degrees of school segregation. Furthermore, we contribute to a more profound understanding of the mechanisms involved in educational expectations by investigating the intervening role of student engagement. Results of stepwise multilevel analyses (R) on data of 7527 students in 122 high schools in the four cities, part of the baseline survey of the International Study of City Youth (ISCY) collected in 2013-14, showed that SES composition positively predicts students' expectations for higher education, but only in the two systems with substantial school segregation. Two out of three indicators of engagement significantly relate to expectations, possibly relevant for policy makers wanting to raise attendance in higher education.

RN10_01b | Contextual factors in education

Interplays Between Individual And Social Group Factors In School Bullying

Lyng, Selma Therese

Oslo Metropolitan University, Norway
selma.lyng[at]oslomet.no

Research on bullying in schools has, since its emergence in the 1970s, been dominated by theories and explanations from traditions within psychology and education focusing on pathological or deficient individual and family factors (e.g. Kousholt and Fisker 2015; Thornberg 2017). While social conditions, mechanisms and dynamics have been included as contextual factors, research addressing the causes of bullying predominantly emphasize bullying as a form of pro-active aggression explained by individual dysfunctions related to aggression and empathy (e.g. Olweus 1993; Roland & Idsøe 2001). Lately, the research field has been expanded with social science theories emphasizing how social factors may not only influence, but also produce and trigger bullying (e.g. Lindberg et al. 2002; Sønndergaard 2012; Thornberg 2017; Lyng 2018). While the research field, on the one hand, is characterized by the opposition between individual vs. social perspectives, scholars assert the need for more empirical and theoretical studies on the interplay between individual and social factors in bullying (e.g. Espelage 2014; Thornberg 2015; Thornberg et al 2018; Lyng 2018). Based on a qualitative data set well apt to study bullying interactions in context, the aim of this paper is to supplement existing research by examining how individual and social group factors may co-produce triggers of bullying.

Teaching Styles and School Alienation in Luxembourgish Primary Schools: A Mixed-Method Study

Greco, Alyssa Laureen; Hadjar, Andreas

University of Luxembourg, Luxembourg
alyssa.greco[at]uni.lu, andreas.hadjar[at]uni.lu

Teaching styles are considered as important determinants of students' alienation from school – defined as increasing distance towards school experienced by the students. School Alienation comprises a set of negative attitudes towards academic and social aspects (teacher, classmates and learning) of schooling (Hascher & Hadjar 2018). This paper emphasises the relevance of teaching styles for the development of alienation from teachers and learning in primary school. Examining Luxembourgish primary schools is meaningful as school alienation develops early and has tremendous consequences for educational careers like dropout and educational impoverishment. A strong degree of stratification involving high academic pressure during the transition to secondary school might intensify students' alienation. Moreover, during primary schooling pedagogical practises and relationships change in light of educational demands and students' development. To analyse alienation from teachers and learning, a mixed-method approach has been applied. Data on Luxembourgish primary school students (5. and 6. Grade) originate from the international research project "SASAL-School Alienation in Swiss and Luxembourg" (2015-2018). Based on a longitudinal questionnaire study, the quantitative part examined the impact of teaching styles on alienation and the two outcomes of participation and deviant behaviour. Additionally, results of a qualitative content analysis (based on three group discussions) are presented focusing students' experiences of teaching and learning practices. Quantitative and qualitative results reveal the importance of unjust and authoritarian teaching styles for the development of school alienation. In contrast, authoritative teaching style show protective effects. Results also point towards consequences such as increasing deviance and decreasing participation in class.

A Sociological View On Teacher Efficacy: A Closer Look At The School Context

Van Eycken, Lennart; Van Houtte, Mieke

Ghent University, Belgium
Lennart.VanEycken[at]UGent.be,
Mieke.VanHoutte[at]UGent.be

Studies have indicated that teacher efficacy influences teachers' effort to encounter classroom difficulties and students' academic performances (Fackler & Malmberg, 2016). Through mainly psychological research, we know which teacher characteristics affect teacher efficacy, nevertheless, classroom or school characteristics are largely overlooked in studies on teacher efficacy (Knoblauch & Hoy, 2008). Few studies concerning teacher outcomes include external obstacles, such as the socioeconomic composition of the school (Van Houtte, 2011). Socioeconomic and gender composition have already proven to influence students (Sellström & Bremberg, 2006; Van Eycken, 2018), but we know little about how these compositions can affect teachers' efficacy. Studies suggest that teaching mostly low-SES students has a negative effect on teacher efficacy and the effect will be even stronger when teaching mainly low-SES boys (Auwarter & Aruguete, 2008). Using Flemish data of 1247 teachers and 6380 students in 59 schools gathered between 2012 and 2014, our multilevel analysis shows that socioeconomic composition does not affect teacher efficacy and no significant interaction between socioeconomic and gender composition was found. Gender composition affects one dimension of teacher efficacy: efficacy for classroom management. Teachers feel more efficacious when teaching mostly boys. This was unexpected, although we could link this with Bandura's social learning theory (1997): "mastery of difficult tasks heightens feelings of efficacy". Thus, schools with mostly girls seem less challenging. This study confirms the relevance of investigating compositional effects on teacher efficacy showing that teachers feel more efficacious for classroom management when teaching mostly boys, while efficacy affects students' motivation and achievement.

Remaking Place-Based Education Inequality in an Era of Austerity: The Interactive Effects of Education Austerity Reforms and Neighborhood Distress and Gentrification in Chicago

Farmer, Stephanie (1); Baber, Ashley (2)

1: Roosevelt University, United States of America; 2: Loyola University - Chicago
sfarmer[at]roosevelt.edu, ababer[at]luc.edu

In the United States, municipal and state officials have adopted a neoliberal fiscal austerity strategy for public schools taking the forms of disinvestment through school closures and adopting marketized models for school budgets called Student Based Budgeting (SBB). We are interested in understanding the relationship between modes of education austerity and neighborhood dynamics of the 21st century U.S. city. How do demographic changes due to neighborhood transformation impact the likelihood that schools will be closed? What impact does the adoption of a Student Based Budgeting model have on schools in neighborhoods where the number of school-age children is depopulating, whether through displacement via gentrification or people moving out of distressed neighborhoods? Using Chicago as our case study, we develop an index for three types of neighborhoods: stable neighborhoods, gentrifying neighborhoods, and distressed neighborhoods. We then map the location of Chicago Public Schools closed and newly opened between 2000 and 2015. We then select a cross-section of neighborhood types to do a more focused study of Student Based Budgeting on school budgets. Our findings provide evidence that public school disinvestment follow the wake of other neighborhood stress factors and contribute to the downward cycle of distress experienced in predominantly Black and low-income communities. Our findings also support the position that Chicago Public Schools was more likely to close schools in gentrifying neighborhoods and reopen new schools with entrance requirements in the gentrifying zone. We will also present our analysis of the impact of student based budget and schools.

The Influence Of The Partner On The Academic Success

Brömmelhaus, Ana

Carl von Ossietzky University of Oldenburg, Germany
ana.broemmelhaus[at]uol.de

The problem of dropout in higher education affects almost all OECD countries, albeit to varying degrees. In Germany, almost 25% of students leave the University without a first degree. Key areas of students' lives, such as students' partnership, have rarely been considered in this context. The life course

approach emphasizes that individual decisions take place in different contexts. It is assumed that individual decisions and individual motivation are to a large extent influenced by other reference persons. There are numerous findings on the significance of the partner for the profession. Analyses for academic success are lacking, though various studies have suggested that friends and fellow students can have an impact on academic success. The present article aims to answer the following question: What significance do the partner's expectations have for the success of the course of study? The analysis is based on data from the panel study LAST (Life Course Perspective and Dropout from Higher Education). The dataset was developed to analyze the importance of students' central areas of life over time. In order to approach the research question, structural equation models ($n = 1364$) were calculated. First results confirm the findings of other studies, according to which the motivation of the student is a key determinant of academic success. It turns out that the learning motivation is positively influenced by the expectation of the partner. Further calculations analyze the effects of the partner in a longitudinal perspective.

Social Resources Promoting Persistence in Higher Education

Pusztai, Gabriella; Kovács, Klára; Markos, Valéria

University of Debrecen, Hungary
gabriela.pusztai[at]gmail.com, kovacs.klarika87[at]gmail.com,
markosvaleria.90[at]gmail.com

Even the analysis of richest statistical databases leaves the reasons of student drop out from higher education largely in obscurity. In order to find a solution to that problem, we devised a quantitative questionnaire survey, based upon the quantitative examination of students who have dropped out (DEPART 2018, $N=591$). The survey included individuals who had begun their studies not more than 10 years earlier, and give up their studies. The primary objective of this presentation is revealing and identifying the factors hinder students from obtaining a degree, and surveying the processes and decisions that resulted in their not being able to graduate. We compared the data to the persistent students' who are highly determined to continue their studies (IESA 2015, $N=2017$). For the examination of persistence, a 9-item, highly reliable scale (Cronbach ,883) has been used. The theoretical background to our research was provided by Coleman's concept of social capital (1961), Tinto's integrational and Astin's involvement theory, as well as Pascarella and Terenzini's institutional integration/embeddedness ideas (2005). Our hypotheses were based upon the assumption that students are not primarily shaped by their social and demographic characteristics, but their daily experience and interactions under the permanent pressure to make decisions. This experience steers them on their journey between persistence and drop out. The results suggest that the influence of institutional factors and that of the social networks (membership in various voluntary organizations) are more powerful than the individual characteristics. Our findings provide empirical foundations for the institutional dropout prevention programmes.

Educative Participation: Social Impact of Family Education

Ramis-Salas, Mimar; Racionero-Plaza, Sandra

Universitat de Barcelona, Spain
mimarramis[at]gmail.com, racionero-plaza[at]uwalumni.com

Educative participation has emerged as a successful type of family participation with significant social impacts both on the lives of family members as well as on the learning outcomes of the children. The main features contributing to this impact have been analysed in the EDUFAM project funded by the Spanish National RTD Plan, which analysed these programmes with a special focus on vulnerable groups in different Spanish urban primary schools. Our presentation will shed light on the type of family education that is offered to respond to end-users needs, delving, among others, into the impact that the involvement of the family members in decision-making regarding its content and organisation (Díez, Gatt, & Racionero, 2011; Flecha, 2014) has, and how this contributes to its success. Through the communicative methodology of research (Gómez, 2014), the research project analysed the situation in 8 primary schools in 5 Spanish regions, including different techniques: from questionnaires to communicative life stories, communicative focus groups and semi-structured interviews with communicative orientation. The results of this qualitative analysis shed light on a series of strategies that have allowed Roma and Moroccan families in the decision-making of relevant aspects of family education programmes (García-Yeste, Morlà-Folch, Ionescu, 2018), reducing barriers to their very participation and learning and with further benefits for them and the community. Importantly, these results are being transferred in other European contexts through the Schools as Learning Communities.

Status and Popularity in Mixed Ethnicity Primary Schools in Hungary: A Mixed Methods Approach

Bocskor, Akos (1,2)

1: Corvinus University of Budapest, Hungary; 2: Hungarian Academy of Sciences, Centre for Social Sciences, Computational Social Science – Research Center for Educational and Network Studies (CSS – RECENS)
akos.bocskor[at]gmail.com

Peer relations and peer group affiliations are one of the most salient aspects of pre-adolescents' and adolescents' social life with serious developmental implications on their well-being, self-esteem, mental health and school performance. Among these relations, social status and popularity are of central importance, as high status, or popular, peers can contribute to the spread of both positive and negative behavioural patterns in the peer group. This paper focuses on the dynamics behind (perceived) popularity in mixed ethnicity (Roma, non-Roma) primary school classes in Hungary. In particular, the paper concentrates on the interplay between school performance, academic engagement, athleticism and popularity in primary schools with a significant ratio of socially disadvantaged and ethnic minority students. The data analysed include four waves of longitudinal survey data (N of classes = 53; N of students = 1054) and one wave of focus group interviews (N of classes = 10; N of students = 141) collected from the same pool of students during fifth and sixth grade. Multilevel regression and stochastic actor-oriented models for network dynamics were used for the quantitative and thematic and discourse analysis for the qualitative data. While both the quantitative and the qualitative data demonstrated the importance of athleticism with regard to popularity, the results concerning academic performance and academic engagement were much more controversial. In both cases, the group interviews helped refine the quantitative results, while they also unveiled some further dynamics at work behind popularity. For instance, they exposed the importance of physical strength, a factors that was not included among the survey questions.

RN10_02a | Aspiration, choice, selection in secondary education (2)

Early Selective Grammar Schools And The Fragmentation Of The Hungarian Public Education Field: What Can Parents And Elementary Schools Do?

Berényi, Eszter

ELTE University Budapest, Hungary
berenyi.eszter[at]tatk.elte.hu

In Hungary, traditional elementary schools run from the 1st till the 8th grades and most secondary schools start from the 9th grade. However, after a highly selective entrance exam, successful students can enter into the tracks offered by the so called early selective grammar schools after the 4th and the 6th grades of elementary school; whereas the “rest” of the students stays in elementary school until the 8th grade. In my presentation I will scrutinize how this gradual entrance into secondary education affects elementary schools and parents. My analysis relies both on quantitative and qualitative data. My quantitative data show that students from disadvantageous background, especially from schools with many such students have almost no chance at all to get admission to these schools. I will also present my findings based on interviews made with parents and teachers about this process. I will analyze the reasons why and how families decide to apply to the elite tracks. I will scrutinize their strategies and the “investments” they are ready to make (eg special classes and private tutors; gathering know-how on the process; visiting the grammar schools’ information days) but also the moral dilemmas of middle class parents (Oria et al, 2007 and Roda and Wells, 2013) because of the tension between their personal choices and their beliefs and value systems about what a good school and a good school system should be. I will also scrutinize what positions elementary schools take with regards to this early selection, which threatens them by losing their “best” students. Can they become actors who empower their socially less advantageous students and help them to become resilient? The presentation is based on the research findings of the PD 123954 project made possible by the research grant of the Hungarian National Research, Development and Innovation Office.

Effects of the Duration of Cram Schooling on High School Students’ Academic Achievement and Mental Health in Taiwan

Kuan, Pin-Yin; Peng, Ssu-Chin

Department of Sociology, National Cheng Chi University, Taiwan, Taiwan
soci1005[at]gmail.com, aegis146[at]gmail.com

This study examines the effects of the duration of cram schooling on adolescents’ academic achievement and mental health in grade 12. Past studies have focused on the effect of cram schooling on academic achievement. The impact of cram schooling on adolescents’ mental health has been speculated but not rigorously investigated. This study uses four waves of the panel data collected by Taiwan Education Panel Survey, which tracked about 4,200 high school students from 2001 to 2007. The study first employs the inverse probability of treatment weighting (IPTW) strategy to balance the background differences of those who participated in cram schooling and those who did not in the academic years between 2001 and 2007. Second, the analysis applies the seemingly unrelated regression model to deal with the possible correlation between academic achievement and mental health. The main findings are: (1) going to cram school in the last year of high school will increase the degree of depression, while, it may not have a significant influence on academic achievement. However, according to the result of the seemingly unrelated regression model, the independent test shows that academic achievement and mental health are connected. Hence, this article concluded that cram school may, directly and indirectly, influence the mental conditions of the high school students, and it may only indirectly affect academic achievements. (2) Comparing to the result of not using IPTW weights, the estimate of cram schooling is larger when the analysis uses IPTW weights.

How Does Peer Academic Performance Affect Educational Aspiration?

Yuan, Xiao

the Chinese University of Hongkong, Hong Kong S.A.R. (China)
yuanxxb317[at]gmail.com

Peers play key roles in shaping a student's educational aspiration, which is a strong prediction for his/her future educational outcomes and status attainment. Especially, peer effects are crucial in adolescent education. Previous literature shows that the underlying mechanism on the effect of peers' academic performance on student's educational aspiration is still disputable. Two opposite pathways (positive and negative) are put forwarded. The negative pathway is interpreted as "contrast effect", supported by the "big-fish-little-pond" theory: in a class with high average academic performance, the fierce competition will depress individual's academic performance and aspirations. The positive pathway is interpreted as "assimilation effect": in a class with high average academic performance, the inspiring ambience will bring positive influences on students' educational attitudes and motivations. Using data in China, this article aims to re-examine the association between peers' academic performance and student's educational aspirations on both class and school level. I use a three-level hierarchical linear model to investigate the relative magnitude of effects in different levels (individual-, class- and school-level). The findings are as follows. Firstly, *ceteris paribus*, personal score, class mean score and school mean score all have positive effects on educational aspirations. Secondly, the class mean score have the strongest effect across all three levels while the school mean score only provides weak prediction. It means that compared with other equally able counterparts, student who studies at high performance class tend to have higher educational aspiration. From the cross-level comparisons, this article derives some possible social and policy implications in class placement and school enrolment for future policy-making process.

Spending Choices Among 15years Old: The Role Of Family As A Financial Education Agent In Italy. Evidence From The PISA 2015 Survey

Rinaldi, Emanuela (1); Di Chiacchio, Carlo (2); Greco, Sabrina (2)

1: University of Milano Bicocca, Italy; 2: Invalsi, Italy
emanuela.rinaldi[at]unimib.it, carlo.dichiacchio[at]invalsi.it,
sabrina.greco[at]invalsi.it

After 2008, while economists have published a large amount of studies on financial literacy, especially on individual characteristics associated to low financial literacy, sociologists have paid less attention to this topic. We tried to fill in this gap starting from Webley and Nyhus study on economic socialization (2005). We focus on the role of family (parents)

who educates (talking about money with children) or socializes (through the effect of their socio-economic and cultural level) children in using money in different ways. Using the OECD-PISA 2015 survey on financial literacy (sample of approx. 3.000 students, representative of the Italian 15y. old population enrolled in educational institutions), we divided participants according to the question "If you don't have enough money to buy something you really want (e.g. an item of clothing, sports equipment), what are you most likely to do?". Those who answered "Save up to buy it" were labeled as "ants". Those who answered "Buy it with money that really should be used for something else" were labeled as "grasshopper". Moving on from previous studies, we explored different relationships, such as: a) the effect of financial literacy on ants and grasshoppers; b) the effect of family as a financial education agent in the expected spending behavior; c) the effect of socio-economic and cultural family background on students' financial literacy, keeping under control economic education and expected spending behavior. We looked also at the effect of gender. Surprisingly, being an ant or a grasshopper is not associated with the socio-economic or cultural family background of students but ants has higher financial literacy. The reduction of gender differences is discussed and we throw future research hypotheses.

RN10_02b | ICT in education

The Impact Of Online Research Sites In Shifting Boundaries, Lessening Barriers And Increasing 'Belonging' In The HE Academic Community

Brereton, Bernadette

Dundalk Institute of Technology, Ireland
bernadette.brereton[at]dkit.ie

The Scholarship of Learning and Teaching (SoTL) is a crucial pillar in the landscape of higher level education, providing a bank of knowledge and practice which underpins the academic community and promotes excellence in educational research and learning innovation. The expansion and growth of online research and innovation networks e.g. ResearchGate, Academia and Quora, is shifting the boundaries of the traditional dissemination base. The global reach of these research and innovation networks is helping to lessen the barriers of elitism in HE and widening the sense of those belonging to these networks. This paper considers the impacts of these changes in boundaries, barriers and belonging and raises questions for practitioners in the HE sector. We examine the experiences, perceptions, attitudes, values and the changing nature of HE skills and identities of those using these online spaces. Combining practitioner experiences and online responses, we produce two types of outcomes: qualitative accounts of users of these spaces and more abstract general principles deriving from these in relation to the wider field of HE SoTL.

Education and “e-Inclusion”: Supranational Goals, Local Productions. From European Public Policies to Aix-Marseille’s Projects

Demory, Matthieu

Aix-Marseille Univ, LAMES, CNRS, Aix-en-Provence, France
matthieu.demory[at]gmail.com

Nowadays terms such as “inclusion”, “insertion”, and “integration” have widely invested the public policies discourse, and particularly the educational field. According to the massive spread of digital technologies and its contemporary cultural mutations, a new term has recently emerged: the “e-inclusion”. Considering this neologism, being able to use digital tools would allow people to be included in the society, by succeeding in school, finding a job, etc. In other words, digital technologies are considered as empowering tools, which is why government authorities take “e-inclusion” as a main goal. Looking into various public institutions agendas reveals that “e-inclusion” is a nascent public problem with its own history (Borja, 2013). Here, the point is to analyse this emergent pedagogic right (Bernstein, 2000 ; Vitale & Exley, 2015), as it is intrinsically linked with digital technologies’ uses. Thus, this paper intends to study local appropriations of national and supranational concerns, without pre-empting that there is a direct and efficient link between them. Besides, it’s a way to highlight the existing gap between European Union’s glossary, French government plans and local projects realities. First of all, it will be an opportunity to approach European Commission, Parliament and French Ministry of Education discursive productions, through a lexicometric analysis and a socio-history of plans encouraging introduction of digital technologies within education. Then, we will consider local digital mediation workshops in the cities of Aix-en-Provence and Marseille, to the prism of one collective fieldwork (Demory, Girel, & Richard-Bossez, 2019) and thesis observations in progress.

Education For Digital Natives – Employing Digital Learning Devices To Empower Students’ Individual Knowledge From Diverse Social Backgrounds

Heinz, Jana

Technical University Munich, Germany
jana.heinz[at]tum.de

In the here proposed presentation, processes of enrichment of school education by employing digital media are studied at the level of primary education in Germany. The main foci of this presentation will be on the question how students’ socio-economic backgrounds influence their motivation to work with digital media in school and their level of digital competence. This qualitative study is based on semi-standardized expert-interviews with 15 teachers, principals, experts and representatives of educational policy and administration in Germany. The interviews were analyzed using qualitative content analysis supported by MAXQDA. The results indicate that teachers design digital based instruction that is aligned with students’ informal knowledge of digital media, interests, class and ethnic background as well as with school-specific curricula. Students’ socioeconomic backgrounds influence their access to digital devices and social media at home as well as their motivation to engage in digital learning opportunities in schools. Gaining digital competencies, however, is greatly influenced by other competencies and learning strategies, in particular literacy. The results indicate that while low achieving students seem to benefit from digital learning programmes that can be adapted to their individual prior knowledge, in many digital learning environments they need extra support and guidance. Furthermore, teachers need support for employing digital media in their classrooms and to meet the needs of their students’ heterogeneous prior digital knowledge.

Education in Information Societies: a Chance or Challenge? – Comparing the Effect of ICT Use on Student Performance in Countries at Different Levels of Information Society

Vincze, Aniko

University of Szeged, Hungary
anvincze[at]gmail.com

By the integration of ICT in everyday life, learning and education, the traditional factors influencing school performance have somehow restructured. Despite the aspects of social background, digital inequalities – dimensions of ICT usage – have to be taken also into consideration when evaluating differences of school performance. Previous researches showed that the different modes of ICT use – regarding frequency and purpose – have an, in some cases a positive, in others rather a negative effect on academic achievement independently from family background. However digital inequalities do not only appear at the micro-level, but also at macro-level. My presentation aims to explore the relationship between these different levels: the student level (frequency/intensity/purpose of use, digital skills and family background), the institutional level (ICT infrastructure, integration of ICT in teaching) and the societal level (Internet penetration, information economy) regarding the effect of Internet use on school performance. By applying multilevel regression analysis on the PISA 2015 dataset supplemented with contextual variables at the societal level and by comparing countries of different levels of information society I will reveal to what extent the effect of ICT use on achievement is influenced by institutional and social context. The focus of my paper is on the Hungarian case, which is compared with other countries at different levels of information society. The findings contribute to a better understanding of educational inequalities in a digital age when the use of ICT is indispensable at almost every aspect of life. Furthermore, based on the results solutions for the use of ICT in education are suggested to diminish the role of digital inequalities in educational inequalities.

RN10_02c | Vocational education and training

Horizons of Educational Decision-Making: Symbolic Logics Behind the Decision to Leave School for Vocational Education

Pavlenko, Ekaterina

National Research University Higher School of Economics,
Russian Federation
epavlenko[at]hse.ru

In this research I've applied theoretical approach of "horizons of action" to study educational decision-making among vocational education students in Russia. I've have built upon the approach of Phil Hodkinson, following him as he shows how young people are restricted in their opportunities to see all the options available to them by the horizon of action. I'm trying to expand upon the cultural and symbolic mechanisms behind this decision-making process and suggest that "horizon of action" is a symbolic structure that renders reality meaningful, a frame of reference (Eviatar Zerubavel) that is a result of meanings shaping young people's outlook. Using this approach I extract 5 complexes of meanings, "logics of choice", and further investigate how "serendipity" (Atkins, 2017) and "agency" (Silva, Corse, 2018) are woven into young people's symbolic logics of choice. I show that students rely on the meaningful frame that allows them to agentically enact a narrative of "bringing adulthood closer", but at the same time are highly uncertain about their future and are open to serendipity. Serendipity plays a large role in their trajectories. I use the interview data of qualitative longitudinal project "Tracer Atom", a part of "Trajectories in Education and Career" longitudinal panel study.

A Theoretical Framework Of Social Institutions Of Technical Vocational Education And Training (TVET)

Buergi, Jutta; Renold, Ursula

Swiss Federal Institute of Technology Zurich ETHZ, Switzerland
buergi[at]kof.ethz.ch, ursula.renold[at]kof.ethz.ch

This paper aims at developing a theoretical framework of social institutions of Technical Vocational Education and Training (TVET). Social institutions herein refer to complex social forms that reproduce themselves and influence actors' choices. Such a theoretical framework should enable us to draw clear hypotheses on how different characteristics of social institutions of TVET make programmes in formal, non-formal and informal systems function in different ways, leading to different outcomes for their students in terms of school-to-work transitions, employment quality, and further education perspectives. We build on Luhmann's theory of social systems and new institutionalist theory. According to social systems theory, there are two social systems relevant for TVET – the education and employment systems – which need to coordinate and share power to optimally prepare TVET students for their future career across the borders of these two systems. We argue that the types of social institutions in TVET that guide this communication and cooperation between both systems determine the quality of the resulting so-called linkage. We conceptualize social institutions of TVET in a new institutionalist manner as complex social forms consisting of rules, positions, roles, norms, sanctions, values, and cultural-cognitive elements. By reproducing themselves, social institutions constitute the social structures of TVET, forming relatively stable patterns of human activity sustaining the TVET field. The paper develops the definition, multidimensional characterization and interplay of the different kinds of institutions and their functions in the educational process of TVET, as well as their relevance with regard to outcomes in formal, non-formal, and informal TVET.

Transitioning from Vocational Education and Training to Higher Education: The case of the UK

Hayward, Geoff

Cambridge University, United Kingdom
Gfh22[at]cam.ac.uk

The paper examines the ways transitions to Higher Education (HE) are experienced and narrated by students with Vocational qualifications in United Kingdom. It draws upon a mixed-method project that combined a survey of the transitional terrain between Vocational Education and Training and HE, with the qualitative exploration of students' subjective experiences of transition. Focusing on the study's qualitative strand of data, the paper will present the material derived from the narrative analysis of semi-structured interviews and focus groups conducted with students at five HE Institutions in UK. We utilise interview data to illustrate the centrality of the epistemic and pedagogical struggles that students with

vocational background experience. More specifically, a process of differential epistemic positioning was evident in the participants' narratives, which manifested itself through a misrecognition of their worth in the field of HE. Further, pedagogical struggles were also narrated by the participants in relation to the teaching, learning and assessment regimes prevailing in the selected HE Institutions. In light of the study's findings we argue for the need to revisit the narrow and static education policy framing that emphasises barriers to access to HE towards addressing instead more comprehensively questions pertaining to pedagogy and knowledge, along with completion and retention rates. Lastly, we conclude by stating that the policy initiatives under the rubric of Widening Participation to HE should aim at contributing towards the transformation of HEI's pedagogical regimes and organisational logics in the direction of epistemic inclusivity and pedagogical flexibility.

Towards Competence-based Learning in Civil Protections Vocational Education

Guerrero Lara, Anna; Gerhold, Lars

Freie Universität Berlin, Germany
anna.brinkmann[at]fu-berlin.de, Lars.Gerhold[at]fu-berlin.de

During the last years, competence-based learning has become a well-discussed topic within educational sciences. Lately, lecturers in the field of civil protection in Germany have addressed principles of competence-based learning in terms of vocational education, too. Besides knowledge, extensive competences are getting more and more important with regard to effective disaster response. The main problem, however, is that on the one hand civil protections vocational education was traditionally characterized by hierarchical structures, mainly. On the other hand, there is no consistent pedagogical guideline, which defines competences of necessity for emergency responders and explains didactic mediation regarding competence-based learning. In this study, existing didactic models have been and are currently applied using data triangulation to address that gap and to understand the lecturers' attitude and intention of teaching. Through conducting an exploratory online survey (quantitative) with lecturers and school directors in the field of civil protection (n=108), it was found that lecturers in civil protection assessed didactic principles like active learning, independent learning and participant orientation as relevant factors with regard to competence-based learning. Even if there already is a certain awareness regarding those principles of competence-based learning only 18% of the surveys participants, have them in mind while teaching. Data of the online survey also showed a significant link between lecturers' training and the lecturers' attitude considering competence-based learning. At this stage, an observational study (quantitative) of vocational education classes and additional interviews (qualitative) with lecturers are being conducted. Through these methods, it is investigated if and how principles of competence-based learning are affecting the planning and holding of vocational education classes in civil protection.

RN10_03a | Grade retention and dropout

Comparing the Experiences of Youth at Risk of Dropping Out in Different Country Contexts

Schmitsek, Szilvia

The University of Warwick, United Kingdom
smicsek[at]gmail.com

Early School Leaving (ESL) as an important societal issue has been a matter of debate in policy making in most EU countries for more than 30 years, and it is currently under more intense debate. But the differences in young people's experiences of being at risk of dropping out have often been neglected; leading to a one-size fits all policy and pedagogical approach. This paper explores educational experiences of young people who had been at risk of dropping out in England, Denmark and Hungary, and compares some comprehensive measures developed to address ESL. The research is based on comparative fieldwork in three urban areas. Empirical data were collected from observations; a total of 28 interviews with former students; and a total of 21 interviews with a range of stakeholders including policy makers, teachers, and career counsellors. By listening to the voices of former students, the analysis focuses on the relevance and importance of different sources of support with special regard to positive relationships as motivators to sustain engagement in education. The paper presents how they described their career at school. Moreover, it presents their interpretations about the influences, which they considered important to their career in education and later in their adult life. My original contribution to knowledge is that this qualitative study was able to give a more distinct image of dropouts in different policy contexts; moreover, their opinion about the potential for improvement was addressed.

Grade Retention And Test Anxiety: A Multilevel Analysis Towards The Effects Of Retention Composition On Non-Cognitive Outcomes

Van Canegem, Timo; Van Houtte, Mieke; Demanet, Jannick

CuDOS, Ghent University, Belgium
Timo.VanCanegem[at]UGent.be,
Mieke.VanHoutte[at]UGent.be, Jannick.Demanet[at]UGent.be

Grade retention is defined as the practice of letting low-achieving students repeat their grade in order to grant students more time to master the subject matter. Most grade retention research focuses upon cognitive learning effects, while research into potential non-cognitive outcomes – including academic self-concept – remains largely inconclusive. According to the comparative reference group theory, the school context an individual resides in impacts the

outcomes of social comparison. Therefore, we expect that a retainees makes an assessment of the prevalence of grade retention among his/her peer group and adjusts his/her interpretation of the event accordingly: the more people repeat a grade, the less a stigma it becomes, which should result in a higher academic self-concept. Our objective is to investigate if there is an association between grade retention and test anxiety – an indicator of academic self-concept – and if this association is influenced by the retention composition of a school. In order to fulfil this objective, a multilevel analysis was conducted upon data from the Programme of International Student Assessment (PISA-2015). Preliminary results suggest that grade retention is associated with more test anxiety in the short term, but less anxiety in the long term. The effect of grade retention composition upon the relation between grade retention and test anxiety is not significant, which suggests that the comparative reference group theory is not applicable in understanding the relationship between grade retention and academic self-concept.

Diversity of School Dropouts. A Typological Approach

Blondal, Kristjana Stella

University of Iceland
kb[at]hi.is

In the OECD countries, upper secondary education is regarded as the minimal level of necessary educational attainment. Still many young people drop out. Although the situation has been improving in the EU, in 2016, around 10.7% of 18-24 old – more than four million young people – left education with only lower secondary education or less. School dropout is of concern for nations, it has high costs both for individuals and society. Students who leave school are a large and diverse group and leave for a variety of reasons. Dropping out is a complex process of interactions between the individual and his or her environment which often happens over a long period of time. Risk and protective factors involve characteristics of the individual and her or his social context in the family, the school, and the community. Research on school dropout has been criticized for treating early school leavers as a homogeneous group, ignoring their psychosocial diversity. Our research addresses such criticism by identifying different subgroups of young people who leave school. The typology is based on significant factors that contribute to early school leaving. 3,470 upper secondary students participated at baseline and were followed over seven years. Our findings confirm that students who drop out form a diverse group which leaves school for a variety of reasons. We identified four distinct subgroups with regard to engagement, emotional problems and previous academic achievement, i.e. alienated, low-spirited, low-achievers and sociable. Our study shed new light on the complexity of the dropout phenomenon and the importance of taking into account the specific needs of different groups, both in prevention and intervention efforts.

Students in Professional Programmes: Patterns of Higher Education Attendance

Hovdhaugen, Elisabeth (1); Helland, Håvard (2)

1: NIFU, Norway; 2: SPS, OsloMet, Norway
elisabeth[at]nifu.no, havhel[at]oslomet.no

Nursing and social work, which can be considered professional programmes in higher education, have a recruitment pattern which slightly differs from that of disciplinary programmes. These types of programmes have also experienced a massive growth in the last couple of decades, number of nursing students have increased by 50 percent while social work increased by 37 percent. The question raised in this paper is if these differences also are visible in relation to patterns of completion and dropout? By using Norwegian register data on students starting a higher education degree in the period 1990 to 2010 we investigate if the growth in professional programmes have had any implications for patterns of completion and dropout in nursing and social work, using event history analysis. We will try to identify mechanisms leading to dropout by several means, and study how dropout vary by socio-economic status (SES), gender, ethnic origin etc. The finding will be contrasted with earlier findings of patterns of completion and dropout in more disciplinary oriented programmes. Conceptionally, the analyses draw on the work of Tinto (1993) and Yorke and Longden (2004).

RN10_03b | Gender and education

Gendered Universities and Work-life Balance Strategies. A Study Case in a University in Spain

Villar Aguilés, Alicia; Obiol Francés, Sandra

University of Valencia, Spain
alicia.villar[at]uv.es, sandra.obiol[at]uv.es

This work gathers the results of a line of research that we are developing on strategies and policies of work-life balance at University from a combined quantitative and qualitative methodology. In this communication we present a part of the results through a qualitative analysis of the discourses collected by in-depth interviews with scholars making use of the sociological concept of symbolic violence, to understand how intermingle and carry out academic times and care times. The people interviewed relate their times as interwoven between the personal, the familiar and the professional, often highlight the professional first. It is a profession that requires a lot of dedication in an academic career increasingly endowed with competitiveness and indicators of quality measurement, where social conditions are not considered or unequal starting positions; a scenario that we analyse through the notion of accountability linked to the prevailing meritocratic model. The

spreading of the accountability model promotes and demands an accelerated pace that is characterizing the current University as accelerated, both in the preparation and realization of teaching and, in particular, in research production. In this sense, we wonder if this model can be interpreted as a generator of symbolic violence.

“Why Do Girls Shoot Higher Than Boys?”: Individual And Country-level Predictors Of The Reversed Gender Gap In Educational Expectations

Olivos, Francisco

The Chinese University of Hong Kong, Hong Kong S.A.R. (China)
fjolivos[at]uc.cl

Cross-national studies have shown consistently that girls have higher educational expectations than boys. The literature has provided macro and micro level explanations for this phenomenon. Country-level indicators such as gender equity and the rate of female enrollment in tertiary education have been significant predictors of a pro-girls gap. On the other hand, regarding individual-level determinants, psychosocial studies have found a significant mediation of gender attitudes on the formation of educational expectations for girls. However, the interplay of macro and micro variables has not been addressed. By using data from the second wave of the International Civic and Citizenship Study 2016 (N= 86,803) of eighth and ninth graders from 22 countries, this study aims to understand why girls have higher expectations for completing college than boys, considering the interplay of micro and macro-level predictors. The results indicate that girls are more likely than boys to hold expectations for completing tertiary education. Mediation analysis suggests that an important proportion of this effect is mediated by individual gender attitudes (69%). Contrary to the literature, gender equity at country-level reduces the pro-girls gender gap. Moreover, the interaction between individual gender attitudes and structural conditions suggests that, in countries with a higher level of gender inequality, girls have higher expectations than boys independently of individual gender attitudes. However, in more egalitarian countries, girls will have higher expectations than boy only when they hold pro-woman gender attitudes. Additionally, this analysis addresses issues of small samples of countries in multilevel modeling overlooked by previous studies. The study of the reversed gender gap in educational expectations will shed lights on fields where pro-male differences remain.

Sibling Influence in Field of Study Choices

van der Vleuten, Maaïke (1); Maas, Ineke (2); Weesie, Jeroen (2)

1: Radboud University Nijmegen, Netherlands, The; 2: Utrecht University, Netherlands, The
m.vandervleuten[at]maw.ru.nl, I.Maas[at]uu.nl, J.Weesie[at]uu.nl

Abstract This study evaluates sibling influence in field of study choices. We argue that sibling similarities in fields of study arise because older siblings transfer field-specific resources to their younger siblings. This is more likely to occur when siblings are more similar in age, education level or when siblings are of the same sex. We analyze 14490 siblings in 1858 families using conditional logit models. We find that younger siblings tend to follow their older sibling's field of study, irrespective of parent's occupational field. These sibling similarities are weaker when siblings differ more in education level, but stronger when siblings are of the same sex. There is no evidence that sibling similarities depend on age differences between siblings. Importantly, we can conclude that the influence of older siblings does not lead to gender differences in fields of study. We find that not only the field of study of the older sibling closest in age is important, but also the field of study of subsequent older siblings. Our results imply that when interventions meant to increase the number of individuals entering certain fields of study target one child in the family, they may have indirect effects on that child's younger sibling, but do not decrease gender segregation in the field of study.

The Intergenerational Transmission Of Occupational Norms: Gender And Social Status

Gross, Dinah (1,2)

1: University of Lausanne, Switzerland; 2: University of Geneva, Switzerland
Dinah.Gross[at]unil.ch

Teenagers' representations of occupations adequate for them in terms of gender and social class contribute to circumscribing the range of occupations they aspire to. This phenomenon feeds the reproduction of occupational segregation according to gender and social origin. In this paper, we look at the social reproduction of occupational norms and attitudes by assessing the influence that parents have on their children's representations. We consider two topics: the transmission of sex-typed occupational representations and of representations of prestige. Gender-role attitudes, both in occupational and non-occupational contexts, are found to be transmitted from parents to children. In contrast, the influence of parental gender-related lifestyle characteristics such as part-time work for mothers cannot be ascertained. We find parental representations of the prestige of occupations influencing their children's, and we find their social background, in particular their level of education, having a strong effect on their children's ambitions. This study is based on the quantitative study of a sample of 3200 12-15 year old

students in French- and Italian-speaking Switzerland, primarily using linear and logistic regressions.

RN10_03c | Segregation, choice and enrolment

School Of Choice Or Schools' Choice? Intersectional Correspondence Testing On Ethnic And Class Discrimination In The Enrolment Procedure To Flemish Kindergarten

Bourabain, Dounia (1); Verhaeghe, Pieter-Paul (1); Stevens, Peter (2)

1: Vrije Universiteit Brussel, Belgium; 2: Universiteit Gent, Belgium
dounia.bourabain[at]vub.be, Pieter-Paul.verhaeghe[at]vub.be, Peter.Stevens[at]UGent.be

In comparison to other countries, parents in Belgium have relatively more freedom to enroll their children into their school of preference without restrictions. Simultaneously, schools are highly autonomous with regard to enrolment procedures. Due to this dynamic, we can wonder whether every child has the same chances in accessing schools, especially in the era of superdiversity in Western countries. This research used correspondence testing to investigate ethnic- and class-discrimination in the enrolment to Flemish kindergarten (N=2243). Results show that not only parents, but schools play a considerable role in the decision-making process. Schools act as gatekeepers using subtle discriminatory strategies to enroll the perceived "model" students and keep students with an underprivileged background out.

Segregation In German Pre-School Education And Its Effects On Free Primary School Choice

Ramos Lobato, Isabel

ILS - Research Institute for Regional and Urban Development, Germany
isabel.ramos-lobato[at]jils-forschung.de

In the year 2008, school catchment areas were abolished in the federal state of North Rhine-Westphalia (NRW), Germany. Free primary school choice was promoted as a chance for families living in disadvantaged neighbourhoods to access other and possibly 'better' schools than those in their immediate living environment as well as to enforce a "responsible competition" between schools. However, this market-led school reform has rather led to an increase of primary school segregation (Groos 2015). Parents' strategies of social distinction and their impact on school segregation have already been widely discussed (Ball 2003; Butler & Robson 2003; Boterman 2012; Vowden 2012; van Zanten 2013). Less attention has been paid to pre-school education and its role in reinforcing segregation in primary schools. However, as effective brokers of social ties (Small 2009), childcare centres constitute an important setting to facilitate and maintain relationships between parents and to influence their views on schooling. Therefore, this paper takes one step back in children's 'educational career'. Based on interviews with parents (35 in total) recruited in three socially and ethnically mixed childcare centres and interviews with heads of primary schools and childcare centres (15 in total), it examines the role of pre-school networks for choice – both as a source of information and as an opportunity to accumulate (local) social capital. The article thus seeks to analyse the extent to which pre-school networks produce common norms of schooling or rather reinforce segregating choices and thus pave the way for segregated educational pathways. The empirical analysis took place in Mülheim an der Ruhr, a German city in the federal state of NRW.

The Educational Trajectories of Second-Generation Students Towards Higher Education: the Italian Case

Bozzetti, Alessandro

University of Bologna, Italy
alessandro.bozzetti2[at]unibo.it

Nowadays Italy is experiencing an increasing migratory presence also in the higher educational paths. Despite the fact that several researchers explored the presence of second-generation students in primary and secondary schools, the state of research on their presence in Italian Universities is still very poor. This lack of information is very relevant, if we think about the role that the social, cultural and economic background plays in educational choices. In this contribution, the presence of second-generation immigrant students in Italian universities will be first contextualized from a numerical point of view, paying attention to the role played by variables

such as age, gender, and the previous educational path at the time of the transition to Higher Education. The contribution will then focus on the empirical research carried out at the University of Bologna, one of the main Italian universities by number of students and by the presence of second-generation students. The final aim is to describe the opportunities and the difficulties of second-generation students enrolled at the University. To achieve this goal, the research path has been divided into two different levels, a quantitative and a qualitative one, according to the mixed methods approach: starting from the 537 questionnaires and the 30 interviews collected, the contribution will highlight the students' motivations for the choice of long-term educational paths and the role played by family, teachers and educational institutions in inspiring that choice. All these aspects seem highlighting the difficulty in managing cultural diversity both for individuals (teachers or family members) and for (institutional and educational) contexts, which can lead to a social construction of ethnicity in the educational processes.

Developing Diversity Sensitive, Evidence-Based Student Selection Toolkit

Kuryshcheva, Anastasia; Dilaver, Gönül

Utrecht University/University Medical Center Utrecht, Netherlands, The
a.kuryshcheva[at]umcutrecht.nl, g.dilaver[at]umcutrecht.nl

In the face of increasing graduate application numbers, generating a solid evidence-base for selective admissions becomes an evermore pressing issue. At the same time, too narrow a focus on identifying potential selection criteria which can be shown to be predictive of future study success might perpetuate exclusionary mechanisms and jeopardize the diversity of the student body. Using data on 2000 students for the last six academic years at a large Dutch graduate school with research-oriented two-year Master's programmes, this study aims first, to determine the predictive value of different undergraduate academic achievement indicators for student preparedness for successful education on a graduate level and second, to examine whether this predictive value differs per groups of students from different demographical and previous education backgrounds. The overarching goal is to develop a validated student selection toolkit and monitor potential consequences for the diversity of the student population. For the analysis, a multilevel regression approach is used, where students are nested in classes and classes are nested in study programmes. Preliminary results show that both bachelor's GPA and research project grades are predictive of a number of graduate outcomes (including performance at the research internships and overall GPA). Moreover, the bachelor's research project grade is the strongest predictor and it has an incremental validity over the bachelor's GPA. From a practical perspective the results imply that the graduate admission committees should specifically consider the grades for bachelor's research projects when making an admission decision. Different strategies for consolidating evidence-based selection criteria aimed at improving academic achievements with enhancing diversity amongst students are discussed.

RN10_04a | Teacher turnover

The Distribution of Teachers in a Marketised School System. The Case of Sweden 1995-2016

Bertilsson, Emil

Uppsala University, Sweden
emil.bertilsson[at]edu.uu.se

Since introducing several market-oriented reforms in the early 1990s, the Swedish school system has moved towards increased differentiation, social segregation and growing competition between schools in local school markets (Bender & Kornhall 2018, Brandén & Bygren 2018). Growing evidence suggests that this trend also involves an increased pedagogic segregation based on teacher competencies (Hansson & Gustafsson 2016, OECD 2014) and rising teacher turnover rates (Karbownik 2014). Some of this turnover is attributed to non-pecuniary factors, e.g. larger turnover rates at schools with a high proportion of immigrant students (Hansson & Gustafsson 2016, Falch & Strøm 2005). However, most studies of Swedish teachers analyses these transitions on an aggregated level not taking into account variations between and within local school markets. Furthermore, the majority of these studies are conducted within the field of econometrics, which imply a shortage of sociological interpretations within the research field. Hence, this study is a contribution to the discussion on both teacher-turnover and teacher sorting by taking into account not only the apparent differences between local school markets - regarding for instance the degree of market exposure and segregation patterns - but also by analysing the strategies that emerge among teachers with different capital compositions (Bourdieu 1989). Using longitudinal datasets on all teachers and all students in compulsory schools (grade 1 to 9) in Sweden, the years 1995-2016, this study both confirms the overall findings of increased pedagogic segregation but also disclose new patterns of teacher sorting.

Tracking Teacher Pride of Course! A Study On How Track Position And Subject Matter Influence The Feelings Of Pride In Belgian teachers.

Dekeyser, Lorenz; Van Houtte, Mieke; Stevens, Peter

Universiteit Gent, Belgium
lorenz.dekeyser[at]ugent.be, mieke.vanhoutte[at]ugent.be,
peter.stevens[at]ugent.be

The aim of this paper is to gain insight in the relationship between teachers' track position and the feelings of pride (cfr. private regard) they hold towards that specific track. Tracking is used to describe the organizational structure of an educational system that groups students in various curricula based on their ability. There are curricula focusing on academic achievement while other tracks are oriented towards the labor market. Previous research has shown that different statuses are ascribed to these different tracks. Subsequently this might affect the private regard of the teachers employed within these tracks, which could undermine their morale and performance. Furthermore, this study investigates the role of being a track-specific teacher in moderating this relationship. To test this model the data of the Belgian SIS (school, identity and society)-survey is used, a large scale dataset gathered in 2017 containing the self-reports of 450 teachers, clustered in 22 secondary schools. The results of a multilevel analysis show that there is a significant positive effect of teaching in technical or vocational tracks in comparison to teaching in the academic track, so the former holding higher levels of private regard. Furthermore, the analysis indicates that this relationship is not moderated by being a track-specific teacher. No significant variation was detected at the school level. These results go against the theoretical expectations and suggest that other dynamics are at play in understanding teachers' private regard.

Leaving My Teaching Job Or Leaving My School?" – The Role Of SES Composition, Teachability Perceptions, Emotional Exhaustion And Self-efficacy

Amitai, Ama; Van Eycken, Lennart; Van Houtte, Mieke

Ghent University, Belgium

Ama.Amitai[at]ugent.be, Lennart.VanEycken[at]Ugent.be, Mieke.VanHoutte[at]Ugent.be

Teacher turnover is problematic for teachers and students as it negatively impacts educational quality. Especially for low SES students, an unstable teaching staff can be detrimental for their schooling career. However, teacher turnover and teacher mobility are often intermixed in studies and may not have the same association with the students' SES composition. In addition, research has shown that teachers' teachability perceptions of the students increase teachers' level of burnout and turnover intentions. However, these teachability perceptions often first influence teachers' level of emotional exhaustion and self-efficacy, which affects their turnover intentions. In this study, we investigate whether the SES composition impacts teachers' intention to quit and intention to transfer schools. Furthermore, we analyse whether both intentions are impacted by teachability perceptions and if this association is mediated by emotional exhaustion and self-efficacy. Through a multilevel analysis, we investigated the Procrustes data (2012-2013) of 1087 teachers and 6234 students in 58 Flemish secondary schools. Preliminary results show that the SES composition is only associated with teachers' intention to transfer schools. In addition, more negative teachability perceptions increase teachers' intentions to transfer, both through a direct effect of teachability as through a mediation via emotional exhaustion. Self-efficacy only has an indirect effect on intention to transfer through emotional exhaustion. The intention to quit does not vary across schools. Teachability perceptions only have an indirect effect on intention to quit via emotional exhaustion. However, self-efficacy has both a direct effect on intention to quit and an indirect effect through emotional exhaustion.

Teacher Absence And Student Outcomes

Borgen, Nicolai T. (1); Markussen, Simen (2); Raaum, Oddbjørn (2)

1: University of Oslo, Norway; 2: The Ragnar Frisch Centre for Economic Research

n.t.borgen[at]sosgeo.uio.no,
simen.markussen[at]frisch.uio.no,
oddbjorn.raaum[at]frisch.uio.no

Studies find that teachers' absence rate is about three to six percent in countries such as the US, the UK, and Norway, which translates to about 6-9 absence days per school year for an average teacher. When teachers are absent, the school may substitute the ordinary teacher with a less qualified teacher (compositional effects), or worse, cancel the class because no substitute teacher is available. Additionally, disruption of routines, lack of meaningful student-teacher relationship, lack of knowledge about specific students' skills, and failure to implement the long-term instructional strategies may result in impaired learning. In this paper, we use Norwegian register data to examine the effects of teacher absence in lower secondary schools (8th-10th grade) on academic achievements and attainment. To account for selection, we include school fixed effects and controls for prior test scores. With this value-added school fixed effects model, we find that teacher absence results in lower examination grades from 10th grade (age 16) and decreases the probability of completing upper secondary school by the age of 21. Robustness tests indicate that there is causal effect of teacher absence, and not that teachers get sick leaves because of students with behavioral problems or because of students who struggle academically (reverse causality).

RN10_04b | Life-long learning

The Role Of Lifelong Learning In Improving The Efficiency Of Knowledge-intensive Enterprises

Kliucharev, Grigorii; Chursina, Anna; Trofimova, Irina

Federal Center of Theoretical and Applied Sociology of the Russian Academy of Sciences, Russian Federation
kliucharevga[at]mail.ru, anna.chiursina[at]gmail.com, itnmv[at]mail.ru

The paper considers interaction between institutions of lifelong learning and sectors of the knowledge-intensive economy. The practical importance of the investigation is that it provides a systemic understanding of the factors that secure the effective interaction of subjects, enabling recommendations for improving the efficiency of knowledge-intensive industries. The paper's theoretical basis is that innovation practice is viewed as an open environment with a high level of uncertainty and risk, in which both adaptation (lifelong learning) and conservative (rental) strategies are implemented. Empirical data was gathered through 100 semi-structured interviews of experts conducted between 2017-2018 in different regions of Russia. The sample included heads of knowledge-intensive enterprises, heads of educational institutions, members of innovation clusters, government employees and venture investors. The conclusion is that the role of lifelong learning in the development of innovation processes has increased because of the need for regular training of staff and improvement of their skills based on the needs of industries. Moreover, the formal system of higher professional education doesn't meet the requirements of the market economy. Consequently, lifelong learning is realized as supplementary professional education provided by the employer, sometimes as a corporate University structure operating as one of the divisions of the enterprise.

A Proposal for Conceptualising, Analysing and Training Computational and Critical Thinking in Adults in the Knowledge Society

Iñiguez-Berrozpe, Tatiana (1); Elboj Saso, Carmen (1); Marcaletti, Francesco (2); Boeren, Ellen (3)

1: University of Zaragoza, Spain; 2: Universitat Internacional de Catalunya; 3: University of Edinburgh
tatianai[at]unizar.es, celboj[at]unizar.es, fmarcaletti[at]uic.es, Ellen.Boeren[at]ed.ac.uk

The current knowledge society requires new skills for personal, labour and social inclusion. Among the so-called 21st Century Skills (Care, Griffin & Wilson, 2018) we can find the so-called "Computational Thinking", that is deeply connected to the "Critical Thinking" (computational and thinking -CCT-) as problem solving competence. Whereas young people in education are (recently) trained on these skills, little or nothing is done to prepare adults to this transformation. With the aim to promote these new skills among adults and derived from the Erasmus+ project "NACSR-New Adults' Competences for Skills Revolution", in this paper we propose an approach to conceptualise these relevant skills and the relationship among them, following very recent scientific literature. We also propose a methodology for measuring it, following PIAAC data on Problem Solving in Technology Rich Environments (PS-TRE, OECD, 2016), performing a Structural Equation Analysis (SEM) about factors that contribute to CCT development. Results from our research suggest that it is possible to link CCT concept to the skill evaluated in PIAAC survey – PS-TRE –, making possible to measure and analyse this relevant competence. Derived from this analysis, the results show that both the educational level and the development of different skills (reading, numerical, related to ICT) at home and at work, as well as non-formal education activities, decisively indicate a greater level of CCT. Finally, to increase the possibilities of CCT development among adults, we propose a methodology for their training through a digital platform designed in our project.

The Double Exclusion: Level of Education and Educational Activity of Adults

Worek, Barbara (1); Jelonek, Magdalena (2)

1: Jagiellonian University, Poland; 2: Cracow University of Economics, Poland
b.worek[at]uj.edu.pl, jelonek.mag[at]gmail.com

In modern societies, the problem of adult learning becomes more important and is considered as one of the significant problems that should be addressed in the sociology of education. In our presentation, we want to draw attention to the educational activity of people with low qualifications. The results of such research as the Labour Force Survey and the Adult Education Survey show that better-educated people develop their competences more often than worse-educated. This phenomenon is usually explained using the concept of cultural and social capital. However, it can be assumed that the difference in the level of the educational activity is due to other factors. One of them could be measuring method. Analysis of the Polish versions of LFS survey indicate that low-qualified people are disadvantaged in terms of selected forms of education included in questionnaires and the survey language. The Gunning Fog Index made for the questions about non-formal learning in LFS questionnaire showed that it is necessary to have a University degree to understand it. People with low qualifications have difficulty in decoding the text. Therefore, research on the educational activity of adults do not reflect the actual involvement of low-skilled people in the development of their competences. The presentation puts forward the thesis that in the area of adults learning we deal with the phenomenon of double exclusion. The adult education system is better adapted to the needs and abilities of better-educated and research measuring the level of educational activity favours people with higher language competences, further strengthening the stereotypical image of people with a lower level of education as educationally passive.

European Lifelong Guidance Policies and Devices: an Opportunity or a Hindrance to Emancipation?

De Feo, Antonietta (1); Romito, Marco (2); Gonçalves, Catarina (3)

1: University of Roma 3, Italy; 2: University of Milano-Bicocca, Italy; 3: University of Lisbon, Institute of Education, Portugal
antonietta.defeo[at]uniroma3.it, marco.romito[at]unimib.it, catarinagoncalves[at]ie.ulisboa.pt

In the latest educational policies at national and European level, lifelong guidance is increasingly identified as a key instrument to innovate and strengthen the provision of schooling to reduce school dropout and develop students' adaptive capacities in a context of growing job flexibility. Guidance activities constitute indeed a key setting for the development of Career Management Skills (CMS), those abilities needed to support students in their transitions through education, work and training. By looking at the Italian context, our paper outlines how lifelong guidance policies, and the technological mediation used to make them operational, constitute crucial devices promoting changings in teachers' professional culture. In particular, we analyse how teachers are recruited into a new pedagogical paradigm and we reflect on if and how this opens or closes spaces for developing processes of empowering or domination, especially for students from an underprivileged background. In the paper, we discuss the case of the recent introduction of a career guidance software in Italian schools, named SORPRENDO, whose aim is to improve the quality of guidance services in Italy and provide an e-learning platform where teachers can support and evaluate the future planning of students. First, we provide a theoretical reflection on the agential effect of digital devices in the governing of education, in particular through their interaction with teachers' practices; secondly, through an empiric case study research, we show the types of educational practices the software makes 'affordable' within the Italian school context, and the organisational and cultural tensions it creates. We conclude by reflecting on the impact of the lifelong guidance project on the pedagogical relationship between teachers and their students, highlighting limits and opportunities.

RN10_05a | Education and migration (1)

The Complexities of Policy Landscape, Psychosocial Well-being and Academic Achievement of Young Unaccompanied Refugees in the UK

Wilkinson, Harsha Nishadi

Independent researcher, United Kingdom
harsha.wilkinson[at]gmail.com

Objective:The paper discusses the impact of government policy and legislation on the psychosocial well-being and educational progress of unaccompanied refugee children and young people in the UK. It argues the importance of stability at the post-migration stage in preventing their psychological and social problems. **Research design:** The paper is based on the findings of an exploratory study on educational interventions for young unaccompanied asylum seekers and refugees in the UK. The design consisted of two elements: a systematic review of educational and vocational interventions and a qualitative field study. **Method:** The main study comprised in-depth semi-structured interviews to gather data from thirty-eight professionals and academics, and fifteen male and female young unaccompanied asylum seekers in England and Scotland. The analysis was based on the constant comparative method. **Results:** The study demonstrates the negative impact of government policy and legislation on these young people's psychosocial well-being. As a result, they are less likely to make educational progress and achieve their full potential. **Conclusion:** The findings urge more specific and robust investigation about the issue. Given the scarcity of literature available, further exploration will help make well-informed policy decisions and develop effective psychosocial interventions for unaccompanied asylum seeking and refugee children and young people.

Understanding Learning through the Lens of Acculturation and school Belonging: Life Histories of Syrian Refugee Students in the UK

Al-Waeli, Jumana A.

Institute of Education- UCL, United Kingdom
jumana.al-waeli.16[at]ucl.ac.uk

During their attempts to adapt to a different culture, Syrian refugee students, residing in the United Kingdom, demonstrate various strategies of acculturation with respect to two major issues— cultural maintenance and contact and participation. Literature has demonstrated that acculturation might be a voluntary process when immigrant groups and individuals are granted the choice to determine their preferable acculturation orientations. However, this is only the case in multicultural societies with policies that equally support cultural maintenance; contact and participation in the new cultures (Berry, 1990). Integration Policies and the wider cultures' attitudes towards immigrants are major factors that determine whether strategies of acculturation are chosen by the acculturating groups and individuals, or are being imposed upon them (Bourhis et al., 1997; Berry, 1992). Nevertheless, there is a significant difference between the process of acculturation of immigrants and that of refugees, considering the rising hostility towards the latter, the trauma associated with the refugees' experiences of fleeing conflicts and prosecution, displacement, the process of asylum seeking and resettlement in new societies. Refugees have frequently expressed the stress of being segregated and refused among their new settlement societies (Phillimore, 2011); refugee students have also expressed such concerns when it comes to adapting to schools' environment and the schooling process (Régner and Loose, 2006). By employing life histories, and through giving voice to the participants to tell their own experiences, this research aims to investigate whether the acculturation orientations, adopted or imposed upon a group of Syrian secondary school students in the UK, have any impact on their sense of belonging to school, and how these trajectories of acculturation and belonging, shape the experiences and outcomes of Learning.

Stuck In The "In-Between"? High-achieving Roma And The Costs Of Social Mobility

Durst, Judit (1,2); Bereményi, Ábel (3)

1: HAS, Institute for Minority Studies; 2: UCL, United Kingdom; 3: UAB, Spain
judit_durst[at]yahoo.co.uk, abel.beremenyi[at]uab.cat

This paper focuses on the experience of social mobility through successful academic trajectories among college educated Roma in Spain and Hungary. Survey data that link high academic achievement and social advancement through socio-economic characteristics tend to silence another set of indicators that is related to subjective well-being. In this article we offer a comparative analysis of dilemmas that Roma people, both in Spain and in Hungary experience throughout their trajectory of upward educational mobility, towards their community of origin and the mainstream social milieu that encompasses them. While range and pace of social mobility are proved to be key factors related to the capacity to manage adverse personal experiences of habitus dislocation (Bourdieu 1998); social, policy and institutional arrangement of protecting factors can also contribute to mitigate painful personal "costs" of changing class. This paper systematically interrogates the most salient individual costs of inter-generational upward mobility of different speed, with a big range compared to the parents' social standing. We explore 'costs' or 'hidden prices' of mobility by analyzing related factors such as dislocated habitus, choice of studies, access mostly to segmented labour market positions, and the situation of partner selection and family formation. Our study followed a purposive sampling approach. Data from 20-20 graduate Roma (from the two respective countries) were collected through in-depth interviews. They were analysed with the grounded theory method, conducting repeated processes of initial coding towards a theory coding. Results from a comparative perspective show that while socially mobile Roma people have to face a similar set of dilemmas and 'costs' in both contexts, the intensity and potential effects on these costs on individuals are fundamentally different across countries.

Muslim Home Schoolers InThe UK: Narratives Of Risk And Radicalisation

Myers, Martin (1); Bhopal, Kalwant (2)

1: University of Portsmouth, United Kingdom; 2: University of Birmingham
martin.myers100[at]gmail.com, k.bhopal[at]bham.ac.uk

This paper examines the experiences of Muslim families who choose to home school their children drawing upon a larger project exploring a diverse range of home schoolers. The work of Ulrich Beck (1992, 2006) is used to discuss how 'risk' is understood for Muslim homeschoolers often by conflating global fears of Islamification within local settings such as schools. Home schooling in the UK is subject to very low thresholds of regulation and this has increasingly led to concerns about child safeguarding and educational outcomes. There has been a noticeable trend however, for identifications

of home schooled children being 'at risk', to seemingly reflect preconceptions about ethnicity, class or religious affiliation (Bhopal and Myers, 2018) Often Ethnic minority and poorer homeschoolers, are more readily identified as putting their children 'at risk' than their white, middle class counterparts. Muslim homeschoolers have been singled out by the schools inspectorate OFSTED as putting their children 'at risk' by using the lax regulation of home schooling as 'cover' for radicalising children. This has emerged against wider political and media discourses in which Muslims are portrayed as promoting narrow, religious curriculums out of step with mainstream society. Our findings suggest that many Muslim homeschoolers, like other BME families, use it as a strategy avoid racism within schools. A vicious circle emerges in which Muslim children encounter racism and bullying at school because of their religious background, causing families to withdraw children from school, which feeds further narratives in which Muslim communities are demonised.

RN10_05b | Perceptions and constructions of vulnerability

Interactive Constructions of Youth Vulnerability

Rambla, Xavier

Universitat Autònoma de Barcelona, Spain
xavier.rambla[at]uab.cat

The paper draws on a recent study that conducted 160 interviews with 18-to-30 years-old youth in Austria, Bulgaria, Croatia, Finland, Germany, Italy, Portugal, Spain and the UK (Scotland). The respondents were included in the target groups of active labour market, education and welfare policies that aimed at tackling social vulnerability. Drawing on the life course approach, the analysis focuses on the biographical experiences of the interviewees as well as on their construal of the policies. To start with, respondents suffered from very heterogeneous circumstances such as material deprivation, long-term unemployment, early school drop-out, mental health problems, traumatic experiences with bullying and other ones. However, most of them were satisfied with the programmes where they were participating. In the interviews, they showed how they endeavoured to overcome their problems. In addition, many interviewees felt deep uneasiness with the institutional arrangements that catered to their needs. Their feelings were mixed. While on the one hand they were proud to have developed new social skills, on the other hand, they thought they did not know their real opportunities. Significantly, the vast majority of policies did not take their views into account. The paper draws on three strands of literature to account for these findings. First, sociology of education has unveiled the painful experiences of some students in compulsory education, as well as the significant impact of engagement and disengagement in secondary schools. Second, youth studies have discussed both the extent of stereotypes (e.g. associated to NEET) and the variable interpretations of the youth. Finally, policy studies have shown that programmes instil particular understandings of social problems into the routines of both street-level professionals and beneficiaries.

Sense of Futility as Subject of Disciplinary Action: do Students with Negative Attitudes toward the Educational System get disciplined more often?

Degroote, Emma; Van Houtte, Mieke

Ghent University, Belgium
emma.degroote[at]ugent.be, mieke.vanhoutte[at]ugent.be

Several studies on school discipline have pointed out that the labeling of student behavior as deserving of disciplinary action is far from a clear-cut process. From these studies it becomes clear that the labeling of student behavior as deserving of disciplinary actions is a selective process whereby school actors take into account other factors than just the characteristics of the behavior posed. Theory states that those students who do not fit well into the educational vision of the school are more likely to be labeled as behaving in a 'troublesome' way. In this study, we argue that not only students' disruptive behaviors are subject of disciplinary actions, but also students' attitudes toward the educational system. Specifically, we will examine if expressions of sense of futility cause students to receive official sanctions like detention and suspension more often. Multilevel analysis was carried out on data collected in 2015 from 1662 students in 28 Ghentian (Belgium) schools, that participated in the International Study of City Youth-project (ISCY). Results indicate that teachers with disciplinary actions do not react to students' sense of futility directly, however, they impose disciplinary actions following disruptive behaviors on students displaying higher feelings of futility more often.

"Excessive" Bodies In The Secondary Classroom: (Short) Stories Of Students With Restricted Growth Of Their Secondary Education In The United Kingdom

Ktenidis, Antonios

University of Sheffield, United Kingdom
aktenidis1[at]sheffield.ac.uk

The body is always already a political site in the classroom, yet many times the body is ignored both as a significant site of pedagogical attention and as a key for educational practice (Warren, 1999: 257). Western schooling's desire for bodily absence privileges certain bodies which embody the normative schooled body (white, male, heterosexual, able-bodied, middle class) while othering bodies e.g. disabled, queer, of colour, which are too visible and 'excessive' and which get punished or disciplined (Warren, 2005). Such an excessive body is the body with Restricted Growth (herein referred to as RG-restricted growth results in a stature of less than 4 feet and 8 inches), which defies the normative developmental milestones of growth and becomes the target of surveillance

and normalisation in the school classroom. Exploring the 'excess' of the body with RG, this paper draws on the embodied narratives of twenty-one young people with RG (11-30 years old) of their secondary education in the United Kingdom. These stories were generated through semi-structured narrative interviews. Analysed thematically, these stories demonstrated how students 'fell short' of their teachers' and teaching assistants' ableist expectations, that is how the former's (lack of) height translated into the latter's minds as a 'problem' that had to be dealt with. References Warren, J. T. (1999). The body politic: Performance, pedagogy, and the power of enmeshment, *Text and Performance Quarterly*, 19(3), 257-266. Warren, J. T. (2005). Gallegos (Eds) *Performance theories in education: power, pedagogy and the politics of identity*, New Jersey: Lawrence Erlbaum Associates, 83-106.

Compensation of Educational Disadvantages as Social Service?

Perpék, Éva (1,2); Kiss, Márta (1,2)

1: Hungarian Academy of Sciences Centre for Social Sciences, Hungary; 2: Corvinus University of Budapest, Hungary
eva.perpek[at]yahoo.com, kiss.marta[at]tk.mta.hu

The manifestation of social inequalities as educational disadvantage, which are inherited through generations, is a kind of common knowledge today. At the same time, in Hungary, the family background has an extremely strong impact on students' efficiency, and there are very big differences between the results of educational competencies in different schools. Our research group is working in the most disadvantaged areas of Hungary, which characterized by a high rate of segregated schools, and very low level of basic educational competencies. This situation highlights the need to better target catching up of children. In the last years, the extracurricular catching up projects were carried out in the frame of tender sources in Hungary, while now these projects are starting to be organized as institutionalized social services. According to current tendencies in Hungary, the social sphere professionals are more and more actively involved in educational disadvantage compensation. In our research, we focus on insights of social services and developmental professionals on educational disadvantages and possible ways of their compensation. The presented preliminary results are based on a survey conducted in 2019. In our paper, we prevail the professionals' beliefs on the roots of educational disadvantages. The respondents expressed their opinion about the impact of the micro and macro level factors such as children and their families as well as the functioning of the education system as a whole. We also analyze the professionals' perception of the various forms of educational disadvantage compensation. We pay special attention to comparison by discovering insights of the professionals of different fields.

Experiences of migrant children at Primary schools in Paris and Brussels Zemborain, Federico

CNRS-EHESS, France
federico.zemborain[at]ehess.fr

This presentation is a synopsis of my PhD Dissertation at the Sorbonne University in June 2017. Migrant children's schooling is a challenge for all social actors involved — most of the migrant families coming from deprived rural areas in Africa and Asia. The objective of my research is to compare, on the one hand, migrant children's attitudes, and, on the other hand, the implementation of programs within primary school educational systems in Paris and Brussels (French community). I formulated two hypotheses. First, migrant children are active social actors embedded in conflictual situations and their socialisation process in general. Second, their experiences as migrant children challenge the status quo of the existing school system because they reveal the contradictions of educational systems concerning their basic principles. The main result is that there are not many differences between primary schools in Paris and Brussels. The presence of migrant children makes that schools which function according to basic principles such as normalisation, discipline and formation are being challenged. Their presence requires new answers from all adults involved. Difficulties to acknowledge migrants and to work with them, gaps between schooling and extra-schooling culture, efforts to maintain the fiction of equality (*égalité*), the lack of professionalisation of staff; all generate symptoms such as avoidance, collective and individual boredom, and even fear amongst some adults towards their migrant pupils. In turn, these symptoms tend to increase the phenomenon of segregation in schooling further. Keywords: migrant children; pupils; primary school education; intercultural education; Paris; Brussels; Europe.

School Segregation and School-Home Proximity among Immigrant-Origin Youths: A Case Study in Bologna, Italy Santangelo, Federica; Gasperoni, Giancarlo; Mantovani, Debora

Alma Mater Studiorum-University of Bologna, Italy
federica.santangelo[at]unibo.it,
giancarlo.gasperoni[at]unibo.it, d.mantovani[at]unibo.it

School segregation affecting immigrant-origin students depends on residential segregation but also exists as a separate phenomenon, determined by differences in families' school choices, in turn reflected in distances between residence and attended schools. Socially disadvantaged students are more likely to attend the nearest school to their home and respect schools' suggested catchment areas, since

school selection depends more on convenience rather than on an evaluation of multiple schools' pros and cons in a medium/long-term perspective, thus engendering potential educational inequality. This paper explores home-school proximity among students attending lower secondary schools in a major city in Northern Italy (Bologna) and identifies both student/family and school characteristics associated with such proximity differences. After having implemented a geolocation procedure to a data-base supplied by the Italian National Institute for the Evaluation of the Educational System for Schooling and Training (INVALSI) as well as a student-school matching procedure in light of schools' official catchment basins, we examine the characteristics of students who attend close-to-home vs. distant schools and catchment-mandated vs. other schools as a function of factors including neighbourhood of residence, migration status, socio-economic status, and parental education. Schools are also classified according to the degree with which they exert differential attraction or repulsion among students originating from more vs. less privileged families.

Feeling At Home In School. Migrant Youth's Narratives On School Belonging In Flemish Secondary Education

Van Cauenberg, Rut (1,2)

1: CeMIS, University of Antwerp, Belgium; 2: Universitat Autònoma de Barcelona, Spain
rut.vancaudenberg[at]uantwerpen.be

In this paper, we explore the role of school belonging in the educational trajectories of migrant youth in secondary education in Flanders (the Dutch-speaking region of Belgium). The hegemonic imaginary of Flemish education as a system of equal access and opportunity stands in stark contrast with a reality of strong social and ethnic stratification processes in which migrant youth are amongst those most heavily negatively affected. They are highly overrepresented in lower-status educational tracks, experience more grade retention and school and track mobility, and are more likely to leave school early than their native peers. Drawing on in-depth interviews collected over a two-year period of time (2015-2016) within the framework of the European research project RESL.eu, we zoom in on three cases to analyse individual experiences and 'belonging concerns' (Murphy and Zirkel, 2015) in a structural context of persisting inequalities in educational opportunities, and show how experiences of exclusion and struggles to claim specific educational spaces as places where they 'belong' result in feelings of being an outsider rather than a valued member of the school community. We illustrate how the youngsters' journeys through secondary education are mostly recounted as journeys of trying to find a 'good school' where they feel they can 'fit in', and argue that their 'unstable' trajectories through Flemish secondary education should be understood as attempts to stay engaged in education after disempowering experiences in previous schools, concluding that it is crucial to think about how schools and educational tracks can become more inclusive, rather than a place for a selected group.

Education as a Migration Pathway? Exploring the Narratives of Non-EU Students Pursuing a Master's Degree in Denmark

Ginnerskov-Dahlberg, Mette

Uppsala University, Sweden
mette.ginnerskov[at]edu.uu.se

International students have for a long time been largely absent in migration research and have remained “conceptually separated from “real” skilled migrants in the academic literature” (Eskelä 2013: 145). An increasing number of studies, however, suggest considerable overlaps between student mobility and more traditional migration patterns (Raghuram, 2013; Robertson, 2013; Soong, 2014; Valentin, 2012; Wanki and Lietaert, 2018). Especially in a time where it is becoming increasingly difficult for non-EU citizens to enter the European Union (EU), the student category has emerged into one of the few legitimate options for migration to the Union. In this presentation, I will explore the narratives of students coming from countries outside the EU, who are pursuing a master's degree in Denmark – a more “offbeat destination” destination in the Northern part of Europe. Based on a long-term ethnographic fieldwork and repeated interviews with 25 students, I will especially discuss the extent that the students' educational mobility is entwined with a wish for more long-term migration (Luthra and Platt 2016). While my findings suggest that the majority of the students – especially those travelling from poorer regions – initially aspire to settle down in Denmark more permanently, such aspirations often change due to their experience of residing abroad and various difficulties of fitting into the host society. For that reason, most of the students return to their home countries. Thus, the analysis also highlights the importance of studying international students' narratives and experiences for a longer period of time in order to track the changes and continuities that they undergo abroad.

My Perfect Day In School

Kjer, Mikkel; Nielsen, Chantal

The Danish National Centre for Social Research, Denmark
mgk[at]vive.dk, cpn[at]vive.dk

- investigating students' perception of their ideal timetable
Time has caught the attention of reformers of school systems over the past decade, prompting an academic debate on pros and cons of additional instructional time. However, how time is used most productively has received somewhat less attention. In the aftermath of a major reform of the Danish public school system in 2014, introducing more instructional hours, this paper investigates how students would construct an ideal timetable – if they were given the opportunity. After interviewing 100 students between ages thirteen and fifteen

about their views on their view on an ideal timetable, four analytical points turn out to be pivotal: First, students articulate the importance of scheduling a fun and “not so academic” afternoon. Students usually place subjects such as electives, visual arts and physical education at the end of their school day. Second, students prefer having more “demanding” subjects such as Danish, Maths or English from 9 am-12 noon. Third, students express the significance of having a “quiet morning” from 8 to 9 am, e.g. doing homework or reading. Finally, although the reform has provided longer school days, the students outline a timetable very similar to their present one in terms of the number of instructional hours. Summing up the analytical point: This article show, by using students' perceptions of their ideal timetable, that student motivation is not merely a matter of number of hours spent in school. Schools have the capacity to motivate students by organizing the school differently within the framework defined by the reform.

Re-imagining Learning: Art- making As An Emergent Community Of Practice

Trowsdale, Jo

University of Warwick, United Kingdom
jo.trowsdale[at]warwick.ac.uk

This paper argues for the structuring of school education through a ‘community of practice’ (Lave and Wenger 1991) model developed by makers, particularly artists, engineers and designers. It suggests a re-framing of formal schooling beyond ‘real-world’ projects engaging ‘progressive’ principles of making as learning (Dewey, 1934) is both timely and possible. In a ‘community of practice’, ‘situated learning’ is acquired through practice and observation, getting the ‘feel’, rather than being directed. ‘The Imagineerium’, still an emergent model, manages tensions with more directive schooling structures through promoting practice-based learning. Primary aged pupils (9-10 year-olds) were imaginatively inducted as ‘Young Imagineers’ to design and develop creative, mechanically engineered performance artefacts, some of which were built for a public event. As apprentice-like, ‘legitimate peripheral participants’, situated in this emergent community of practising Imagineers, children absorbed knowledge and skills through social interaction and collaboration, becoming inducted into the ways of being, behaving and thinking of the ‘imagineer’. The practices and culture of the Imagineers led to ‘The Imagineerium’ being conceived of and enacted very differently from mainstream schooling. I draw upon interviews with teachers (n.4) and children (n.25) to argue for ‘The Imagineerium’ as a space which, literally and symbolically, structures children's learning experiences differently. Children reported a sense of agency through the community of practice and feeling trusted, inspired and supported. The effect appeared to be to empower them with a sense of confidence in their creativity and capabilities. This paper reports, primarily, on the first-year data of a four-year ethnographic research project funded by ACE and PHF. Dewey, J. (1934) 'Art as Education', Perigree Lave, J. and Wenger., W. (1991) 'Situated Learning: Legitimate peripheral participation'. CUP

Cultural Literacy in the English Curriculum: Amalgams of Cultural Conservatism and Enterprise Culture

Soytemel, Ebru; Stamou, Eleni; Popov, Anton

University of Aston - Centre for Critical Inquiry into Society and Culture (CCISC), United Kingdom
e.soytemel[at]aston.ac.uk, e.stamou[at]aston.ac.uk, a.popov[at]aston.ac.uk

The paper presents the findings of a review of the curriculum guidelines, regarding the provision of cultural literacy education, in secondary schools in England. It covers official documents issued by the Department for Education, applied to maintained schools at Key Stage 3 and 4. We use the term 'cultural literacy' to refer to the development of dispositions regarding cultural identity, cultural heritage and cultural participation/belonging. Our focus is on formal education processes, as part of our wider objective to examine how cultural literacy becomes institutionalised in secondary education. Our aim is to explore which aspects of cultural literacy are manifested in the curriculum documents and how. To this end, we selected subjects based on their relevance to the development of cultural literacy and carried out a documentary analysis, deploying thematic and content-based techniques. Our findings discuss the overall pedagogical approach, understandings of culture, European identity and aspects of cultural literacy, as these are constructed throughout the official documents. We point out and critically discuss processes of cultural restructuring, evident throughout the curriculum guidelines, as involving a paradoxical amalgamation of revived nationalism and cultural traditionalism, alongside elements of enterprise culture and free-market logics.

RN10_07a | Social inequality in higher education

Elite Pathways in the Meritocratic Sub-System of Chilean Higher Education

Lillo Cea, Pablo

Uppsala University, Sweden
pablo.lillo_cea[at]edu.uu.se

The implementation of neoliberal policies in Chile during the last three decades of the 20th century, made it possible for two parallel sub-systems of higher education to emerge and coexist. Though both include market-driven features, only one of them comprises the most traditional and prestigious institutions making it mandatory for the applicants to submit themselves to a merit-based admission process. Departing from a simple correspondence analysis of individual-based data from the national entry test for the period 2012-2017, this study maps out the uses that social elites make of this sub-

system. Results show noticeable differences in recruitment patterns in relation to students' social class origin, both for study programmes and institutions. Further, there is a sharp gender opposition among students originating from lower social classes, which tends to decrease at the elite pole of the space, where there is a dominance of private, non-traditional universities and programmes. The results also suggest that the observed recruitment patterns can be analysed in the perspective of the careers that different study orientations lead into, employing the notion of social field for understanding the social logic of meritocratic higher education in Chile. Findings testify of the existence of what Bourdieu named "refuge" study paths and institutions within the meritocratic sub-system of higher education. These seem to constitute back-doors designed for students with strong inherited capital who aim at obtaining prestigious credentials but fail to perform at the level required to get them.

Accessibility of Higher Education: 8 Dimensions of Accessibility

Vandyck, Inne; Pasteels, Inge

PXL University of Applied Sciences and Arts, Belgium
inne.vandyck[at]pxl.be, inge.pasteels[at]pxl.be

Many OECD countries have witnessed a continued rise in the supply of tertiary education graduates. However, there is a large gap in enrollment and retention between students from disadvantaged backgrounds and students from advantaged backgrounds. Extensive research is done on the accessibility and retention rate of educational systems and institutions focusing either on the organisational level (accessibility of the institution) or the individual level (barriers to participate in education) and either on incoming students or transferring students. In this paper, we propose a multi-dimensional multi-actor framework in which accessibility of an educational institution is defined by 8 dimensions (e.g. affordability, availability, approachability, ...) which can be applied on the organisational and individual level and in all phases of the educational career. Based on this framework, a questionnaire was developed to study the accessibility of one higher education institute for students with different ethnic backgrounds. Participating in nine departments, 9000 students were invited to fill in the questionnaire to provide us with information on the 8 dimensions of accessibility of the educational institute both retrospectively at the time of study choice as well as during their educational career. We aim to reveal barriers regarding accessibility and retention on both organisational and individual level.

Stratification in Unitary Higher Education Systems: the Case of Progression to Postgraduate Study in the UK

Mateos Gonzalez, Jose Luis; Wakeling, Paul

University of York, United Kingdom
pep.mateosgonzalez[at]york.ac.uk,
paul.wakeling[at]york.ac.uk

In this presentation, we investigate institutional stratification in higher education through examining a novel empirical case: patterns of student mobility between undergraduate and postgraduate institutions. Since the early 1990s, UK higher education has witnessed a policy drive to create and consolidate a nominally unitary system via the liberalisation of the adoption of “University” titles. Academic research has, however, consistently found that the system’s homogeneity is only nominal, as stark differences in terms of institutional reputation, international projection, social and academic selectivity and graduate employment prospects –to name a few– are still to be found among previously formal institutional divisions (cf. Boliver 2015; Shavit, Arum, and Gamoran 2007; Marginson 2016). Theories about educational expansion, such as Lucas’ (2001) Effectively-Maintained Inequality hypothesis provide potential explanations of the links between institutional and social stratification. Our contribution to this field extends the debate by looking at progression to postgraduate study of UK first-degree graduates. Using a very large dataset (N≈1,300,000) containing all UK-domiciled first-degree graduates between 2012/13 and 2016/17, we are able to track graduates post-graduate institutional pathways. We investigate the extent and nature of movement between institutions and types of institutions for those who progress to postgraduate degrees. We also consider how and whether this connects to graduates’ field of study and to their other characteristics, such as gender, race/ethnicity and socio-economic class. While we find a certain degree of ‘trading up’ of institutional status, our findings suggest a high degree of immobility between University types for those students deciding to enrol in postgraduate courses. These findings contribute to better understanding how stratification works in nominally unitary systems.

Diversity Management, the Social Dimension and the Covering up of Social Inequalities in Austrian Higher Education Institutions

Müller Kmet, Bernadette

University of Innsbruck, Austria
bernadette.mueller-kmet[at]uibk.ac.at

The Austrian higher education policy – like the European higher education policy – has set the social dimension on the agenda. The objective is to provide previously underrepresented groups in higher education with greater access to tertiary education institutions and enable them to

complete their studies successfully. One way to reach this goal, emphasis is led on diversity management. Student diversity is used to indicate equality and social inclusion (Archer 2007). Austrian higher education policy strategy papers provide guidelines to establish diversity management at higher education institutions in order to reduce inequalities in access and retention. At the level of the higher education institutions the social dimension as well as diversity management are neglected topics. They occur in the institutional development plans but resources and concrete actions are rare. The question arises if diversity management rather covers up certain forms of social inequalities, e.g. social class inequalities than helping to eliminate them. To investigate this question 12 expert interviews with staff of diversity management offices and working groups as well as document analyses were conducted. The results show that diversity management in five higher education institutions covers up social class inequalities and focus mainly on the categories gender and disability. The overall findings can be interpreted in line with the results of Archer (2007): Diversity management (a) detracts away from structural inequalities and goes along with individualistic, neoliberal framings; and (b) facilitates an audit-style approach to “managing” diversity.

RN10_07b | Social inequality in primary and secondary education

Student Enrolment in Upper Secondary Education within Ethnically and Socioeconomically Heterogeneous municipalities in southern Stockholm, Sweden

Forsberg, Håkan
Uppsala University, Sweden
hakan.forsberg[at]edu.uu.se

This paper investigates how young peoples' enrolment in upper secondary education are marked by segregation and marketisation of education. The study especially targets differences in how students with foreign and Swedish background navigate the local school market. Research is narrowed down to eight municipalities in southern Stockholm, Sweden, that are characterised by ethnically and socioeconomically heterogeneous residential areas. I argue that all students living in this region constitutes a socio-geographical space in which the school market is embedded and operates. Drawing on Bourdieu's concepts of field, capital and strategy the socio-geographical space of the school market in this particular region and how it relates to school enrolment is analysed with specific multiple correspondence analyses (specific MCA) and Class specific MCA. Using individual census data on all students in the designated municipalities from 2013 to 2014, the differences between 10 967 students are investigated as regards their parents' education, income, occupation, services, and national origin, and the students' earlier academic merits. The analysis concludes that students' enrolment in upper secondary schools and study programmes are related to their amount of resources, separating students with a high capital volume from those with a low capital volume into academic and vocational tracks, respectively. However, when the composition and distribution of students inherited and acquired capital is more thoroughly analysed, other power relations emerge such as a dimension separating students with a migration background and a large capital volume from students with Swedish working class background and a low capital volume.

The Social Space of Swedish Preschools: A Bourdieusian Analysis of Families' Preschool Enrolment in a Marketised Welfare State

Waddling, Jennifer Charlotte; Forsberg, Håkan

Uppsala University, Sweden
jenny.waddling[at]edu.uu.se, hakan.forsberg[at]edu.uu.se

Swedish preschool provision has grown exponentially since the 1970s to become a welfare-service that 95 percent of all 4-5 year olds attend. Since the 1990s, independent actors have been authorised to establish preschools. This has facilitated the development of local preschool markets, where families are able to 'choose' between settings. In this paper, we present results from an ongoing investigation of families' educational strategies regarding preschool enrolment. Drawing on Bourdieu's concepts of field, capital and strategy, we analyse how the composition and distribution of capital among parents relates to the character of the preschool within which they enrol. The analysis is based on individual register data from Statistics Sweden on all families in Sweden for the year 2016. This comprises of information on approximately 500 000 children. We use specific multiple correspondence analysis (specific MCA) to analyse the differences between these children (using their parents' education, income, occupation, and national origin), the preschools' socio-economical and pedagogical characteristics (such as social recruitment, and teacher composition regarding their social background), and the composition of providers in the preschool market. The analysis of the Swedish social space of preschools reveals an overarching structure of enrolment that is related to, on the one hand, the distribution and composition of families' capital, and on the other hand, the demographic, geographic, socio-economic and business-orientated conditions that frames the providers place in the market. Hence, local preschool markets' offers are socio-economically and ethnically stratified, allowing families to strategize for their children's care/education and social context.

The Effects of National Performance Standards on Educational Poverty – Findings from a Fixed Effects Approach with PISA Data

Teltemann, Janna (1); Schunck, Reinhard (2)

1: University of Hildesheim, Germany; 2: GESIS Leibniz Institute for the Social Sciences

janna.teltemann[at]uni-hildesheim.de,
Reinhard.Schunck[at]gesis.org

Policy makers and researchers share a strong interest in school and system factors, which have the potential to reduce educational inequality and to alleviate educational poverty. The aim is to ensure equity in education. One common understanding of equity focuses on societal participation opportunities. Securing societal participation requires determining minimum levels of education that seem necessary for entering the labour market and other societal spheres - and ensuring that every student reaches this level. Performance standards can thus be a measure for reaching equity and for avoiding educational poverty. Standards, for example in the form of national standardized tests, function as an incentive for teachers to adapt teaching and learning opportunities. Previous works on effects of standardization of education systems focused on standardization of school leaving certificates. Studies showed that more standardization is related to lower social inequality at labour market transitions. So far, less research is devoted to the effects of performance standards on low performance ("educational poverty"). We present an innovative way of analyzing a pooled dataset from the OECD PISA studies 2003, 2009 and 2015. We apply multilevel modeling with country fixed effects, thereby avoiding common problems of bias in cross-sectional analyses. Our focus lies on the effect of standardization on the risk of performing below competence level 2 in reading ("educational poverty"). Further, we analyze interactions with individual socio-economic status and migration background. Preliminary results show that performance standards are more effective for reducing the effect of immigrant background on the risk of low performance. They are less effective for reducing socio-economic disparities in educational poverty.

Does It Make Sense to Measure the Inequality of Opportunity in Education? Comparing Inequality of Opportunity to Inequality of Outcome in Adolescents' Reading Achievement Across 37 Countries and Over Time

Gromada, Anna; Chzhen, Yekaterina; Rees, Gwyther

UNICEF Office of Research - Innocenti, Italy
agromada[at]unicef.org, ychzhen[at]unicef.org,
grees[at]unicef.org

We demonstrate the implications of using six different approaches to the conceptualization and measurement of inequality for cross-country and over-time comparisons of educational disparities. We analyze reading literacy performance of 15-year-old students using data from PISA 2009 and 2015 for 37 EU and OECD countries. We show not only that inequality of outcome and inequality of opportunity do not have to go hand in hand but that they can move in opposite directions. Our results suggest that indicators of variation in educational outcomes are more robust to the types of problems that affect international comparisons of educational achievement than the more common approach of measuring of inequality of opportunity.

RN10_08 | Perceptions and beliefs of the future

Young People And Visions Of The Future: The Role Of Cultural Capital

Cangiano, Ciro; Sarnataro, Rosalba

University of Naples Federico II, Italy
ciro.cangiano[at]unina.it, rosalba.sarnataro[at]unina.it

The pervasive discourse of neoliberalism, pushing young people to acquire high levels of education as well as high-profile skills and qualifications, emphasizes the idea of education as a powerful tool to promote employability and social mobility. In contrast with this vision, an important theoretical perspective has shown how in the educational system powerful mechanisms of reproduction of social inequality operate, since the educational pathways (how long and what young people study) are deeply influenced by social positioning (Apple 2006; Furlong & Cartmel 2009). Following Bourdieu (1964), it is possible to see how in these mechanisms – in orienting young people’s educational chances and choices – a decisive role is played by aspirations and visions of the future: so, the relationship between education and visions of the future turns to be a crucial issue. This relationship constitutes the object of our contribution, whose aim is not only to show if (and how) aspirations and images of “tomorrow” affect the educational choices but also to understand if education is able to enlarge young people’s horizons of the future and/or to raise their aspirations. On the bases of the analysis of 78 life stories, collected within a research program funded by MIUR (The Italian Ministry of Education and Research) the contribution shows how embodied cultural capital (Bourdieu 1979) and the capital of experience (Furlong 2011), situated in individual’s subjectivity (Woodman & Wyn 2006), make the difference in the way young people conceptualize the future more than the institutionalized cultural capital.

Educational Strategies Among Danish Disadvantaged Youth – Cautious or Carefree?

Bom, Louise Høyer; Thomsen, Jens-Peter

VIVE - The Danish Center for Social Science Research, Denmark
lhb[at]vive.dk, jpt[at]vive.dk

This project examines how educational strategies varies among disadvantaged Danish adolescents. While most studies focus on between-group differences, we examine how educational expectations are shaped differently within this group of disadvantaged young people. We have conducted qualitative, semi-structured interviews with 100 9th graders sampled from diverse socioeconomic backgrounds, focusing on their educational expectations and transition. In this paper, we present results from an analysis of a subgroup of these 9th graders – those from more disadvantaged backgrounds (where the parents have none or little education beyond compulsory

school). While studies have previously shown that disadvantaged children have lower expectations than their privileged peers (even net of scholastic ability), this study investigates the variation in this group and why some youngsters have expectations well above the average for this group. We find that there are substantial within-group differences and identify distinct educational strategies that highlight how young people from disadvantaged back-grounds responds very differently to the process of educational expectation-making. These different responses show how important information on educational expectation-making is lost when averaging expectations for the group of young disadvantaged people.

agnes.vanzanten[at]sciencespo.fr

This presentation will analyze policies and practices of widening participation and, specifically, two programmes launched in France by an elite higher education institution (van Zanten, 2017). Although these schemes concern a small number of beneficiaries, they have strongly influenced the way in which educational inequalities are being framed and tackled in a wide variety of dispositifs encouraged by the Ministries of education and higher education. Using data from two ongoing qualitative studies based on interviews with institutional actors, tutors and students and observations of tutoring sessions in four secondary schools and at the institution, we will address three questions: 1) the underlying visions about the factors involved in the development and persistence of educational inequalities among the actors involved in the design and implementation of these programmes; 2) the way in which these conceptions are translated into pedagogical arrangements and activities; 3) their reception by the students. The discussion will underline the importance given to psychological factors (self-censorship, lack of self-confidence) in explaining educational inequalities as well as to practical techniques (documentary work, note-taking) and ‘soft-skills’ (presenting oneself...) in the actual programmes and, conversely, the low consideration of structural factors (economic resources, learning problems) and the low emphasis on ‘hard skills’. It will also emphasize and interpret variations across settings and actors. Reference van ZANTEN A. "Widening participation in France and its effects on the field of elite higher education and on educational policy" in S. PARKER, K. GULSON, T. GALE (eds.). Policy and Inequality in Education, Springer, 2017, 73-89.

What Matters When Promoting Social Inclusion in Urban School?

Lappalainen, Sirpa (1); Kosunen, Sonja (2); Juvonen, Sara (2); Vartiainen, Heidi (2); Bernelius, Venla (2)

1: University of Eastern Finland, Finland; 2: University of Helsinki, Finland

sirpa.lappalainen[at]uef.fi, sonja.kosunen[at]helsinki.fi, sara.juvonen[at]helsinki.fi, heidi.vartiainen[at]helsinki.fi, venla.bernelius[at]helsinki.fi

Social inclusion in the context of education is a highly contested concept. In education policies and practices, the focus has mainly been on particular groups of individuals considered as having limited capacities to act in the society. In this presentation we are aiming for more sociologically informed approach to social inclusion, focusing on practices of promoting social inclusion in one urban school. The analysis draws on an ongoing study at one (pre)primary school located in the metropolitan area in Finland. Based on statistical analysis, we have chosen a research site with heterogenous composition of families (in terms of socio-economic background and language); risk of segregation through a pattern of middle-class rejection in school choice; close connection between pre-primary and primary education; needs-based resource allocation from the municipality; active participation in pedagogical development. In this presentation we focus on our ethnographic data, which includes field notes based on participant observations and interviews of children, parents and educators, asking how the policy of inclusive education is articulated and implemented in the local school context. In order to understand the complexity of inclusion and exclusion, the concept of intersectionality provides a framework for analysing how various dimensions of difference, such as socio-economic background, gender, ethnic background, and (dis)abilities, position children and their families. Our preliminary analysis suggest that pedagogical practices have taken steps forward in terms of discursive sensitivity when it comes to ethnicity, whereas children's various socio-economic positions have not been reflected in pedagogical practices, which potentially might provoke sense of social exclusion.

Breaking Through the Symbolic Battlefield of Education in Turkey

Şentürk, Yıldırım

Mimar Sinan Fine Arts University, Turkey
yildirimkenturk[at]gmail.com

For a while, the education setting has been a significant battlefield for two major political and cultural standings in Turkey: secular-western versus conservative-Islamic. While each side has tried to change education policies in line with their perspectives, they have developed various strategies to make their political symbols and images more visible in education. In this regard, the conservative-Islamic one has become more effective recently. However, this prevailing old-fashion political divide needs to be questioned along with its outcomes in education. Based on the qualitative research conducted in three secondary schools in Turkey (Metropole, semi-urban and rural settings) as a part of our Horizon 2020 Research Project (CHIEF – Cultural Heritages and Identities of Europe's Future); first I will examine how youths perceive this symbolic struggle in education. Indeed, enduring politically over-coded education program leads youths to lose their motivation and interest in learning and enriching their lives. Then, by our fieldwork findings, I will explore the daily educational practices of youths and their interactions with each other to understand in which ways and settings youths are more inclined to learn and thereby improving themselves. Meanwhile, comparing to the older generations, youths recently immerse more in various transnational cultural interactions and practices which cannot be easily labelled with the enduring political codes in Turkey. Therefore, I argue that paying more attention to these new cultural interactions and practices of youths and trying to integrate them more into education can provide us a way to overcome the prevailing symbolic battlefield in education as well as to improve the quality of education.

Work-Family-School Conflict For Non-Traditional Students In Cyprus Damianidou, Eleni; Iacovou, Maria

University of Cyprus, Cyprus
eleni5da[at]cytanet.com.cy

The continuous efforts to balance conflicting responsibilities, obligations and pressures from work, home and school, most likely result in work-family-school conflict and, consequently, in dropout behaviour. Hence, non-traditional students tend to neglect their studies rather than their other obligations, even though a high-school degree is linked to better jobs and career advancement. Thus the aim of this study was to explore the effects of work-family-school conflict regarding non-traditional students in Cyprus. In order to understand the issues related to work-family-school conflict, we conducted mixed-method research. Our main research tools were structured interviews with registered and ex-students from a second-chance school in Cyprus, and a questionnaire that was delivered to registered students at the same school. The interviews were analysed with the constant comparative method. Ex-students reported that they dropped out from school because of conflicting time-schedules that prohibited working students from coming to school. In addition, ex-students indicated that fatigue stemming from too many hours being alert was a negative factor that rendered them less eager to come to school instead of resting at home after work. Registered students revealed their solution to work-family-school conflict, which included increased absenteeism and less attention to classes. Importantly, participants expressed limited desire to continue their studies in tertiary education, because they believed that they would not be able to make it and that studying demanded too much effort. Even though data from the questionnaires have not been analysed yet, it seems that work-family-school conflict may raise barriers not only to finishing secondary education but also to demanding and trying to have a better future through education.

Time Series Correlation of Indigenous and Total Young Child Populations in Taiwan: Intermarriage, Legal Status, and Educational Rights

Wang, Chien-Lung; Chang, Ju-Hui

National Taitung University, Taiwan
wcl[at]nttu.edu.tw, amandac[at]nttu.edu.tw

Indigenous peoples account for 2.4% of Taiwan's total population, and among them 1–4-year-olds account for 3.7%. Taiwan's government attributes these percentages to indigenous population's higher fertility rate, overlooking approximately two fifth of them are second or third generation offspring of indigenous and Han Chinese intermarriages. The

status registrations of current indigenous students under 17 are according to the "surname-based inheritance rule" of Indigenous Status Act promulgated in 2001. This study analyzed the time series population data for indigenous and total young children. To fit with ARIMA models, the series with trends affected by fertility rate and Chinese zodiac were transformed with differencing into stationary ones. First-order differencing revealed birth effects of the tiger and dragon years in 2009 and 2011 in both series reflecting the prevailing intermarriages, and seasonal increases before and after Chinese New Year when more birth registrations are completed. Second-order differencing revealed the seasonal increases of indigenous status registration at the start of school year when the priority for public kindergarten enrolling and subsidies are decided. The indigenous series $Y(t)$ and total series $X(t)$ can be forecast with the seasonal ARIMA $(0,2,1)(2,1,0)_{12}$ models: $Y(t) = .624Y(t-12) + .362Y(t-24) + a(t) - .772a(t-1)$; $X(t) = .677X(t-12) + .452X(t-24) + a(t) - .542a(t-1)$. Cross-correlation functions indicate that the indigenous series can be forecast using the total series with the transfer function model: $\ln y(t) = .732B \ln x(t) + \ln (1 - .999B / 1 - .650B^{12} + .435B^{24}) a(t)$. This study indicates that indigenous students should not be viewed as disadvantaged tribal population with fixed boundary, which becomes a barrier to know comprehensively about who they are. In accordance with international laws, they should be viewed and educated as future autonomous citizens with legal status to fulfill indigenous rights including cultural revitalization and political self-determination in democratic society.

Alternative Spaces Of Failure: Disabled 'Bad Boys' in Alternative Further Educational Provision

Johnston, Craig

University of Winchester, United Kingdom
craig.johnston[at]winchester.ac.uk

This article draws from an ethnographic study of a group of school-aged disabled white working-class and self-proclaimed 'bad boys' in one Alternative Provision (AP) in an English Further Education College. These young disabled students' disabilities contribute to the formation of their revalorised – yet stigmatised – identities. Stigma also facilitates the governance of their educational careers. The article considers how this group understands its precarious existence in and beyond AP and how these young men resist the conditions of their devaluation. Despite multiple, stigmatising experiences the article shows how they appropriate space and (social) capital, often in tension with other students and College staff. The article suggests that there are questions about AP as an appropriate means to confer value upon young disabled students.

The Agency Of Deaf Indian Learners Of English In A Peer-To-Peer Multiliteracies Project

McEwan, Eilidh Rose

Institute of International Sign Languages and Deaf Studies,
School of Languages and Global Studies, University of Central
Lancashire, United Kingdom
ermcewan[at]uclan.ac.uk

The impact of sign language use upon the agency of deaf learners is still poorly understood. Researchers note that deaf learners in the global South often struggle to access education and basic literacy, but it is less widely known that this is principally because of a lack of provision of sign language in the early-years, the most crucial window for language acquisition (Strong 1988). Another secondary cause is the lack of sign language provision in later educational contexts (Schirmer 1994). This study examines participants' involvement in the Deaf Peer-to-Peer Multiliteracies project (2017 - 2020) which teaches English to deaf learners utilising local deaf peer tutors and the local sign language. This study will focus particularly on how involvement in the projects impacts on participants' experiences of agency and empowerment. These are framed by identifying common assets and capabilities which are indicative of agency, here defined as the ability of individuals to pursue goals one values. (Sen 1999; Ibrahim and Alkire 2007). To investigate this, I use qualitative data from 35 deaf Indian learners in two literacy workshops, which took place in Orissa and Indore, using a mixture of mapping activities, focus groups and interviews. Preliminary findings point to the use of sign language in teaching English to the deaf, deaf-friendly visual methods for tutoring, and the hiring of local deaf project staff all as cumulative factors which had positive implications on participant agency. Other novel methodological approaches to data collection such as employing local facilitators for interviews, and allowing participants to contribute to research design by suggesting keywords for the mapping activities, had further radical implications for the agency of participants as learners and tutors.

RN10_10a | Social inequality in education - General considerations

Educational Institutionalisation as Secularization. A Comparative- Historical Analysis of the Educational Secularization in Austria, Germany and Sweden

Gordt, Simon

University of Hildesheim, Germany
simon.gordt[at]uni-hildesheim.de

The formation of national education systems during the 19th century marks the beginning of modern schooling in Europe. Originally, education was part of the churches domain for centuries but became a fundamental feature of modern state particularly because of its value as a source of political power. Therefore, modern education has to be understood in the context of state and that is why educational institutionalization is interpreted as a secularization process. Secularisation is a multi-dimensional concept and refers in this study to a decrease of religious authority. Thus, the school system is regarded as an institutional arrangement wherefore the state and the churches are their main actors because school systems are not only the result of historically specific cultural orientations and socio-economic conditions but also of power relations among interest groups. In a comparative-historical perspective, this paper analyses in two steps how the Austrian, German and Swedish school systems secularized and why they followed the same path although they differ in their cultural heritage. The causal reconstruction of each national path is followed by a narrative comparison to identify their causal conditions. Based on the work of Martin (1978) and Rokkan (2000) it is argued that the similar state-church relation created in conjunction with their cultural and political conditions during the state- and nation building a specific setting of change, which was responsible for their similar educational institutionalisation. These three school systems share one specific social pattern, which offers an explanation how each proceeded from a confessional to a secular school system.

Multidimensional Social classification Applied to the Analysis of Educational Spaces

Bergström, Ylva; Bertilsson, Emil; Börjesson, Mikael

Uppsala, Sweden

ylva.bergstrom[at]edu.uu.se, emil.bertilsson[at]edu.uu.se, mikael.borjesson[at]edu.uu.se

Analyses of social class have rendered a renewed interest given the rise of social and economic inequalities, recognized as historical high throughout many western countries, the Scandinavian welfare states included (Savage et al. 2013, Piketty 2013). This also involves discussions on how to understand analytical entities such as class, capital and occupation in today's society. According to Savage et al (2015) the elites have distanced themselves from the rest and the precariat form a class beneath, while the class lines have become blurred and complex in the middle. In this paper we empirically investigate the current social structure of the Swedish society and, following the tradition developed by Bourdieu and collaborators (Bourdieu 1979), create a classification of social groups that rimes with the distribution of assets. We use the rich statistical material that is available on the Swedish population and examine the main classification system of occupations, SSYK-08 (built on 429 different occupations and aggregated into four levels) in order to analyze how these occupations are structured in the social space, constructed out of data on income, educational level, gender and work sector of the total population in Sweden 2015. Based on this analysis we propose a classification of 38 social groups (SEC-SOC-2019), which are optimized to capture the multidimensionality and complexity of the social space and yet be sufficiently aggregated and useful in concrete analysis. Finally, the constructed 38 social groups are applied in an analysis of the fields of higher education and upper secondary education in Sweden 2015.

How Do Characteristics of Education Systems Shape Educational Inequalities? Results of a Systematic Review

Zapfe, Laura; Gross, Christiane

Julius-Maximilians-University Würzburg, Germany
laura.zapfe[at]uni-wuerzburg.de, christiane.gross[at]uni-wuerzburg.de

The key role of social context for educational trajectories is well known since the so-called Coleman Report (1966) and has been the focus of the latest educational research. A multitude of studies analyzes the influence of educational system characteristics such as stratification, standardization and vocational orientation on educational inequality. Educational systems are considered to be "good" if they are permeable and provide equal opportunities for all students aside from their ascriptive characteristics. However, there is no systematic overview of the current research results. Therefore, this study

analyzes the question how educational systems shape educational inequalities through a systematic review. We define educational inequalities as the variation of educational outcomes (such as competencies, attainment, credentials) linked to ascriptive characteristics (such as gender, social origin, migration background). The literature research is conducted in the database web of science/knowledge with 18 different keywords. The analysis of the abstracts and full texts takes six inclusion criteria into account which are derived from our research question. The research has to analyze educational system characteristics, educational inequality, educational outcomes as well as be an international comparison with at least five different countries, be published in English and refers to pupils. 11 studies meet the inclusion criteria which are supplemented by researching further studies which cited the original ones in order to include the latest texts. The abstracts and full texts of the supplementary studies are also screened against the inclusion criteria and must be additionally published in peer-reviewed journals. The literature review of the first studies will have been conducted prior to the ESA Conference in August and the results presented.

Academic Governance and the Field of Higher Education

Vabø, Agnete (1); Lindqvist, Moa Maria Cecilia (2); Börjesson, Mikael (2)

1: Oslo Metropolitan University, Norway; 2: Uppsala University, Sweden
agnvab[at]oslomet.no, moa.lindqvist[at]edu.uu.se, mikael.borjesson[at]edu.uu.se

Changing modes of governance in higher education have apparently led to significant changes in relationships and power between different groups: students, academic staff, administrative staff, vice chancellors and external stakeholders. For instance, in Sweden the University boards have gone from a majority of in house-members to a majority of external members following the trend of New Public Management in general. This paper analyzes changes in governance model in Swedish higher education in relation the positions of the institutions within the overall field of higher education. We have interviewed all types of representatives on the boards of three different universities: a traditional full research University, a modern metropolitan University and young regional University. In these interviews, it is striking that the different types of members on the boards have dissimilar points of views of how a University ought to be organized and managed. There is also distinctively different focus: where teachers tend to emphasis professional dimension of the core activities, research and education, the local leadership steers towards policy issues in relation to the ministry of education and other national authorities, external representatives stress external demands on higher education and research. We can also notice that universities that attract students with larger volume of assets tend to be organized more in collegial ways and dispose boarder members with larger networks. Through our interviews, we have sought to investigate the relations between the University and the working life, the public sector, industry and the private sector to examine whether any of these relationships, more than anyone else, has changed the organization and orientation of the universities. In the end, what does this mean for Swedish higher education?

RN10_10b | Internationalisation

Who Choose to Study Abroad, and What Educational Field Do They Choose?

Helland, Håvard

OsloMet - Oslo Metropolitan University,
Norway

havard.helland[at]hioa.no

Studies from many countries show that internationally mobile students are of higher social origin than their peers at home, and that both cultural and economic capital influence the propensity for studying abroad. Much less, however, are known about how social origin correlates with choice of educational field. Are the social differences similar in different fields like e.g. medicine and business administration? Or do the patterns vary between fields? Another interesting question relates to the internal horizontal cleavages in the upper- and middle classes. Are there horizontal differences between different middle-class factions with different composition of cultural and economic capital? Do the effects of parents' income vary between different educational fields, or are the overall patterns the same across fields? The proposed paper investigates such questions by analysing Norwegian register data (from Statistics Norway) covering the entire population born between 1940 and 2000. Norway has a generous public funding programme for students, implying that studying abroad is not necessarily more expensive than domestic HE. Hence, one could expect that mobile students would be less socially selected than in other countries. We still find considerable social differences, and preliminary results suggest that the correlations vary considerably across fields and class factions.

The impact of European school partnerships: The case of Greek participation

Zevgitis, Theodoros; Emvalotis, Anastassios

University of Ioannina, Greece
tzevgit[at]gmail.com, aemvalot[at]uoi.gr

This paper deals with European Education policies as implemented in the Lifelong Learning Programme by Comenius multilateral school partnerships. The study is based on all the final reports that Greek schools submitted during 2008-2013 combined with the outputs from the European Shared Treasure. The data, which was collected from the final reports, provided a means of integrating quantitative and qualitative approaches to the study of the partnerships' impact on the school. This paper presents the preliminary results of the quantitative analysis. The objective of the analysis was to

evaluate, based on a constructed evaluation framework, the extent to which European school partnerships affect schools. A further aim was to identify the encountered problems and obstacles the schools had to deal with and pinpoint the key competences that were addressed by each partnership. In addition, the analysis was used to examine if the school profile, where school profile refers to number of students, number of staff, school level and geography, affects the impact of European partnerships in school. The main results of the analysis showed that, regardless of the school type, all the schools felt that the impact from the partnerships was high. The students and teachers who participated in the mobilities gained the most from the partnership, whereas the impact on the school and on the local community was significantly lower. Moreover, the key competences that most partnerships had focused on were the communication in foreign languages and cultural awareness. In addition, the problems that mostly occurred were lack of time for project work and the high administrative workload. Finally, the longer-term impact seems to be weak based on the availability of the produced outcomes.

The Education of the Global Elite: The Role of 'Traditional International Schools'

Lauder, Hugh; Bunnell, Tristan; Donnelly, Michael; Whewall, Sam

University of Bath, United Kingdom

h.lauder[at]bath.ac.uk, t.bunnell[at]bath.ac.uk,
m.p.donnelly[at]bath.ac.uk, s.whewall[at]bath.ac.uk

This paper argues that the children of global elites, such as those from families who are employed by Transnational Corporations, multilateral agencies and international NGOs, are constructed in ways that, to use the British Prime Minister's phrase, are 'citizens of nowhere'; their understanding of and commitment to particular geographic spaces and places is being replaced by an outlook that perceives a world in which diversity is valued and global concerns, such as the environment, take precedence over a world view which is firmly located in the local. The hyper mobility they experience in their early lives, as well as the nature of the curricular to which they are exposed, provides a unique platform to cultivate elite global subjectivities. This is both a theoretical and empirical paper which critically examines international curricular and draws on interview data with students attending 'Traditional International Schools'. These schools offer the programmes of the International Baccalaureate (IB), which promote the concept of 'international mindedness' (IM). We argue that the process and experience of IM offers a platform which has the potential to provide an element of global social solidarity amongst students. It enables them to speak with the same vocabulary, with the same mindset, even if their interpretations and experience of IM differ. However, the IB programmes also emphasize service in local communities, which may be seen as a way of grounding the students in local contexts. If they are constructed by the local community as 'citizens of nowhere', then this form of service is likely to be contradictory to the aim of IM.

Accountability Reform in the Chilean Education System: Exploring its Trajectory and Enactment through a Cultural Political Economy Approach

Parcerisa, Lluís (1); Falabella, Alejandra (2)

1: Universitat Autònoma de Barcelona, Spain; 2: Universidad Alberto Hurtado, Chile

lluis.parcerisa.uab[at]gmail.com, afalabel[at]uahurtado.cl

In the last decades, accountability reforms have been adopted in many countries around the world. In the case of Chile, a new wave of accountability policies was enacted during the 2000s as a way to solve the "market failures". In this regard, the main purpose of this research is to analyze the adoption and re-contextualization of accountability policies in the Chilean education system, as well as to examine the actors involved and the main drivers and local contingencies that have mediated their enactment. The study uses Cultural Political Economy (CPE) approach because it allows us to explore the emergence of particular problems that push for reform, the reasons that explain the selection of particular policy options, and the dynamic processes of institutionalization. Methodologically, the research combines 30 semi-structured interviews with stakeholders with document analysis. The findings show that the crisis of the Chilean educational system occurred due to the confluence of two problem streams, which opened a window of political opportunity for policy change. In this context, the mechanisms of accountability, framed under a new public management logic, emerge as a "magic solution" between decision-makers. Accountability was a place of consensus between the right and center-left Chilean policy-makers because it allowed aligning their political preferences. In addition, accountability was promoted and legitimated by international organizations, and especially, by the World Bank, which contributed to reinforcing decision-makers' preferences to accountability policies. As a result, far from reversing the market logic, accountability policies contributed to the sophistication of the educational market.

RN11 | Sociology of Emotions

RN11_01a | Theorizing Emotion

From Alienation To Shame, And Back Again

Bruni, Lorenzo

University of Perugia, Italy
lor.bruni[at]yahoo.it

RN11.17. theorizing affect and emotion - RN11.26. emotions and reflexivity; This paper advances the hypothesis of a theoretical affinity between alienation and shame. This attempt will be circumscribed by a narrow intention based on the work of the philosopher Rahel Jaeggi (2014), a leading figure in the latest generation of scholars from the critical theory tradition of the Frankfurt School. Specifically, the paper will try to outline a sociological translation of Jaeggi's thought, attempting at the same time to identify interpretive and conceptual affinities between a Meadian social-theoretical reading of shame and a hypothetical sociological translation of the German philosopher's theory of alienation. By argumentative choice, we will maintain our focus within the perimeter of Rahel Jaeggi's theory of alienation, utilizing it as a conceptual base for some creative sociology. In the final analysis, the aim of this paper is to construct a conceptual bridge between shame and alienation. As we will see, these two phenomena can be associated in reference to their common twofold root: they are, at one and the same time, social events, objectified and exteriorized, and individual events, linked to subjective experience. Moreover, they both show further ambivalences. They are necessary to the stabilization of social bonds (Scheff 2000, 2003, 2004), but at the same time they can indicate the emergence of social pathologies (Honneth 1996a, 1996b, 2004, 2006). A Meadian reading of shame can thus help to compensate for Jaeggi's lack of discussion of the social aspects of alienation and, at the same time, emphasize the alienation side of shame.

Emotions in Social Interactions: Human Feelings and the Interaction Order

Sawicka, Maja

University of Warsaw, Poland
m.sawicka[at]is.uw.edu.pl

Emotional communication is an integral and fundamental component of interpersonal communication, and, what follows, also of social interactions. According to existing research on emotions, emotional expression is a universal channel for communicating meanings (Ekman, 1972), initiating

interactions, demonstrating intentions and attitudes towards social situations (Oatley, Jenkins 1998) and establishing social hierarchies (Wilson 1982). Additionally, sociologists who analyze emotions in the perspective of symbolic interactionism have proven that people are able to intentionally and purposely use human capacity to feel and express emotions in order to steer the course of interactions and influence interaction partners' feelings and actions (Hochschild 2003, Kemper 1990). In this presentation I will demonstrate a theoretical model which links the ways in which participants in the interactions employ the aforementioned ability to use emotions with social-situational factors – key characteristics of selected types of interpersonal situations. I will consider the following types of social situations: anonymous and transient, role-based and recurrent, identity-based and lasting. The aim of the presentation will be to refine general statements by sociology of emotions regarding the role played by emotions in interpersonal communication through identification of specific social-situational factors which circumscribe and channel the presence of emotions in social interactions.

Emotion and Utopian Imagination

McKenzie, Jordan

University of Wollongong, Australia
jordanmc[at]uow.edu.au

Contemporary utopian theory offers exciting insights about the role of emotion in the theory and praxis of the political sphere. In place of classical utopian literature from More, St Simon and Bacon, modern utopian literature places this kind of thinking in everyday critique (Levitas 2013; Jameson 2005), everyday praxis (Cooper 2014; Sargisson 2017), and perhaps most importantly, within the realm of inevitability rather than impossibility (Bloch 1954; Abensour 2008). Utopian thinking simply involves critiquing the present in favour of a better future, and for Bloch in particular, this is something that individuals constantly do. Jameson furthers this approach and suggests that even anti-utopian thought is itself a form of utopian thinking as it identifies historical mistakes and attempts to rectify them. This presentation will consider the role of emotion in utopian theory and praxis. Political discourse is deeply entwined with emotion and visions for a future utopia (in the sense of a best possible outcome for society) are imbued with nostalgia, hope, happiness and pride. Meanwhile, dystopian narratives are often driven by fear, shame, hatred and guilt. There are important emotions missing from this list; loneliness, boredom, envy and so on, and the prominence of some emotions over others undoubtedly shapes the direction and tone of political arguments. This presentation will specifically explore the possibility for differing emotional climates to inform and drive directions of utopian discourse.

Emotions, Boundaries, and Societal Divides: A Critical Examination from a Communication-theoretical Point of View

Kurilla, Robin

University of Duisburg-Essen, Germany
robin.kurilla[at]uni-due.de

As media of sociation, emotions both unite and separate individuals and collectives, creating boundaries with varying degrees of permeability. This paper addresses the relations among emotions and the fabrication, maintenance, and deconstruction of boundaries in a threefold manner. Firstly, the role of emotions in the coordination of collective action will be discussed. Special attention is paid to anger and indignation as means of coordination in social movements and political parties. It will be determined how boundaries are emotionally established and maintained in practical and objectifying ways in the process of coordinating social protest. Secondly, the dynamics of mutually divergent moralizing ascriptions of emotions between different collectives will be explored to illustrate how emotional boundaries can turn into barriers of communication, impeding the societal coordination of action and thus exasperating societal divides. Different excerpts of historical and present political communication regarding separatism, nationalism, and identity politics as well as scholarly literature and its repercussions on everyday life will be analyzed to elucidate this point. Thirdly, the permeability of the boundaries between everyday life, politics, and academia will be critically examined regarding their potential to either aggravate or bridge emotionally fabricated schisms in society in Europe and beyond. The paper concludes with a plea for social reflexivity in research on emotions and an outline of ways this research can contribute to constructing the raw materials for the communicative fabrication of Europe as an inclusive imagined (emotional) community.

RN11_01b | Emotions and Collective Action

“You’ll Never Walk Alone”: Exploring Collective Emotion At The Hillsborough Vigil

Day, Chris Robson

Coventry University, United Kingdom
dayc8[at]coventry.ac.uk

Emotion, specifically collective and group-based emotion, has been investigated as a motivation in social change (for example, Britt & Heise, 2000) with empowerment, and positive emotions, shown to lead to increased collective action (Drury et al, 2005). This presentation explores the role of collective emotions in social justice campaigns and through triangulation of multiple forms of data (such as televised footage, interviews

and newspaper reports) this research aims to analyse accounts of ‘in situ’ and retrospective collective emotion in response to the Hillsborough verdict in 2016. A cursory analysis of crowd behaviour at the event would suggest a celebratory, positive atmosphere; evident in joint singing, cheering and scarf-waving. Contrary to this, a more detailed analysis of crowd behaviour and interviews conducted found feelings of sadness, anger and alienation. This was the impact of a decades-long media campaign discrediting victims, families, campaigners and the city of Liverpool. The Hillsborough Vigil offered a unique space of collective emotion where various affected groups came together in response to the long-awaited exoneration of victims and football fans. The variety of emotions evident in those present at the Vigil highlights that, despite receiving the verdict so desperately fought for, this does not result in positive, unanimous group emotion. Instead, the legacy of their struggle and the continued strain that they have endured means there is a need for continued support while they process the outcome and come to terms with their complex emotional experiences. It also emphasises the dynamic nature of emotion(s) in large groups, often described simply as ‘effervescence’, and the need for more in-depth investigation that combines personal accounts, observations and other narratives.

Emotions in Riots. Exploring Micro-level Dynamics in Riots in Belfast 1969-2010

Arenales, Alba

Queen's University Belfast, United Kingdom
aarenales01[at]qub.ac.uk

Despite significant developments in the study of emotions in social movements research, micro-level dynamics in riots have received little attention. This paper has a twofold aim. First, employing Collins’ Interactional Ritual Chains theory (2004), this research explores the emotional dimensions of participating in riots in Belfast between 1969 and 2010, from a micro-level of analysis. Using the Biographical Narrative Interpretative Method (Wengraf 2001), I conducted 9 life-story interviews with participants in riots in Belfast. The life-stories illustrate that ritual dynamics that occurred during riots facilitate the emergence of Emotional Energy, which in-turn, reinforces solidarity. At the same time, participation in riots was lived as a moment of collective empowerment for those taking part. The involvement in riots strengthened identification with their local communities and intensified the friendship ties among rioters. Second, the paper examines in-depth the place of riots in the lives of three participants, showing that participation in riots, as a form of collective action, was carried out as a means to defend their community against a perceived threat. In addition, these life-stories show the importance of social bonds in understanding participation in, and emotional dynamics of, riots. This work highlights the necessity of addressing riots by looking at both the context and motivation for participation in them, as well as the emotional dynamics that occur during the course of riots.

Feeling solidarity with strangers: The Rose Marches and the sociology of emotions

Rafoss, Tore Witsø

KIFO, Institute for Church, Religion, and Worldview Research
tore_rafoss[at]hotmail.com

On 22 July 2011, Norway was the victim of two successive terrorist attacks. The terrorist, Anders Behring Breivik, was motivated by anti-immigrant and anti-Islam ideology. He bombed the main government building in Oslo, killing 8, before traveling to Utøya, an island where the Norwegian Labour Party's youth organisation held a summer camp, where he murdered 69 people, more than half which were 18 years old or younger. In the aftermath of these attacks, there were many large public gatherings in Norway, the so called "rose marches". In Oslo more than 200 000 people gathered at the city hall square, the largest gathering of people in the history of Norway. This paper is a sociological analysis of the feelings that people experience inside and outside of these marches, with a special emphasis on strong, bodily feelings of community that many felt – but also with a discussion of those who felt little or none solidarity. The paper is based on the written answers that were given on a survey that charted how people had experienced the public gatherings. This data was collected in 2011 and 2012, and 329 respondents described, in their own word, how they felt after the attacks. The theoretical perspective is Durkheim's writings about the social nature of emotion, especially his theories about mourning rituals, as they are described in *The Elementary Forms of Religious Life* (1912). This perspective is supplemented by more recent research, such as the sociology of emotion, cultural traumas and the performance of the social rituals. The paper documents the nature of public, shared feelings after terrorist attack, and provides insights into the genesis of such social.

RN11_02a | Emotions in Intimate Relationships and Emotional Reflexivity

The Emotional Researcher: Emotions and Ethnographic Fieldwork in Ethical Non-Monogamy Communities in Belgium

De Graeve, Katrien

Ghent University, Belgium
katrien.degraeve[at]ugent.be

Although a substantial body of feminist and postcolonial work has discredited the myth of the impersonal, independent, objective scientist and opened the door for research methodologies that require the full participation of the researcher and immersion in the field, emotional aspects of reflexivity tend to remain neglected and the researcher's emotions and emotional involvement as sites of knowledge are still relatively underexplored. In this paper, I aim to reflect upon my own and participants' emotions (of anger, grief, hurt, frustration, tenderness, connection, friendship, etc.) in the course of my fieldwork (both online and real-life) in 'ethical' non-monogamy communities in Belgium. Doing so, I aim to investigate my own and participants' emotional engagement in interpersonal relations and emotion work for its implications (1) for processes of understanding and knowledge production, (2) for activist/action-based research strategies and (3) for the researcher's and participants' emotional wellbeing, academic credibility and research ethics. Unpacking some of the complexity of emotions as they play out between researcher and participants (and of what is seen as (legitimate) emotion and what is not), I aim to gain insight in the role of emotions in (understanding) mechanisms of normative power and oppression and in the reproduction of neoliberal and heteropatriarchal power relations in communities that promote the destruction of these norms. However, a focus on the (gendered, classed, etc.) politics of affect in 'ethical' non-monogamy advocacy groups can also open up potential to begin to think of alternative (more effective) strategies of subversion and feminist solidarities and cooperation.

Future Building, Gender and Emotional Reflexivity: Navigations of Agency and Social Change in Non-Conventional Relationships

Holmes, Mary (1); Jamieson, Lynn (1); Natalier, Kristin (2)

1: University of Edinburgh, United Kingdom; 2: Flinders University, Australia
mary.holmes[at]ed.ac.uk

Imagining possible futures, both immediate and distant, is an everyday activity in which people engage. They are likely to do so differently according to their social positioning, biographical propensities and the resources available to them. World leaders engage in 'strategic planning', activists in working towards alternative ways of living and school children in daydreams about what they will do when they grow up. However, relatively little is known about the more mundane varieties of future building and how they relate to people's lives and actions. This paper sets out a conceptual framework to make sense of this everyday future building. It focuses on imagining future intimate lives and the emotions that inform and accompany such an activity. Thus, such imagining is conceived as a practice of intimacy. Future building is also understood as achieved via embodied and relational forms of emotional reflexivity. Such imagining and building work is crucial to how people feel, think, imagine and do intimacy over time. We suggest that relationships that vary from the normative might provide a good place to begin to see the emotionally reflexive practices of imagining and building future intimacies. From this emerge original insights into how the ability to exercise agency is not just about strategic or instrumental resilience but about the enabling or constraining of actions and change at an emotional level. This happens relationally, as in at an interpersonal level of gendered intimate relationships, but also at a wider structural level around gender relations

Love, Couple Relations and Emotions in Pop-rock Songs in Romania, Today: Specificity and 'Globality'

Simu, Mona Mihaela Corina

Research Institute for the Quality of Life, Romania
monasimu[at]yahoo.com

In all modern societies, pop songs are one of the best ways to communicate/ capture emotions that are present within different areas of the society. Songs within pop culture are good representations of the society they write about. With huge audience figures, they reach many people, especially young generations, yet not only. In their texts, they cover actual issues that preoccupy people in their daily lives. Love songs are predominant in the pop-rock culture of every society, and they best depict emotions related to love and intimate lives, and not only. In the ongoing research I propose here, I studied the texts of 16 (8 female artists; 7 male artists;

1 band) Romanian pop and rock songs during 2017 and 2018, in terms of content/ themes, intending to add 2019. The method is content and frequency analysis on the songs' texts, looking for aspects related to genders different view upon love and intimate lives, to youth problems and the ways they express them, couple relations and feelings. The issues occurred during analysis were related to concerns about money, sexuality, relations, family, marriage, love, belonging and alienation. The study brings valuable information regarding the manifestation of emotions concerning life today in the Romanian (as European) society, and how gender differences look, in representative art/media forms of the society. The preliminary results were valuable: both male and female artists were relating to love; deceit, loss and separation were the predominant theme in all the songs, with evident differences according to gender.

Methodologically Feeling - The Process Of Entering A New Area Of Research Through The Lens Of Emotion Sociology

Nordquist, Cecilia

Uppsala University, Sweden
cecilia.nordquist[at]soc.uu.se

Considering emotional labour as a necessary endeavour when conducting qualitative research, this paper aims to investigate how the process of entering into a new area of research can be accomplished methodologically, as well as from the perspective of emotion sociology. The project at hand investigates the role of emotion and emotion management in judicial and prosecutorial decision-making in Scotland, as a part of doing and upholding objectivity within this setting. The research is carried out within the framework of the project JUSTEMOTIONS, studying how objectivity is constructed and operationalized as an emotive-cognitive applied process of legal decision-making in four different countries. This notion invites methodological discussions and comparisons between countries and legal systems. The paper investigates the process of gaining access to a research field in a country and within a judicial system not previously known to the researcher. Ethnographical tools such as small talk, field notes and participant listening are discussed both as means to gain access and to collect data. We believe that approaching the field by applying different qualitative methods enhances the understanding of the field itself and provides different tools of reflection for the researcher. Key words: Methods; Emotional Labour; Decision-making; Objectivity; Emotions.

RN11_02b | Mediated Politics of Fear, Hate and Anger

Emotional Dynamics of Political Scandals and Scandalizations

Verbalyte, Monika (1,2)

1: Freie Universität Berlin, Germany; 2: Otto von Guericke
University Magdeburg
monika.verbalyte[at]fu-berlin.de

Scandal is very often defined through the public moral outrage; however, the nature of this emotion in the scandal research has barely ever been really investigated. My theoretical work on the role of emotions in the political scandal discloses that: 1) moral outrage is not the automatic emotional reaction of the public, it is a result of emotio-discursive work; 2) emotio-discursive work is a dynamic process with emotions articulated in it changing when the scandal progresses. These two premises are the basis for my empirical inquiry into the public emotion articulation during the political scandal. Its dynamic is analyzed with the trans-sequential discourse analysis of media coverage of German political scandals. Analyzed scandals differ in their extend and course, and thus in their emotional dynamics. The focus of this presentation will be these differences in emotio-discursive work of my cases. First, I will explain the logic of my case selection and comparison. Second, I will present the emotional dynamics of the full-blown scandal: its turn from excitement to moral outrage and from moral outrage to contempt. Third, I will compare this dynamic to the dynamic of the unsuccessful scandalization, scandalization which ended in no scandal, i.e. in no consequence for the politician, and therefore never reached the contempt phase. Then, the second comparison will be made between the typical complete scandal and the scandal which was interrupted by early resignation of the politician. Last, comparison of the unsuccessful scandal and interrupted scandal will be drawn: Does the emotional dynamics of both cases end in moral outrage or does the emotional dynamics of the interrupted scandal have a tendency to be continued in some way?

The Social Construction of Fear and Hatred in Italy

Pratesi, Alessandro

University of Florence, Italy
alessandro.r.pratesi[at]gmail.com

Are there emotions which are more relevant than others to understand and explain electoral political choices? How are these emotions built and solidified? What is the role of media and social media? How can the study of emotions improve our knowledge and understanding of contemporary political dynamics at a national and international level? Can the intrinsic ambivalence and transmutation of emotions

transform them in potential resources for social change? These are some of the questions addressed in this paper. Drawing on a Goffmanian and content analysis of media texts and images selected from two Italian newspapers of opposite political views, this paper highlights the way in which political consensus is manufactured, performed and maintained through an entire emotional set of feeling rules (Hochschild) and micropolitics of emotions (Ahmed). The affective registers seem to produce positive electoral outcomes across the political spectrum, but certain emotions (anger, frustration, fear) seem to be stronger, more efficacious and to last longer than others (trust, hope, love) in terms of electorally successful outcomes. Preliminary findings seem to confirm that the emotional style and the charismatic leadership are more effective when feelings such as fear, resentment and hate are at stake. But the social construction of hatred does not exclude the social construction of solidarity and other positive emotions. This is consistent with recent literature on emotions in mediated politics (Wahl-Jorgensen, 2019). Putting emotions at the centre of our analytical interpretations allow us to avoid both media banalizations and political manipulations; understanding their key role is not only relevant as an academic achievement, but also in terms of political strategies and policy recommendations at a national and international level.

Affective (Re)Orientations in Online Discussions on the Threat of Violence Posed by Migrants

Venäläinen, Satu (1); Virkki, Tuija (2)

1: University of Helsinki, Finland; 2: University of Jyväskylä
satu.venalainen[at]helsinki.fi, tuija.virkki[at]jyu.fi

Online discussions are rife with fear-evoking images and meaning-making that highlight the threat posed by violence committed by migrants to the security of European nations and their inhabitants in the wake of increased immigration. This paper focuses on the role of emotions in shaping anti-immigration views as a response to the threat of violence attached to migrants in online discussions. In particular, we analyse the affective dynamics in processes of interpellation where participants in online discussions are invited to adopt anti-immigration orientations, and which work to construct such orientations as morally legitimate. The data consists of online discussion threads that comment on various cases of violent crime – mainly sexual violence against women and an alleged terrorist attack – with migrants as suspects that gained vast media attention in years 2015–2017 in Finland. Our analysis shows how emotions such as fear, hate and love work together in complex ways in constituting and shifting meanings associated with migrants, on one hand, and with those holding anti-immigration views, on the other. These processes allow for the construction and uptake of affectively appealing identities, such as those of ‘normal citizens’ and ‘caring parents’, which are based on re-signification of anti-immigration orientations enabled by the sticking of affects to the othered figure of a dangerous migrant. The analysis thus provides insight into processes in which ‘ordinary’ citizens hear, and respond to, the call of xenophobic positions, and illustrates how a sense of community and care for it is built in these affective, exclusionary processes.

Compassion, Solidarity and Othering – The Connection between ‘Politics of Emotions’ and Discourses on Migration

Mayer, Maria Magdalena

University of Vienna, Austria
maria.mayer[at]univie.ac.at

The ‘refugee crisis’ has been one of the most important topics in European media and politics in 2015 and 2016. While there was much attention given to right-wing politicians fostering ‘fear’ and ‘hate’, ‘empathy’ and ‘compassion’ were named to be the right strategy against these emotions. On the one hand, empathy seems to be seen as the condition for a civil society working in solidarity with refugees –on the other hand, claims arise to not ‘feel too much’ and to foster strong nation states with border controls: ‘the fortress Europe’. In my presentation I will examine the question how compassion, empathy and solidarity are connected to the perception of the ‘other’ as well as seeing how these interdependencies are connected to ‘politics of emotions’ and national identities. My research combines questions of identity, nationalism and emotions as well as politics of migration. To give insights into these discussions and the theoretical and empirical research of my discourse analysis, I will present findings from several newspaper articles included in a discourse analysis in German newspapers from 2015 and 2016 as well as parliamentary discussions from 2016. These findings will show the ambivalent ways in which compassion and empathy influence the discourses of emotions and migration and what critical role the study of emotions and affects therefore play for migration studies and questions of anti-racism and solidarity.

RN11_03a | Mobilisation, Resistance and Emotion

The Strategic Use of Emotions in Recruitment Strategies of Armed Groups: The Case of the Liberation Tigers of Tamil Eelam (LTTE)

Meier, Larissa Daria

Scuola Normale Superiore, Italy
larissa.meier[at]sns.it

What kind of emotions do armed groups use to recruit members and how do they use them? In this paper, I show that armed groups use “emotion work” (Hochschild 1979) as a part of their strategy to mobilize fighters. They try to appeal not only to people’s self-interest or reason but to their values and normative judgements too, and they do so by evoking emotions. Once confronted with falling numbers of volunteers, the LTTE stepped up an extensive recruitment campaign targeting young Tamils living in the territory they controlled. I

use data from 45 interviews with former members of the LTTE and civilians who have been living in the warzones to show that emotions were a central element of this recruitment strategy. In order to analyse the role of emotions in recruitment, I build on research on mobilization and emotion in social movement and contentious politics and propose an analytical framework linking different types of collective action frames with different emotions they provoke and the mechanisms through which they facilitate recruitment. I find that the LTTE used interpretative frames (identification of common grievances and responsible actors) to create resentment. This emotional response together with the cognitive effects of the frames increase polarization among social groups – an important component of mobilization into militancy. Additionally, the LTTE used motivational frames in order to provoke anger and shame. These emotions increase the salience of frames to targets of mobilization. People feel personally affected and develop a sense of an inner emotional and moral obligation to take action and to redress (perceived) grievances.

Emotions and Collective Action: Managing Fear in Recent Romanian Social Movements

Simion, George Ionut

University of Bucharest, Romania
george.simion04[at]gmail.com

The protests that took place in Romania in early 2017 represent the birth of the most vivid social movement in my country after the 1989 Revolution, which ended a period of almost 50 years of communism. Until February 2017, Romanian social movements consisted in shy protests of different social groups in order to obtain some benefits, mostly wage increases. Starting with 2017, the way how Romanians perceive their social reality and their social involvement radically changed. Which are the explanations for these social changes? In my paper, I aim to explain the recent social movements in Romania through the sociological lens of emotions, particularly the fear which can be used as a trigger to boost participation. My choice of fear as a main filter to analyze social movements is not random. The magnitude of the 2017 events was compared to what happened in 1989. Back then, it was a reactive fear. Nowadays, it seems to be a proactive fear. The common aspects between the two events are collective action and hope for a better future.

Ordinary Appropriations Of Politics Through Jokes. Germany 1938-1944

Oeser, Alexandra

Université Paris Nanterre, France
alexandra.oeser[at]gmail.com

The Nazi past is a serious subject, a theme you “cannot joke about”. Nevertheless, people do joke about Nazism. An easy way to discredit this behavior is to say that these jokes are extreme right wing and/or anti-Semitic (Dundes/Hauschild, 1983). On the other hand, the laughter between 1933 and 1945 has often been qualified as resistance (Gamm 1979; Hermes 1946, Müller 2009). This view is now being challenged, some authors claiming that jokes were “propaganda by distraction” (Delporte 1993). This proposal reformulates questions on the relation between citizens and the state, by using a sociology of emotions applied to jokes on nazism. We want to understand unruly uses of humor as well as “soft” state repression in a twofold approach, from above and below. This paper is based upon 250 court procedures found in the Bundesarchiv mentioning jokes. They not only exhaustively list the jokes, but also the people who were present and laughed as well as those who denounced them to Nazi institutions. We learn about the context (public or private, work or home, with family or friends or anonymous persons). The archives also contain CV’s of those who told the jokes, which gives us access to sociological data such as gender, profession, marital status, salary, and the number of children. On the other hand, these archives give us access to different Nazi institutions that frame and sanction the public wit: the police (who writes a first report), the public prosecutor (who writes the accusation), and the judges (who write the verdict)

Storytelling and Emotional Engagement in Social Communication: the Italian Donation Campaigns

Ducci, Geal

University of Urbino Carlo Bo, Italy
gea.ducci[at]uniurb.it

The paper offers reflections on how non-profit and public sector organizations, in the network society, make communication campaigns aimed at sensitizing the population on socially relevant issues, such as health and well-being, using storytelling and communicative registers that arouse emotions in the publics, online and offline. The social communication has a function of symbolic integration in the society and can arouse different emotions: from a friendly, shameful or reassuring, even ironic communication in which the theme (or a problem) is represented in its positive sense, to a communication that leverages feelings of fear (fear arousing appeal), until the tendency to strike terror. In this framework, the paper illustrates a research, which aimed to analyze the communicative campaigns on the “donation” which have been conducted in Italy over the last five years, to understand some trends and principal characteristics. In particular, this study

was intended to try to understand what communication strategies are adopted by non-profit organizations and public organizations and, above all, what kind of storytelling is chosen in recent years to encourage the emotional engagement of the public to whom the communication activities are oriented. The research is quantitative and qualitative, and is divided into two phases as follows: - First phase: online detecting of the campaign on the donation of blood, organs, cells and tissues, promoted in the last five years in Italy by public institutions (State-Ministry of Health, Regions, Provinces, Municipalities, Health and Hospital Organizations) and by non-profit organizations. - Second phase: qualitative analysis of the Italian campaigns detected in the first phase of the research, taking into consideration the most representative cases of the Italian panorama.

RN11_03b | Emotions and the Law

The Feeling of Justice - Emotion-cognitive Processes of Judicial Decisions

Törnqvist, Nina

Uppsala University, Sweden
nina.tornqvist[at]soc.uu.se

The idea of objectivity as disembodied and unemotional, which lies at the core of the criminal justice system, is currently challenged by the growing field of law and emotion. The aim of this presentation is to develop an understanding of the emotion work engaged in by judges and prosecutors when evaluating and assessing evidence in fraud and intimate partner violence (IPV) cases. While fraud usually requires technical evidence and tends not to raise expectations of emotionality, the main evidence in IPV cases is often the testimonies of the victim and witnesses and these cases are generally regarded to be emotion-laden. Drawing on ethnographic data from an ongoing research project in Sweden, encompassing observations of hearings and deliberations, shadowing and interviewing prosecutors and professional judges, the comparison between these different types of crime provides a rich description of emotional processes in judicial decisions. The analysis demonstrates that judicial decision-making in practice is oriented by emotional information and investigates how this orientation, conceptualized as the emotive-cognitive judicial frame (Westergren & Bergman 2016), comes into play in court proceeding and deliberations in the context of a civil law system.

262

To Master the Stone Face: Learning and Habituating Judicial Emotions in Court

Bergman Blix, Stina (1); Wettergren, Åsa (2)

1: Uppsala University, Sweden; 2: University of Gothenburg, Sweden
stina.bergmanblix[at]soc.uu.se, asa.wettergren[at]socav.gu.se

This paper examines the learning and habituation of tacit emotion management necessary to sustain professional feeling norms and behavioural boundaries and techniques; the 'emotive-cognitive frame' of judges. The analysis is based on data from Sweden, building on a civil law system where judge is a career profession with specific training after law school. 43 judges at different stages of their career were interviewed and shadowed during their workday, including observations of court hearings. We find that the overarching demand for autonomy requires continuous self-evaluation, developed through several phases linked to increasing experience. During clerk training, the seemingly contradictory expectations of independence and emotional astuteness towards those of higher rank become consolidated and internalized. During judge training, autonomy develops through continuous self-evaluation to ensure conformity with standard judicial performance, epitomized by the stone face. Experienced judges may question the relevance of the stone-face norm, but to a large extent remain loyal to this ideal. For the more senior judges, the stone face can become solidified as a mask, but their habituated autonomy also paves the way for an ability to demonstrate emotional presence during hearings and discretion in evaluations.

Learning and Habituating Prosecutorial Emotions

Wettergren, Åsa (1); Bergman Blix, Stina (2)

1: University of Gothenburg, Sweden; 2: Uppsala University, Sweden
asa.wettergren[at]socav.gu.se, stina.bergmanblix[at]soc.uu.se

In order for boundaries and norms of legal professional actors to settle and reproduce, the 'emotive-cognitive judicial frame' must be habituated; professional feeling rules and behavioural requirements must be incorporated as part of the professional identity. This paper investigates how the emotive-cognitive judicial frame becomes habituated with growing experience, from prosecutorial training to experienced prosecutors. 41 prosecutors in different stages of their career were interviewed once or twice while being shadowed in their daily work, during preliminary investigations and in court. Around 300 criminal hearings, involving prosecutors, were observed. For prosecutors 'bounded independence' – independent self-confident performance of objective prosecutorial powers which is paradoxically dependent on the efficient and deferential work of other professional groups – is a core competence. Bounded independence requires flexible use of techniques of emotional astuteness and elaborate

insensitivity. The first phase of habituating bounded independence is learning how to distance oneself from one's own foreground emotions of embarrassment and insecurity, as well as from others' communication of irritation, frustration and ridicule. Elaborate insensitivity protects prosecutors from attempts by others to weaken their self-confident performance. In the second phase, the need to manage one's own foreground emotions decreases as emotion work becomes routinized. The performance of independence develops into a strategic and nuanced display of objectivity. In the final phase, emotional distance becomes securely habituated, allowing situated emotional presence and skilfully strategic emotional displays. Although independence is a critical individual requirement for inclusion within the rank and file of prosecutors, it builds on a solid ground of group solidarity and collective support.

RN11_04a | Desire for Happiness

Recipes for Happiness: Moral Orientation of Action and Emotion

Martin Perez, Alberto; Rodríguez Díaz, José A.; Aguayo, Aitor D.

University of Barcelona, Spain
amartinperez[at]ub.edu, jarodriguez[at]ub.edu,
Aitor.D.A13[at]gmail.com

In our research on The Happiness Industry (R&D project, Spanish Ministry of Science, Innovation and Universities, Ref. CSO2016-77248-P, years 2016-2019), we analyze how happiness has become a market product as an object of desire and consumption. We have identified different types of happiness products that include messages or tips recommending actions for the achievement of happiness. Many messages take the form of recipes prescribed by a variety of social actors: both multinational and smaller companies, the media, and specifically, different profiles of 'experts in happiness'. On the internet, there are numerous examples of indications whose purpose is to lead individuals to perform certain actions or to buy products leading to happiness. Based on this public and accessible information, we have built, through data mining procedures, an extensive sample of recipes for happiness that includes information about its inspirers, its disseminators, its mechanisms of legitimation -mainly through science-, as well as the fields of knowledge associated with each prescription. These large collection of recipes and ingredients is analyzed through grounded theory procedures, in search of the central categories of its discourse system. We understand the recipes for happiness as markers of specific actions to be carried out by individuals with a clear normative and moral intentionality: every prescription include morally binding feeling rules that must guide the social behavior of individuals.

Conceptualizing Happiness: Social Behavior Strategies In The Process Of Identification

Plepyte-Davidaviciene, Giedre

Lithuanian Social Research Center, Lithuania
giedrepl[at]gmail.com

Keywords: happiness, identity, recognition, sociology of emotions
The main objective of the presentation is to deliver initial theoretical frame of a doctoral thesis whose aim is to understand how individuals experience happiness through their social identification process in a certain social-cultural context. Thesis assumes that happiness can be perceived as complex set of emotions (Holmes & McKenzie 2018). These can be experienced intersubjectively and are embedded in a particular social context which is framed by certain sets of meanings, values and norms. Experience of happiness closely relates to verification of self-identity that occurs through social relations. This seems to be connected to struggle for recognition as a process of validating one's identity to a sufficient degree in a context of unequal power relations between social agents (Honneth, 1995). During such identification process individuals verify their personal, group or social identities with socially important others (Burke & Stets 2009, Stets & Burke 2014). Individuals can feel positive emotions when perception of the self in a certain social context corresponds to the standard meaning of identity (Stets & Burke 2014). On the other hand, they can experience frustration, envy or shame if the identity is not socially recognized. Thus, happiness as gaining recognition is linked to perceptions to equality and inequality in a giving context (Holmes & McKenzie 2018). The thesis strives to link sociology of emotions, formation of identity through self-verification and recognition with critical social theory.

Emotions and Society in the Digital Age: Revisiting the Postemotional Society Thesis

Kirton, Andrew

University of Liverpool, United Kingdom
a.w.kirton[at]liverpool.ac.uk

In 1997 Stjepan Mestrovic introduced the concept of 'postemotionalism' in an attempt to capture what he described as 'a distinct tendency in contemporary social life toward the mechanisation of emotional life' (1997: 1). He talks of 'a climate of affected, feigned emotion, as if it were rehearsed and planned ahead of time' (ibid: 13). This is not a society without or after emotion, but a society in which the place of 'emotions' and emotionality are fundamentally changed. Mestrovic's original thesis and commentary have not been well received or acknowledged. In this paper I revisit and seek to recover elements of the postemotional society thesis in the context of digital social media however. It was Mestrovic's contention that postemotionalism had reached its apex in the 1990s, but I argue it is only in the age of digital social media, of algorithms and emoji, hashtags and 'happy

slapping', that we might fully appreciate the efficacy of Mestrovic's analysis. Whilst acknowledging some ambiguities and potential problems with the original thesis, I go on to highlight and discuss a range of contemporary and significant postemotional phenomena. I ultimately seek to update, develop and extend Mestrovic's thesis as part of a broader analysis of emotions and society in the digital age.

RN11_04b | Work-Related Challenges and Emotional Labour

Keep a Stiff Upper Lip or Wear Your Heart on Your Sleeve? Ethnic Identity and Emotion Management among Arab/Palestinians in Israel

Shehade switat, Maha; Feinstein, Yuval

University of Haifa, Israel
maha_shehade[at]hotmail.com, fyuvall[at]soc.haifa.ac.il

This study examines how emotion management is linked to subjective identity among members of ethnic minority groups in ethnically mixed workplaces. Data were drawn from interviews with Arab/Palestinian citizen residents of Israel. The results reveal three distinct strategies of emotion management: (1) Arab/Palestinians, regardless of their subjective identity, tend to conceal emotions during interactions with majority group members. (2) Individuals who identify as 'Arab' also tend to regulate social interactions to avoid the emotional risks that accompany interactions with majority group members. (3) Those who choose a 'Palestinian' label are more likely to actively express their ethnic identities despite the emotional risks associated with this type of identification. The findings suggest that emotion management is influenced not only by a person's assignment to a social minority category (the emphasis of previous research), but also by a person's subjectively defined identity.

Boundary Making, Emotional Labour And Human Non-Human Relationships: A Qualitative Study Of Veterinary Professionals And How They Manage Work-Related Emotions In Professional And Private Contexts

Green, Lorraine; Moran, Lisa Martina

Edge Hill University, Ormskirk, Lancashire, United Kingdom
greenl[at]edgehill.ac.uk, lisa.moran[at]edgehill.ac.uk

This paper presents findings from a sociological study of practicing veterinarians, veterinary nurses and veterinary specialists (e.g. biosecurity, herd health experts) in the UK and Ireland; focusing on their everyday relationships with farmers, pet owners, breeders and non-human actors. We apply Arlie Hochschild's (2003) work on emotional labour, to focus on 'emotion work' and 'emotion management', to examine veterinarians' relationships, and how they manage emotions in professional and personal domains. We focus on how veterinary professionals manage their feelings in complex situations involving humans and non-humans including animal death, pet cremation, and threats to biosecurity that jeopardise economic, cultural and social sustainability and human food chains. We argue that how veterinary professionals express and/or suppress emotions, and how maintain relationships with farmers, pet owners and animals partially relates to training and discourses of professionalism within veterinary communities and the importance of fulfilling one's expected occupational or professional roles. Importantly, we also argue that the specific contexts where vets work impacts on emotional management. The cultures of specific clinical settings, and 'cultural scripts' (Vanclay and Enticott 2011) that are often place-based, and regulate interactions in communities, marts and fairs, on farms, and in specific households and which link to cultural artefacts in these settings (e.g. diagnostics, machinery, sheds, animals) indelibly shape how veterinarians manage their emotions and how they recreate emotional boundaries with human and non-human clients.

Edgework Emotional Management in Organ Donation Negotiation

Avilés, Lissette; Kean, Susanne; Tocher, Jennifer

The University of Edinburgh, United Kingdom
Lissette.Aviles[at]ed.ac.uk, Susanne.Kean[at]ed.ac.uk,
Jennifer.Tocher[at]ed.ac.uk

Background: Exploring the process of approaching the families to negotiate organ donation consent remains to be a sensitive topic within medical professions and healthcare systems. Extensive literature is focused on ethical, psychological, legal and structural considerations regarding people and families' making decision process. However, few studies have analysed

the social interactions that healthcare professionals and families experience when organ donation negotiation occurs. Aim: I examine the role of emotions within the process of approaching families. Method: A constructivist grounded theory study is carried out, which analyses these social encounters due to the delicate topic to pursue. Results: I argue that Edgework Emotional Management constitutes one of the main processes that professionals perform within approaching the families, pushing the boundaries of death forwards, body belonging and end of life decision-making. I discuss the crucial role of emotions in these interactions and how healthcare professionals and families challenge themselves to negotiate organ donation. I extend the concept developed by Lyng (1992), Lois (2003) and Bolton (2005) to explain the emotional work experience by nurses within organ donation process and eventually other critical areas in the medical context. Conclusion: Understanding the role of emotions as the mediator of these interactions may explain the complexity of social encounters in sensitive topics, and therefore, propose strategies to deal with these challenges.

"Why Don't You Find Yourself A Proper Job?" – Feelings And Feeling Norms In The Struggle Over The Symbolic Meaning(s) Of Work

Margies, Nina

Humboldt-Universität zu Berlin, Germany
margiesn[at]hu-berlin.de

When forms and conditions of work change, so too does the symbolic meaning(s) of work. The definition of what is considered work and non-work becomes highly contested and is subject to (re)negotiations. The struggle over definition and recognition of work is important as this definition determines the value we attach to certain forms of labour. It also influences the entitlement to feelings – does the work one is carrying out entitle, for instance, to feel stressed or complain about the workload. In this struggle for the interpretative authority, I argue, feelings play a crucial role. First, feelings and feeling norms are used as moral argument to make claims about what is or ought to be considered and valued as "proper work". Second, the clash between "old" and "new" definitions of valuable work can lead individuals into a painful inner conflict between their self-esteem and feelings of self-realisation, on the one hand, and the (missing) external recognition, on the other. Finally, this inner conflict and the painful emotions that emerge when being denied the recognition of carrying out proper work, require a considerable and constant amount of cognitive and emotion work. This paper carves out this social struggle over the symbolic meaning(s) of work and their emotive dimension by looking at young people's work experiences in Spain – a generation, which is most affected by new, atypical and often precarious working conditions, even more so in the aftermath of the economic crisis. Drawing on qualitative data of in-depth interviews with young freelancers and entrepreneurs in Madrid, I will show how norms of work and the feelings that get attached to them are perceived, managed and contested.

RN11_05a | Emotions in Welfare and Care

Respecifying 'Worry': How Clients Manage the 'Subjective Side' of Welfare Service-Seeking

Flinkfeldt, Marie

Umeå University, Sweden
marie.flinkfeldt[at]umu.se

This paper uses discursive psychology (DP) to investigate and re-specify 'worry' as an interactional achievement and resource. The DP perspective involves conceptualizing emotion as something people 'do', display, or invoke in interaction with other people, and investigating in detail its social functions in different settings. In the study, we analyze a corpus of 366 recorded phone calls to the Swedish Social Insurance Agency's customer service for housing allowance – a benefit specifically targeting financially vulnerable youth and families with children. In these data, we examine how clients' 'worry' is made interactionally relevant, where in the calls this happens, and what functions it has. In line with the broader DP goal of seeking to uncover how institutions are characterized by specific 'psychological business', we show that worry in our data is treated as undermining the legitimacy of seeking this specific welfare service. In other words: speakers collaboratively treat worry-induced calls as problematic. When worry features in calls, its dispositional character (in terms of the speaker coming off as 'the worrying kind') tends to be downplayed and worry is instead linked to a lack of knowledge, building the worry as warranted (or not) and as warranting further institutional activity (or not). In this sense, speakers treat worry as rationally, morally, and institutionally constrained. The ways in which the results differ from previous discursive research on worry in institutional settings serve to emphasize that emotion is locally accomplished and thus part of how the institution at hand is constituted.

Care(ful) Relationships: Supporting Children in Secure Care

Ellis, Katie; Curtis, Penny

University of Sheffield, United Kingdom
k.ellis[at]sheffield.ac.uk, p.a.curtis[at]sheffield.ac.uk

Children enter secure accommodation under two types of orders, while approximately half are placed on remand or sentenced for committing a serious offence, the other half are placed by social services under a child welfare order. Though sentenced under different orders, children in secure care are perceived as the 'most vulnerable' and in need of intense support. Hence, secure units tend to be small, with a high ratio of staff to young people. With vulnerable young people separated from their families and friends, secure accommodation becomes an enclosed hotbed of emotions where everyday life is played out against a backdrop of heightened reactions and intense relationships. Since

placements aim to provide a safe environment in which young people are enabled to address personal difficulties and subsequently move on to a 'better life', staff are charged with creating safe and supportive environments to aid this transition. Relationships formed between staff and young people are the therapy and are therefore engineered to elicit particular changes in young people's behaviour and outlook. Drawing on findings from sensitive ethnographic fieldwork, this paper considers the emotional experiences of carers who are expected to deliver life changing and coercive care to vulnerable young people with complex needs.

Messing with the Emotions of the Other: Exploring Affective Intergenerational Encounters at a Residential Care Institution for Young People

Warming, Hanne

Roskilde University, Denmark
hannew[at]ruc.dk

In this presentation, I examine the lived ambivalence, between support and control that arises in care work. I do so through an analysis of the spatialised entanglements of emotions, age and formal position in intergenerational encounters at a residence for young people suffering from social and mental distress. By identifying the dominant norms associated with the roles of 'resident' and 'professional in the social space of the residence', I explore what may, drawing on Haraway, be termed popular, oppositional and inappropriate practices and the emotions and power relations linked to them. The analysis reveals how the three types of practices – all framed by neoliberal youth policies and psy-knowledge about age, (ab)normal personalities and 'professionalism' as spatialised in the institutional organisation of work and the physical space as well as rules, norms, and routines - represent very diverse ways of navigating. Moreover it demonstrates, how 'messing with other people's emotions' and trying to change their behavior is regarded as manipulation if it challenges norms or power relations rooted in spatially anchored perceptions of appropriate practices, but as empowerment if it chimes with norms that correspond to the roles and intersecting binary constructions of childish/young/insane client – adult professional.

RN11_05b | Collective Identity, Belonging and Emotion

Being Soviet and Lithuanian: Emotional Regimes as the Bridge between the Opposites

Putinaitė, Nerija

Vilnius University, Lithuania
nerija.putinaite[at]tspmi.vu.lt

The Soviet Union occupied Lithuania in 1940. After 1944, hopes of restoring the political independence were gradually lost. The personal experiences were a clash of opposites: the experience of the loss of the state, repressions and deportations, and forced loyalty to the regime and the initiatives of the new political administration. The political administration attempted to establish links between the traumatic experience and the hostility towards the regime, and on the other hand, the goals of the Soviet world and the society's loyalty to the state and regime, i. e. between the negative emotions arising from the experience and the positive emotions necessary to the regime. In order to build such a bridge, the Soviet Lithuanian administration created a kind of hybrid culture as a smooth synthesis of the Soviet ideas and the national elements. It generated specific regimes of emotions: happiness, melancholy and suffering. The regimes of emotions helped to blend the national and the Soviet experiences; they absorbed and legitimized the personal traumatic experiences and even the experiences of guilt of collaboration with the regime. The study analyses the most popular phenomena of the Soviet Lithuanian culture: the song and dance festivals, the folklore movement at the end of the 1960's, and the dramatic trilogy by the most famous Lithuanian poet Justinas Marcinkevičius, *Mindaugas*, *Mažvydas* and *The Cathedral*, written in the 1960's and 1970's. All the phenomena were prevalent in the mass culture until the end of the Soviet era, and they have remained popular until present day. The study is based on the concept of emotional regime developed by William M. Reddy in his book *The Navigation of Feeling*.

Longing for Belonging: DIY Practices And Emotionalities In (Post)mining Landscape

Daňková, Hana

Institute of Sociology of the Czech Academy of Sciences, Czech Republic
hana.dankova[at]soc.cas.cz

The paper shows how through DIY practices emotion of belonging to landscape heavily altered by open cast mining is materialized and performed. It discusses the potential of these DIY emotional-material practices to challenge an alienated process of technocratic management of post-mining landscape. One of the foci of the paper is the reflection of "materialization of transcendence and loss" (Bille et al., 2016) and its repercussions in the process of DIY activities. The paper presents results from a project exploring DIY activities around open cast brown-coal mines in the Czech Republic. In particular, it comprises of participatory observation and interviews with producers of DIY artefacts, activists of "Mare Tranquillitatis" association. The activists promote the subversive idea of salt-water sea on the place of nowadays mines (especially subversive given the Czech republic is an inland country). Their DIY activities embrace manufacturing wooden lighthouse, small terrestrial marina on the edge of still operating mine or placing buoys marking lines of the "sea" next to touristic routes. Once the possibility of citizens to negotiate the future shape of the post-mining landscape is scarce in post-socialist conditions of the Czech republic due to existing barriers created through politics and policies, the activities of "Mare Tranquillitatis" association offer possibility for subversive action. Through DIY practices and artefacts that resemble fantastic marine landscape members of the association and their followers materially and emotionally manifest their longing for belonging to the landscape and longing for overcoming the barriers of non-participatory technocratic solutions offered by the stakeholders. Keywords: DIY, emotionality, belonging, (post)mining landscape, Czech Republic

Emotional Urban Territories: Ephemeral Practices, Social Control and the Role of the Emotions

Bertoni, Fabio

University of Padua, Italy
fabio.bertoni.1[at]phd.unipd.it

In the daily and widespread struggles that characterize the quarrels on the uses of urban spaces, as well as the direction of the policies that norm accesses and expulsions, emotions have a key role. In particular, considering contested spaces, where more legitimated (from an economic, legal or urbanistic point of view) has to face with other uses, more unplanned, unexpected and interstitial, emotions permit to have a heterodox access for a deeper understanding of the normative assemblage of the urban space, in its combination of legal tools, everyday interactions (and dynamics of power) between subjects in their different ways of using and inhabiting the urban sites, affective atmospheres and habits. Starting a territoriological analysis of the everyday encounters, in which territories are considered as acts that spatially inscribe boundaries and control apparatuses that make them effective, emotions are mobilized in the urban struggles and claims. Result of an ethnographic research, realized with the practitioners of three artistic and leisure activities (parkour, slacklining and buskers and street art performances), realized in the North Italy, the paper will start from the urban events generated by these ephemeral interventions in public spaces are subjected to a boundary-making process that excludes the more impromptu and unplanned modalities of these disciplines, combining a moral, aesthetic and emotional control on them. In particular, great attention will be dedicated on the implications for the body government, in terms of movement, performativity, and presence, that the political dimension through the emotional feature of the social control implies.

RN11_06 | Transnational Emotions and Migration Experiences

Solidarity in Transnational Context: Refugee Representations of Hungarian Migrants Working in the German Refugee Reception System

Zakariás, Ildikó; Feischmidt, Margit

Hungarian Academy of Sciences Research Centre for Social Sciences, Hungary
zakarias.ildiko[at]tk.mta.hu, feischmidt.margit[at]tk.mta.hu

The paper aims to describe categorisation and boundary making between various transnationally mobile groups, and their implications on the emergence of solidarity or the lack

thereof. More specifically, we focus on refugee-representations of intra-EU migrants. While the discursive contexts in societies affected by such transnational mobility categorise and hierarchise people, implying differing legal, institutional and moral positions for various migrant categories, such differences might become questioned, altered or recreated in specific contexts. In our presentation we analyse the representations of refugees in the accounts of Hungarian migrants working/volunteering in the refugee reception system in Germany. First, we will ask how various dimensions of (un)deservingness are constructed in individual accounts of Hungarian employees and volunteers. Second, we aim to decipher to what extent and how such frames relate to personal migrant experience and life histories of the helpers, and whether these evoke the construction of sameness or difference vis-à-vis the addressees of such support. Thirdly, we aim to describe how such representations imply solidarity, responsibility taking, and intentions and practices of helping. 16 qualitative semi-structured interviews conducted in 2017 among Hungarians living in Germany (mainly Berlin and Munich) form the empirical basis of the analysis.

Predicting Migrant's Emotional Course: How Does Duration Of Stay Shape Experiences of Primary Emotions?

Kuche, Coline

Georg-August Universität Göttingen, Germany
coline.kuche[at]uni-goettingen.de

Although moving to a foreign country is suggested to be an inherently emotional challenge encompassing feelings of uncertainty or homesickness, studies on integration paths have only rarely addressed these subjective dimensions of migratory experience. Despite evidence from qualitative research projects, migrants' emotions have not been investigated in population-representative studies yet. Instead studies focused on happiness or mental health outcomes. They propose a partly paradoxical picture on how migrants' affective evaluations of life and wellbeing develops over time. Additionally, these investigations are rather narrowed in terms of the complexity of emotional states, which makes them untenable to grasp the overall emotional course that migrants' go through. This gap is aimed to be tackled by an empirical quantitative investigation considering changes of frequencies in four primary emotions (anger, anxiety, joy and sadness) over the time of stay in the new home country. Theoretically, it is proposed that these emotional courses are socially conditioned by cultural expectancies and socio-structural circumstances. Therefore, the main thesis states that emotional differences between newcomers and the established mainstream should attenuate in the long run. Secondary data from the German-Socioeconomic Panel (Wave 2007-2016) is used (N= 44,068) to determine the experience of and change in four distinct emotions by the duration of stay (approx. 0 - 60 years) in the host society. First results from multilevel regression analyses are presented testing migrant's emotion outcomes compared to native Germans and the second generation of Immigrants in a longitudinal perspective.

Emotional Transnationality: Multiple Pathways of Belonging and the Constitution of an Emotional Space

Albrecht, Yvonne

FSU Jena, Germany
Yvonne.albrecht[at]uni-jena.de

Current medial, political and scientific debates often deal with ideas of spaces. The assumption of a national 'container' which is exchanged by people in processes of migration by another 'container' is still dominant. This assumption is often linked with the demand of emotional assimilation to the autochthonous people in the context of arrival and with the identification to norms which are located in this 'container' of arrival. In contrast to this perspective, the aim of my talk is to contribute to a different idea of space which is constituted in processes of emotional transnationality. In that way, it becomes necessary to consider emotional processes in contexts of migration in a different way. This emotional space develops in processes of reciprocal emotional influencing which can be described as "affecting" and "being affected": Emotions and affects are conceptualized as spacial movements which do not end at national borders but which are transnational effective. The concept of emotional transnationality is in that way a counter-concept to discourses of assimilation and demands of identificatory integration.

The Lived Experience of Inequality and Migration: Emotions and Meaning Making among Latvian Emigrants

Kesane, Iveta

Latvian Academy of Culture, Latvia
iveta.kesane[at]gmail.com

Based on qualitative interviews with Latvian emigrants collected between 2008-2014 in England, Ireland and USA, this paper asks: how do migrants' perceptions of inequality and the emotions corresponding to these perceptions influence their migration experience and decisions? Through the ability of the migrant to compare life at home with that of their receiving state, this paper finds that inequality is significant, not only in a strictly economic sense (as a pure inequality of income or wealth), but also in terms of the socio-emotional and cultural dimensions that accompany it. Through an examination of migrants' narratives and meaning making, I identify four scenarios of what I call the inequality-emotion tie: resentment and anger towards the ruling elite as unjust; exploitation and feelings of humiliation at work; inability to consume and associated feelings of deprivation and inferiority; and perceived inferiority in daily interactions. Through these four scenarios, I find that the inequality that exists in a migrant's home society creates resentment and anger towards ruling elites and employers, as well as creating perceptions and feelings about the self as inferior. Conversely, the inequality that exists in receiving states, where inequality levels are actually comparable, does not have the same effect. In these

countries, migrants described positive experiences with associated feelings of recognition, making a return to the home country less appealing.

RN11_07 | Populism Symposium

Social Sharing of Emotions in Populist Online Communication

Wunderlich, Philipp

Freie Universität Berlin, Germany
philipp.wunderlich[at]fu-berlin.de

Anger and fear are frequently considered as driving forces of populist party support, since their corresponding appraisal structures resonate with characteristics of populist ideologies. This contribution examines the presence and diffusion of these emotions in populist online communications to gain insights into the formation of intergroup emotions. The study applies a lexical sentiment analysis of discrete emotions to a sample of 275,582 Twitter posts authored by officials of two German political parties frequently characterized as populist, the left-wing "Die Linke" and the right-wing "Alternative für Deutschland" (AfD), and to a baseline sample of 315,536 randomly collected posts. Using multilevel regression models, the study compares the presence of anger and fear cues across groups and analyzes associations between these cues and linguistic references to migrants and political elites. Also, the effect of expressed anger on the frequency by which posts are shared by their recipients is modeled. Results support the hypotheses that anger, and to a lesser extent fear, are dominant emotions in populist communications on Twitter, and that populists are more likely to evoke anger when referring to out-groups. Finally, the study shows that anger cues significantly increase the sharing of posts authored by populist actors. Since social sharing of emotions is thought to contribute to emotional alignment processes within groups and consequently to the strengthening of group identities, these findings do not only depict a strong resonance of emotionalized populist messages promoting out-group devaluation but also hint at their potential to foster in-group cohesion within populist online-collectives.

Shame and Pride: Affective Polarization in Polish Right-wing Media Coverage of the 2019 European Parliament Elections and the 2019 Polish Parliamentary Elections

Kazlauskaitė, Ruta; Salmela, Mikko

University of Helsinki, Finland
ruta.kazlauskaitė[at]helsinki.fi, mikko.salmela[at]helsinki.fi

The rhetoric of Poland's ruling populist right-wing Law and Justice (PiS) party reveals an important role of emotions in efforts to mobilize the support of electorates. A key element of right-wing populist mobilization in Poland is the strategic use of the media, which contributes to the affective polarization of Polish society and politics. The paper examines how right-wing, pro-government media outlets in Poland employ two interrelated emotions – shame and pride – in their coverage of debates in the run-up to the 2019 European Parliament elections as well as the 2019 Polish parliamentary elections. Our theoretical approach builds on work by Salmela and von Scheve (2017, 2018) which proposed two hypotheses regarding the emotional underpinnings of support for the populist right. The first hypothesis identifies the mechanism of resentment as an emotional dynamic transforming negative self-focused emotions via repressed shame into anger and resentment towards out-groups. The second hypothesis relates to the emotional distancing from social identities that inflict shame and instead seeking more stable ascriptive ones. In support of the two mechanisms, previous research (Tworzecki 2019) indicates that PiS invented and popularized a discourse that set the beneficiaries of the post-1989 transformation against those who experienced a decline in their economic well-being and social esteem. These experiences relate to envy and shame, whose repression in turn feeds resentment. Close collaboration of PiS with the Catholic Church identifies the out-groups to which the resulting anger is to be directed and supports emotional distancing by encouraging identification with ascriptive social identities.

Emotional Dynamics of Right- and Left-Wing Populism

Salmela, Mikko (1); von Scheve, Christian (2)

1: University of Helsinki, Finland; 2: Freie Universität Berlin, Germany
mikko.salmela[at]helsinki.fi, christian.von.scheve[at]fu-berlin.de

Emotions are prevalent in the rhetoric of populist politicians and among their electorate. However, it is not clear if the same or different emotional dynamics underlie support for right- and left-wing populism. We argue on the basis of our recent research (Salmela & von Scheve 2017, 2018) that partially dissimilar emotional processes may be at play behind opposite

branches of populism. Existing research has associated populism with fear and insecurities experienced in contemporary market societies, on the one hand, and with anger, resentment, and hatred, on the other. Yet there are significant differences in the targets of right- and left-wing resentment: A political and economic establishment deemed responsible for austerity politics (left) and political and cultural elites accused of favoring ethnic, religious, and sexual out-groups at the expense of the neglected in-group (right). Referring to partially different emotional opportunity structures and distinct political strategies at exploiting these structures, we suggest that right-wing populism is characterized by repressed shame that transforms fear and insecurity into anger, resentment, and hatred against perceived “enemies” of the precarious self. Left-wing populism, in turn, associates more with acknowledged shame that allows individuals to self-identify as aggrieved and humiliated by neoliberal policies and their advocates. The latter type of shame holds emancipatory potential as it allows individuals to establish bonds with others who feel the same, whereas repressors remain in their shame or seek bonds from repression-mediated defensive anger and hatred

RN11_08 | Emotions in National and European Politics

Managing Feelings Within European Institutions? The Case Of Emotion Work In European Union Politics

Sanchez Salgado, Rosa; Vogel, Alice

University of Amsterdam, Netherlands, The
r.m.sanchez[at]uva.nl, rosa.sanchezsalgado+student[at]uva.nl

This paper analyzes emotion work in the European Union (EU) with a specific focus on the European Parliament (EP) and the European Commission (EC). While emotion work –studied within the discipline of sociology of emotions- has been found to be highly relevant within business organizations little is known about its eventual role in political organizations. This paper shows that a meta-discussion on the role of emotions takes place within European institutions and that there is great variation per key player and per policy area. When the attention was shift to the policy areas where emotions were the most present, such as Foreign and security policy, Food safety and Justice and Home affairs, the most important dimensions of emotion work, including a pre-arrangement of what is possible and feeling rules were clearly identified. Data analyzed include the EP database (1999-2014) and the EUSpeech database (2007-2015).

How to Research Polish Contexts and Effects of Group Resentment?

Werynski, Piotr

Silesian University of Technology, Poland
p.werynski[at]interia.pl

The author as his objective set the following: (1) determining ontological, epistemological and methodological bases for the research on the creation and social effects of negative collective emotions (mostly resentments) reflecting, according to Max Scheler and Max Weber, the tensions in the social structure and culture; (2) pointing out and operationalizing the parameters characterizing the structural and cultural contexts as well as their effects cumulating in the public sphere; (3) creation of triangulation research procedure in order to, in a possibly standardized way, diagnose the potential resentimental structural and cultural contexts; (4) constructing a deductive scheme of causal explanation, understood in a morphogenetic way (Margaret Archer), explaining the genesis of contemporary effects of the actions of collective resentimental mechanisms in the Polish social structure, culture and public sphere.

The Contrasting Emotional Bases Of Political Populism: Comparing Brazil's 2013 Protests And The United Kingdom's 2016 Brexit Vote

Sullivan, Gavin Brent

Coventry University, United Kingdom
ab7809[at]coventry.ac.uk

Political events that achieve national and international significance have complex dynamic features that warrant analysis of their contributing individual, group-based and collective emotions. Social structures and collective memory are background features of large-scale political behaviour which are necessary to providing a coherent explanatory account but not sufficient in practice to determine the emotions that arise during actions to secure or maintain control of economic and cultural resources. In this paper, I provide an overview of the role of theoretical work on the emotional drivers of populist political behavior focusing initially on explanations proposing similar or dissimilar emotions purported to underpin and drive forms of left or right wing political populism (Salmela & von Scheve, 2018). Theories of group-based and collective emotions (von Scheve & Ismer, 2013), collective action (van Zommeren, 2013) and affective practices (Wetherell, 2012) are, in turn, explored in relation to two recent empirical examples: Brazil's 2013 anti-government protests and the United Kingdom's 2016 Brexit vote. Thematic analysis of 25 interviews with Brazilians during the 2014 FIFA World Cup and 20 interviews with UKIP voters pre- and post-2015 General Election and before the UK Referendum highlight the following themes: how particular discrete or mixed personal, group-based and collective emotions contribute to popular widespread political action, the role of dynamic relational and contextual features in the transformation and

generation of further emotions, and longer-term implications of emotion-laden divisions and restriction of intergroup solidarity in the development of collective political identities and ambitions. Potential implications are discussed in terms of policies and practices that might encourage "healing" as well potential long-term ways to address sources of group-based dissatisfaction, resentment, disengagement or distrust.

RN11_09 | Emotion Management in Intercultural Contexts

Love as Means of Reproduction

Wide, Elisabeth

University of Helsinki, Finland
elisabeth.wide[at]helsinki.fi

Research literature on value production in contemporary capitalism identifies a shift in the character of the production of value, with affective labour regarded as one of the most important instruments for value production. Affective labour literature emphasises that the line between labour and emotions is often blurred. Furthermore, this theoretical literature often interprets care and domestic work as a primary example of affective labour. There is, however, a need to specify how the affective value production occurs in care and domestic work. Through an analysis of care and domestic work as affective labour, this article analyses the connections between value and affect. Drawing on interviews with migrant care and domestic workers in Finland (N=20), I ask in what ways the informants identify love as the most important tool in their work, either as love for their work, or love for those who they are caring for. I approach love as an affect that is closely connected to the informants' migratory experiences, the postcolonial context and the legally insecure position the workers hold in Finland, and to the nature of reproductive work. Firstly, I bring forth the ways in which the affect love is produced as a work skill in affective labour. Secondly, I analyse the intimate connections between the affect love, the colonial context and the social relations of value. In conclusion, I propose conceptualising affects such as love as a part of the use-value of labour-power and as means of reproduction.

'It Could Have Been Me': Cultural Sensitivity and Social Workers' Identification With Migrant Clients Who Resemble Themselves

Volckmar-Eeg, Maria G.

University of Stavanger, Norway
maria.g.volckmar-eeg[at]uis.no

In debates on multicultural social work, cultural sensitivity is center stage. Researchers emphasise professionals' training in cultural competence as important tools of providing equal services. Additionally, the Norwegian Labour and Welfare Administration (NAV), has implemented cultural sensitivity in its counselling policy to improve services for immigrant clients. Cultural sensitivity refers to professionals adopting an introspective approach to cultural issues. However, how other aspects of the background, social position and emotional registers of the professionals come into play in their day-to-day work have received limited attention. Social workers' ability to reflect on issues such as regulation of emotions in encounters with clients, as well as being conscious about one's own cultural background, are part and parcel of their educational training. However, the impact of such emotions and personal identification on professional practice has not been studied through ethnographic accounts. We depart from ethnographic fieldwork at a front-line NAV-office, in addition to nine in-depth interviews of caseworkers of other offices. We investigate the salience of perceived intimacy and identification on social workers' perception of a client or case and ask whether such cases increase the motivation of social workers. What are the implications for case proceedings that social workers sometimes identify themselves closely with the migrant client – because of class similarity, educational backgrounds, shared life-stage (e.g. parenthood)? Are social workers less inclined to take on cases with clients with whom they feel less immediate intimacy? Findings suggest the relevance of symbolic boundaries and emotional labour in the work of welfare professionals.

Affective Aspects of the Transnational Migration from Central Asia in Russia

Peshkova, Vera

Institute of Sociology of the Federal Center of Theoretical and Applied Sociology of the Russian Academy of Sciences
pever[at]mail.ru

The Russian Federation is among of the top five countries receiving migrants, much of which is migrants from the Central Asia. Their main goal is to improve their personal life and well-being of their family at home. However nowadays migration is a multifaceted phenomenon involving various transnational links and practices, the circulation between countries not only of people, but also of various social and economic activities, ideas and symbols, elements of material culture, as well as various desires and expectations. This means that a deep understanding of migration cannot be limited to approaching it as a predominantly mechanical movement between

countries due only to rational reasons. A moving person turns out to be not just in a new country, but in a new life situation, which is characterized by a multitude of new circumstances and statuses. These new contexts and social interactions generate new emotions. In this regard, I will make an attempt to show the emotional experiences that accompany transnational migration on example of the migration from the Central Asia in Russia. What emotions migrants experience? What emotions are associated with migration experience? What contexts of migration experience evoke positive and what negative emotions? What role do emotional experiences play not only in the life of migrants, but also in the lives of their families at home, etc.? According to our preliminary analysis, the main characteristic of the migrant's emotions is that they perceive themselves not as an equal participant in social interaction, but as an object; lose their subjectivity.

RN11_10 | The Nation, the State and Emotion

Emotion, Routinized Charisma and the Entrepreneurial City-State

Coleman, Roy

University of Liverpool, United Kingdom
roy.coleman[at]liv.ac.uk

This paper draws on earlier sociology to critique contemporary patterns of charismatic power through the figure of the entrepreneur: the entrepreneurial city, the academic as entrepreneur, the businessman/woman as 'saviour'. To varying degrees, Durkheim, Weber, Gramsci, Park and Mills, cast the figure of the entrepreneur as a sign of modernity's looming social malaise and morbidity and its inability to sustain empathy in social relations. The ascendancy of the entrepreneur is detailed in anti-social terms: standing alongside other social ailments - fascism, state coercion, social melancholia and egoistic and narcissistic social relations. This paper explores the entrepreneurialization of the state - as a component of decades of neoliberalization - and how this has encouraged socially harmful emotional regimes. What are 'entrepreneurial emotions' are in the context of state and city building and the forced ambiance and emotional animations that they cultivate? Where is the role of imagination, empathetic emotion and 'spontaneity' in an era where charisma and 'magic' is prescribed so tightly around the figure of the entrepreneur? What does this government-through-entrepreneurialism mean for what Durkheim called 'creative effervescence' as a basis for social solidarity and, more recently, what Lefebvre referred to as 'the right to the city'?

272

Enlightened Bourgeoisie: Therapeutic Discourse, Democracy and Nationalism in the Israeli Public Television

Leshem, Rotem

Tel-Aviv University, Israel
leshem.rotem[at]gmail.com

This talk contributes to the socio-cultural discussion on emotions and nationalism by showing how class culture and national attachment are mutually shaped through the integration of a therapeutic discourse into the national one. I focus on the television program 'Keshet Mishpachti' that was screened between 1986-1997 on the Israeli public channel. This project aimed to introduce counseling practice for real families on television for the first time. The counseling display drew on a Western psychological discourse inspired by Alfred Adler's approach. Through this international therapeutic discourse, the program's creators intended to inculcate a democratic spirit to the domestic audience. I conducted an interaction analysis of 18 episodes, as well as discourse analysis of hundreds of journalistic articles about the program and its professional counselors. The findings reveal that: 1) the program integrated two cultural codes: the therapeutic and the national. As a national TV, it adjusted the therapeutic discourse to national goals, while simultaneously, as a major popular culture medium, it inserted therapeutic messages into the national agenda. 2) Although the program aspired to represent the "All-Israeli" family, it actually reflected an image of the Israeli middle-class family. I argue that this program played a role in constructing and spreading an Israeli middle-class ethos, by establishing emotional habits that were received as characteristics of a new class distinction. The program aimed to leverage this class culture through nationalism, thereby facilitating its critical role in reshaping the national ethos.

Embodied Nationalism: Nations, States, Emotions

Heaney, Jonathan G.

Queen's University Belfast, United Kingdom
j.heaney[at]qub.ac.uk

While theoretical talk of globalization and cosmopolitanism was a significant feature of the late 20th century, the beginnings of this century have and continue to be dominated by a resurgence in nationalism and nationalist discourse. This has taken a multitude of forms, and is evident in both popular and political registers. This resurgence has been mirrored in academic work, from across the social sciences, including political sociology (e.g. Bonikowski, 2016; Malešević, 2019), and the emergent political sociology of emotions (Berezin, 2002; Scheff, 2000; Holmes, 2004; Demertzis, 2013; Heaney & Flam, 2013). Here, a new generation of scholars have reopened the question, going beyond the once-dominant top down 'nationalism as ideology' approaches to consider more bottom-up perspectives that characterize nationalism as a form of practice (Brubaker, 2004), combining both cognitive and affective orientations to the social world, and involving a more tacit and everyday forms of acculturation and reproduction (Fox & Miller-Idriss, 2008). In this paper I wish to address the endurance and tenacity of nationalism through the development of a concept of 'embodied nationalism'. This perspective, which draws on previous work (Heaney, 2013), aims to combine key positions on embodiment (a literature that is somewhat silent on the notion of nations), and the sociology of emotions, whilst also accounting for the key role of the (emotional) state in the attempt to (de)legitimize specific versions of nationness within the polity. The case of Ireland will be used to illuminate key points

Learning to Downsize

Boström, Magnus

Örebro University, Sweden
magnus.bostrom[at]oru.se

The paper is a theoretical literature review focused on the study of groups/people that, for sustainability reasons, change lifestyles, with a focus on reduced consumption. It reviews how social practices, socio-material structures and cultural forces of mass consumption facilitate or prevent such lifestyle change. It draws on the theoretical concepts on transformative learning. In the common understanding of the “green” or “climate friendly” consumer, the consumer is rarely a person who makes profound lifestyle changes, rather minor adjustments in everyday life. One point of criticism in previous research is that this focus on “greening” narrows the scope of social/societal change: minor changes in habits and consumption is insufficient to deal with climate change and other urgent sustainability problems. Another point of criticism concerns that the focus disregards that individuals are embedded in social relations and structural/cultural contexts. In our everyday lives we are dependent on others, on infrastructure and technology; and others are dependent on us (e.g. children). Thus, to understand the conditions for social transformation we need to consider the role of more basic socio-material structures, resources, cultural norms and forces, as well as intimate social relations. Particularly problematic are the structural/cultural forces of mass consumption and social acceleration. Therefore, efforts to downsize must involve a long-term, demanding, and conflictual transformative learning process. However, such a process can also be a life-enriching experience. By becoming less dependent on mass consumption, what are the possibilities for achieving personal development, self-fulfilment, a less stressful life and a sense of (re-)connecting with nature? This paper offers a review of existing literature on the attempts, experiences and achievements by groups and individuals with such aspirations.

Reconceptualizing Metabolic Rifts as the Product of Strategic Essentialism within a Socially Constructed Adaptive Landscape

McLaughlin, Paul Joseph

SUNY Geneseo, United States of America
mclaughp[at]geneseo.edu

Foster’s reconstruction of Marx’s analysis of metabolic rifts has generated an influential literature which attributes environmental degradation to the natural tendencies of capitalism. Despite providing new insights, the limitations of this literature are increasingly apparent. Marx’s argument is grounded in functional-developmental essentialism. While this doctrine taxonomically acknowledges environmental relationships and the universal necessity of adaptation, its reliance on context-independent dynamic laws undermines our ability to theorize structural diversity, environmental adaptation and human agency. These difficulties can be overcome by elaborating an alternative evolutionary account of metabolic rifts, premised on the concept of a socially constructed adaptive landscape. The latter defines a negotiated and contested fitness terrain whose shape changes in response to shifts in biophysical, social, economic, political and discursive environments. Actors simultaneously adapt to and actively reshape such landscapes by using alternative collective action frames and frame-alignment processes to mobilize resources and to create or exploit political opportunities, thereby altering the survival probabilities of social roles, routines and organizations. Within this framework, I redefine Spivak’s concept of strategic essentialism as any attempt to use essentialist theories or rhetorics to manipulate evolutionary topographies. Thus, Marxian theory is itself a form of strategic essentialism, one which historically treated large-scale, capital-intensive agriculture as a context-independent ideal. Translated into public policy in the Soviet Union this ideal generated precisely the same environmental problems as modernization theories in capitalist countries. This evolutionary analysis suggests that rather than providing a solution to environmental degradation, Marx’s theory may be part of the problem.

Too Rich To Be Green. Challenging Postmaterialism Thesis

Brockington, Dan (1); Requena-i-Mora, Marina (1,2)

1: The University of Sheffield; 2: The University of València
d.brockington[at]sheffield.ac.uk,
marinarequena[at]gmail.com

The postmaterialist thesis states that the emergence of widespread concern for the environment depends on high levels of economic and physical security. This theory also predicts that people in low-income countries lack concern for the environmental. Environmentalism is a luxury of the rich. The thesis has recently been reformulated to explain the rise of politics hostile to environmentalism in wealthy economies. It is now claimed that there is a cultural backlash in postmaterial values derives from a rise in inequality in wealthy economies. In this paper we test the empirical propositions of the postmaterial origins of environmentalism using data from the World Values Survey and the Material and Ecological Footprints. Following Inglehart's postmaterialist thesis and his current reformulation, our null hypotheses are: 1) High-income countries display more environmental consciousness now and in the 1990s— at a time where there was a relative prosperity in wealthy countries; 2) There is a cultural backlash in environmental consciousness because of a rise in income inequality. By using linear regression between GDP per capita (now and in the 1990s), GINI index and the indices of environmental health, we find that empirical support for ideas of postmaterialism is weak; indeed, our findings refute its claims. Neither GDP per capita nor the lack of income inequality support the postmaterialist theories of environmental awareness. We conclude by arguing that concern for the environment is and was not a product of a postmaterialist cultural shift, and we propose two alternatives that could promote more environmental consciousness, especially in high-income countries.

RN12_01b | Sustainable Mobilities

Understanding Daily Travel Mode: Insights From A Mobility Experiment Conducted In The Ruhr Area In Germany

Lübke, Christiane

University of Duisburg-Essen, Germany
christiane.luebke[at]uni-due.de

The excessive use of cars causes a variety of problems for cities and their inhabitants, including air pollution, noise and traffic congestion. The number of people, however, who uses public transport as a more sustainable alternative is still comparable low in many places. This paper aims to shed more light on the individual motives and barriers to use public transport in the Ruhr area in Germany. It evaluates a representative survey as well as a simultaneously conducted field experiment during which daily car commuters received a free one-month travel card. The traffic behavior and experience of the participants were recorded through regular online surveys before and during the experiment in October 2018. This paper focuses mainly on two questions. First, what are the motives to participate in such a mobility experiment. And second, how does the experiment influence the travel mode of participants. The results indicate that car users are increasingly annoyed by traffic congestions and parking situation and thus are looking for alternatives (push-factors dominate the decision to take part in the experiment). Most participants use the opportunity and travel regularly to work by public transport during the time of the experiment. In contrast, the car remained the dominant mode of transport in the leisure time. At the end, the participants come to very different conclusions. Several are willing to further commute by public transport, some are not (for reasons such as unreliability of public transport). This shows that short-term (financial) incentives might work as tools to change individual travel mode. At the moment, however, the existing infrastructure of public transport is perceived as insufficient to be a viable alternative for many commuters.

The Social Perception Of Driving Bans For Older Diesel Cars In Stuttgart (Germany) – Results From A Focus Group Study

Sonnberger, Marco; Leger, Matthias

University of Stuttgart, Germany
marco.sonnberger[at]ziri.us.uni-stuttgart.de,
matthias.leger[at]ziri.us.uni-stuttgart.de

On the 1st of January 2019, the city of Stuttgart (Germany) has established driving bans for older diesel cars forced to do so by a verdict of a regional administrative court stressing that citizens have to be protected from damage to health caused by excess of NO₂ limit values. Stuttgart is the first German city to impose diesel driving bans covering the whole municipal area. In the course of 2019, other German cities will have to follow due to legal compulsion. Drawing on data obtained from seven focus groups, which have been carried out in November and December 2018 with citizens in Stuttgart using different means of transportation (car, public transport, bike) for their everyday travel to work, we identify crucial aspects of the social perception of driving bans. Our research reveals a complex perceptual pattern encompassing the deconstruction of air quality measurement as well as the process of setting air quality standards, doubts about the effectiveness of driving bans and blaming of different actors for the current situation, which is perceived as socially unjust. While the argumentative structure underlying this perceptual pattern varies across different focus groups, the overall structure largely remains constant: most focus group participants consider driving bans as ineffective and socially unjust, regardless of personal affectedness. Furthermore, we find that opposition to driving bans can be understood as part of a more general tendency towards political disillusionment and a feeling of alienation from decision-making elites, which particularly finds its expression in an us vs. them mentality. With our findings we hope to contribute to a deeper sociological understanding of public reactions towards complex sociopolitical developments in the field of urban mobility.

Professional Actors' Imagination Of The Future Of Personal Transportation

Arnold, Annika Ulrike

University of Stuttgart, Germany
annika.arnold[at]ziri.us.uni-stuttgart.de

In many places, efforts are being made to turn our energy consumption more sustainable, including the way we move about. The transportation sector is under great scrutiny to provide environmentally friendly, low-carbon mobility solutions. A myriad of different actors, such as political regulators, environmental NGOs, automotive associations, citizens initiatives, transport industry and so on, are shaping the debate. In this process, every actor pursues a specific vision of how future transport is shaped, which technologies will dominate and what their own role will be. These visions are competing for interpretational sovereignty in order to shape the path of the sustainable transformation in the transport sector. Informed by the concept of sociotechnical imaginaries and by insights from narrative analysis, the proposed paper investigates the visions of professional actors within the transport sector. The study analyzes qualitative interview data with different actors, often mobility-as-a-service-providers, and the annual business and sustainability reports of major German automobile manufacturers. Conceptualized as sociotechnical imaginaries, the visions herein describe what is deemed an attainable and desirable future scenario of transport in the eyes of these actors, where they position themselves in these futures, which socio-cultural shifts they anticipate and which role they assign to those people, that populate these visions. Findings show different understandings, e.g. one where an envisioned goal-oriented flexibility of mobility-as-a-service paints the picture of a rational human being, obliterating any cultural and emotional connection to different modes of transport, contradicted by emphasizing the aspect of gamification as a vital feature and selling point of intermodal transportation systems.

RN12_01c | Environmental Dilemmas and Paradoxes

Choosing Green Energy. A Social Dilemma With a Solution

Liebe, Ulf (1,2); Gewinner, Jennifer (3); Diekmann, Andreas (3,4)

1: University of Warwick; 2: University of Bern; 3: ETH Zurich; 4: University of Leipzig
ulf.liebe[at]soz.unibe.ch,
jennifer.gewinner[at]soz.gess.ethz.ch,
diekmann[at]soz.gess.ethz.ch

Customers of Swiss electricity providers had a choice between “green” and “grey” energy. However, customers had to pay a slightly higher price for ecofriendly green power than they had to pay for grey power. There is no difference in the private utility of green or grey electricity. Hence, choosing green energy is a contribution to the collective good of a better environment. Households and businesses alike face a social dilemma with the alternatives of cooperation (green energy) or defection (grey energy). By this logic it is clearly understandable that the overwhelming majority opted for grey energy. But there is another psychological factor to be taken into account. In previous years several utilities switched the reference category for ordering electricity from grey energy to green energy. Many studies report relatively large effects of the default category on behavior. But does the effect persist? And, even more interesting, is the default effect observable for businesses as well as for private households? We explored default effects of energy consumption using data from two electrical suppliers. The novel aspects of our investigation are that we were able to analyze a large data set of more than 250'000 customers and that the sample included businesses as well as private households. These data made it possible to explore the persistency or fading out of default effects. Comparison of differences as well as more refined econometric analysis showed that there is even a surprisingly large and persistent effect of a change in the context of decision making.

Co-operation and Conflict on the Canal: Hydrosocial Convivialities on the Inland Waterways

Kaaristo, Maarja (1); Medway, Dominic (1); Rhoden, Steven (1); Burton, Jamie (2); Bruce, Helen (3)

1: Manchester Metropolitan University, United Kingdom; 2: University of Manchester, United Kingdom; 3: Lancaster University, United Kingdom
m.kaaristo[at]mmu.ac.uk, d.medway[at]mmu.ac.uk,
s.rhoden[at]mmu.ac.uk, jamie.burton[at]manchester.ac.uk,
h.bruce[at]lancaster.ac.uk

There are over 3,000 miles of navigable inland waterways in England and Wales, mostly managed by the Canal and River Trust. These waterways have transformed from having a transport function during the Industrial Revolution, to dereliction in the first half of the 20th century, and to leisure use in a contemporary context. The canals are linear and liminal, hydro-social places that connect urban and rural, constructed and wild, human and non-human, symbolic and material, and historic and contemporary; they are meeting places for a wide variety of groups, including boaters, anglers, cyclists, walkers, runners, and others. With people using the waterways for different and sometimes spatially conflicting purposes, such as dwelling, work, recreation, leisure and commuting and with the waterways running through (and sometimes in parallel with) distinct districts and spaces pertaining to different regulatory stakeholders and public bodies, they have also become potential places of tension. This paper will explore how different values and understandings of sharing and shared space on the canal network, as well as freedom and control, can create challenges in terms of governance and place management. Our research is a broad-based ethnographic study undertaken on the canals of England and Wales in 2015-2018, with the main methods of data collection being participant observation involving field notes and photography, and in-depth interviews and focus group discussions with canal users and key stakeholders.

Beyond the Present: Managing Time Structures in Energy Policy of Poland after 1989

Wagner, Aleksandra

Jagiellonian University, Poland
aleksandra.wagner[at]uj.edu.pl

“Time is not politically neutral or innocent. Temporal understanding, in other words, is implicit in all political language and constitutive of political life.” (Coles at.al. 2014). Energy policy- next to the economic development and technological innovation- is a prominent factor in shaping the energy transition (Cherp at al. 2018). Public policy is usually spread between past and future- it proposes some pathway from a past to a foreseen or desirable future. Among various issues, two interlinked problems of public policy are crucial for coping with the future: control and uncertainty. If we treat the energy policy as the acts of political communication the problem of growing uncertainty is twofold- it is a consequence of changes happened in a system environment (exhausted resources, market flows, technological innovation,) but also it is produced within the system (political risks, double contingency caused by other actors’ actions, unintended consequences). The Niklas Luhmann’ idea of temporal structures opens the new perspective on the role and significance of public policy documents. Interpreted through the lens of the potential of coping with the unknown, the public policies reduce system complexity and contingency related to the future. Thus, they are rather focused on controlling reality, than on changing it. This paper presents the results of an in-depth analysis of documents of Energy Policy for Poland from 1990-2018. Following Luhmann’s theory, we investigated the design of governing of temporal structures in the energy policy by exploring the relations between prediction and action, futurization and defuturization, stability and change.

Polarisations in Perceived Pathways for Sustainability: Insights from Mining Industry in Estonia

Orru, Kati

University of Tartu, Estonia
kati.orru[at]jut.ee

The extraction industries face a number of social and regulatory challenges. The sustainability challenge is high on the agenda in extractive industries-dependent North-Eastern part of Estonia. By exploring the conflict around a limestone extraction industry development plan, it highlights the challenges characteristic to a transitioning market economy with a communist industrial past. Based on documentary analysis, expert interviews and focus groups combined with scenario testing, the paper shows how place-based, ingrained social practices and regulatory context shape the extraction controversy. The paper discusses how the conflicts in the extractive resource management are partly embedded in the path-dependencies in regulatory cultures and ingrained

perceptions of extractive industries as environmentally and socially irresponsible, the roots of which stem from the Soviet period. Furthermore, opportunities for biases in the process of impact assessment and extraction permission system appear as significant sources of controversy and distrust. The paper highlights the polarisation in interest groups supported by the varying strategies of coalition building among the economic-profit driven development interests and supporters of traditional local sustainability pathways. Industry developers’ and local government representatives small and tightly coupled communities appear confronted with seemingly open social-media-empowered opposition. Paper highlights the need for addressing the diversity of and interactions between actors and other forces influencing mining development in different local contexts.

RN12_02a | Social Theory and the Environment

Shaping Environmental Expertise For Social Transformations: The Role Of Social Sciences

Lidskog, Rolf

Örebro University, Sweden
rolf.lidskog[at]oru.se

Numerous international expert bodies and assessment centres have evolved around environmental issues with the aim to assess scientific knowledge and make it policy relevant. Even if social sciences have increasingly been welcomed to these bodies, evaluations have found that they still play a limited role. A reason for this is that they often are restricted either to give advice on procedural aspects or to handle down-stream issues and end-pipe solutions. This paper takes this situation as point of departure and elaborates on the character of a social scientific expertise for environmental matters. Drawing on findings from Science and Technology Studies (STS), environmental sociology and critical social theory, it stresses that in order to give robust and relevant expert advice, this expertise needs to include at least three aspects. An understanding of how society works (analysis of social dynamics); an identification of the character of a particular environmental problem (diagnosis of pathologies); and a proposal for how to solve the problem at stake (therapy, i.e. means for initiating and supporting social transformations). The paper ends by discussing the benefits and risks of including all three aspects in the making of social science environmental expertise.

What Is Better For Us: Air or Money? - The Feminine Perception of Changes in the Field of Environmental Protection and Energy

Iwinska, Katarzyna

Collegium Civitas, Poland
kiwinska[at]civitas.edu.pl

The paper is to show the case study research from Upper Silesia, a region of Poland, which is one of the most intensively mined areas in Europe. The region has developed since the 19th century based on mining and metallurgical industries and is one of the most densely populated and industrialized region in Poland to this day. For almost two centuries Silesia was one of the world's largest producers of coal, and the identity of this region is till these days composed of classical images of the modern industrial society. Based on qualitative interviews and active participative research with Silesian women I tackle the issue of environmental and ecological awareness using Giddens' theory of discursive and practical consciousness (and unconscious motives/cognition). The aim of this paper is to reconstruct the opinions, first associations and reflections about the environment, pollution and energy in the coal mining region. The findings are presented within the dilemma between modern and postmodern views on ecological issues and can help in better understanding the social challenges and cultural changes in the region.

Is Eco-Social Welfare State Even a Possibility? A Social Security Reform in Finland

Saikkonen, Paula

National Institute for Health and Welfare, Finland
paula.saikkonen[at]thl.fi

Kate Raworth has used the term doughnut model to describe sustainable societies. Basically, it means that society is sustainable if it does not cross its ecological ceiling but offers social foundation for the citizens. At the moment there is no country to fit in in this mode. However, the Nordic welfare states, Finland among others, are successful in providing good social foundation. Unfortunately, they overuse resources and are unable to fit in ecological limits. The paper asks what means sustainability in the Finnish social security reform and in what way sustainability is presented in the documents. In Finland, the social security reform has been under discussion and in preparation for around two years. There was a project at the Prime Minister's office to scrutinize alternatives and possibilities for the reform. Its work finished at the end of February, just one and half month prior to parliamentary elections. Research material consists of the documents produced by this project. Unsurprisingly, it is noticed that economic and social sustainability are handled together whereas ecological sustainability does not appear. However, as the aim of the reform is a resilient social security system that is able to cope with the constant change in labour market caused by the technological development and it is emphasized

in the documents that the reform should be implemented step by step, it could be possible to modify as one path towards the eco-social welfare state.

A Revisit Of Human Ecologies As A Social Mosaic: Boundaries, Barriers And Belonging Between Natures And Cultures

Némoz, Sophie

University of Bourgogne , Franche-Comté, France, Laboratory
of Sociologie and Anthropology, MSHE Claude Nicolas Ledoux
CNRS USR 3124
sophie.nemoz[at]univ-fcomte.fr

The continuation of investigations reconducted at a distance of ten years on the grounds of transitions to more sustainable societies in France and in Europe (Némoz, 2008; 2009; 2016; 2017; 2018) aims to analyse the worlds' experienced as social life processes. The contribution starts from the assumption that they are formed and reformed over time, as interactions emerge between bodies, organizations and environments not only natural but also material and social. In that sense, the act of living could take shape based on an ecology. Rather than consider "sustainability" as an absolute, we are inspired by urban and rural anthropologies and their ethnographic methods. The paper will argue that no normativity in line with habitat invites us to over determine the social and existential variations, nor their futures. The technique of revisits proves to be a heuristic device to gain a better understanding of the impact and consequences of inequality and uncertainty on different territorial arenas. Coming and returning to the same field studies a decade later have allowed us to deepen a differently shared vision of sustainable cities and housing as already given and applied facilities. Hence, the keynote will explore the connections as a process of living nature where the ethnographies are designed by dynamics of totalisation that we must always complement.

RN12_02b | Urban Natures

Knowledge co-creation on the urban Food-Water-Energy Nexus

Laborgne, Pia (1); Goszczynski, Wojciech (2); Sarzynski, Andrea (3); Suchomska, Johanna (4,2); Wróblewski, Michał (2)

1: European Institute for Energy Research; 2: Nicolaus Copernicus University; 3: University of Delaware; 4: Pracownia Zrównoważonego Rozwoju
pia.laborgne[at]eifer.uni-karlsruhe.de, goszczynski[at]umk.pl, apszaryn[at]udel.edu, j.suchomska[at]pwr.org.pl, michwrob[at]umk.pl

In recent years, a strong increase in research on the food-water-energy nexus can be observed, manifesting in literature as well as in research programmes and projects on European and international level. Still, in literature, the concept often stays quite abstract and there is a co-existence of different understandings and uses (Giampietro 2018) as well as persistence of silo thinking in governance practices. The project “CreatingInterfaces” (JPI Urban Europe and Belmont Forum 2018-2021, co-financed by the Horizon2020 programme under grant agreement No. 830254) aims at making the FWE-linkages better understandable to the stakeholders (city government, science, business and citizens), and to facilitate cooperation and knowledge exchange among them. It develops and tests innovative approaches for local knowledge co-creation and participation through Urban Living Labs and Citizen Science approaches in three mid-size cities on water: Tulcea (Romania), Wilmington (USA) and Slupsk (Poland). The paper presents the Urban Living Lab and knowledge co-creation approach and results from a governance analysis, comparing the FWE systems in the three areas, as well as experiences and results from workshops with stakeholders and citizens in Tulcea, Wilmington and Slupsk. Main questions of the paper are: how are the food-water-energy systems interlinked in urban governance? what data governance models and flows exist in the study areas? how can knowledge co-creation be realized linked to a crucial but rather abstract concept like the FWE nexus? How can knowledge co-creation (citizen science) contribute to scientific knowledge building regarding the urban FWE nexus?

A City is Not a Park

Fitzgerald, Des

Cardiff University, United Kingdom
fitzgeraldp[at]cardiff.ac.uk

In 2019, London became the world’s first National Park City, the endpoint of a campaign to re-orient the city as a specifically natural environment – indeed, to turn urban design in London away from ‘industrial sites, houses, roads and rail lines’ and towards ‘a richly woven tapestry... of gardens, rivers, parks, woodland, nature reserves, canals, meadows, woodland, allotments, streams and lakes.’ In support, the international “luxury architecture” firm WATG released an image of Fleet Street, showing the north of the iconic street, looking toward

St Paul’s, with the road and footpath replaced by a highly manicured garden; in the computer-generated scene, couples check their phones on decking surrounded by shrubbery; eighteenth-century buildings are covered in carefully-pruned leaves and vines; a lone cyclist moves silently between the plants. In this paper, drawing on interviews with designers, architects and psychologists, as well as archival research on the history of urban greening in London, I work through this speculative and imaginary economy of the natural environment in/and the city. In particular, I analyse the images, rhetorics, maps, and scientific devices through which an emergent class of policy makers, designers and intellectual entrepreneur are coming to understand the future of the city as a future in which the artifice of industry and infrastructure is replaced by a lush canopy of animals and trees. And I argue that this development should be situated in a longer strand of strand of twentieth-century city thinking and urban design that understand the built environment of the city through its psycho-emotional effects on human development – a sense that the city must be leavened by a return to greener, more “natural” forms of living.

The relation of Urban Dwellers and Rivers: The Case of Ankara, Turkey

Adem, Çigdem

Independent Researcher, Turkey
c_adem[at]yahoo.com

The world is entering a new urban period where the ecology of the earth is increasingly inclined by human activities (Folke et al., 2011: 720). Cities are turning into major centres of relationship between people and nature where both constitute as significant centres of demand of ecosystem services and as causes of environmental impacts (Elmqvist et al., 2013: 719). Urbanisation has been recognised as a cause of loss, degradation and fragmentation of habitats. Improving green infrastructure and restoration of urban rivers is one way that contributes to conservation of urban environment. Despite all, in the recent decade, there is an increasing recognition of the need to restore and sustainably manage freshwater ecosystems. A rising movement to uncover, deculvert or ‘daylight’ urban rivers prevails, where rivers became flagships within urban environments. Ankara (Turkey) was developed around rivers but due to severe flooding and rapid urbanization most of the rivers are degraded, covered and the rest are left in neglect. For its inhabitants, however, these milieus have negative and positive connotations such as disaster, flooding, home, livelihood and part of their cultural and environmental histories. In 2013, the Study Group on the Rivers of Ankara was formed with the aim of raising awareness on the rivers of the city and eventually daylighting them. The research explores the relationship of residents of Ankara with its rivers and with green infrastructure, the change in the approach to and perception of Ankara rivers. The research methods will include semi-structured interviews and surveys. These interviews and surveys will be conducted with the visitors of Lost Rivers of Ankara photo exhibition.

Aesthetic Environmentalism: The Play Value of Nature in Urban Gardening Practice

Langa, María Florencia

Uppsala University, Sweden
maria.langa[at]soc.uu.se

Environmental practices are often understood as sacrifices for the greater good. However, moral valuations of nature through the beauty of wilderness and leisure activities have played a relevant role in conservationism and environmental movements. Drawing from a 3 year study in Sweden, I show that the enjoyment of the sensorial experience of gardening, rather than a sacrifice for the greater good, grounds nature's intrinsic value for Swedish urban gardeners. Human/nature boundaries are then constructed as being about a feel of nature, more than about levels of human intervention. Growing food is also part of this enjoyment, where not only harvesting but also eating are part of creative play with plants, compost, water and soil. For gardening projects, the game of cultivation creates environmental consciousness through the transformative experience of nature. Moreover, it contributes to the preservation of unpolluted soil, insects, animals, biodiversity and ecosystems. Finally, in the larger picture, gardening preserves the knowledge of urban food production for a future of social and environmental crisis. I argue then that Swedish urban gardeners value nature in their practice as a form of creative play-action, constructing an aesthetic environmentalism.

RN12_02c | Environmental Values and Attitudes

Environmental Consciousness in China

Ma, Huidi

Chinese National Academy of Arts, China, People's Republic of
mahuidi[at]china.com

According to an study by the Ministry of National Land Resources in 2007, the polluted arable land has reached 150 million mu (the Chinese system of weights and measures). The land affected by polluted water is about 32.5 million mu and the land taken up as dumping grounds for solid wastes and garbage is about 2 million mu. Accumulation of pollutants in the land will inevitably lead to food pollution. Against this backdrop, lots of people in most of the Chinese cities, towns, and villages grow their own vegetables, grains, fruit trees, and raise livestock in the little plots of land around their homes. In order to decrease the intake and consumption of polluted food. The "Questionnaire Survey of Home-Grown-Food" is a joint research project between the Chinese researchers and the Open University in the UK and Czech Academy of Social Sciences. The questionnaire is provided by the British partner. Respondents of the questionnaires are all adults randomly selected by sex and different regions. The Survey encompasses

the seven areas in the eastern, western, southern, northern, and the mid regions of China. The main approach is a combination of qualitative and quantitative analyses via interdisciplinary theoretical investigation. On this basis, we try to discover what environmental consciousness, psychological motives, conditions of support the participants in "home-grown-food" possess and their perception of and sensitivity towards the whole environment, their understanding of environmental issues and related experience, their sentiment and emotions towards ecological environment and their abilities in recognizing and solving environmental problems, etc. Key words : Questionnaire survey, home grown food, environmental consciousness, conditions of support

The Application of Panel Regression in the Structural Equation Modelling Framework to Assess Relationships between Environmental Values and Attitudes

Andersen, Henrik Kenneth; Mayerl, Jochen

Chemnitz University of Technology, Germany
henrik.andersen[at]soziologie.tu-chemnitz.de,
jochen.mayerl[at]soziologie.tu-chemnitz.de

Recently, there has been increased interest in the application of panel regression techniques within the framework of structural equation modelling (SEM). SEM panel regression combines several attractive analytical features. On the one hand, the unit-specific error term subsumes the combined effect of all time-invariant confounders and drastically reduces the number of control variables normally necessary to identify a 'causal' effect. SEM, on the other hand, incorporates factor-analytic techniques to explicitly model and account for measurement error in any exogenous and endogenous variables. This paper outlines the SEM panel regression framework and applies it to the question of how environmental values influence attitudes towards the Transition to Renewable Energy ('Energiewende') in Germany. It uses three waves of data (2014 – 2016) taken from the GESIS Panel survey. It demonstrates the flexibility of the method which makes it possible to incorporate bidirectional (normally cross-lagged) and autoregressive effects as best suits the theory. Unobserved heterogeneity in terms of levels and growth can be accounted for by including latent intercept as well as growth factors. The inclusion of time-invariant predictors (date of birth, sex, education etc.) is straightforward. The constructs are modelled as latent variables to account and correct for measurement error and establish temporal measurement invariance to ensure observed changes are due solely to true changes in the latent constructs. The paper finds, in accordance with attitude theory, that one's own environmental values do indeed seem to influence their attitudes towards the Energiewende at a later point in time. A positive change in environmental values later leads to more positive attitudes and vice versa. At the between-level, values seem to be more stable than attitudes over time.

“Fitting Within The Doughnut” - Measuring Socio-Economic, Socio- Cultural And Biophysical Thresholds Of Sustainability

Brajdić Vuković, Marija (3); Ančić, Branko (1); Domazet, Mladen (2)

1: Institute for Social Research in Zagreb, Croatia; 2: Institute for Political Ecology; 3: University of Zagreb
mbvukovic[at]gmail.com, branko[at]idi.hr, mladen[at]ipe.hr

Consumption of energy and materials has increased exponentially across the globe since the Industrial Revolution, resulting in environmental degradation and increased risk of moving our planet outside a safe operating sustainable space (Stefan et al., 2015.). A new paradigm in science is needed founded on epistemology that enriches and deepens the understanding of the Earth System by closing the loop between natural and social sciences (Donges et al., 2017) in order to understand the socio-economic and socio-cultural forces that are related to the biophysical foundations. Tracking environmental and social sustainability indicators is crucial in order for humanity to simultaneously reduce environmental impacts and improve social and individual well-being. Therefore the aim of our paper is to improve the understanding of “the social context” in which environmental degradation occurs through combining of various indicators in the web of societal-biophysical analysis. This study creates a framework for defining the safe operating space for humanity in Croatia by setting globally just biophysical and social thresholds, by modifying and extending Raworth’s Doughnut model (Raworth, 2017). The research also considers public perceptions regarding sustainability and how indicators change over time to understand the barriers to achieving sustainability targets. Empirically, we connect different aspects of the material flow, comparative burdens and goals, and prevalent social attitudes hindering and fostering planetary resilience. In a new empirical synthesis we employ survey data on representative national samples over the past 5 years and set it against the comparatively advantageous biophysical funds and flows in line with sustainable degrowth in the Global North.

The Link Between Attitudes and Environmental Practices. An Empirical Analysis on French Data

Coulangéon, Philippe (1); Demoli, Yoann (2); Ginsburger, Maël (1,3); Petev, Ivaylo (3)

1: OSC, Sciences Po, Paris, France; 2: Printemps, Université Versailles Saint Quentin en Yvelines, France; 3: CREST, CNRS, ENSAE, Université Paris-Saclay, France
philippe.coulangéon[at]sciencespo.fr,
yoann.demoli[at]juvsq.fr, mael.ginsburger[at]sciencespo.fr,
Ivaylo.Petev[at]ensae.fr

This paper relies on a recent survey conducted on a representative sample of the French population, the ELIPSS

internet panel. The survey includes questions on opinions about pollution, global warming, technological risk, and questions on consumption patterns, energy expenditures and trips. It thus offers the opportunity to explore the link between attitudes and practices with respect to the environment, based in particular on responses to a scale of attitudes towards the environment and nature, the NEP scale [Dunlap and Van Liere, 1978], stemming from responses to fifteen questions relating to different dimensions of environmental consciousness. The aim of this communication is twofold. We first show that the NEP scale is structured by two distinct dimensions, that of concern about the degradation of nature and the environment and that of distrust in technical progress. We then show that these two dimensions are unsteadily and weakly correlated with the practices observed in the different domains of consumption or expenditure that are harmful for the environment. These results lead us, following the work of Elizabeth Shove (2010), to question the relevance of the planned action theory according to which practices result from the implementation of underlying attitudes and dispositions (Ajzen and Fishbein, 1980). Rather, they draw attention to the structural constraints and contingencies that shape people’s behaviours notwithstanding their dispositions and inclinations.

Why Is Nature Valuable? The Historical Trajectory Of Environmental Debates In Norway

Andersen, Gisle

Norwegian Research Centre, Norway
gian[at]norceresearch.no

This paper analyses the changing valuation of ‘nature’ and ‘the environment’ in Norwegian parliamentary debates (1900-2015). The analysis documents substantial changes in why nature is considered valuable, and what kind of knowledge and policy instruments considered necessary and relevant. The analysis builds on theoretical perspectives from pragmatic moral-political sociology (Boltanski and Thévenot 2006) and focus on a substantial shift in valuation of nature that occurred in the 1990s. The Norwegian parliamentary debates from this period are characterized by a harsh ecological self-critique that supported a new way of valuing nature: What is valued is not nature ‘itself’ but the function that nature has for humans and the conservation of nature as a ‘life supporting production system’ for humanity. This has had significant implications for how environmental concerns are coordinated with other social considerations in parliamentary decisions: It is primarily nature’s function as a production system that must be protected from harm. As long as an activity can go on without diminishing the functional utility of nature for humanity - use, change and destruction of nature can be considered legitimate. Furthermore, this can be linked to changes in environmental management systems and environmental law. It is also related to changes in systems for measuring, calculating and evaluating environmental impact. This development can be conceptualized as a shift towards ‘ecosystem-based’ or ‘holistic’ environmental policy, but are based on an anthropocentric valuation of nature. The changes in Norway are considered closely related to, and in part inspired by, international development, conventions and United Nations initiatives.

Box Schemes: Convenience, health and sustainability in a box?

Heidenstrøm, Nina; Hebrok, Marie

Oslo Metropolitan University, Norway
ninah[at]oslomet.no, marieh[at]oslomet.no

Box schemes, providing pre-portioned meals, conveniently ordered online and delivered at your doorstep with easy to prepare recipes, are gaining market shares in Europe. A great proportion of these services provide organic, local and seasonal food, vegetarian meals, and promise reductions in household food waste. This raises the question if box-scheme services may represent a potential vehicle for sustainable food consumption. Can box-schemes enable sustainable food practices? Contrary to the promises made by the service providers, results from 16 in-depth interviews with Norwegian households revealed that the subscribers believed they wasted more food than usual. Furthermore, participants found that the box schemes did not offer the type and amount of food suitable for their families, and that they were inflexible regarding ad hoc changes in contents and delivery. However, some box-scheme services are already making changes to their product in order to enable consumers to personalise their subscriptions. By logging into the digital platforms of box scheme providers, users can adjust portions and delivery times, as well as pick and choose the dishes that tempt the most each week. This paper explores the potential of box schemes, as a digital food platform, in enabling sustainable food practices. Our analysis is based on a mapping of box-schemes in Norway, Italy, Germany, Ireland and Sweden, as well as in-home interviews with box-scheme users in Norway. The mapping provides a richer understanding of the characteristics and prevalence of these services in Europe, and sheds light on the variety of box-scheme concepts and whether these might contribute to a transition towards sustainable food consumption.

Food Provision Transitions: An Audit of the Digital Landscape in Ireland

O'Neill, Claire; Hashem, Shadi; McCarthy, Mary

University College Cork, Ireland
claireoneill[at]ucc.ie, shadi.hashem[at]ucc.ie,
M.McCarthy[at]ucc.ie

The Irish food provisioning system can be characterised as one dominated by a small number of large operators, with the top 5 retailers accounting for about 90% of grocery sales. However, in recent years a transformation of this system is evident, with the emergence of a number of alternative routes to market that support smaller scale operators. Included in this transformation is the rise of the digital route, where an annualised sales growth rate of 25% is reported. Despite this, little attention has yet been given to profiling businesses offering such services. The objective of this research is to audit/profile current operators and characterise them based on how they present themselves and the services they provide. Within this context, business models are considered to identify the extent to which this development represents a pipeline for a business or a platform to connect suppliers and buyers. A desk analysis was carried out on 70 food companies offering a digital route to market. These food provisioning systems were identified and analysed as either traditional food pipelines, i.e. e-commerce sites, or food platforms, i.e. sites connecting sellers and buyers. Results indicate that the traditional pipeline structure remains the dominant form of digital food-provisioning. Only 2 providers are classified as a platform structure. In terms of how these companies present themselves to prospective stakeholders, multiple sustainability-related claims have been identified as core goals across all digital food provisioning sites surveyed. These claims include commitment to health and wellbeing, protection of cultural heritage, provision and commitment to local food, and expressions of commitment to environmental protection.

Mind the Gap: Between the Chain and the Platform

Bozzini, Emanuela; Forno, Francesca; Magnani, Natalia; Oncini, Filippo

University of Trento, Italy
emanuela.bozzini[at]unitn.it, francesca.forno[at]unitn.it,
natalia.magnani[at]unitn.it, filippo.oncini[at]unitn.it

Over the past few years, the world economy has assisted to the rise and success of the so-called platform business model. This innovation in the digital framework partially reconfigured the way users and producers engage by providing an intermediary service that facilitate interactions and economic transactions. The rise of platform capitalism has made inroad also in the food-provisioning sector, although many traditional e-commerce models still coexist alongside the new platform options. Despite food economies and food sharing initiatives have gone digital since several years, still lacking is a systematic depiction and categorisation of the existing web organisations. Making use of a unique dataset mapping all the Italian online food provisioning systems (N = 220), this study aims to shed light on the current transformations of the food provisioning sector, putting special emphasis i) on the relation between material and digital food supply, and ii) on the most important differences between food pipelines and food platforms. Three main indications emerge from the analysis of the data: first, there is a substantial continuity between the structure of the Italian brick-and-mortar stores and alternative food networks, and the emergence of traditional digital pipelines. Second, food platforms represents only a minority (5%) of the actual online food provisioning services. Third, platforms are still very heterogeneously organised, and differently from most economically successful examples in other sectors (e.g. Uber, Airbnb or Amazon Marketplace) still have not reached capillarity and the capacity to develop network effects. We conclude by speculating on the factors hindering the growth of the platform food model, and by outlining the possibilities and obstacles that this model may pose to the sustainability challenge.

"Bridging Spaces" Linking Modes of Food Provisioning with Household Food Practices Methodologically

Brettin, Suse; Brückner, Meike

Humboldt-Universität Berlin, Germany
suse.brettin[at]gender.hu-berlin.de,
meike.brueckner[at]gender.hu-berlin.de

Everyday food provisioning is increasingly embedded in a complex landscape of alternative modes of distribution of produce. The variety is ranging on the one hand from digital supported to purely analog routes as well as from consumer- to business-driven routes. These new modes create not only digital market-places and platforms, they also have the potential to cultivate socio-technical networks of sharing and caring and thus, facilitate alternative food economies in which consumers are allowed to choose and practice food differently. Though it has yet to be analyzed in which way these

alternative modes of food provisioning actually do foster other ways of food consumption in the domestic sphere. Thus it is necessary to open the black box of the household in order to facilitate knowledge about consumer's food related practices in and around the kitchen as well as in order to analyze how those practices are linked to certain ways of food provisioning. Based on experiences from different research projects we, first, want to discuss how food practices can be investigated methodologically. Secondly we will focus on methods that are feasible to analyzing the link between food provisioning and food consumption, while giving respect to the divers and complex landscape of different modes of distribution of produce. We will present and discuss methodological conclusions as well as preliminary research results from a case study in Berlin where quantitative data regarding different types of food provisioning has been gathered and complemented with qualitative interviews conducted in households.

Climate Change, Policy and Posthumanism: Analysis of Four Policy-assemblages

Fox, Nick J (1,2); Alldred, Pam (3)

1: University of Huddersfield; 2: University of Sheffield; 3: Brunel University London
n.j.fox[at]sheffield.ac.uk, pam.alldred[at]brunel.ac.uk

This paper uses a posthuman approach to interrogate critically four policy perspectives on sustainability and climate change: 'liberal environmentalism'; the United Nations' policy statements on sustainable development; 'green capitalism' and finally 'no-growth economics'. We analyse these policy positions micropolitically – as 'policy assemblages' comprising a range of human and non-human elements that establish what a policy can do, what it ignores or omits, and consequently how it might impact on sustainable development and climate change. This analysis is founded in a posthuman ontology of environment that de-privileges human interests in relation to those of other animate and inanimate matter. Humans, from this perspective, are part of the environment, not separate from or in opposition to it, but possess unique capacities valuable for environment sustainability. Micropolitical analysis reveals that none of these four policy assemblages is adequate to address climate change, posing a severe change for the capacity of current policies to successfully address climate change. However, it also enables us to develop a posthuman policy assemblage with the potential to adequately deliver environmental sustainability.

Small-scale Interventions into a Dangerous Debate? How Civil Society Organizations React to Climate Engineering Proposals

Wittstock, Felix

Helmholtz Centre for Environmental Research – UFZ, Leipzig, Germany
felix.wittstock[at]ufz.de

Many civil society organizations (CSO) have constantly advocated ambitious climate targets. After the 2015 Paris Agreement, they face a situation in which climate science contributes to discussions about controversial 'climate engineering' technologies. Climate engineering is commonly understood as a deliberate, large-scale intervention into the climate system in order to counteract anthropogenic climate change. For CSO, the challenge is twofold. First, they use scientific results to make their case for climate action. Criticizing the research behind CE proposals might risk delegitimizing climate science and important institutions such as the IPCC. Second, climate engineering as a topic has potential to reinforce divisions in civil society between 'eco-modernists' and 'climate justice' organizations. To date, it remains unclear whether the heterogeneous CSO engaged with climate policy perceive climate engineering proposals as a topic that urgently needs to be addressed and how they deal with this political and strategic challenge. In my contribution, I present results of my PhD project based on exploratory qualitative research. Qualitative content analysis of CSO communication shows three major characteristics of CSO responses to climate engineering proposals: 1) simultaneously making climate engineering more 'real' by consequentialist arguments and more 'speculative' by challenging viability, 2) enhancing reflexivity of the climate engineering debate by meta-communication and 3) keeping options open by treating climate engineering as a decision-making issue without demanding concrete political actions. Altogether, I interpret CSO communication as a conditional politicization of climate engineering.

Knowledge Resistance: Climate Change Dismissal As Fear Of Cultural Change

Klintman, Mikael

Lund University, Sweden
mikael.klintman[at]soc.lu.se

This paper provides a critique of the sometimes sociology-free views that are often implied in concerns about knowledge resistance as regards climate change. The paper aims to develop and analyse three distinct ways in which people and organisations can relate to environmental knowledge claims. Conceptually, the paper makes use of - and reshapes - a three-part distinction that stems from the 19th-century biologist and ethical thinker, Thomas Huxley. Empirically, the paper mainly draws upon in-depth interviews conducted with leading human scientists in the UK from the social, economic, and evolutionary sciences. The topic was their experiences with, and understandings of various types of organisational and individual knowledge resistance regarding environment - particularly climate change - and health. Thomas Huxley's separation of three ways to relate to a different knowledge area - evolution by natural selection - has needed substantial, analytical reworking in order to create a conceptual toolbox suited to knowledge claims about climate change and other environmental topics. This has resulted in three categories: (i) 'Directly translating' environmental knowledge claims to specific changes in policies and culture; (ii) Running away from knowledge claims where undesirable cultural consequences seem inevitable, and (iii) In open, deliberative settings interpreting what range of changes in policies and culture would deal with the problems identified. If the root concerns were brought to the open and were discussed more - about possible, cultural or political implications of accepting the rich knowledge pool about climate change - far more productive visions of society from various ideological angles might emerge - and even partially converge, than if we stick to the current polarity of assuming dead-certain knowledge absorption vs ditto resistance.

Aiming for Transdisciplinarity: Theoretical and Methodological Considerations for the History of Nuclear Energy and Society (HoNESt) Research Project

Charnley-Parry, Ioan; Whitton, John

University of Central Lancashire, United Kingdom
iparry[at]uclan.ac.uk, jwhitton[at]uclan.ac.uk

Citizen engagement, between nuclear energy and society has been carried out by a range of actors in differing socio-political contexts (community, government and industry). This has resulted in a wide variation in engagement activity over the last 60 years, from none at all to deliberative forums and referenda. In this paper, we outline the methodological approach taken by Social Scientists and Historians from across the EU to carry out an analysis of the experience of nuclear energy development and its relationship to contemporary society in 22 countries. We discuss the academic rigour applied by Historians and Social Scientists to create a shared understanding of terms and themes. A joint workshop to derive research questions as a basis for the work was the starting point for applied learning that would then be provided as a Guiding Framework to Field Research Historians collecting interview data for Short Country Reports – written for 22 countries on their experience of nuclear energy engagement. Social Scientists have assessed not only the degree that engagement occurred but from this generated a set of engagement principles that we hope will be useful to communities and governments alike. We also employed qualitative backcasting and visioning techniques at workshops in Barcelona, London and Potsdam, to derive potential sustainable nuclear engagement futures. The challenge has been the development of epistemological and methodological understanding that crosses disciplinary divides between the academic fields of the humanities and social sciences but also the project commissioning body and stakeholders. As such, we discuss project challenges but also those when dealing with the European Commission Horizon 2020 programme and nuclear industry stakeholders.

RN12_03c | Participation, Acceptance, and Environmental Governance

Community Based Water Management in Rural Chile: An Institutional Ethnography

Suarez Delucchi, Adriana Angela

Bristol University, United Kingdom
as15606[at]bristol.ac.uk

Although Institutional Ethnography (IE) has clear emancipatory goals, it has not been widely applied to the area of natural resource management. This contribution attempts to fill this gap by looking at community-based water management in rural Chile through IE. In Chile, Rural Sanitary Services (RSS) work as a partnership between the State and rural communities to provide drinking water and sanitation to rural areas. 'Rural Drinking Water Associations' (APRs) are responsible for the management and operation of the RSS. More than 1800 APRs are represented by the APR's National Federation which has created a law that protects them from private sanitary companies, after 14 years of negotiations with the government. The Federation is now advocating for changes to the Water Code, the main water legislation which privatised water in 1981 creating a water market. This presentation will share results from my fieldwork where I use IE to explore the ways in which the Federation is organised. Taking the standpoint of an APR located in the semi-arid north of Chile, I start from people's work experiences and go beyond them, to understand the social and political processes involved in people's everyday activities. Through this bottom up approach, I explore the organisation of rural drinking water within the broader institution of water management in Chile. I hope to contribute to this research group both theoretically and empirically by sharing my experience of doing an IE in Chile in the context of community water management, critically considering how a very distinctive organisation gets involved in law making.

Politics of Environmental Governance on High-level Nuclear Waste Management in South Korea

Lee, Young Hee

The Catholic University of Korea, Korea, Republic of (South Korea)
leeyoung[at]catholic.ac.kr

The politics of risk management regarding science, technology and environment in modern societies is closely related to the conflicts between technocracy and democracy. Nuclear waste management system is a good case showing the politics of risk management and the “politics of expertise”. The purpose of this paper is to analyze the evolution of nuclear waste management system and the politics of expertise in South Korea from the viewpoint of environmental governance. Since the initial launch of a nuclear power plant in 1978, South Korea today has 25 nuclear reactors. They account for 35% of the nation's total power generation, and rank 5th in the world in terms of capacity. South Korea barely succeeded in securing low and intermediate level nuclear waste disposal site in 2005 after tremendous social conflicts. However, Korea is currently confronted with much more difficult task of high level nuclear waste management. Korean government's nuclear waste management paradigm can be characterized as technocratic: it has pursued elitist approach so far relying exclusively on experts and technical bureaucrats. No significant participation of civil society has been allowed until recently. However, Korea's anti-nuclear movement has been expanding its influence after Fukushima nuclear disaster and German government's declaration of nuclear phase-out policy, strongly demanding public dialogue program on nuclear waste issues as well as phasing-out existing reactors. One of the recent responses from Korean government is the official announcement that they are going to launch “Public Dialogue and Participation Program” regarding high-level nuclear waste policy making this year as a way of democratic risk management. Does this mean a paradigm change from technocratic to participatory environmental governance with regard to nuclear waste management?

Citizen Engagement In Nature Conservation. Shifting Discourses And Policies In The Netherlands

van Koppen, Kris; Buijs, Arjen; Elands, Birgit

Wageningen University, Netherlands, The
kris.vankoppen[at]wur.nl, arjen.buijs[at]wur.nl,
birgit.elands[at]wur.nl

Ever since their emergence in the late 19th century, nature conservation efforts have included forms of citizen mobilization, education, and participation. In the last three decades, debates on citizen engagement gained central stage in nature policy and management. In this paper, we analyze these debates in the Netherlands on the basis of document analysis and interviews with key actors. Three dominant

discourses are identified: 'ecology first', 'broad engagement', and 'green economy'. All three have impact on policies and practices of citizen engagement, but the 'ecology first' discourse has been dominant in this respect. We identify factors explaining the relative strength of the discourses, such as EU policy and the ecosystem services approach. We discuss the relevance of our findings for international debates, and implications for advancing citizen engagement, among others in consideration of current trends towards economization of nature protection.

Integration of Acceptability Studies into Adaptive Landscape Design

Busse, Maria; Siebert, Rosemarie

Leibniz Centre for Agricultural Landscape Research (ZALF), Germany
maria.busse[at]zalf.de, rsiebert[at]zalf.de

Studies on acceptability are often perceived as stand-alone or self-contained studies in which the contextualisation of results is neglected. Almost always acceptability studies are only a piece of puzzle of a broader picture. Our experiences have taught us that reflecting and integrating results is a crucial step. That is why we aim at introducing a new approach that shows how to integrate acceptability studies in adaptive landscape design. This is an outcome of our empirical studies from a German case study on cultural landscape transformation. The approach is mainly suitable for place-based innovation processes, which contribute to sustainable landscape management. It is grounded on several assumptions: existence of recursive patterns of acceptability, importance of social learning and reflexive learning processes, and a need of flexible decision-making and actors' involvement. Whereas the first assumption is rather uncommon, the other assumptions are incorporated into some established epistemological concepts such as innovation system approaches, adaptive landscape co-design or co-management and collaborative landscape governance. Our approach is divided in four sequential steps: 1) clarifying the precondition for acceptability analysis, 2) conducting the acceptability study, 3) integrating the results into the landscape design, and 4) refine the landscape design by involving different actors and groups. Normally, the iterative cycle may start again once the four steps have been passed through. Our approach contributes to understand complex process dynamics when dealing with landscapes and to link until now separately conceived conceptual strands – landscape governance concepts and acceptability.

Private Trees For Public Benefit: Comparing Regulatory Frameworks Concerning Cutting Off Trees On Private Land In Poland, Germany And Lithuania.

Matczak, Piotr (1); Beckmann, Volker (2);
Mikša, Katažyna (3)

1: Adam Mickiewicz University, Poland; 2: University of
Greifswald, Germany; 3: Mykolas Romeris University,
Lithuania
matczak[at]amu.edu.pl, volker.beckmann[at]uni-
greifswald.de, kbogdzevic[at]mruni.e

Trees in urban areas are part of the green infrastructure, provide multiple ecosystems services and are important for ecological processes and quality of life. A density of trees cover is related to land cover and land use characteristics. Nevertheless, trees coverage of urban areas has been declining for several decades, due to pressure from development and attitudes of inhabitants towards trees that are mixed, ranging from tree lovers to tree haters. One approach to deal with the decline of tree coverage is the creation of by-laws or ordinances that regulate tree removal on private property through a permitting process. These regulations aim at protecting the private urban forests and specific categories of trees. Research on privately owned forests in Europe shows a significant variety of ownership rights between the countries, which stems from the historical development of political and legal systems, as well as geographical distribution. A significant impact on regulations on trees coverage in built areas was found. In Poland, changes in the regulations concerning permits for cutting off trees in private land had an impact on cutting off trees. In this paper, analysis of regulatory frameworks concerning cutting off trees in private land in Poland, Germany, and Lithuania are compared. It is investigated what form of restrictions on rights to private property are imposed. Do categories of trees involve different property rights? What kind of regulatory areas do the restrictions belong to (spatial planning, environmental protection, other)? What is the level of the regulation (municipal, national etc.)?

RN12_04a | Food Production and Consumption

Governing Sustainable Seafood – Developing A Flows And Practices Framework

Oosterveer, Peter

Wageningen University, Netherlands, The
peter.oosterveer[at]wur.nl

Governing sustainable seafood is a critical challenge considering the current pressure on limitedly available fisheries resources, increasing global demand for seafood and the involvement of multiple governance actors such as governments, NGOs and private companies. Addressing this challenge in an effective manner depends, at least in part, on the application of an adequate conceptual framework. This presentation therefore expands on developing a conceptual framework for analysing the global social relations that condition the success of the sustainable seafood movement. First relevant debates on governance are reviewed, including the role of public and private legitimacy and authority before turning to global value chain analysis which is often used as a framework for understanding the organisation and interaction of key public and private actors. In light of the limitations of this framework the presentation elaborates on the potential for an alternative framework based on theories of flows and networks in combination with social practice approaches. This framework provides the basis for identifying the challenges facing global seafood provision and the governance responses from public and private actors. These are understood under the themes of global/local, inclusion/exclusion, public/private and convergence/divergence. The presentation then develops a new flows and practices perspective for understanding global food movements.

Meat Consumption and Vegaphobia. An Exploration of the Social Characteristics of Carnivores, Vegaphobes, and Their Social Environment.

Vandermoere, Frédéric; De Backer,
Charlotte; Geerts, Robbe; Erreygers, Sara

University of Antwerp, Belgium
Frederic.Vandermoere[at]uantwerpen.be,
charlotte.debacker[at]uantwerpen.be,
Robbe.Geerts[at]student.uantwerpen.be,
sara.erreygers[at]uantwerpen.be

There is an increasing consensus on the negative impact of meat consumption on the environment. At the same time a majority of the population eats meat on a regular basis. Moreover, neutral to negative attitudes towards vegetarians seem to persist. Against this background, this survey research first examines the motives of meat-eaters in Belgium (N = 996). The latter include the taste of meat, a perceived lack of meat substitutes, and the cost of a vegetarian diet. Next, meat-eaters are contrasted with non-meat-eaters in terms of different socio-demographic characteristics. Whereas convinced meat-eaters are often male and lower educated, people that never or rarely eat meat are more often female and higher educated. Furthermore, attention is paid to the social context of meat consumption. Specifically, results of a logistic regression analysis show that a person's meat consumption is considerably lower when one of its household members is vegetarian. This also seems the case, but to a lesser extent, if people's social circle includes a vegetarian friend or family member. Similar results were found when looking at the linear correlates of vegaphobia, the negative and stigmatizing attitude of meat-eaters toward vegetarianism and non-meat-eaters.

The Functionality of Dissimilarity: Sustainable Consumption Through Heterogeneous Networks

Geerts, Robbe; Vandermoere, Frédéric

University of Antwerp, Belgium
robbe.geerts[at]student.uantwerpen.be,
frederic.vandermoere[at]uantwerpen.be

This study explores whether interaction with dissimilar others can lead to sustainable consumption. Dissimilar others are people who differ from the person in question (e.g. in terms of lifestyle or culture). Whereas most research focusses on similarity in social networks (i.e. network homogeneity), we explore the potential of dissimilarity in social networks. Specifically, using data (N=1370) from the Flemish Survey on Socio-Cultural Shifts (2010) and the International Social Survey Programme (2010) we examine the relationship between network heterogeneity and sustainable purchasing practises (e.g. buying eco-friendly products and reusable packaging). Granovetter's theory on 'the strength of weak ties' (SWT)

serves as the theoretical foundation for this inquiry. It has been almost half a century since he emphasised the functionality of weak ties because they avoid the trap of information redundancy. In a similar way, our study proposes that dissimilar others can be functional in the context of sustainable consumption. Through interaction with dissimilar others, people may create a heterogeneous network often consisting of a diversity of information and social expectations with regard to sustainable behaviour. Accordingly, we expect that network heterogeneity may foster sustainable consumption. Preliminary findings indicate that sustainable consumption may indeed be positively related to social interaction with dissimilar others. Moreover, it seems that the relative influence of dissimilar people potentially diminishes as someone's educational level increases. We end the presentation with a discussion on the functionality of dissimilarity. Furthermore, we reflect on the theoretical implications of our findings and provide some avenues for future research.

A Social-Practices Perspective on Vulnerability and Urban Resilience Building at the Water, Energy and Food Nexus. The Case of Cooking in Kampala, Uganda

van Vliet, Bas (1); Mguni, Patience (1);
Marshall, Fiona (2); Dolley, Jonathan (2)

1: Wageningen University, Netherlands, The; 2: University of
Sussex, United Kingdom
bas.vanvliet[at]wur.nl, patience.mguni[at]wur.nl,
F.Marshall[at]sussex.ac.uk, J.Dolley[at]sussex.ac.uk

In this paper we draw on theoretical insights and an empirical case study in urban informal settlements in Kampala, Uganda to examine how a social practices approach on the urban Water Energy and Food (WEF) Nexus could be employed to provide insights into urban resilience building. We are concerned with the socially constructed and contested nature of urban resilience and with forms of resilience building that seek to address the underlying causes of vulnerability and may challenge the status quo. For poor communities and individuals the disconnections between food, water, and energy influence a complex set of interacting vulnerabilities and coping strategies. These are shaped by a range of formal and informal livelihood opportunities and a diverse set of constraints on individual and collective levels: meaning that top-down technological and infrastructure fixes to nexus (dis)connections often fail, resist scaling up or produce negative unintended consequences. While established nexus approaches often help bring the macro-scale interconnections between sectors into focus, they tend to obscure the day-to-day community and household nexus interactions. Applying a social practices lens to analyse these nexus interactions in the practices of cooking, provides a more nuanced understanding of the vulnerabilities across scales and how nexus disconnects are reinforcing them. This reveals opportunities for nexus reconnections that reduce the vulnerability of individuals and communities and contribute to enhancing the resilience of urban systems in a more inclusive way.

RN12_04b | Sociology and Climate Change

How Public Attitudes Toward Climate Change Mitigation Policies Are Measured: A Review and a Construct of Policy Attitudes

Kyselá, Eva; Ščasný, Milan; Zvěřinová, Iva

Charles University Environment Centre, Czech Republic
eva.kyselaa[at]ff.cuni.cz, milan.scasny[at]czp.cuni.cz,
iva.zverinova[at]czp.cuni.cz

Research on public responses to climate change policies is proliferating. We reviewed 118 studies published over the last 15 years to investigate how policy support, acceptability, acceptance, and other types of evaluative responses have been measured and operationalized in the area of climate change mitigation policies. We found that conceptual vagueness and weak theoretical embedding are pervasive in the field, which leads to uncertainty of what is being measured, ambiguity of policy recommendations, and difficulties in comparing empirical results. In response to this state, we propose a construct of policy attitudes as an overarching concept comprising the diversity of measures and constructs already in use. The purpose of the construct is to serve as a common basis for operationalisation and survey design, as well as for interpretation and comparison of existing results. In order to inform policy makers, researchers should be clear in formulation of survey items and their adherence to research and policy-making questions of importance.

Co-producing Climate Adaptation: Insights and Challenges of Participatory Methodologies

Schmidt, Luísa; Gomes, Carla; Alves, Adriana

Institute of Social Sciences, University of Lisbon, Portugal
mlschmidt[at]ics.ulisboa.pt, carla.gomes[at]ics.ulisboa.pt,
adriana.alves[at]ics.ulisboa.pt

The idea of co-producing knowledge has become widespread in climate adaptation research and planning over the last few years. It has been presented as intrinsically positive, among research funders, scientists and public institutions. However, its practical implementation is often challenging, and further empirical research is needed to identify which participatory methodologies are most appropriate for co-producing climate adaptation. The Institute of Social Sciences of the University of Lisbon has been involved in a series of interdisciplinary projects focused on climate adaptation in Portugal. These have aimed to involve a wide range of stakeholders in policy and decision-making - from the government to municipalities and the general population - while contributing to develop mechanisms of multi-level governance. Project "Change"

nurtured a process of adaptive governance in three vulnerable coastal areas. The ICS team has also participated in ClimAdaPT.Local, aimed at co-producing adaptation strategies across 26 municipalities, with the direct involvement of local institutions, scientists and stakeholders. The ICS team has moved on from an interdisciplinary exercise of stakeholder engagement to a hands-on process of co-production, whereby a diversity of local actors is invited to contribute practical solutions for climate change impacts, through a transformative social process. This presentation critically analyses the learnings of these projects, namely: how these contributed to improve participation in decision-making, as well as communication between levels of governance; to raise awareness of climate risks; to promote articulation between climate science and policy; to identify critical factors that constrain adaptation processes; and ultimately help implement innovative solutions.

Leadership and Communication: Parameter Setting for Action Against Climate Change

Sarlos, Gabor (1); Ferencz, Zoltan (2)

1: RMIT University Vietnam, Vietnam; 2: Hungarian Academy of Sciences Centre for Social Sciences
gabor.sarlos[at]gmail.com, ferencz.zoltan[at]tk.mta.hu

The research studies the role of trust in building awareness and bringing shift regarding climate change perception. The research matches successful leadership dimensions with relevant communication tools, and creates a model where an appropriate combination of the two are set as parameters for the mobilization of relevant clusters of the population. The IPCC report (IPCC, 2018) voices a dramatic call to all: climate change will become irreversible within 12 years. Engagement of the individual is essential in gearing action against climate change. Mobilisation needs to build on 2 factors: leadership and communication. The last 100 years of management and leadership speak of 4 different successful leadership styles (Western, 2005, 2008). The current analysis addresses how the combination of the relevant leadership dimensions with communication can address relevant clusters of the youth population in Hungary and in Vietnam. The research builds on the further elaboration of the data from a comparative study in 2018 of youth population in Hungary and in Vietnam. Clusters are matched against prevailing leadership dimensions, and against media and communication preferences of the actual clusters. Findings of the research show that trust is essential for accepting the possibility of action against climate change. Lack of trust in guidance and leadership would eliminate actual participation of the individuals. Finding the optimal combinations of leadership and communication will pose significant challenges in changing climate change perceptions.

Identifying the Climate Edge: Categories, Measures and Mixed Data Sources

Alexandrescu, Filip Mihai (1); Anghel, Ionuț (1); Mihai, Anca (2); Pop, Alina (3); Ștefănescu, Lucrina (4)

1: Research Institute for the Quality of Life, Bucharest, Romania; 2: University of Bucharest, Bucharest, Romania; 3: Dimitrie Cantemir Christian University, Bucharest, Romania; 4: Babeș-Bolyai University, Cluj Napoca, Romania
filip.alexand[at]gmail.com, ionutanghel7[at]gmail.com, anca.mihai07[at]gmail.com, alina.pop[at]ucdc.ro, lucrina_stefanescu[at]yahoo.com

The article aims to provide a preliminary methodological basis for the concept of climate edge. The latter is the point at which a set of extreme social conditions turn into climate vulnerability in areas that are exposed to extreme weather events. The climate edge concept is inspired by Saskia Sassen's systemic edge, but connects it to advancing climate threats. The systemic edge is characterized by extreme conditions created by the so-called expulsions effected by neoliberal processes. Expulsions are more or less forceful processes of eviction from cities, especially in areas undergoing gentrification or changing land use, but also social exclusions from rural areas. The outcomes of these processes are segregated communities that are disconnected from the vital links that ensure the resilience of a community. The climate edge is one key locus in which to observe how society moves from a politics of adaptation to a possible post-adaptation regime. The article uses data on compact Roma communities from Romania in an attempt to piece together the empirically recognizable conditions that approach the theoretically postulated climate edge. The data are the result of a quantitative survey of Roma segregated communities (N=2300) and of two case studies of ghettos in large Romanian cities. The central result is a mixed framework that incorporates qualitative and quantitative data on socio-economic and legal expulsions alongside data on vulnerability to extreme weather events. We thus contribute to a sui generis understanding of the social processes that create vulnerabilities to climate risks under conditions of neoliberal governance.

RN12_05a | Renewable and Non-renewable Energies

Factors Explaining Energy Consumption Behaviour Intentions in Lithuania

Vilčinskis, Vidas; Budžytė, Agnė

Kaunas University of Technology, Lithuania
vidas.vilcinskas[at]ktu.edu, a.budzYTE[at]ktu.lt

Energy – and its consumption is the prerequisite for existence of the contemporary society, which encourages investing into these sectors, which leads to significantly increased renewable energy usage in all EU-28-member states since 1990's (Eurostat, 2018). However, final energy consumption in households increased significantly in comparison with other sectors (EEA, 2018). To ensure a stable and sustainable development, the political initiatives and investments into specific sectors are not sufficient. Society must be involved in this process not only by acknowledging the fact that the worlds' climate is changing but by taking actions on their own individual level as well. By changing their behaviour in energy use, individuals could add in their effort to reduce their impact on climate change. However, the attitude-behaviour gap towards climate change is not always directly connected. This presentation highlights the attitude and behaviour gap, which comes from the concerns on climate change and behavioural intentions. Quantitative data analysis based on representative survey conducted in 2018 October – November in Lithuania reflects the differences in environmental attitudes and behavioural intentions on limiting energy usage. For explaining the possible reasons of these differences between attitudes and intentions the theory of planned behaviour by Icek Ajzen has been selected. Explanatory research of the relation between environmental attitudes and intentions hasn't been conducted in Lithuania yet. This presentation is based on a research project Public Perceptions of Climate Change: Lithuanian case in a European Comparative Perspective, funded by a grant (No. S-MIP-17-126) from the Research Council of Lithuania.

Digital deliberation as advocacy: the case of the New Energy Policy campaign in Finland

Toikka, Arho

University of Helsinki, Finland
arho.toikka[at]helsinki.fi

Social media offers a new platform for democratic deliberation and the emergence of new advocacy groups. Especially policy debate, or mulling over minute details of legislative proposals, citing scientific research with careful rhetoric and engaging into citizen initiatives and interventions has a new, modern forum. Whereas traditional advocacy groups would usually have some barriers of entry and require those joining to devote a large amount of time and effort to participating, social media opens up pathways for more fleeting. This paper looks at the emergent network in such deliberation: The empirical case of this paper is Finnish energy policy debate. As part of the Finnish debate over climate change and energy transition, an open Facebook discussion group was founded, and has attracted a range of discussants, from academics to high-level professionals to lay people, supporting different technological and policy solutions. With more than 4 000 members, 5 000 discussion threads, and 70 000 messages, there is a breadth of analyses, arguments, and debates. The paper takes a big data machine learning approach to analyze the network structure of this debate. On Facebook, emergent networks of liking posts by other users, commenting positively and negatively on their posts, and commenting with either similar or dissimilar framings of the key issues on the post become a flowing network of discussion. Traditional qualitative approaches to policy framing can capture some of these dynamics, but the combination of social network analysis and the natural language processing methods of topic modelling and sentiment analysis allows mapping the evolution of a large, emergent deliberation community.

Low Income Households' Energy-related Attitudes in the Focus of Climate Change

Ferencz, Zoltan; Csizmady, Adrienne;
Kőszeghy, Lea

Center for Social Sciences at Hungarian Academy of Sciences, Hungary
ferencz.zoltan[at]tk.mta.hu, csizmady.adrienne[at]tk.mta.hu,
koszeghy.lea[at]tk.mta.hu

Society is increasingly dependent on energy: more and more activities which constitute individuals' membership in contemporary society require energy. In terms of the factors influencing energy behaviours, personal factors have been considered in many studies. The most recent behavioural methodologies suggest the consideration of not only the individual and personal characteristics of residents, but also the features of their social context. Access to energy becomes a significant factor in social inclusion and exclusion. This aspect also plays a key role in certain definitions of energy poverty.

The household is energy poor if it is unable to obtain the amount of energy that allows it to participate in activities which define membership in society. Our paper analyses a special social problem, the interrelation between energy poverty and climate change. Energy poor households can be specifically exposed to effects of climate change (e.g. extreme cold or hot conditions), and the energy use of energy poor households may affect factors that increase climate change (e.g. the use of solid fuels leads to high black carbon emissions). These factors make the analysis of energy poor households in terms of their energy use and energy-related attitudes highly relevant. The paper, after a brief introduction concerning energy poverty in Hungary, provides such an analysis based on data of ESS 8. round: we examine the energy saving attitudes in the scope of climate change issues on an internationally comparable database, focusing on low-income social groups, more exposed to energy poverty.

Energy Platforms and the Future of Energy Citizenship

Kloppenburger, Sanneke; Boekelo, Marten

Wageningen University, Netherlands, The
Sanneke.Kloppenburger[at]wur.nl, Marten.Boekelo[at]wur.nl

The recent emergence of digital platforms for energy provisioning enables new forms of access to and exchange of (green) energy for consumers. Provenance platforms such as the Dutch Powerpeers offer people the possibility to choose the prosumer they wish to buy electricity from. In community platforms, prosumers with lithium batteries can "intelligently" share their (excess) energy. Such new ways of hooking up to the grid may problematise existing energy practices and facilitate new ones. In this paper we examine how platforms are becoming a means for people to engage with energy and the energy system, thus allowing new enactments of energy citizenship. Drawing on a case study of a "virtual power plant" demonstration project in Amsterdam, we map the way this energy platform constrains and enables the energy practices of its users, and discuss the notions of energy citizenship it thereby promotes and frustrates. We show how existing practices of monitoring and timing energy practices are disturbed by the new layer of exchange, while at the same time issues such as grid balance and energy equity become visible.

Toward Proactive Environmental Action: Evidence from China's EMS Adopters

Li, Yuan Zheng

Université Laval, Canada
yuan-zheng.li.1[at]ulaval.ca

Two decades ago, ISO 14001, the international standard for environmental management was introduced in China. Today, the country has become the world's largest ISO 14001 adopter. What are the impacts of environmental management system (EMS) on other corporate environmental practices? This communication aims to offer some elements of the answer through examining relationships between EMS and various environmental actions. Based on primary and secondary sources including interviews, participant observations, and surveys conducted in the Pearl River Delta, known as "factory of the world", our study applies ecological modernization theory and the Porter hypothesis to identify firm-specific and contextual factors influencing environmental measures undertaken in over 100 firms in fifteen industry sectors between 2012 and 2016. A matrix consisting of four types of combinations in adopting EMS derived from our comparative analysis among adopters and non-adopters. The more the surveyed firms engaging in EMS, the more likely they initiated concrete measures. The sampled companies establishing both ISO14001 and in-house EMS (type IE) were forerunners in taking initiatives. However, environmental practices among adopters ranged from minimal measures to more proactive actions. Evidence shows that a standardized framework has generated heterogeneous outcomes despite similar industrial activities, environmental impacts, and organizational attributes such as size and ownership. Our findings suggest that adopters may have different corporate strategies and organizational capacities that affect levels of environmental commitment, time, and resources invested to go beyond EMS application and produce further environmental actions.

Resource Extraction in Germany—Survival of Which Technological Future?

David, Martin; Rutjes, Henriette; Bleicher, Alena

Helmholtz-Centre for Environmental Research - UfZ, Germany
martin.david[at]ufz.de, henriette.rutjes[at]ufz.de,
Alena.bleicher[at]ufz.de

This paper focusses on two former German mining areas (Harz and Ore Mountain region) and discusses technological

trajectories developing around scientific resource extraction projects aiming to restart more sustainable modes of resource extraction. It is asked to what degree these developments can be classified survival. Based on qualitative interview data, the paper assumes that the end of German metal mining 30 years ago was and still is a highly controversial process which, at the same time, substantially pushes sociotechnical innovation. The paper draws from the conceptual idea of Norbert Elias' survival units and identifies three main points to explain quite distinctive inherent technological trajectories of both regions. First, technological development strategies towards more sustainable forms of resource extraction are a form of self-constraint and a product of learning from past environmental pressures originating from primary mining; one strategy is invisibilizing primary mining, the other is the recovery of resources from waste streams. Second, self-legitimation for R&D activities is strongly fueled by narratives about negative effects of ceasing mining in the past; these processes occurred quite differently in the respective regions. Third, the construction of innovative, more sustainable resource futures depends on knowledge co-created by publics, administrations, research and industries from a past which should actually be overcome. The paper reveals that the inherent controversial design of the end of mining 30 years ago still determines how the impetus towards the future might unfold in each region. Furthermore, and in line with works on ecological modernization, the paper reveals that ecological survival is always the survival of local technology developers and that both normative ends cannot be separated.

Mental Wellbeing, Air Pollution And The Ecological State

Signoretta, Paola Eleonora (1); Buffel, Veerle (2); Bracke, Piet (3)

1: Loughborough, United Kingdom; 2: Ku Leuven; 3: Ghent University
p.e.signoretta[at]lboro.ac.uk, veerle.buffel[at]kuleuven.be,
piet.bracke[at]ugent.com

The ecological State places environmental considerations at the core of its activities. To explore its role in the association between air pollution and mental wellbeing, we turn to a hierarchical three-level analysis on the third wave (2011-2012) of the European Quality of Life Survey (Ncitizens = 25007, Nregions=216, Ncountries=20) while the geographical focus is on regions and countries of the European Union. We use an established classification of Environmental Governance Regimes - viz. established, partial, emerging and other environmental States - subjective and objective indicators of air pollution, and the WHO-5 index of mental wellbeing. The findings show that the perception of major air pollution troubles and worse mental wellbeing go hand in hand only in partial and established environmental States.

Local Values Versus Urban Growth: Living Nearby Riga Port

Āboliņa, Kristīne (1); Daugavietis, Jānis (2);
Zīle-Veisberga, Agnese (2)

1: University of Latvia, Latvia; 2: Institute of Literature,
Folklore and Art of the University of Latvia
kristine.abolina[at]lu.lv, janis.daugavietis[at]gmail.com,
agnese.zile[at]inbox.lv

While the concept of degrowth is becoming more and more popular for individual lifestyle (zero waste lifestyle, etc), still powerful growth paradigm continues to re-shape the urban space in Riga, Latvia, from city as home to city as resource for economic activities. This paper focuses on Riga city neighborhoods next to the port where different kinds of pollution are higher than in other parts of city. The following research questions are analysed: A) do local inhabitants living nearby port feel like at home in their neighborhood? B) Which activities and services are meeting points for local community? C) does the Riga city development plan (2018-2030) and growth processes (like hypermarkets versus small shops) respect local inhabitants' values that are important for them in the neighborhood? For analysis data from Riga city development plan, municipal and project "Living next to the port" surveys of local inhabitants as well as interviews and field studies are used.

RN12_06a | Sustainability and Environmental Conflicts

Fermento. Experiences of circular innovation in Aosta Valley

Marciano, Claudio

University of Aosta Valley, Italy
c.marciano[at]univda.it

Fermento is a sociological exploration on the circular innovation practices in Aosta Valley. The concept of circular innovation entails economic and cultural practices able to realize a new model of sustainable development based on the regeneration of agricultural and touristic resources through the use of communication, networking and the implementation of the scientific and collective know how. From the Gressoney Valley, where two young graduates decided to recover several hectares of abandoned lands to cultivate potatoes from Walser tradition, to the Maison Bruil of Introd, where a start up created a collaborative network between local producers, Aosta Valley seems to be a geographic and social field in "ferment", where several projects of micro or self enterprise try to propose a sustainable way to create new job opportunities as well as new form of collective identities. Drawing on fifteen case studies and focusing on their common points, the paper aims to draft an interpretation of the social change in Aosta Valley, where conflicts and contradictions between circular and linear economy are more evident due to the uniqueness of the Alp's environment.

Challenging Dominant Understandings of Sustainability: Continuities and Change in Migrants' Sustainability Practices

Walker, Catherine; Katz-Gerro, Tally;
MacGregor, Sherilyn

University of Manchester, United Kingdom
catherine.walker-2[at]manchester.ac.uk, tally.katz-
gerro[at]manchester.ac.uk,
sherilyn.macgregor[at]manchester.ac.uk

We present findings from mixed-methods research conducted in summer 2018 into the environmentally-significant household practices of Somali immigrants in Moss Side, an ethnically 'super-diverse' (Vertovec 2007) ward in Manchester. Like other Global North cities, Manchester is juggling the pressures of inward migration and urban austerity while trying to become a 'world leader in inclusive and sustainable growth'. An identified challenge to this ambition is the lack of informed understandings of the environmental concerns and knowledges of 'hard to reach' groups such as immigrants from the Global South (cf. Head et al. 2018). Our research was framed by a theoretical critique of the dominance of Western imaginaries in conceptualising and governing sustainability and by an intersectional approach to considering the composite effects of gender, socioeconomic background, ethnicity, and religion on the dynamics of sustainability practices. Drawing on analysis of survey and interview data, we present three key contributions to this emerging area of study: first, we theorise the cultural, economic and structural factors that may determine the continuation or discontinuation of practices as people migrate. Second, we identify a number of motivations (cultural, economic, governmental and environmental) underpinning the performance of practices such as food acquisition and preparation, use of water and energy and recycling. Third, and building on these observations, we argue that these findings allow us to trouble dominant understandings of sustainability and have potential to contribute to more inclusive strategies for addressing the intersecting challenges of international migration and urban environmental change in Manchester and beyond.

Transdisciplinary Environmental Impact Assessment: resistances from the practitioners' perspective in Spain

Ortiz, Guadalupe; Climent-Gil, Emilio

University of Alicante, Spain
guadalupe.ortiz[at]ua.es, ecliment1[at]gmail.com

The transdisciplinary approach has become an useful epistemological and practical tool for tackling the complex relation between society and science, with a particularly interesting application in the case of environmental issues. Transdisciplinarity emphasizes the need to address these complex problems through openness to new forms of non-expert knowledge and epistemological interpenetration. We explore the applicability of transdisciplinarity to the case of Environmental Impact Assessments (EIS) in Spain, first, with a proposal for a transdisciplinary EIA procedure, and second, by contrasting this proposal with EIA practitioners through 25 qualitative interviews. These interviews have allowed us to deepen in the predisposition of these professionals to an effective integration of new forms of knowledge in the EIA procedure. In this sense, the interviewees assessed the real possibilities of deploying participatory strategies for the identification and evaluation of impacts, and reflected on the difficulties they face in the treatment and analysis of the social dimension. We found that the main barriers for a transdisciplinary approach in EIA are a) the lack of multidisciplinary teams on the technical side; b) a reductionist vision of social participation and c) a weak institutional support.

The Energy Retrofit of Urban Buildings as a Socio-Spatial Challenge for Civil Society

Magnani, Natalia (1); Carrosio, Giovanni (2); Osti, Giorgio (2)

1: University of Trento, Italy; 2: University of Trieste, Italy
natalia.magnani[at]unitn.it, gcarrosio[at]units.it,
Giorgio.Osti[at]dispes.units.it

The current paper analyses the issue of energy retrofitting of buildings in Italian cities. In particular a mixed-method approach is used combining the socio-spatial analysis of data on the most nationally and regionally relevant policy tool, namely tax deduction together with qualitative analysis of three case studies of middle-sized cities. The results show that on the one hand that tax deduction has not been very effective in promoting a deep renovation of buildings and it may exacerbate already existing inequalities. On the other hand, it emerges that progress in eco-retrofit of buildings depends mainly on creation of new intermediators and intermediation incentives. They are increasingly necessary in an urban panorama that has become inevitably polycentric.

Cittaslow Movement and Sustainability in Seferihisar (Turkey): The Perspective of Local Inhabitants

Ozer Tekin, Nazli Beril

Okan University, Turkey
ozerber[at]hotmail.com

This paper is based on the results of my field work conducted between 2015-2018 within the framework of my PhD research. The majority of cittaslow studies focus rather on the topics of local development, tourism and city policies. Few of them deal with the issue of sustainability from a critical perspective of capitalist production and accumulation regime. My study fills this gap and demonstrates that cittaslow practice cannot be understood independent of capitalist production relations. The data acquired through survey questionnaires conducted with local actors have been analyzed with a perspective of neo-Marxist urban studies approach. Accordingly, my research shows that with the official recognition of Seferihisar as cittaslow, we see an increase in the services offered by municipality, but this has been also accompanied by the arising problems such as population increase, further increase in social stratification, environmental problems, gentrification, and alienation of local people. Within the scope of the research quantitative methods (332 survey questionnaire with the inhabitants) as well as qualitative methods (semi-structured in-depth interviews with neighborhood leaders- mukhtars and informal interviews) has been combined with each other. The obtained quantitative data has been processed through SPSS 21 (Statistical Package for Social Sciences) program and related tests have been applied. In my paper I discuss these results as mentioned above and finally I argue that although cittaslow has been posed as an alternative to current capitalist economic system, with the implementation of this concept in Seferihisar urban space became highly commodified and cittaslow has been used rather as a shop window in the marketization processes of the urban space.

RN12_06b | Science, Technology, and the Environment

Moving Towards Environmentally Responsible Society: Risk Perception and Social Acceptability of Energy Technologies in Lithuania

Budžytė, Agnė

Kaunas University of Technology, Lithuania
a.budzyte[at]gmail.com

Intensive implementation of multiple political tools towards environmental protection, led to increased usage of renewable energy sources. These changes had a positive effect on the aims to reduce GHGS and CO2 emissions in the EU (Eurostat, 2018). However, energy industries remain the main pollutants in the area and still have a huge impact on the environment. This leads to energy technologies being discussed as technogenic threats with catastrophic potential. To prevent serious consequences in the very near future, the need for ecological enlightenment emerged, which according to Beck would create an environmentally responsible society (1995,1999). To achieve this, upgrades to energy infrastructure are not enough, public perception of risk is also required. Unperceived risks could create distortions in social acceptability of energy technologies and change the priorities for the energy sector. Lithuania's National Energy Strategy aims to generate 80% of the country's energy from renewable energy sources till the year 2050 which shows environmentally responsible attitude from institutions. It is necessary to evaluate the public risk perception and identify the most acceptable energy technologies among the public of Lithuania to understand if National Energy Strategy and public opinion on energy technologies overlaps, what are the main concerns for energy production which need to be solved to accelerate development of environmentally responsible society. Analysis data based on public survey conducted in October – November of 2018 in Lithuania. This presentation is based on a research project Public Perceptions of Climate Change: Lithuanian case in a European Comparative Perspective, funded by a grant (No. S-MIP-17-126) from the Research Council of Lithuania.

How Does The Nuclear Phase-Out Influence Nuclear Host Municipalities?

Yuasa, Yoichi

Kanto-Gakuin University, Japan
yuasa[at]kanto-gakuin.ac.jp

How will the nuclear phase-out impact on nuclear host municipalities? Nuclear host municipalities are peripheralised and become to be dependent on many benefits from the location of nuclear facilities. Those municipalities are likely to oppose nuclear phase-out due to a concern of losing their benefits. After the Fukushima disaster, nuclear phase-out is being focused on. In this context, asking a question of what nuclear phase-out causes to nuclear host municipalities is important. Our hypothesis is that ways of dependence on nuclear facilities and impacts by nuclear phase-out have a close relationship with the process of social peripheralisation by the location of nuclear facilities. We should note that these factors and relationships vary from country to country that has different social institutions. In Japanese cases, benefits to local public finance are essential. As a characteristic of the local public financial institution in Japan, municipalities may go into bankruptcy. This possibility is relatively high to geographically remote, politically powerless and economically weak municipalities. This is why some rural municipalities have accepted nuclear facilities. This unique institution of local public finance is an important key for peripheralisation process by the location of nuclear facilities. In fact, nuclear host municipalities are rich. Officials in these municipalities concern about financial and economic damage by nuclear phase-out. Taking some cases of nuclear host municipality in Japan, we will examine its current dependent situation and what can happen to them by nuclear phase-out.

Boundary Relations in the Field of Technology Development

Rutjes, Henriette; David, Martin; Bleicher, Alena

Helmholtz Centre for Environmental Research - UFZ, Germany
henriette.rutjes[at]ufz.de, martin.david[at]ufz.de,
alena.bleicher[at]ufz.de

Resource extraction is often criticized for its negative impacts on the environment. This critique caused manifold research initiatives that aim on developing environmental friendly technologies for the exploitation of raw materials. This presentation will focus on the role of environmental administrations which have a much stronger influence on technology development in this field than previously thought. Therein we will zoom in on collaborative knowledge production that happens due to the legally required interaction of science and regional environmental agencies. In order to analyze this forced interplay, we rely on the concept of communities of practice (Wenger 1998) and understand collaborative knowledge production as a result of a negotiation between the participants of the two social practices. When they intertwine, their boundary relation is negotiated on the basis of the following dimensions: a joint enterprise (e.g. development of environmental friendly technologies), that enables mutual engagement of individuals (e.g. participation in meetings) and the development of a shared repertoire of shared understandings, artefacts, or concepts (e.g. the definition of recycling). Based on the analyses of two case studies of mining technology development in Germany we will show that negotiations between administrative and scientific practices in the context of mining technology development can establish a joint enterprise (e.g. securing the supply of raw material by recycling technology) and that they both benefit from it. Or, the negotiation results in retaining their respective enterprise (technology development in the scientific practice and remediation in the administrative practice) which leads to a less collaborative interplay. The effects this has on technology development will be shown in the presentation.

The Dramaturgy of Experts in Brazilian Regulatory Science: the Case of the National Technical Biosafety Commission

Guivant, Julia Silvia (1); Fonseca, Paulo (2)

1: Federal University of Santa Catarina, Brazil; 2: Universidade Federal do Recôncavo da Bahia
juliaguivant[at]gmail.com, dopaulo[at]gmail.com

Based on a study on the National Technical Commission on Biotechnology (CTNBio), which focuses on the regulatory genetically modified organisms (GMOs) in Brazil, we present an analysis of how regulatory science is staged. We follow the interactionist approach of Goffman, as Hilgartner (2000) has applied it for the analysis of the struggles over the credibility of science advice. Our research is based on an ethnography of the meetings of CTNBio and interviews between 2015-2016.

We consider CTNBio as a theater where the different experts carry out performances on stage, with an audience, and behind the scenes and, also, we analyse the conflicts related to the roles represented. Through such strategies it is possible to understand the process of consolidation/legitimation of the commission as the decision-making body on GMOs in Brazil. The stabilization of CTNBio is associated with a stage management of conflicts behind the scenes and the presentation of decision making as lacking any political interference or personal interests.

RN12_07a | Environmental Sociology and Sustainable Development

Transitions in the Making: Novel Practices in Food Consumption Unravelling

Niva, Mari (1); Laakso, Senja (1); Kaljonen, Minna (2)

1: University of Helsinki, Finland; 2: Finnish Environment Institute, Finland
mari.niva[at]helsinki.fi, senja.laakso[at]helsinki.fi,
minna.kaljonen[at]ymparisto.fi

Increasing concerns for both climate change and other environmental problems call for radical systemic changes in society. As reminded by a number of practice theorists and sustainable transition theorists, no spread of innovation, or enduring change in eating practices, is possible without alterations in intertwined, differentiated and interlinked practices that steer not only our daily consumption, but also processes of production and policy. For instance, any durable lessening of meat in our eating would require changes not only in available products and services, but also in know-how of using them and in social and cultural meanings related to meat. Practices also differentiate and diffuse socially, underlining the dynamics of social interaction and contestations in transition dynamics, as well as interlink across areas of daily life. Our ongoing study brings together sociotechnical transition and practice theories, and connects them with an analysis of institutional disruption in transition, in order to develop further the understanding of reconfigurations that are required for altering the interconnected patterns of production and consumption. In this presentation, we use this framework in studying meat reduction cases and the ways these cases could be seen as 'transitions in the making', leading to a more sustainable food system. We focus especially on social media campaigns promoting veganism and experiments in school catering that aim to make school lunches more sustainable. We identify key processes of interconnected relations in food consumption practices in sustainability transitions and the role of policy mixes therein.

Citizens and Consumers in Sustainability Transformation: The Case of the Zero Waste Movement

Zhan, Xinyu; Sahakian, Marlyne

University of Geneva, Switzerland
xinyu.zhan[at]unige.ch, Marlyne.Sahakian[at]unige.ch

Faced with unprecedented challenges of climate change and environmental degradation, individuals across the globe are engaging in transformations towards more sustainable societies. Over the last few years, citizens have grown to be more aware of the negative impact of plastics, manifested in a global movement of zero waste. The aim of this paper is to propose a conceptual framework for studying the zero waste movement in two differing contexts, that of Switzerland and China. Through the social practice theory lens, we grapple with shared understandings, procedure and engagement (Warde, 2014). We begin with a literature review of the zero waste movement in social and environmental studies, noting a research gap in how the movement – albeit global in its aspirations – is being practiced in different local and regional settings. We then provide historical insights on how the movement emerged in Switzerland and China, based on available data, suggesting that more emphasis could be placed on uncovering forms of collective action as a social practice, building on Welch and Yates (2018). Finally, we outline the conceptual framework and propose an analytical tool for further studying the zero waste movement in these two contexts, building on social practice theory, which can be relevant to further studies on collective action towards more sustainable consumption and production.

Sustainable Development and Populism

Kroll, Christian

Bertelsmann Stiftung, Germany
christian.kroll[at]gmail.com

The UN Sustainable Development Goals provide an overarching framework that world leaders have pledged to achieve until 2030. This agenda comprises 17 goals ranging from ending extreme poverty to tackling climate change. At the same time, a key challenge for many developed societies in recent years has been the rise of populism that threatens international cooperation. This is the first study to systematically examine the relationship between the rise of populism and sustainable development. It analyzes country performance over time with respect to the 17 Sustainable Development Goals as measured by the SDG Index (Sachs et al. 2018) and how this performance relates to support for populist parties. A nuanced picture emerges regarding the economic, social, and environmental dimension of sustainable development and its relationship with political populism.

Identification Of Sustainability Goals: Application Of A Decision Support Tool To A Dual-purpose Chicken Case Study

Zoll, Felix (1); Katharina, Diehl (2);
Rosemarie, Siebert (1)

1: Leibniz Centre for Agricultural Landscape Research; 2:
University of Potsdam
Zoll[at]zalf.de, KDiehl[at]uni-potsdam.de, Rsiebert[at]zalf.de

The transition towards sustainable consumption patterns first requires innovation in prevailing unsustainable production regimes. However, the development and implementation of such innovations can be a challenge for the actors involved, since sustainability encompasses many different aspects. To successfully integrate sustainability into an innovation, goal congruency among actors and a clear communication of the added value within the actor network but also towards consumers is needed. The challenging identification of common sustainability goals calls for the use of decision support tools. Thus, the aim of our research was to develop such a tool and to explore if the tool is useful to reveal commonalities and differences in actors' sustainability goals along a value chain. Furthermore, we wanted to know if the tool could assist in showing concrete aspects to be improved within the value chain. In a case study that aims at increasing the sustainability of poultry production by rearing so called dual-purpose chickens, the decision support tool was applied by three different actor groups. The results show that there are manifold goals within the innovation network but only some goals overlap and the perception of their implementation diverges as well. Based on the visualization of commonalities and differences of joint sustainability goals, we proved that the tool is suitable to identify fields of action in which the sustainability aspects should be improved. The application of the tool also fostered thinking processes for possible adaptations of the value chain regarding aspects such as information flows or marketing processes.

RN12_07b | Biological Diversity and Nature Conservation

Turning Nature Into An Asset: Corporate Rent-Seeking Strategies

Levidow, Les

Open University, United Kingdom
l.levidow[at]open.ac.uk

Since the turn of the century, global agendas for nature conservation have become increasingly framed by financial concepts. The metaphor 'natural capital' has been widely taken up for evaluating and protecting natural resources, initially by The Economics of Ecosystems and Biodiversity (TEEB) initiative in its 2008 report and later by UNEP at the Rio+20 Earth Summit. As its problem-diagnosis, Nature remains invisible in normal economic accounting and thus neglected as expendable, so a formal valuation must render it visible. Valuation methods have been formalised by business organisations jointly with non-governmental conservation organisations (NGCOs). In particular, their joint Natural Capital Protocol provides 'a comprehensive guide to measuring and valuing natural capital in business decision-making'. Through its methods, natural capital assessment (NCA) evaluates how a business depends on ecosystem services, as essential conditions of production for market-based economic activity. Ecosystems are generally maintained by everyday social labour, yet this becomes reified as properties of thing-like 'natural capital assets', thus relegating local communities to the role of fellow dependants. In this framework, natural capital needs a holistic responsible investment manager through corporate environmental stewardship. This agenda facilitates rent-seeking, e.g. a company more predictably, favourably appropriating natural resources, almost as if they were proprietary. This paper will supplement such analysis with case studies of three companies' supply chains: Kering's cashmere supplies, Olam International's palm oil, and Coca Cola's water extraction. Outcomes for control of resources remain contingent on each context. Corporate NCA informs their strategies in several ways – by establishing a Nature/society binary, depoliticising the power relations, and promoting corporate environmental stewardship of 'shared assets', readily substituting for statutory environmental protection.

Problem Setting and Problem Solving in the Case of Olive Quick Decline Syndrome in Apulia, Italy

Colella, Christian; Carradore, Roberto; Cerroni, Andrea

University of Milano Bicocca, Italy
c.colella2[at]campus.unimib.it,
roberto.carradore[at]unimib.it, andrea.cerroni[at]unimib.it

This contribution gives an account of the social construction of

phytopathological knowledge in the case of olive quick decline syndrome (OQDS) in Apulia, Italy. Due to the economic, cultural, and social importance of the olive crop, the spread of this disease has been characterized by a social debate over the implementation of mandatory phytosanitary policies, the etiological role played by the bacterium *Xylella fastidiosa*, the role of scientific experts, and the unexplored research trajectories ("undone science") proposed by social and environmental movements. We examine how the disease has generated different approaches to problem setting and problem solving, one focused on OQDS as a complex of symptoms uniquely caused by *X. fastidiosa*, and the other framing the study of "complesso del disseccamento rapido dell'olivo" (CoDiRO) as a complex of causes. Drawing on a 2-year ethnographic study among researchers, policymakers, agricultural stakeholders, and social movements, this article uses theoretical concepts from the sociology of knowledge, sociology of scientific knowledge, and sociology of ignorance to examine the case and to reconstruct the 360° approach proposed by social movements as an alternative to the epistemic and political reductionism of official phytosanitary and science policies.

Assessing The Nature And Importance Of Biodiversity: Discourses, Impact Evaluation And Compensation Schemes In Colombia

Dianoux, Robin (1,2)

1: NASP, University of Milan, Italy; 2: GSPR / EHES, France
robin.dianoux[at]gmail.com

Changing from a matter of pride and facts to a matter of concern, biodiversity related issues are always more present in the public discourses and policies of Colombia. This led to the recent implementation of a great number of programs to safeguard it and to follow the global trend of biodiversity offset policies. The analysis puts in perspective the evolution, on one hand, of the ways biodiversity and its associated threats have been presented in the Colombian newspapers and, on the other hand, of the evaluation of the impacts that specific projects can have on biodiversity and how they can be compensated. Newspaper articles archives relate the evolution of the perceived relation between biodiversity and human activities, providing the opportunity to study the framing of biodiversity and to reveal underlying theories and popular modes of valuation. The redefinitions of what is biodiversity are reflected on the general ethical stances about what should be worried about, what should be done and how. On the other side, the evolution of Environmental Impact Assessments that are required to license infrastructure projects and the Colombians' biodiversity offsetting rules provide a very specific and technical way to look at biodiversity. This parallel allows to understand how environmental ethics are translated by public institutions into normative frameworks that includes guidelines for their practical application, and how and why they are contested by other actors.

Proposing a New Approach in Explaining and Predicting Public Support for Protected Areas

Jones, Nikoleta (1,3); McGinlay, James (1); Malesios, Chrisovaladis (2); Kontoleon, Andreas (3)

1: Anglia Ruskin University, United Kingdom; 2: Aston University, Business School, Birmingham; 3: Department of Land Economy, University of Cambridge
nikoleta.jones[at]anglia.ac.uk, james.mcginlay[at]anglia.ac.uk, c.malesios[at]aston.ac.uk, ak217[at]cam.ac.uk

In the past 3 years over 100 new Protected Areas have been established in European territory and support from local communities is essential in order to secure their effectiveness. The management of Protected Areas is often obstructed by conflicts mainly associated with social impacts imposed on local communities due to their establishment. In this paper we would like to present a new approach in explaining public support for protected areas by bringing together theoretical contributions from the fields of environmental sociology, environmental psychology, public policy and ecosystem services. Our main argument is that an individual's decision to support a protected area is dependent on the level of perceived social impacts following the designation and that these perceptions are bounded by the specific socio-ecological environment where this decision is taken. Thus, ecological factors, including the provision of ecosystem services, the local economic environment, the management framework proposed and also the social structure of a community (eg norms, values) and individual characteristics are expected to significantly influence the level of social impacts perceived by citizens and as a result the level of support for a Protected Area. Improving our ability to identify key factors influencing these perceptions will allow practitioners to design policy actions in order to minimize negative impacts and increase public support for Protected Areas. This work is funded by the European Research Council (Project FIDELIO: Forecasting social impacts of biodiversity conservation policies in Europe, Grant no. 802605).

RN12_08 | Environmental Justice Energy Transition, Climate Change and the Portuguese Public: Insights from an Energy Justice Lens

Horta, Ana; Schmidt, Luísa; Sousa, João Carlos

University of Lisbon, Portugal
ana.horta[at]ics.ul.pt, mlschmidt[at]ics.ulisboa.pt, joaocsousa[at]gmail.com

Public engagement has been considered key to sustainable energy transitions and action to tackle climate change, as

effective policy strategies require public support and acceptance. However, public perspectives on the challenges of climate change and energy transition still need to be better explored. Although many surveys have shown high levels of concern about climate change and broad support for renewable energy technologies in countries around the world, effective public engagement should not be taken for granted. Specific sociopolitical contexts, infrastructures and practices, among other factors, may condition the acceptance and adoption of changes. In this paper we highlight energy justice as a relevant framework to understand issues that may arise as forms of resistance to energy transitions and climate policies, as well as to point out that such changes may aggravate poverty, forms of inequity, vulnerability and lack of trust. We do this by analyzing data from the latest edition of the European Social Survey. We focus on the case of Portugal since results have shown the highest levels of concern about climate change among 23 countries, but on the other side, there is a clear divide between people with low income and the more educated and well-off. This divide reflects significant differences in support for energy-related changes. The paper explores these results and provides an in-depth analysis of the specific national context in order to contribute to cross-national research.

Enacting Hope: Transition Narratives in the Climate Justice Movement

Vandepitte, Ewoud

Universiteit Antwerpen, Belgium
ewoud.vandepitte[at]uantwerpen.be

Transition Narratives (TN) envision pathways for sustainability transformations. They identify problems, actors, actions and socio-technical future imaginaries. While identifying different TNs, Luederitz and colleagues (2017) propose to bridge them to facilitate co-learning between TNs, rather than insisting on a singular narrative. However this research strand has thus far left aside to investigate the climate justice movement (CJM). As this movement increasingly gains civic support, we propose to study TN in CJM, and use this analysis to gain sociological understanding in the dynamics of hope. We theorize TNs as potential carriers of hope: when symbolically enacted, they can provide motivation and envisioning of pathways for transformation. We conceive the use of TN in CJM as a non-linear strategy of anticipating 'better futures' via the identification of 'not-yet-realized' possibilities in a non-synchronic environment. Based on ethnographic research at two CJM – the German anti-coal movement, and Belgian climate justice movement – we explore how multiple TN are enacted and how they shape hope. Specifically, we identify a 'blockadia' narrative that aims at disrupting fossil fuel infrastructure (Vandepitte, Vandermoere, & hustinx, 2019) and a 'just transition' narrative that aims to gain workers support. Both can be coupled in a climate-justice metanarrative. Luederitz, C., Abson, D., J., Audet, R., & Lang, D., J. (2017). Many pathways toward sustainability: not conflict but co-learning between transition narratives. *sustain sci*, 12, 393-407. doi:10.1007/s11625-016-0414-0 Vandepitte, E., Vandermoere, F., & hustinx, L. (2019). Civil Anarchizing for the Common Good: Culturally Patterned Politics of Legitimacy in the Climate Justice Movement. *voluntas*, 1-15.

Nature's Neoliberalisation and Accumulation by Dispossession in Karaburun Peninsula, Turkey

Özcan Cive, Yağmur; Arslan Avar, Adile

Izmir Institute of Technology, Turkey
yagmurozcan26[at]gmail.com, adilearslan[at]gmail.com

This presentation elaborates on nature's neoliberalisation and accumulation by dispossession in Karaburun Peninsula, Izmir, Turkey. Neoliberalisation is defined by privatisation (that is, the use and property rights of natural resources, which were not private properties, assigned to firms or individuals), marketisation (that is, previously unpriced natural resources, which were kept out of market mechanisms, are subjected to market mechanisms), deregulation (that is, the regulatory restructuring of state in a way of limiting its interference in social reproduction and environmental sphere, thus rendering them commodification), and reregulation (that is, setting state regulatory frameworks to promote further privatisation and marketisation of social and environmental spheres). By the 2000s, nature's neoliberalization in Karaburun Peninsula begins by the way of allocation or leasing forests, natural protection areas, pastures and meadows to private corporations for industrial olive production, and coastal waters for commercial fisheries at the expense of local people and nature. These were the first steps in a process of extended neoliberalization of nature where commodification and privatisation began to spread aggressively across the once pastoral geographies of the Peninsula. This process runs rampant owing to wind power generation infrastructures. Not only were pastures, forests, but also private properties of peasants expropriated customarily or urgently and they were encompassed into capital accumulation. Nature's neoliberalisation goes along with enclosure of common resources, which were communally used by local people for making their lives. Goat breeding almost ended because pastures have been narrowed down dramatically. Hence, nature's neoliberalisation meant dispossession of local people.

RN12_09a | Environmental Risks and Conflicts

Coexisting Alongside the Port with Tangible Burdens and Invisible Risks

Daugavietis, Jānis (1); Āboliņa, Kristīne (1,2); Zīle-Veisberga, Agnese (1)

1: Institute of Literature, Folklore and Art, University of Latvia, Latvia; 2: Faculty of Geography and Earth Sciences, University of Latvia
janis.daugavietis[at]gmail.com, kristine.abolina[at]lu.lv,
agnese.zile[at]inbox.lv

Quantitative international comparative studies since the beginning of the 1990s show that the environmental attitudes of Latvian and Baltic citizens differ significantly from the

average of European countries and are often in the group of the most indifferent countries (Gooch 1995; Gerhards & Lengfeld 2008; Franzen & Vogl 2013; Dalton 2015; Budžytė & Balžekienė 2018 etc.). When surveying the inhabitants of Riga communities (Kundziņsala and Mangajala), whose neighborhoods are adjacent to the territory of Riga port, and who are experiencing the day-to-day operation of the port (including pollution and accidents), we ask: is their environmental awareness and ecological anxiety different from the other people in the city and country? Doing this environmental issues are conceptually divided and operationalized as 'visible' (smells, dust, noise, landscape degradation, shrinking access to the river, port area sprawl) and 'invisible' (pollution of air, water, soil and common space, city plans, imagined past). We put forward the following hypotheses: (1) citizens of 'port communities' are aware and not satisfied with "visible" problems to a greater extent than residents in Riga and Latvia in general; (2) but only a small part of the population is able to assess 'invisible' problems. Self assessment of the people living next to the port is compared with data from environmental quality assessment based on the opinions of experts and results of field studies.

Polish Smog: Metrological Conflicts, Ontology and Neoliberal Capture

Wróblewski, Michał

Nicolaus Copernicus University in Toruń, Poland
mich.wrob[at]gmail.com

High level of PM10 and PM2,5 makes Polish air quality one of the worst in Europe. This is related to the fact, that Polish individual energy consumption is based mainly on coal. Although the problem exists for quite long time now (since the 90s), it became a subject of public concern only recently. One of the example of this concern is a social demand for data. Many companies sell simple sensors that can be used in home environment or create its own infrastructure and collect data in Polish cities. The latter are used by big web portals, that show information about air quality to millions of viewers every day. To collect accurate and reliable data on suspended particulates it is necessary to calibrate measuring infrastructure and to standardize the way data will be indexed. However on the level of technical standardisation and data infrastructure there are serious discrepancies between aforementioned stakeholders. Each one of them uses different sensors and devices, adopts different legal norms, uses different analytical standards and different methods of data visualisation. In the presentation I want to 1) show controversies around air pollution monitoring practices; 2) analyze the social enactment of the smog in different data and metrological regimes; 3) show how data and data infrastructure mediate the relations between the public sector, the private sector and the citizens.

Dark Or Bright? Controversial Views On Sustainable Lighting In Times Of Technological Change

Schulte-Römer, Nona; Meier, Josiane;
Dannemann, Etta; Söding, Max

Helmholtz Centre for Environmental Research - UFZ, Germany
nona.schulte-roemer[at]ufz.de, josiane.meier[at]tu-berlin.de,
etta[at]studiodannemann.de, max.soeding[at]gmx.de

In the 21st century, 'sustainable lighting' is closely associated with LED technology. In the past ten years, light emitting diodes have been introduced worldwide in urban spaces, in streets and living rooms to save energy. However more recently, the idea of 'sustainable' LED lighting has come under pressure. Biologists, physicians and biologists voice increasing concerns that blue-rich light emitted by LEDs disturbs the biological clock of living organisms, including humans, and might have negative health and behavioural effects. Looking at their scientific findings, they call for precautionary measures: the preservation of natural darkness and the installation of light sources with a limited light spectrum (e.g. yellow light). However, these environmental concerns seem to contradict the idea of human-centric lighting. To increase our visual comfort, most lighting professionals prefer LEDs with a continuous spectrum that comes close to daylight with a good colour rendering. In our paper, we outline the controversy and possible solutions based on insights from our recent project Light Pollution – A Global Discussion (2018), which included expert discussions and an interdisciplinary expert survey. Our findings show how the ecological focus on the unwanted, non-visual effects of LED lighting challenges established ideas of safe or aesthetically appealing illuminated environments. In this light, LED technology looks no longer sustainable, but ambivalent: energy-efficient, but also a potential source of light pollution.

Ontologies Of The Anthropocene In Portugal – Low Carbon Transitions, Social Movements And Climate Politics

Carvalho, António; Matos, Ana Raquel;
Ferreira, Vera; Leonardi, Emanuele; Barca,
Stefania

University of Coimbra, Portugal
antoniomanuelcarvalho[at]gmail.com, amatos[at]ces.uc.pt,
veralsf.vf[at]gmail.com, leonardi[at]ces.uc.pt,
sbarca[at]ces.uc.pt

Social and institutional devices to tackle climate change are often understood as belonging to the "post-political" realm, and they are frequently coupled with sociotechnical interventions considered necessary to contain the disastrous consequences of CO₂ emissions. Despite displaying distinct material and ontological politics, devices such as solar radiation management, carbon capture and storage and political attempts to reduce CO₂ emissions all have in common

the vision of a catastrophic future supported by technoscientific expertise. The current proliferation of grassroots movements, climate technics and carbon taxes indicate that the "common world" of the Anthropocene is prone to ontological heterogeneity, thus complicating its politics. This presentation sets out to delve into the ontopolitical heterogeneity of the Anthropocene in Portugal, focusing on two case studies – the Transition Network (TN) (a grassroots environmental movement founded in the UK in the early 2000s) and institutional attempts, led by the Portuguese government, to reduce CO₂ emissions and enforce low carbon transitions at the national level. We carried out semi-structured interview with members of the TN and participant observation at relevant events; we also analyzed parliamentary debates, legislation and grey literature pertaining to low carbon transitions within the Portuguese context, including the recently developed Carbon Neutrality Roadmap. This presentation stems from the R&D project TROPO – funded by the Portuguese Foundation for Science and Technology – that aims at providing a sociological mapping of the multiple dimensions of climate politics in Portugal. It will explore the imaginaries, technics and means to attain a low carbon society, analyzing the ways in which energy, economics, technologies and affect are enrolled by distinct social groups, enacting multiple versions of the Anthropocene in Portugal.

RN12_09b | Renewable and Non-renewable Energies

Farewell To Coal Mining In The Horna Nitra, Slovakia: Jobs, Environment And Challenges In The Transformation

Filcak, Richard; Škobla, Daniel

Slovak Academy of Sciences, Slovak Republic
filcak.richard[at]gmail.com, danielskobla[at]gmail.com

Phasing out coal mining in Slovakia is not question if, but when and how? Lignite produced is of problematic quality and the productive deposits are reaching their limits. The state subsidies through surcharges provided to TPP are increasingly unpopular and rising price of emission trading permits (under ETS) and evolving emissions norms and investments to BAT/BATNEEC will further undermine the present economic model. The area is one of the most polluted in the country and would require substantial investment to rehabilitation of the environment. The coal mine is still among the largest employers in the region, but their productivity (in terms of revenue per employee) declined by 19% in the period 2010-2017. We have analysed economic, social, and demographic trends and how do they create and/or block the transition. The transition of the Upper Nitra region from coal would require the matching of local capacities with strategic goals and objectives at the national, regional, and local levels. Environmental management provide key opportunities for green jobs creation. The focus of the research is placed on the assessment of the local opportunities/capacities vis-à-vis the framework of the enabling national and EU cohesion policies. Considering the economic, social, and environmental data, factors and trends, the region has a strong potential for successfully phasing out coal, and the present timing may provide a unique "window of opportunity." Based on the research we analyse enabling economic, social, demographic and environmental conditions and discuss barriers in alternative jobs mobilization and key factors in strategies of the transformation.

Local Governments and Green Revolution in China

Wang, Jenn-Hwan

National Chengchi University, Taiwan
wangjh[at]nccu.edu.tw

This paper aims to explain why China has changed so rapidly in producing green energies, especially wind power and solar power. China has been promoting the development of new energies, including wind power, in order to respond to the international pressure to its greenhouse gas emission and its international deterioration of environmental conditions. This paper finds that local government tactically incorporates the central state's climate change policy that emphasizes reducing

coal-based energy production into the local developmental policy of encouraging wind power as well as solar power. Local officials are able to innovatively developed new strategies to combine both environmental demands imposed from above and local economic development at the same time. Local governments in northwestern and northern southwest parts of China took this opportunity to develop the local economy which simultaneously fulfills the central state's policy. This paper follows the environmentally bundled economic development approach to explain the cases of Gansu and Inner Mongolia, and found that local governments use central state's social development program such poverty alleviation to support the development of both types of green energies.

RN12_10a | Media and Environmental Communication

Media's Social Construction of Environmental Issues: the (in)visible dimensions of drought periods on the Portuguese region of the Alentejo

Matias, Ana Rita

Social Sciences Institute - Lisbon University (ICS-UL), Portugal
artmatias[at]gmail.com

The coverage of environmental disasters by the media can be an important information mechanism and a decoder of complex information to the public. It also plays a role in building the public perception of environmental issues and the social construction of environmental disasters (Schmidt and Delicado, 2015). In historical terms, due to its geographical position, Portugal has always been affected by periods of drought. However, recent studies have identified that the probability of drought increased in the Iberian Peninsula at a rate higher than 3% per decade (Stagge et al, 2017) and that these phenomena will become more frequent and intense. The Portuguese region of Alentejo is considered one of the most affected areas by climate change in Europe since it is highly vulnerable to rising temperatures and reduced precipitation, and already considered at a tipping point close to the habitability limit (ERAAC, 2018; Santos, 2012). Based on a comparative analysis of regional newspapers ("Diário do Alentejo" and the "Diário do Sul"), I will identify the major thematic dimensions (concerns, conflicts, symbolic aspects) that arise from the news published in the last two decades regarding the effects of drought periods on ecosystems, economic activities, local power relations, communities, and the popular imagination. Based on the analysis of the local media, I seek to understand the communities' concerns about drought and how they deal with its consequences, which could be symptomatic of the level of vulnerability and local adaptability in place.

Topic Modelling The Mass Media Representation Of Climate Change In Lithuania

Rabitz, Florian; Telešienė, Audronė; Eimantė, Eimantė

Kaunas University of Technology, Lithuania
florian.rabitz[at]ktu.lt, audrone.telesiene[at]ktu.lt,
eimante.zolubiene[at]ktu.lt

The aim of this presentation is to analyze the semantic structure of climate change discourse in Lithuanian online news media. The main research questions: how has the representation of climate change in Lithuanian news media evolved over time? We analyze a corpus of 640 news articles published in Lithuanian online news media over the period from 2010 to 2018. Applying Latent Dirichlet Allocation to uncover the hidden semantic structure of the media discourse, we first identify distinct topics across our corpus, such as the linkage between climate change and natural disasters or the recent role of US climate policy. Second, we assess changes in topic frequency over time. Preliminary findings suggest that, during the period under consideration, international- and European aspects of climate policy gain in importance across our corpus, while climate change becomes increasingly disentangled from other processes of global environmental change. The research project 'Public Perceptions of Climate Change: Lithuanian case in a European Comparative Perspective' is funded by a grant (No. MIP-17-126/SV3-0511) from the Research Council of Lithuania.

Corporate Social Responsibility Communication and Interaction Processes Towards Sustainable Brownfields Redevelopment

Burguete, Teresa; Sardinha, Idalina; Baptista, Cristina

ISEG – Lisbon School of Economics and Management, Lisbon, Portugal
teresa.burguete[at]gmail.com,
idalinasardinha[at]iseg.ulisboa.pt,
cristinabaptista[at]iseg.ulisboa.pt

Corporate Social Responsibility Communication (CSRC) is crucial as a route to enhance the way the company addresses stakeholders' concerns and expectations. The aim of this paper is to understand the nature and development of the relationships established between organizations and its key stakeholders within the realm of corporate social responsibility communication. Theory gaps can be found when trying to get a clear picture of how CSRC happens. CSRC is not cohesive along the insights from the variety of disciplines the studies originate and there is no empiric evidence regarding multi-paradigmatic research. This paper follows a theoretical perspective that brings together marketing and economic and organizational sociological theories, respectively Interaction Processes (IP) approach and CSRC. It introduces a conceptual framework that enables analysing stakeholder relationships and allows the understanding on how stakeholders' interactions influence the way a company develops sustainable management. Methodological challenges include testing this framework in the research setting of mine brownfields redevelopment. Dyadic relationships between brownfield redevelopment company and public bodies, and regulators, and communities/society will be comprehensively investigated through the IP under the realm of CSRC. The conceptual framework is a theoretical tool for application to dyads within stakeholder relationships. Some difficulties are expected in obtaining undisclosed data from companies and their willingness to be interviewed. Still, it is expected that new and relevant insights are attained regarding IP and CSRC. The innovation lies on the interdisciplinarity of the framework adopted, by bringing together marketing and economic and organizational sociological theories, respectively IP and CSRC. These approaches will complement each other in the understanding of stakeholder relationships and will contribute to attain sustainable redevelopment.

RN12_10b | Human-Animal Relations

Children-Animals Relationships And The Critical Debate About Sustainable Development

Policarpo, Verónica; Líbano Monteiro, Teresa; Truninger, Monica; Nunes de Almeida, Ana; Rodrigues, Leonor

Instituto de Ciências Sociais da Universidade de Lisboa
veronica.policarpo[at]ics.ulisboa.pt, tlibano[at]netcabo.pt,
monica.truninger[at]ics.ulisboa.pt,
ana.nunes.almeida[at]ics.ulisboa.pt,
leonor.rodrigues[at]ics.ulisboa.pt

Non-human animals seem to be quite absent from the critical debate about sustainable development, with none of the 17 United Nations Sustainable Development Goals (SDGs) making any explicit reference to them. And while one might say that they are indirectly considered, as some of the goals (namely number 15) refer the need to protect “wild life” and “threatened species”, the major rationale that cross-cuts the SDGs is predominantly human-centred. In this presentation, we aim at bringing non-human animals to this debate, through the angle of their relationships with children. We ask if these relationships contribute to forge ways of relating to the non-human world that are more inclusive. We argue that the affective practices between children and pets, of embodied meaning-making, are crucial to the formation of knowledge, skills, understandings and engagements tuned in with other species' welfare. These are, in turn, condition for promoting more egalitarian interspecies relations, and mutual well-being. We reflect on how children and animals' relationships may help to problematize the concept of sustainability. By addressing how inter-species solidarity is built, from early age; by exploring how the well-being of humans and non-humans is guaranteed, alongside their fundamental rights; and by extending this debate to inter-species relations, following a more-than-human perspective that challenges anthropocentrism and takes into account, as a goal for sustainable development, the agency of non-human animals.

Exploring the Human-Dog Bond: How Police Dog Handlers and General Purpose Dogs Develop a Bond Through Training

Smith, Harriet (1); Miele, Mara (1); Charles, Nickie (2); Fox, Rebekah (2)

1: Cardiff University, United Kingdom; 2: Warwick University, United Kingdom
smithh35[at]cardiff.ac.uk, mielem[at]cardiff.ac.uk,
nickie.charles[at]warwick.ac.uk, rebekah.fox[at]warwick.ac.uk

Police dog handlers are trained to control their dogs and to work together with them in challenging front line policing. This is an intense working partnership which depends on a strong bond. The police dog training practices that we examined show that distinct roles and attributes become blurred through the attachment between the police handler and the dog. However, this bond also enfolds their multispecies relating and is essential to the fulfilment of their police dog-handler roles. In this paper we present a visual ethnographic account documenting the developing bond between trainee police dog handlers and general purpose police dogs. We explore how dog emotions, particularly whether they are having ‘fun’, are read and elicited by handlers and how they are key to the police-human-dog dyad. We discuss the value of visual multispecies ethnography in research that aims to be attentive to questioning more-than-human emotion. Through a visual analysis of the role of fun in training, we demonstrate how translations of feeling and experience are enmeshed into circuits of actions that become valued police work. Our paper concludes by exploring the value for the dog in having fun within this biopolitical framework of governance.

From Fear to Festivity: The Case of Human-Elephant Conflict and Conservation in Odisha, India

Nayak, Medha; Swain, Pranaya Kumar

National Institute of Science Education and Research, India
medha.nayak[at]niser.ac.in, pranay[at]niser.ac.in

Humans and elephants have shared social, historical and ecological relations for ages. However, their coexistence has not been as pleasant as one would like that to be. Researchers suggest that the socio-economic changes over the years have altered the bonds between them. They are in regular confrontations that makes it difficult to protect wildlife in areas prone to human-elephant conflict (HEC) because the real and/or perceived costs of living with wildlife can be greater than conservation benefits, reducing residents' incentives to conserve wildlife, and threat to wildlife is high where perceived livelihood risks are higher. Despite the government's interventions to mitigate HEC and curb intolerance against elephant depredation by providing ex-gratia to aid the affected families, organizing awareness campaigns, training workshops, introducing defensive technologies, demarcating elephant corridors, etc, the frequency and intensity of HEC refuse to wither away. Social sciences and humanities have often ignored the agency of animals in research but now there is a need and shift to include the presence and effect of animals for the development of inclusive approaches to attain long term conservation goals. With this at the backdrop, we tried to understand different stakeholders' perceptions of elephants, their responses to elephant-related problems and future of human-elephants conservation and coexistence in Balasore district of Odisha that is affected by resident elephants and migratory elephants from neighbouring states year after year. Consequently, the findings were used to suggest participatory and community-based conservation and mitigation strategies. (key words: Human-Elephant Conflict, livelihood, conservation, coexistence)

Sardinian Shepherds Facing To The Global Market, Between Resilience Strategies And Struggles For A Fair Sheep-milk Price

Farinella, Domenica

University of Messina, Italy
domenica.farinella[at]gmail.com

This paper is based on an ethnographic research (with also in-depth interviews) on the change in contemporary Sardinian pastoralism (Italy). The Sardinian pastoralism is a privileged setting to observe how the marginal areas rural resist to the pressure of the global agri-food chains and to the agricultural squeeze. The Sardinian sheep-dairy chain is focused on the industrial production of the "Pecorino Romano", a low-cost cheese for export to the US, where the Romano is used by food industry as grated cheese. I analyse the change in the traditional model of Mediterranean pastoralism (based on natural graze and extensive breeding) facing to the global market and the high volatility of the sheep-milk price, focusing on the resilient strategies to survive and resist to the marginalization (e.g. the role of informality, family, immigrant work, traditional way to manage environment). The sheep-farm is a family business able to be straddling two worlds: the market-oriented farm (producing commodities for the market at the lowest cost) and the peasant farm, aimed at reproducing and conserving its productive factors. However, the resilient factors of the traditional agro-pastoral model are increasingly being eroded by the push towards modernization and the global market (where the shepherds are dependent and subaltern). This is evident in the singular ongoing struggle in Sardinia (that is unprecedented in past struggles). Since the beginning of February 2019, the shepherds in all part of the island are throwing the sheep milk on the street to protest against the low price (€0.50).

RN13 | Sociology of Families and Intimate Lives

RN13_01a | Family forms and their change in historical time or across the life-course

Family Inclusiveness: Its Relation With Cumulative Advantages in the Life Course

Sapin, Marlene (1); Widmer, Eric D (2)

1: University of Geneva, Switzerland; 2: University of Lausanne, FORS & NCCR LIVES, Switzerland
marlene.sapin[at]unil.ch, eric.widmer[at]unige.ch

This research hypothesizes that the extent to which family definitions are inclusive or exclusive depend on a variety of resources that individuals accumulate throughout the life course. The link existing between inclusiveness of family definitions and such resources is explored using a representative sample including respondents from age 18 to age 90 living in Switzerland. With such an age range, it was possible to investigate demographic reserves and economic resources as critically shaping family inclusiveness in relation with life stages. The results of the study, using Multidimensional Correspondence Analysis show that inclusiveness of lay definitions of family depends to a large extent on such resources, and that inclusiveness plays a critical role for cumulative advantages.

Feeling Trapped in Singlehood: Experiences and Challenges of Single People in Israel

Bear, Libby; Offer, Shira

Bar-Ilan University, Israel
beerlibby[at]gmail.com, Shira.Offer[at]biu.ac.il

The purpose of this study is to explore how singlehood is experienced among various groups in Israeli society and the extent to which it is perceived to be the result of individual choice or life circumstances. To examine these questions, the study analyzes in-depth interviews conducted with 37 men and women between the ages of 21 and 42 who are neither married nor partnered. The findings show that the overwhelming majority of the participants viewed singlehood as the result of various life circumstances and thus needed to justify it. They expressed a strong wish to get married and did not consider singlehood a desired and legitimate family form. Moreover, it seems that early socialization had an effect on the

lengthening of the singlehood period, especially among women who often related their singlehood to the quality of their parents' relationship and its influence on their orientation and the ability to maintain an intimate relationship of their own. In addition, women expressed the wish to change the gendered balance of power and sought a relationship that is more gender egalitarian. These expectations were seen as major barriers to finding a partner. Several participants also referred to the current social and economic conditions as a reason to their prolonged singlehood and mentioned the difficulty of achieving the preconditions considered necessary for establishing a long-term relationship, including having a stable job and financial backing. Altogether, these findings highlight the major role that the heteronormative model of the family continues to play in contemporary Israeli society.

Becoming a Family out of Wedlock: Finnish Mothers' Perspective

Tuomaala, Vaula

University of Eastern Finland, Finland
vaula.tuomaala[at]uef.fi

In the context of diverse family formation, social categories of close relationships are delineated anew. Single mothers of choice and biological/social mothers are examples of the novel ways of categorizing motherhood. In this on-going study, I analyse social categories structuring the family formation and (reproductive) agency of unmarried Finnish mothers (n=30). How are the meanings of significant social bonds delineated during mothers' life-course and on their paths to parenthood? What kind of implications does the use of distinct social categories suggest for mothers' agency? The qualitative study is based on an interview data of the mothers, who recently had given birth to a baby. The interviews had a specific focus on social bonds during mothers' life-course and in the context of their family formation. The research participants' step to parenthood was not preceded by marriage with a male partner. Instead, most of the mothers lived alone and had proceeded to motherhood voluntarily, utilizing the means of ART, while a minority lived in cohabitation with female or male partner. I apply the insights of membership categorization analysis, focusing on the routine methods the interviewees use to invoke and negotiate social categories. I am interested in the actions, cultural meanings and moral valuations connected with the social categories the mothers make use of during the interviews. The analysis steps beyond the taken-for-granted knowledge of social categories of close relationships, offering new insights to the discussions of family formation and motherhood

Changing Conceptions: Understandings Of Belonging, Genetics, Family And Kin Relationships Over Time In Lesbian Parent Families

Almack, Kathryn

University of Hertfordshire, United Kingdom
k.almack[at]herts.ac.uk

This paper presents data from a longitudinal English qualitative study which revisits a sample of lesbian couples (N=40 individuals). These couples were first interviewed in 1999/2000, having had their first and subsequent children in the context of their relationship. Their children (at the time of the original interviews, all were aged 6 or under) were conceived by two routes – either using donor clinics, at a time when donors had anonymity, or using known donors. They were in many ways pioneers, in particular presenting a challenge to the dominant heterosexual and biological imperatives of reproduction and family life. Their families have evolved during a period (2000-2018) that has seen significant socio-legal shifts (e.g. rights for same sex partnerships but also an increasing emphasis placed on genetic knowledge and connections). The follow up interviews reveal many aspects of changing family lives. Some couples have had other children; some have formed reconstituted families following separation; others have negotiated relationships with donors and in some cases other family members related to the donor. The meaning of genes is variously viewed as highly significant and/or not to matter at all. This paper utilises the concept of relationality to explore how ways of relating have developed and evolved, combining ties of blood and affinity. The findings discussed focus on the parents' narratives relating to the shifting and complex interplay of biological and social connections within the family and wider kin relationships. It contributes to sociological theoretical approaches on belonging, genetics, family and kin relationships and how these evolve over time.

Does Parental Depression Really Lower Child Well-being? A Comparison Of Parents' And Children's (Self-) Assessment

Hess, Stephanie; Pollmann-Schult, Matthias

Otto-Von-Guericke University Magdeburg, Germany
stephanie.hess[at]ovgu.de, matthias.pollmann-
schult[at]ovgu.de

Previous studies show significant negative associations between parental depression and child well-being (CWB). However, most of these studies used parents' assessment of CWB whereas children's self-evaluations have not been considered to a satisfactory extent. Our study aims to examine whether there are differences between the association of parental depression and parental and child (self-) assessment of CWB. Our main question is whether more depressed parents assess their children's well-being worse compared to their children's self-assessment. For our analyses we use data from waves 2 to 9 of the German Family Panel (pairfam). We estimate fixed-effects models of parental depression on CWB as reported by parents (1,924 mothers and 1,260 fathers) and their children (2,642), respectively. Our findings on the effect of parental depression on CWB assessed by parents are in line with previous research: Increasing levels of maternal depression are associated with significant increases in child emotional and conduct problems as reported by the mother. The results for fathers are less robust. However, none of those effects hold for children's self-assessment. Neither maternal nor paternal depression are correlated with children's self-reported emotional or conduct problems. The analyses indicate that negative associations between parental depression and child well-being are significantly less pronounced when CWB is assessed by children instead of parents. Thus, research on the association between parental depression and child well-being needs to take into account the origin of information on CWB and reconsider the validity of parental assessment.

Children's Families as a Resource and a Problem in Educational Settings

Jokinen, Kimmo; Pirskanen, Henna;
Karhinen-Soppi, Anu; Lämsä, Tiina; Notko,
Marianne; Oinas, Tomi

University of Jyväskylä, Finland
kimmo.j.jokinen[at]jyu.fi, henna.pirskanen[at]jyu.fi,
anu.r.karhinen.soppi[at]jyu.fi, tiina.al.lamsa[at]gmail.com,
marianne.notko[at]jyu.fi, tomi.oinas[at]jyu.fi

Families encounter several transitions during a child's life such as a child starting primary school. This phase of life marks a significant change in children's everyday actions and forms of social relations and can be challenging both to children, parents and teachers. Hence, it is important to consider various aspects connected to children's social worlds, in particular themes connected to the role of family in the school context. In the multidisciplinary research project DALFA (Daily life in transitions, children in multiple family relations, 2015-2019) both quantitative and qualitative data regarding children's transitions from pre-school to primary school has been collected from children and from first grade teachers. In this presentation, we will focus on qualitative interview data collected from teachers. First grade teachers (N = 112) have been interviewed in focus groups and in individual interviews in five countries: Australia, China, Finland, Japan and Spain. Research questions in this presentation are 1) How do teachers perceive the role of family in the school context? 2) What similarities and differences are there between countries connected to this issue? The data has been analyzed using thematic and content analyses. Preliminary results will be presented and discussed in the presentation. We distinguish two dominant ways of perceiving the role of the family in educational settings: family as a resource and family as a problem. We also discuss how teachers perceive families as either supporting mainly children's wellbeing at school or children's learning. There are similarities and differences between countries.

Children, Family, Agency, And Display

McNamee, Sara Ann; Frankel, Sam

King's University College at Western, Canada
smcnamee[at]uwo.ca, sam.frankel[at]uwo.ca

Combining theories from family studies and childhood studies this paper looks at how notions of display in the context of recognising 'elements of agency' offers a means through which to make sense of children's meaning making. What emerges is an interesting narrative that combines both myth and reality in order to inform the way that the individual comes to not only present 'family', but also how that informs how they come to 'do' and display family. This paper seeks to interrogate how children come to paint a picture of their family life and how that informs the way in which they reflect on their relationship. Within this one can see the how children come to work up a version of family within which they are able to find, for themselves, a space where they can achieve a level of connection. It is in this connection that they recognise an 'authentic' version of themselves that is essential to their

presentation of self. Notably, however, for some children, these 'authentic' version of self is layered with a range of competing narratives that don't always reflect positive relationships. The fact that children are able to find and heighten the emotional value they give to positive moments within family life, to an extent where these are predominate, shows the power of family and the ongoing need to make sense of the nature of intimate relationships within the context of understanding how children come to navigate their everyday lives.

Child Centredness: Reporting on an Australian Study into Positive Post Separation Parenting

Dunk-West, Priscilla; Natalier, Kristin

Flinders University, Australia
priscilla.dunkwest[at]flinders.edu.au,
kris.natalier[at]flinders.edu.au

Although no fault divorce has been established in Australia since the 1970s, separating couples still report the stigma associated with divorce (Konstam, Karwin et al. 2016), particularly in relation to the perceived impact of separation on children (Grätz 2017). Empirical work is situated in the same social conditions in which divorce stigma exists and thus existing research often focuses on the deleterious effects of separation. We used a Shutzian phenomenological (Shutz 1954) methodological approach in line with interpretive sociology to interrogate meanings and practices of people who had experienced a positive post-separated parental relationship. All of the sample (n=27) resided in Australia. Respondents were primarily women (n=22) and five men. Diversity across the sample was recorded in relation to age, sexual identity, relationship history and duration and care relationships. Most of the sample (n=22) identified as Anglo-Australians with 6 people identifying as first generation migrants from either Europe (n=2) or South America (n=2). Most of the sample identified as heterosexual (n=19) with lower numbers identifying as lesbian (n=3), queer (n=2) and bisexual (n=2). The role that child-centredness played in creating 'good' post separation parenting relationships and practices is examined. Our analysis identified three characteristics crucial to child-centredness. We describe these as the affectual; tangible; and ethical dimensions to child-centredness which were present in the post separation parenting relationship.

RN13_01c | Couple formation in digital age

"Delete the Family": Designing the Smart Home and its Platform Family Goulden, Murray

University of Nottingham, United Kingdom
murray.goulden[at]nottingham.ac.uk

The deployment of 'smart' ICT technologies into the home has created a new domain in which technology companies compete to establish a monopoly platform (Srnicek 2016). Such a platform offers a marketplace in which domestic life interfaces with global capital. More than simply offering another channel through which to consume, this entails the integration of the home into the digital economy. Such a move requires a disciplining of domestic life, through a series of standardised taxonomies and metrics. Addressing this effort, my talk focuses on the implementation of Google Families and Amazon Households. These services, from the front runners in the race for domestic platform dominance, prescribe a domestic group, and a series of roles within it. On one level, these classifications can be read as a recognition, by an industry built on the atomism of individual user and personal data, of the need to embed domestic technologies within its social environment. However, classification is always a performative, ethical act. In formatting domestic relationships such that they are amenable to universalised digital reproduction, technology designers define a set of relations between both family members, and the group and the world outside. Institutions have a long history of intervening in the structure of domestic life. The talk shall address the novel aspects of this latest incursion, its possible consequences, and the lessons it offers for understanding the smart home project.

In Search of Relational Reflexivity at the Early Years of Marriage. A Comparative Study on Family Formation in Moscow and Milan Moscatelli, Matteo (1); Pavlyutkin, Ivan (2); Goleva, Mariia (2); Carrà, Elisabetta (1)

1: Università Cattolica di Milano, Italy; 2: Saint Tikhon's Orthodox University
matteo.moscatelli[at]unicatt.it, euhominid[at]gmail.com, m.goleva[at]mail.ru, elisabetta.carra[at]unicatt.it

"Relational turn" is recognized today as a strong intellectual response to the ongoing debate on the individualization of society (Donati 2015; Donati, Archer 2015; Dépelteau 2018) and this triggers a new interest in operationalizing hypotheses and models of explanation which could be tested in different institutional and cultural contexts. This research focuses on the process of family formation, interpreting it as the result of a "relational reflexivity", run by the couple (Donati 2014). While reflexivity stands as a peculiar character of the post-modern

man, it seems that building we-ness in couple relation becomes more and more difficult, whereas an individualized reflexivity prevails. How to analyse couples' reflexivity and the building of we-ness? In order to answer to this question, a joint research project has been implementing by a Russian and Italian team. The study aims to investigate how young couples (religious and non-religious), living in two modern urban areas, Moscow and Milan, run their reflexivity in order to build we-ness. A pilot trial in Italy was accomplished to test the methodological toolkits, based on individual and couple interview and an online-diary, filled out during six months. Currently, a longitudinal research is being carried out in Russia to follow couples' reflexivity during three years: the first findings will be presented. Four areas are investigated: work-family balance, transition to parenthood, intergenerational relationships and use of money. On the basis of the first results, we are planning the study in Milan, to which some new tools will be tested.

Couple Formation Scenarios In The Internet: The Case Of Russia

Pankratova, Liliia

Saint Petersburg State University, Russian Federation
liliia.pank[at]gmail.com

The research question is how do modern young people develop and maintain intimate relationships, form couples online? The object of analysis is modern Russian young Internet users. The subject is practices of young people in the Internet that are aimed at formation of romantic relations. The purpose is to classify and describe scenarios (patterns) of the behavior (search for a partner, establishing relationships) of various groups of Russian youth in cyberspace. Theoretical basis for the work is: social script approach, in particular the theory of sexual scripts by J.H. Gagnon and W. Simon; conceptual ideas of E. Giddens ('pure relationship') and Z. Bauman ('liquid love'). The empirical basis is the findings of the online focus groups with youth representatives (men and women aged 18 to 30 years old), who were recruited from Russia's most popular and leading dating sites (Mamba, Badoo, etc.) to discuss strategies of sexual and romantic behavior in the Internet, and their virtual presentation. The research was conducted in the framework of the grant by President of the RF No. MK-3510.2018.6. As the result, the normative perceptions about a set of common (generally accepted) elements of these scenarios are classified and their qualitative differentiation is given, cultural online intimate scripts of Russian young men and women are reconstructed. Moreover, the prospects and limitations of the sexual scripts concept for the study of erotic online practices are considered. The Internet is regarded both as a factor of formation of culture and patterns of intimate behavior, and as an arena for their implementation and experiment.

Intimate Surveillance Gone Digital

Hagen Ford, Courtney Emma

Royal Holloway University of London, United Kingdom
courtney.hagen.ford.2014[at]live.rhul.ac.uk

Does technologised intimate surveillance represent a barrier in the parent/child relationship? This paper, which forms a part of the author's PhD study, seeks to understand how family relationships are shaped by the use of apps to monitor children, as well as families' overall attitudes to personal technology. This paper also seeks to provide foundation and support to Tama Leaver's emerging theory of intimate surveillance. This research has an interpretivist stance, making use of constructivist grounded theory to frame its analysis of qualitative semi-structured interviews, supplemented with analysis of cultural references made by participants during interviews (example: Elf On The Shelf, Sherlock) and marketing materials related to products used by families (examples: Life360, Our Pact, Google Family Link). Initial analysis suggests that the use of technologised surveillance does not represent a barrier to the parent/child relationship, but rather can facilitate it. Personal relationships have not previously been considered sites of surveillance, and using the lens of surveillance to examine the parent child relationship is a new academic development. Furthermore, this paper's interest in the experience of conducting surveillance, and in particular the experience of being surveilled, serves to highlight critically under-researched areas.

RN13_02a | Family forms and their change in historical time or across the life-course II

Transition From Employment To Inactivity Among Mothers In European Countries

Lipasova, Aleksandra

Universidad Pompeu Fabra, Spain
aleksandra.lipasova[at]upf.edu

Female labour supply is considered to be adaptable and flexible. For a significant number of women, work is not a continuous uninterrupted status but rather an activity that can be put on hold temporarily in order to prioritize other life pursuits, such as raising a family. But large proportion of women never return to the labour market after giving birth. The main question of the current research is "Which factors influence the probability of becoming inactive for mothers in different European countries?". These factors can be divided into the following types: (1) Individual factors (2) Timing of family events (3) Macro-factors The theoretical framework used in current research is developmental approach which combines socialization and structural theories. According to

this approach, social action is a mix of agency and structure and the alternatives that are available to individuals are determined by their attitudes and internalized gender roles, as well as macro-factors like social policy, economic situation and gender regime. Another theory applied in current research is life course theory that treats events as transitions that change the individuals' roles, statuses and identities. The method used in the research is binominal logistic regression, where the dependent variable is a mothers' probability of becoming inactive at the labour market. Leaving labour market after giving birth can be caused by many factors: precariousness of the job, individual motherhood values, uneven division of housework and childcare tasks, timing of life course events and "women-unfriendly" family policy.

Family Arrangements And Residential Emancipation Trajectories Of Young Catalans From A Subjective Life Satisfaction Perspective

Escobedo, Anna; Condom Bosh, Josep Lluís; Dominguez Aguayo, Aitor

University of Barcelona, Spain
anna.escobedo[at]ub.edu, jlcbosch[at]ub.edu,
aitor.d.a13[at]gmail.com

Families are confronted with new challenges. Here we discuss if the observed new forms of cohabitation between adult children and parents (in more diverse parental settings) may point towards a new intergenerational contract, and an adaptation to new post-crisis economies and sustainable development in Southern Europe. The contribution is based on an analysis on family arrangements and residential emancipation of young people, using the Survey on Youth in Catalonia in 2017 (a representative sample of 3423 young people between 15 and 34 years old) which includes retrospective data. We present results on trajectories of residential emancipation, partnership and family formation. In families with young parents, we observe a strong gender impact of the transition to parenthood in the distribution of paid and unpaid work within the couple, and a low use of early education services. We have analyzed how young people relate different arrangements to life satisfaction. This brings new understandings around decisions or adaptations made by young people in their emancipation processes, where a negotiated cohabitation with their parents clearly appears as a relevant and diverse resource. We have found that what brings more life satisfaction is not residential emancipation per se, but family formation and having children. We propose to reinterpret the cohabitation arrangements between parents and adult children under this prism, as well as to problematize the processes of extension of youth transitions from a gender and family formation perspective.

How Many Relationships Can Fit in One? Analysing Siblings' Relationships

Barbas, Andreia; Portugal, Sílvia

Faculty of Economics - University of Coimbra, Portugal
andreibarbas[at]fe.uc.pt, sp[at]fe.uc.pt

The research leading to this paper aims to analyse the complexity of siblings' relationships, through two main approaches: a) anchored in the work of Finch (2007), the study intends to look at these relationships as daily relations built through interactions and in contrast to other relationships; b) bringing the contribution of Smart about the role of lineage and memories (2007, 2011), it discusses how being part of the family implies that memories from the past are intertwined within the present and (re)create one another. To embrace these perspectives the research uses as techniques of data collection life story in-depth interviews and photo elicitation, to reveal the different forms of being a sibling and their changes across the life-course. The sample was based on heterogeneity: by type of group of siblings (full and half-siblings); by number of siblings (2,3,4 or more elements); by gender (female, male and mixed); by age of the mother (born between 1950-1969); by region (rural or urban); and by educational level. This paper focuses on the preliminary results from the analysis of 60 interviews. First, it discusses the representations about being a sibling: someone who belongs to the family; who is close; who is part of the same family history; someone that shares the same blood – characteristics that confer to sibling's relationships a unitary character. Then, the paper discusses the plurality of these relations - how many relationships can fit in one? The narratives reveal how the relationships are (re)made over time and their levels of closeness and intimacy.

Single Mothers In Lithuania: Employment, Social Class And Mothering Practices

Kuconyte-Budeliene, Deimante

Lithuanian Social Research Centre, Lithuania
kuconyte.deimante[at]gmail.com

Around 53 percent of single mothers with dependent children lives at-risk of poverty and according to this indicator country is among the leaders in EU countries. In this paper we will analyze, the interconnections between single mothers employment, social class and mothering practices in Lithuania. Existing research suggest, that single mothers employment is substantial to fulfill the ideal of good mothering. Working mothers fulfill the economic role in the family, secure material resources, but employment is also relevant for mother's psychological well-being (Chistopher, 2012). On the other hand, employment and work-family conflict often leads to dissatisfaction with the quality of the mothering (Roman, 2017). Single employed mothers tends to assess their mothering as "bad" because of lack of time, energy and financial resources. The paper is based on the results of the

qualitative research. I conducted 22 biographic interview with divorced or separated single mothers, raising dependent children in Lithuania. Research sample is heterogeneous in regard to women's education, employment status. Primary research results revealed variety of strategies how single mothers fulfill the ideal of good mothering. The strategies are highly stratified across the social ladder. The research shows, that low-income single mothers suffer because of the incapacity to fulfill the ideal of "good" mothering. Their experience of mothering is shaped by the low paid work and limited opportunities to combine work and parenting. Single mothers of the lower social class experience sharp internal dilemmas between ideal of good mothering and possibilities to realize them. Higher social class single mothers are oriented towards the child education, they have more resources to respond to the child's needs, to combine work and mothering.

RN13_02b | Parent-child relations, mothering and fathering practices II

Long-term Breastfeeding – Mothers' Embodied Experiences

Säilävaara, Jenny Wilhelmina

University of Jyväskylä, Finland
jenny.w.sailavaara[at]jyu.fi

Breastfeeding and embodiment have become the growing interest of researchers in recent years. When it comes to breastfeeding a lot of research has been done in relation to early breastfeeding but also some research has focused on long-term breastfeeding. This paper concentrates on mothers' experiences on embodiment while breastfeeding long-term. The data includes 39 written accounts of Finnish mothers who have breastfed over 12 months. A qualitative content analysis was used to analyze the data. Mothers reflect on embodiment and four themes were found. Mothers wrote about the functional body and breasts, about being tired, about changes on their body and about breastfeeding and sexuality. The norms that define motherhood and breastfeeding are strongly represented in mothers' writings. Mothers wrote about new found functionality of their bodies and breasts. Being able to provide "the best nutrition" to their child was often central. They wrote how they felt tired to breastfeed but at the same time explained that the feeling of tiredness had more to do with other things than breastfeeding. They also referred to it as something that was before, when the child was a baby. The saggy breasts and other changes that were in contrast with the beauty norms were often discussed with humour. When it comes to sexuality most wrote that breastfeeding has nothing to do with sexuality but also noted that pleasure while breastfeeding is closely related to sexual pleasure. This paper adds on breastfeeding studies from the point of view that mothers' experiences about embodiment are less researched and especially if they are long-term breastfeeding mothers. It contributes also to research on motherhood and norms.

Anticipating Transitions to Motherhood across Generations. A Temporal Avenue for Researching Modern Mothering

Buler, Marta; Pustułka, Paula

SWPS Uniwersytet Humanistycznospoleczny, Poland
mbuler[at]swps.edu.pl, ppustulka[at]swps.edu.pl

Becoming a mother is a clear and identifiable “hub event” in personal biographies of women. However, it is increasingly noticeable that modern motherhood elicits a temporal shift in which the maternal role does not start with the transitional event of birth, but rather begins earlier, in the phase of preparations during pregnancy. With the advances in medical technology, heightened permeation of intensive parenting cultures, as well as consumerist culture targeting pregnant women, the experiences and practices observed during the phase of anticipating a transition to motherhood are sociologically vital on their own. They define a process of becoming a mother and shed light the changing notions of motherhood and mothering over time. With a research design of the GEMTRA project, which interviews not only pregnant women, but also their mothers and grandmothers, we gather current and retrospective accounts of what the anticipation of motherhood is all about. Rooted in a temporal and generational perspectives of continuity and change, this paper looks at Polish women’s expectations and experiences of first-time pregnancy, focusing on the interplay between agency, maternal subjectivity, as well as surrounding (social/historical) events and discourse, all observed on a timeline of three generations. Drawing on a subset of 45 In-depth Interviews (IDIs), we propose a typology of anticipating transitions to motherhood.

Child Rearing and Paternal Rights Among the Yoruba and Igbo People of Nigeria

Fasoranti, Olayiwola Oluwajenyo

Federal University Oye Ekiti State, Nigeria
olayiwola.fasoranti[at]fuoye.edu.ng

Child rearing involves cultural practices that relate to child acceptance, child socialization and integration into the society. Marriage system and fulfilment of marriage responsibilities are intricately woven into the system and method of child rearing and the rights of the biological father to exercise paternal care over the children in certain societies. This paper attempts to examine the child rearing practices among the Yoruba and Igbo communities in Nigeria. In-depth interview method was used to solicit responses from the respondents. Among other things, the findings of the study include: Children are regarded as the crown of marriage in both societies considered and their absence in a conjugal relationship leads either to a divorce of the woman or marrying additional wife or wives. Children are rated as more valuable than any acquired property; the number of children in a marriage relationship ranges between 5 and 10. Rearing of children and responsibility training is the

sole responsibility of both parents or their designated representative while most families prefer male children as first born or at least that there must be a male child in the conjugal relationship. Some men take additional wife/wives in quest for a male child. Among the Yoruba, paternal rights over one’s biological child are unconditionally guaranteed but among the Igbo, paternal rights over one’s biological children are not automatic. Payment of bridal taken and fulfilment of other marriage rites determine the cultural acceptance of paternity over one’s biological child/ the exercise of paternal rights over the child.

Parenting and Children's Videogaming Experience (the case of St.-Petersburg, Russia)

Orekh, Ekaterina; Bogomiagkova, Elena

St. Petersburg State University, Russian Federation
e.orekh[at]spbu.ru, elfrolova[at]yandex.ru

The research is focused on an analysis of contemporary St. Petersburg urban practices related to children’s computer gaming. We analyze the strategies used by parents in relation to children's games on various gadgets, but also aim at uncovering the background assumptions about the world we live in, children, parents, childhood and parenthood, which are implied in these strategies. We used semi-structured interviews with parents whose children play computer games, as well as with parents whose children do not engage in computer gaming. Interviews were conducted in 2017-18 in St. Petersburg. The parents with different social characteristics were included in this research. According to our results there is a connection between parents’ gaming experience and overall positive attitude towards child’s gaming. At the same time, parents’ frequent use of computer at work does not entail a positive attitude towards videogames and child’s involvement into them. Parental attitudes to prohibit or to permit children video gaming are based on two main ideas. The first one we can name as the idea of «fullness of life», and the second - as the idea of «quality of life». The first idea is grounded on the view of the world, when the main value is a variety of activities, eventful saturation of life. The second idea, in contrast, is grounded on the value of the in-depth development of activities, which is evaluated as important. Russian parents use both strategies of argumentation in substantiation of both permission and prohibition of children’s video games activity. We assume, that the idea of quality of life reproduces the Soviet attitudes towards parenting. However, it goes together with a (neo)liberal rhetoric in relation to the use of computer.

RN13_02c | Intergenerational relationships and kinship networks I

Predictors of Family Social Capital in Old Age: The Role of Network Stability, Life Events and Self-Rated Health

Sauter, Julia

NCCR LIVES, University of Geneva, Switzerland
julia.sauter[at]unige.ch

During the final stages in life, family becomes an increasingly important source of support in older adults' lives. In this study, we are particularly interested in the emotional support, that we qualify as "social capital" that older adults give and receive within their family configurations. Although older adults' family networks tend to shrink over time, it is not yet clear if this phenomenon is explained by internal or by external factors. Therefore, our aim is to investigate to which extent social capital stays stable over time and how it is increased or decreased by network stability, family and health related life events, as well as self-rated health. To answer this research puzzle, we use the two measure points of the CIGEV-LIVES Vivre-Leben-Vivere study, an ongoing study on the health and life conditions of older adults living in Switzerland. We use data on life events during old age as well as on family configurations. We found that stable networks were key to have higher levels of available family social capital. Moreover, the density and the reciprocity within the family networks were also impacted by deaths within the family and the experience of a fall. However, self-rated health was not significantly explaining levels of social capital. Overall, our study demonstrates that a stable family network over time has a protective role against declining social capital in old age, even when facing critical life events.

Where are Lives Linked? A Bibliometrical Analysis of the Linked Lives Principle in the Social Sciences Literature

Carvalho, Diana; Nico, Magda; Carvalho,
Helena

CIES-IUL /ISCTE-University Institute of Lisbon, Portugal
dianadiascarvalho[at]gmail.com, magda.nico[at]iscte-iul.pt,
helena.carvalho[at]iscte-iul.pt

Linked Lives is one of the most appraised but underexplored life course principles. It argues that "each generation is bound to fateful decisions and events in the other's life course". It gives centrality to social relations and networks, including kin, and so it concerns, the complexity of the relationships within families and households by referring how the lives of their members are linked through events (turning, critical, demographic), trajectories (in the various spheres of life) or social characteristics (education, occupation, class, etc.). This concept has reached the status of theoretical principle (particularly true in the scope of the Life Course Literature) or of a scientific self-evident premise (implicit, for instance, in models that tackle the effects of life events and statuses). It is thus used as a general premise but not as a research hypothesis. We take a step back, by providing a big picture on how the links of lives within families have been studied in social research. For that purpose, the team of the Project "Linked Lives: a mixed multilevel longitudinal approach to family life course" carried out a bibliometric analysis. An effort towards the census of the publications concerning "linked lives" was made through various bibliographical sources. These were coded (by type of publication, author's institutional nationality, geographic scope, type of events, generational direction of the link, spheres of life, methodology, etc.) and organized in statistical software, where univariate, bivariate and multivariate analyses were performed to identify and characterize the stages and variations of this concept in the sociological and life course literature. We additionally reflect on how it has been contributing to understanding family and intergenerational relations and interdependence.

Design and Validation of a Family Social Capital Scale

Cavallotti, Rita; Marcaletti, Francesco

Universitat Internacional de Catalunya, Spain
rcavallotti[at]juic.es, fmarcaletti[at]juic.es

The aim of the paper is to present the validation of a primary social capital scale, that is the social capital produced by/through interpersonal relationships within family members, as defined according to the sociological relational paradigm (Donati and Prandini 2007). The scale consists of three dimensions defining family social capital, that is 'trust' (6 items, 1 to 5 Likert scale), 'collaboration' (5 items), and 'supporting each other' (6 items). The validation of the scale consisted of an exploratory factor analysis (EFA), reliability test of its outcomes, and a subsequent confirmatory structural equation model (SEM). Data were collected through a survey on a national quota sample of Spanish older parents (65-74-years-old). Three factors emerged with eigenvalues greater than one (Keiser criterion), which accounted for 62.03% of the variance in the sample. The first factor grouped items that related to mutual support, both material and moral, and trust. Therefore, it was called 'Supporting behaviours'. The second factor grouped items that related to doing things together and was referred to as 'Unity'. Finally, the third factor grouped three items that concerned malfunctions of the primary social capital itself, expressing what the literature calls ambivalence (Lüscher and Pillemer 1998; Bengtson et al. 2002; Nauck 2014). It was therefore called 'Mistrust and discomfort'. Findings demonstrate that 'Supporting behaviours' and 'Unity' are positively related, while 'Mistrust and discomfort' is negatively related with both. Moreover, findings suggest that the scale can be a valid tool in order to analyse primary social capital; nonetheless, improvements can be achieved.

The Present and the Future of the Family: an Italian Research Study

Tartari, Morena (1); Scioni, Manuela (2); Bolzan, Mario (2)

1: FISPPA Department, University of Padova, Italy; 2: Department of Statistical Sciences, University of Padova, Italy
morena.tartari[at]unipd.it, manuela.scioni[at]unipd.it, mbolzan[at]stat.unipd.it

This paper is based on a research study that investigates some future-oriented scenarios for the family in Italy in ten years through the point of view of family experts and stakeholders (e.g., policy makers, politicians, family psychotherapists, social workers, and educators). The first stage of the study concerned the selection of some key social issues for the future of the family through seven focus groups that involved forty-five experts and stakeholders. The second stage involved thirty-two experts in a Delphi method (conducted in four subsequent calls) that investigated those specific social issues (e.g., work-family balance, intergenerational relationships and communication, intergenerational solidarity, kinship networks, housing, policies and services for the family). At a statistical level, the analysis of performance's indicators on the process of convergence - applied to the results of the Delphi -

shows a very satisfactory quality for almost all the items. At a substantive level, the Delphi survey points out the evolution and the relevance of these specific issues in ten years. Findings highlight some configurations of evolution and relevance with regard to these family social issues and offer future-oriented scenarios that are interpreted through a social statistical and a sociological approach. This paper focuses on some findings of the focus groups' stage. In particular, the paper deepens the evolution and the relevance in ten years of specific issues concerning the intergenerational relationships and communication, the intergenerational solidarity, and the kinship networks. These findings are discussed and compared to the Delphi method results and the recent sociological literature on the family and its future.

The Significance of Studying 'In-Between' Spaces in Family Life

May, Vanessa

University of Manchester, United Kingdom
vanessa.may[at]manchester.ac.uk

Many of the big debates within family sociology, including debates over individualisation, are rooted in sociology's fascination with dichotomies such as traditional/modern and individual/society. Instead, this paper argues for the significance of studying 'in-between spaces', 'space' here denoting both physical space and more abstract relational space. Inspired by Jennifer Mason's work on affinities, the in-between is conceived of as connective spaces or fields of tension - of repulsion and attraction - that are filled with action, forces and energies. The notion of in-between also opens up avenues of exploration that bring insights from different sub-fields of sociology into dialogue with family sociology. I explore two examples to illustrate my argument, the first pertaining to space-time and the coordination of family practices, the second focusing on relational space and the qualities of (non)relationships. The aim of the paper is to illuminate how a focus on the in-between can open up new avenues of exploration for family sociology.

Similarities and Differences: The Case of Hungarian-Serbian Mixed Marriages

Ladancsik, Tibor

University of Debrecen, Hungary
tibor.ladancsik[at]gmail.com

In the current era the institution of the family is facing many challenges. In the system of changing values and norms, the situation of multiethnic families is a particularly interesting topic. In their case the issues of national identity, socialization and mother tongue are completely different from those of nationally homogeneous families. In my presentation I wish to analyze the situation of nationally heterogeneous families, paying special attention to the role of national identity and gender. In terms of the national identity in the mixed marriages, there are basically two perspectives: the social-cohesion theory and the assimilation theory. According to the social-cohesion theory interethnic marriages reduce the tension between the two nations, because weak and strong ties are created between the relatives and friends of the spouses. According to the assimilation theory however, the identity of the minority party is lost in the intermarriages, thereby accelerating the loss and assimilation of that minority. In addition, I would like to focus on the role of gender, because men and women intermarry in varying proportions, but this ratio varies widely among nations. In my research I use both quantitative and qualitative methods. I study the mixed marriages between Hungarians and Serbs in Serbia, Vojvodina and Hungary. Statistical data from Romania and Slovakia are a good basis for comparing Hungarian-Serbian intermarriages. The purpose of my presentation is to interpret the situation of Hungarian and Serbian heterogeneous marriages, and thus to provide an insight in to the situation of multiethnic families.

Symbolic Capital and Gender Relations: a Case Study of Transnational Marriages between Mexicans and Eastern Europeans

Ots, Ingrid

Universidad Autonoma Metropolitana, Mexico
ingrid.ots[at]gmail.com

Marital migration to Mexico by Russian-speaking women from Eastern Europe is a growing but understudied social phenomenon. Given Mexican middle-class prestige structures that place a high symbolic value on Caucasian features and European cultural practices these women possess certain types of social capital, making them desirable spouses. This research looks into how these women reassess and restructure these capitals when settling in Mexico and how it impacts on gender relations within their families. It employs an analysis of in-depth interviews with women, their spouses and family members and key informants from Russian-speaking diaspora as well as ethnographic data from online groups and places of community gatherings from a constructivist standpoint in gender theories to trace how local gender ideals specific to

Latino culture interact with gender practices that these women embody. Focusing specifically on the level of agent interactions it examines four elements of family dynamics: power structure, division of labour, sexual and emotional representations and gender imaginaries. In doing so, it aims to highlight the variety of ways in which the analytical concepts of social and cultural capital could be used to study gender relations, particularly in a transnational and multicultural setting.

Parents of Refugee Youth: Utilizing and Transforming their Social and Cultural Capital Within the Icelandic Education System

Hardardóttir, Eva; Magnúsdóttir, Berglind Rós

University of Iceland, Iceland
evahar[at]hi.is, brm[at]hi.is

In line with global trends more young people with refugee status are now enrolled into Icelandic schools than before. While there are signs of positive integration processes for immigrant students in Iceland (Ragnarsdóttir, 2016) this group, including refugee youth, faces disadvantages in terms of academic achievement (Grunfelder, Rispling & Norlén, 2018), social well-being (Rúnarsdóttir & Vilhjálmsón, 2015) and segregate schooling or exclusion from school (Hardardóttir & Magnúsdóttir, 2018). Positive school effect seems to impact less on young migrants well-being than Icelandic youth (Rúnarsdóttir & Vilhjálmsón, 2019) whilst migrant parents report communication challenges with schools (Gunnþórsdóttir, Barillé & Meckl, 2017; Ragnarsdóttir & Rafik, 2018). Using an extended Bourdieusian approach (1986) this study proposes an understanding of migration as ways of producing and mobilizing capitals as resources convertible into advantageous positions in different social fields (Erel & Ryan, 2018). Applying an intersectional focus on gender, ethnicity and social class, a focus generally missing in national migrant research, we ask what shapes parents' position within the education field including their strategies to utilize and enact their capitals? Using semi-structured in-depth interviews, we focused on biographical accounts of eight parents with refugee status residing in the capital, rural south and north Iceland. Findings indicate that these parents all have high expectations for their children's education while their experiences Icelandic education system differ relating to their origin and social status, experiences and understanding of global education systems. There were examples of a) devalued cultural capital reflected in low expectation from schools towards children's educational ability and b) transformations of cultural capital, through interpersonal networks, gaining knowledge and understanding of current cultural and social capital within the Icelandic education system.

Gender, Parenthood Norms, and Life Satisfaction: Trends in the Effects of Motherhood and Fatherhood in Germany between 1984 and 2015

Preisner, Klaus (1); Neuburger, Franz (2); Bertogg, Ariane (3)

1: University of Zurich, Switzerland; 2: German Youth Institute, Munich; 3: University of Konstanz, Germany
preisner[at]soziologie.uzh.ch, fneuburger[at]dji.de, ariane.bertogg[at]uni-konstanz.de

In recent decades, the ideal of gender equality has gained support in Germany. Along with this development, social norms pertaining to parenthood have changed, too. These norms, however, have developed differently for men and women. Mothers today have more options to reconcile family and career, and they face less restrictive motherhood norms. Fatherhood, on the other hand, has become loaded with emerging parental “duties” while the expectation to be the main breadwinner has remained constant. These gender-specific changes in parenthood norms have implications for the decision-making and life satisfaction of mothers and fathers, as well as for women and men who remain childless. This article investigates, from the angles of doing gender and rational choice theory, how the relationship between parenthood and life satisfaction has changed over the last three decades, and how this development is related to normative change. The analyses are based on the German Socio-Economic Panel, 1984-2015. A series of hybrid panel regressions is used to determine intrapersonal (within) and interpersonal (between) effects of motherhood and fatherhood on life satisfaction along changing parenthood norms. The analyses indicate that the implications of parenthood have converged for men and women. As traditional parenthood norms have lost ground, the transition to parenthood has become increasingly conducive to life satisfaction for both genders. In particular mothers have benefited from normative change in term of increasing life satisfaction.

Negotiating Parenting Practices And Childcare Decisions: The Case Of Finnish Couples

Eerola, Petteri (1); Närvi, Johanna (2); Tervävä, Johanna (3); Repo, Katja (1); Lammi-Taskula, Johanna (2)

1: Tampere University, Finland; 2: National Institute of Health and Welfare, Finland; 3: University of Jyväskylä, Finland
petteri.eerola[at]tuni.fi, johanna.narvi[at]thl.fi, johanna.terava[at]jyu.fi, katja.repo[at]tuni.fi, johanna.lammi-taskula[at]thl.fi

Couples’ negotiations of parenting practices and childcare decisions are influenced by several factors, such as the parents’ personal wishes and desires, labour market situations, local and national policy contexts, and cultural ideals and social norms. In this article, the relational negotiation of parenting practices and childcare decisions are observed in the context of Finland, one of the Nordic countries, a group commonly cited as global models of shared parenting and gender equality. Finnish fathers’ involvement in early care has expanded in the recent decades, particularly due to family policies supporting shared care and the increasingly father-friendly atmosphere in work life and society in general. Parenting practices in Finnish families with small children have remained gendered, however, as mothers continue to play the role of the primary parent in the majority of families in terms of both hands-on care and ‘mental labour’. These observations form the starting point for this article, which scrutinises the relational character of couples’ negotiations of parenting practices and childcare decisions. Theoretically, the article draws on the sociology of emotions, feminist scholarship, and multidisciplinary family research. The empirical data, which consist of qualitative interviews with 13 heterosexual Finnish couples with a child around one year old, were gathered in 2016. Our analytical framework is informed by discourse studies. The preliminary findings of our study reveal how couples’ negotiations are significantly entangled with the moral and affective dimensions of parenting in addition to, for example, family policies and work life issues.

A Mother — Manager of Care and Everyday Life, a Father — Entertainment Expert. 'Mothering' and 'Fathering' Practices — the study of families in Poland

Sikorska, Malgorzata

University of Warsaw, Institute of Sociology, Poland
malgorzata_sikorska[at]wp.pl

The main aims of the speech are: 1) to present the social perception of the roles of mother and father operating in Polish society; 2) to show the results of the analysis of 'mothering' and 'fathering' practices in context of the division of care and socialization responsibilities and 3) to compare the social norms and expectations with the parental practices. A change in the balance of power in families as well as a new distribution of roles and duties between parents are ones of the most important modifications in the relations between individuals in the postmodern societies. The currently social expectations about features and behaviors of parents are particularly visible when comparing them with the previous generations. The question is: does the promotion of a 'new motherhood' and specially 'new fatherhood' patterns existing on the level of social discourse and social norms translate into parenting practices? In other words: does the 'new' way of defining the roles and responsibilities of a mother and a father transfer into actual 'mothering' and 'fathering' practices? Using the data collecting in the qualitative research (first of the project "Parenting practices in families in Poland — reconstruction of daily routines") as well as the quantitative data (from surveys conducted on the representatives sample for Polish society), I'm going to prove that the traditional devision of roles and duties for a mother and a father is still strongly involved in family life in Poland (with some adjustments). I will argue that the parental practices are intimately embedded in the 'naturalization' of roles of father as a breadwinner and a mother as a caregiver and a housewife.

Family Relationships of Foster Youth: Source of Support or Hindrance during the Transition to Adulthood?

Aeby, Gaëlle; Laurence, Ossipow

University of Applied Sciences and Arts Western Switzerland
gaelle.aeby[at]unige.ch, laurence.ossipow-wuest[at]hesge.ch

The common ground for foster care is a problematic family situation judged unfit for the protection and development of children. Nevertheless, no matter the type of intervention (foster institution or foster family), child protection services actively promote maintenance of the relationships with the family of origin. However, in reality, the placement puts a lot of pressure on families that are already vulnerable and they tend to withdraw from an active parenting role. Therefore, other relationships become of prime importance for foster youth but they are typically characterised by instability. Nevertheless, ruptures can be compensated by stability elsewhere, for instance, through continuities in other life domains such as place of residency, belonging to a club and school attendance. In adulthood it results in a diversity of personal networks that may include family members, foster family members, friends, and even social workers, but that often do not provide the adequate amount of support needed by young adults. After the coming of age, access to social aid is limited and family support may be needed. In this context, the transition of young adults from out-of-home care is especially challenging. Drawing on qualitative interviews with 30 care leavers aged between 25 and 30 years old in the canton of Geneva (Switzerland), this paper investigates ruptures and continuities in their relationships, retrospectively along the placement and during the transition, using ego-centered networks. It discusses alternatives to family solidarity and sources of belonging created in communities of necessity and/or choice, and through intimacies.

Tensions and Taboos in Intergenerational Relationships seen through Advertising

Gram, Malene (1); Marchant, Caroline (2);
O'Donohoe, Stephanie (2)

1: Aalborg University, Denmark; 2: University of Edinburgh
Business School, United Kingdom
gram[at]cgs.aau.dk, caroline.marchant[at]ed.ac.uk,
stephanie.o'donohoe[at]ed.ac.uk

Surprisingly little has been written on grandparents and their relationship with grandchildren, despite this relationship being recognized as very important in terms of well-being and family belonging. The challenges of grandparent-grandchild relations, in particular, remain unexplored in research. However, concerns about being ignored, taken for granted or even having feelings of anger, disappointment and frustration remain part of mundane family life. This paper explores the mundane dark sides of family relations, which are at odds with sociocultural ideals of the happy family. The authors explore the ambivalence and tensions, which may create barriers for intergenerational warmth and togetherness. To get beyond grandparents' and grandchildren's own, often rose tinted, accounts of family, this paper draws on an analysis of sarcastic and humorous advertising that taps into difficult aspects of intergenerational relationships. Online commercials from Western countries featuring intergenerational tensions are analysed to explore family taboos and tensions. The authors compare the identified tensions from ads with tensions identified in an interview study with grandparents and grandchildren in Denmark and New Zealand and discuss findings in relation to sociological literature on intergenerational relations, family, and consumption. This contributes to understanding of the often unspoken and more difficult aspects of intergenerational relationships, which are important to identify to help recognise issues and improve well-being and social cohesion among the elderly and the young.

Intergenerational care-conflicts among Turkish immigrants in Germany

Frohn, Christoph; Breuer, Marc

Catholic University of Applied Sciences, Paderborn, Germany
c.frohn[at]katho-nrw.de, m.breuer[at]katho-nrw.de

Families are confronted with changing structures: In respect to the younger generations, it is less probable that they live nearby their parents. Women are increasingly involved in employment. Due to this, it gets more and more impossible to ensure traditional family care. Our paper focusses on intergenerational conflicts concerning care settings in German families with Turkish roots. In recent research, preferences of familial care among immigrants have attracted widespread attention. However, diverging interests and conflicts on this issue within the families had been scarcely discussed. Our thesis is that family conflicts arise not least as a result of generation-specific expectations on care. This study is based on qualitative interviews conducted with adult children and spouses of dementia-sufferers. Using the methodology of Grounded Theory, a model is provided which points out specific principles of care. Among our interviewees both, children and parents, prefer care settings at home. Members of both groups refer to ethnic traditions. In contrast to the elderly, however, the younger generation's interviewees emphasise stronger the growing importance of professional support. While the latter advocated for professional care, the elderly refused assistance. However, in the end members of the older generation had to accept the preferences of the younger ones because their personal resources to maintain familial care were exhausted. Overall, our contribution highlights how families with care needs become arenas of care-conflicts. Those conflicts have their roots in generation-specific care principles.

Intergenerational Longitudinal Research: Analyzing Relationships and Mentalities with Family Interviews

Hense, Andrea (1); Schad, Miriam (2)

1: Sociological Research Institute Goettingen (SOFI), Germany;
2: Technical University Dortmund, Germany
andrea.hense[at]sofi.uni-goettingen.de, miriam.schad[at]tu-dortmund.de

Analyzing family relations and family practices across life courses of linked lives in changing societies requires new methodological approaches. Family interviews with members of three generations who are interviewed simultaneously are seen as an innovative method that supports longitudinal research as well as research on kinship networks. The talk is based on a project that analyzes intergenerational status stability in occupational fields of the middle class. Theoretically, we refer to the reproduction of social inequality, intergenerational occupational transmission and relationships within families. We study by which means and in what ways middle class families succeed in maintaining their social status across several generations. Thereby, we put a special focus on intergenerational relations: Under which conditions are which kind of mentalities, values, dispositions, and social positioning passed on or modified across generations in order to maintain the social status of the family? The family interview offers the opportunity to analyze communication and collective perceptions in families and directly relate them to individual perspectives and individual positions within the family. Thus it is possible to reconstruct subjective perceptions of families on consensual or conflicting mechanisms of status maintenance. Sampling and data analysis is based on the Grounded Theory Methodology. We use narrative interview techniques and genograms for data collection. The empirical analysis aims at developing a typology of cross-generational strategies of status maintenance. The talk will firstly focus on family interviews as a new method to analyze family networks and intergenerational dynamic and relationships. Secondly, we present first results.

Eldercare in Family-based Models of Care – The Case of Poland and Portugal

Furmańska-Maruszak, Agnieszka Maria;
Wójtewicz, Anna

Nicolas Copernicus University in Toruń, Poland, Poland
afmaruszak[at]jumk.pl, wojtevicz[at]jumk.pl

The family is the main provider of eldercare both in Portugal and in Poland. Changes in family roles and structure as well as projected significant increases of the proportion of the elderly in the coming decades lower the potential of traditionally provided informal care in analysed countries. The way the family is supported in its caring function by public policies reflects the extent to which familialistic approach has been put into practice. The aim of the paper is to check the presence of

familization trends in policies of both countries by means of analysing the cash transfers for care, social and employment entitlements for carers (care leaves, flexible working hours, inclusion in social security schemes) as well as access and the organization of formal care in both countries. In order to do so we conduct comparative analysis of law regulations, Eurostat and OECD data as well as data provided by national statistical offices and social security institutions of analysed countries. The study shows similarities in deficiencies of family care support in both countries (low level of cash transfers and not enough recognition of family carers) but also differences revealing better integration between health care and social care, better access to community care and more regional disparities in Portugal. Moreover, high demand for care in nursing homes mirrors the shortages in informal care capabilities in both countries. The role of catholic organizations in providing eldercare is currently much more pronounced in Portugal where they are the main direct providers of care.

RN13_04a | Marriage and cohabitation

Childbearing and Marriage: Investigating the Importance of Context for Meaning Making of First-time Marriage

Jarnkvist, Karin

Mid Sweden University, Sweden
karin.jarnkvist[at]miun.se

Previous research reveals that the temporal ordering of childbearing and marriage can have an impact on the meaning of first-time marriage. This paper aims to obtain a deeper understanding of meaning making of first-time marriage in relation to childbearing. Narrative interviews with sixteen brides and grooms in eight couples in Sweden were conducted. The material was analyzed in relation to the temporal ordering of childbearing and marriage. The study reveals that the construction of meaning of marriage does not only relate to the temporal context. Social factors such as social class or family formation might also be relevant for how meaning is constructed. This paper contributes to a deeper understanding of meaning making as a relational process constructed within particular contexts.

Gender, Homeownership and Marriage: A case study of Hong Kong

Yip, Pui-chi; Choi, Susanne Y P

The Chinese University of Hong Kong, Hong Kong S.A.R. (China)
tangiyip.study[at]gmail.com, choiyp[at]cuhk.edu.hk

This paper explores the relationship between homeownership and marriage from a gender perspective and uses Hong Kong as a case study. Given a faster pace of housing marketization and a growing difficulty in house-purchase in different parts of the world, housing arrangements have become a central issue in individuals' marriage formation and family lives. Our data suggests that homeownership is not only a significant component in marriage plan, it is also a prolonged process undergirded by gender expectations and norms. The anticipation of getting married is a major pull factor for men to consider moving out of parental home while the relationship quality with natal family is a push factor for women. We show gendered expectations over homeownership and marriage – men maintain a strong preference of house-purchase as a precondition to marriage, but women hold an opposite view and give a priority to getting married before the perceived 'age-threshold-for-marriage' over property purchase. This finding diverges from the traditional marriage norm identified in Chinese societies, of which women generally expect men to secure a property upon tying the knot. We also delineate four strategies in the preparation process of house-purchase, namely setting a clear saving goal, seeking family's financial assistance, acquiring knowledge of the housing market and developing property-checking skills. Through these strategies, young Chinese men try to measure up to their perceived ideal masculinity. They consider homeownership as a barometer of manhood while growing housing unaffordability provokes a crisis of masculinity in many of them.

"Evolution Of Homosexual Marriages And Their Breaks"

Jiménez Cabello, José Manuel; Becerril Ruiz, Diego

Universidad de Granada Spain
josejicabello[at]ugr.es, becerril[at]ugr.es

The present work shows the evolution of homosexual marriages since its legalization in 2005, by means of Law 13/2005 and what are, as the case may be, the subsequent dissolutions. To do this, we use quantitative methodology with bivariate and multivariate analysis through the Statistics of Annulments, Separations and Divorces. As conclusions, it can be observed that once legalization has been overcome, homosexual couples have increased fivefold, with the presence of gay marriage being the majority option, more among women than among men. In addition, the number of marriages between men and women has evolved to be practically the same. As for dissolutions, homosexual marriages have a high degree of consensus, this being a characteristic that is present from the origin of their existence and also shows great stability. Some factors, such as nationality or the possession or not of minor children, are key to knowing how the rupture occurs

RN13_04b | Parent-child relations, mothering and fathering practices IV

"Prenatal Fathers" On The Journey To The New Role. Exploration Of The Process Of Entering An Engaged Father Model In Contemporary Poland

Bierca, Marta Magdalena

University of Social Sciences and Humanities, Poland
marta.bierca[at]gmail.com

There have been significant changes in family roles in Poland over a last decade or so, with strong focus on alterations in the father's role. In the new model, the father is supposed to actively participate in daily parental chores and also build emotionally rich father-child relation. What is more, being a father may start even before the child is born – during pregnancy, but also even earlier, at the stage of parenthood planning. The author analyses the modern father's journey through the various boundaries and stages of "becoming a father" process. The research material reveals that building father-child bonds often happens, in the new model, through a number of symbolic practices like furnishing baby room or participating in childbirth classes. Modern fathers are also willing to possess theoretical knowledge on childminding before they actually face a new-born. Thus, the paper will focus on a number of areas: When and why is becoming a father sparked?; On private and intimate level, how do they play their upcoming fatherhood role?; On public and institutional level, how are they supported or limited by the outer world? The aim of the paper is to capture and explore the process of becoming a father through close look at daily practices and narratives of modern Polish fathers. The empirical material will be provided by qualitative interviews inspired by biographical method conducted with young fathers representing the 'new' paradigm. The paper will present also recent data concerning the development of the new fatherhood model in contemporary Poland.

Societal Father Roles, Gender Ideologies and Father-Child Contact After Parental Breakup

Szalma, Ivett (1); Heers, Marieke (2)

1: Hungarian Academy of Sciences, Hungary; 2: FORS, University of Lausanne, Switzerland
szalma.ivett[at]tk.mta.hu, Marieke.Heers[at]fors.unil.ch

Most children of separated parents continue living with their mothers. Ideally, after parental union dissolution, parents will engage in effective co-parenting. However, for many fathers the increase in divorce and single parenthood implies that less time is spent with their non-resident children.. Lack of time and financial resources are the most common reasons for this decrease in contact. Meanwhile, in a number of societies, fathers' involvement in family life and particularly childcare have increased. Moreover, men's involvement at home is strongly correlated with gender ideologies. The aim of this research is to examine how gender ideology and societal father roles affect non-residential father-child contact after parental breakup. This research draws on data from the Generations and Gender Program from 10 countries and relies on data directly obtained from non-resident fathers (n = 1426) to examine associations between societal father roles, gender ideologies and non-resident father child-contact. Since the dependent variable is of an ordered scale, ordered logistic regression is used to study the determinants of father-child contact. We take into account that individuals within countries cannot be treated as independent observations. Our results indicate that fathers with more modern individual gender ideologies tend to have more contact with their children than fathers with less modern ideologies. Similarly, more modern societal ideologies are associated with higher levels of contact. The results for societal father involvement and its relationship with father-child contact are mixed.

Does Father's Involvement During Childhood Foster Children's Positive Behaviours In Adolescence?

Vanchugova, Darya

The University of Manchester, United Kingdom
dvanchugova903[at]gmail.com

This paper explores how effective father involvement in the early years of a child's life is for nurturing 'positive behaviour' in adolescent children - defined in this study as good social skills, educational motivation and non-engagement in perilous activities (e.g. drug abuse, anti-social behaviour, unprotected sex). Understanding what factors shape children's behaviour in adolescence is important given children's conduct at this age has lasting effects on their individual health, well-being, social adjustment and educational attainment (e.g. see Sawyer et al, 2012; Lanctot, Cernkovich and Giordano, 2007; Beal and Crockett, 2010). I use data from the Millennium Cohort Study, a nationally representative panel survey following 18,522 children born around the year 2000 in the UK. Factor analysis is used to derive a set of latent constructs, which measure

father's involvement in childcare when the child is aged 9 months, 3, 5, 7 and 9 years old. The latent variables are then used in a Structural Equation Model to predict children's behaviour when they are aged 14, controlling for the mother's involvement in childcare as well as other key socio-economic and employment factors associated with both fathers' involvement and children's behaviours. This research endeavours to throw light on the longitudinal impact of active fathering practices. The study will also show whether any of children's behavioural aspects under consideration is influenced by father's involvement more than the others.

Father Involvement and Family Practices for Early Childhood Care in Pakistan

Bajwa, Nehaal F H

University of Sussex, United Kingdom
n.bajwa[at]sussex.ac.uk

The limited literature on fathers' relevance to early childhood caregiving in Pakistan contributes to a detached, distant parental stereotype. This small-sample, qualitative study of fathering and family life in the Pakistani city of Lahore starts with the assumption that most fathers are embedded in families about which they care, and rejects macro-level discourses suggesting that 'involved' fathers are an exceptional, non-normative group in Pakistan. The study focuses on what 'involvement' means for this group of fathers and their families and how that is psycho-socially constituted. Through a series of semi-structured narrative and biographic interviews with families, their routines and family practices (Morgan 2011) were discussed. How these, their biographies, identities, traditions, and structural resources and constraints, intersected in narratives of fathering and family life, with reference to investments in some constructions of fatherhood over others, was made central. Families differently displayed (Finch 2008) how they were, or were not, like other families in various ways, with reference to how societal norms regarding family life and gender were changing. Some family practices seemed to have shifted toward more interchangeable, almost 'degendered' (Connell 2005) parenting, while in other respects the continued gendering of family work was complex and varied across families. Some father involvement was often necessary for a family's survival; the ways in which social space is gendered in Lahore affected women's mobility and ability to perform many caring practices. This calls for a rethinking of gendered caregiving in Pakistan and has implications for policies aimed at engaging families in Lahore.

The Role of Grandparents in the Work/Life Balance Strategies of Spanish Families

Meil, Gerardo; Rogero-García, Jesús;
Romero-Balsas, Pedro

Universidad Autónoma de Madrid, Spain;
gerardo.meil[at]uam.es, jesus.rogero[at]uam.es,
pedro.romero[at]uam.es

During the last years, grandparents' childcare has facilitated Spanish parents' access to paid work. Concurrently, the use of formal childcare services and parental leave have also increased. The aim of this work is to identify the main factors associated with receipt of grandparents' childcare on a daily basis. The study sample included 2,304 parents with at least one child under 13 years old from the Survey of Parental Leaves' Use in Spain 2012. Two kind of factors were analyzed: (1) individual characteristics: parents labor situation, parental leaves use, age of youngest child, and hours devoted to care by both parents; and (2) characteristics of the context: household income, number of generations living in the household, number of children, hours of paid domestic work and formal childcare services use. Our results indicate that families with a higher economic position use grandparents' childcare less frequently. Grandparents' childcare is a fundamental resource among families with both parents unemployed and among single-parent families. In two-parent families, the use of formal childcare services, paid domestic work and parental leaves are associated to a less frequent grandparents' childcare. In general terms, our results suggest that a growing diversification of childcare resources may influence a reduction in grandparents' childcare.

Grandparenting with Media

Nimrod, Galit (1); Lemish, Dafna (2); Elias,
Nelly (1)

1: Ben-Gurion University of the Negev, Israel; 2: Rutgers the
State University of New Jersey, United States of America
gnimrod[at]bgu.ac.il, dafna.lemish[at]rutgers.edu,
nelly[at]bgu.ac.il

Although many grandparents are involved in caring for their grandchildren, they were completely ignored in previous research on mediation of children's media use. Informed by the Grandfather Involvement Framework and the Process Model of the Determinants of Grandparenting, the present study aims at exploring variations among grandparents in mediation styles and in their grandparental self-esteem. The study was based on a survey of 356 grandparents of young

children, who reported taking care of their grandchildren at least once a week. Analysis identified three groups of grandparents according to their mediation styles: Highly involved, non-restrictive and less involved. Mediation styles correlated significantly with grandchildren's age, as well as with contextual factors, activity patterns, motivations for media use while caregiving and its outcomes. Furthermore, the less involved mediators reported significantly lower self-esteem than did those in the other groups, even after controlling for all differentiating variables. Results suggest that mediation of grandchildren's media uses may be considered integral to grandparental involvement in general and may be beneficial to both generations.

Facets of Parent-Child Relationships in Adulthood and their Role in Transmitting Economic Deprivation across Generations

Fischer-Neumann, Marion; Böhnke, Petra

University of Hamburg, Germany
marion.fischer-neumann[at]uni-hamburg.de,
petra.boehnke[at]uni-hamburg.de

We explore how intergenerational relations can lead to poverty in adulthood and explain transfers of economic deprivation between family generations. The study relates to scholarly work that has shown that family social capital during childhood relates to social reproduction processes but extends it by studying the influence of multilocal relations between aging parents and children. Relying on the concept of intergenerational solidarity, we differentiate six aspects of intergenerational relations: structural (i.e. geographical distance), associative (i.e. contact), emotional, conflictual, normative (i.e. norm of support) and functional (i.e. financial/instrumental support). Referring to social capital theory, intergenerational relations can influence individual socio-economic life chances. At the same time, the relations are dependent on socio-structural characteristics. Thus, an economically deprived family background may relate to lower levels of functional and emotional intergenerational relations. Hence, intergenerational relations may perpetuate intergenerational poverty. Our panel regression results on the anchor data from four waves of the German Family Panel pairfam demonstrate that economic deprivation at age 10 is strongly associated with income poverty in adulthood (i.e. household income below 60% of the median, ages 18-47). This association is partly accounted by levels of parent's education. There is no strong multivariate confirmation that intergenerational relations explain much of the intergenerational reproduction of poverty, however, we find single and moderation effects. Thus, spatial distance, conflict as well as normative solidarity increase income poverty in adulthood, while emotional and associative solidarity decrease it. Further, higher spatial distance as well as lower norms of intergenerational solidarity can be found to decrease the association between economic deprivation in childhood and income poverty in adulthood, thus, the intergenerational reproduction of poverty.

The Role of Grandparent Involvement on the Wellbeing of Parents

McNamee, Catherine

Queen's University Belfast, United Kingdom
c.mcnamee[at]qub.ac.uk

Although grandparents are arguably becoming increasingly important for contemporary families, few studies have examined the effects of grandparent involvement on the wellbeing of parents. The present study addresses this gap in the literature by examining to what extent does the type and extent of grandparent involvement (frequency of contact, assistance with childcare, and financial assistance) influence various aspects of wellbeing of parents. Wellbeing is a broad term that has many facets with potentially distinct associations with parenthood, therefore multiple dimensions of wellbeing are considered: psychological distress, life satisfaction, and relationship quality. The study utilizes the Millennium Cohort Survey (MCS) and Structural Equation Modelling (SEM) to investigate if grandparent involvement influences parental wellbeing. SEM is used to establish the underlying lying structure of parental wellbeing. Latent growth curve (LGC) modeling allows for examination of the couple data on the relation between early grandparent involvement and parental wellbeing. The analysis allows me to predict multiple facets of wellbeing from grandparent support estimate and consider the interrelations between the grandparent involvement measures, and account for the shared and the dynamic relationships of couples reporting on the same construct (wellbeing) by using Actor Partner Interaction Model. Grandparent involvement and wellbeing may vary between parents within couples depending on whose side of the family the exchange is coming from (Högnäs & Carlson 2010); therefore, the wellbeing and grandparent involvement perspectives of both parents is considered. Additionally, I consider the impact of the wellbeing of mothers and fathers on each other. Partners' actions and feelings can influence each other, which can affect the quality the relationship and individual wellbeing (Minuchin 1988).

RN13_05a | Family dissolution and post-divorce families I

Long-term Trends of Remarriage in Lithuania

Platukyte, Ernesta

Vytautas Magnus University, Lithuania
ernesta.platukyte[at]gmail.com

The growing number of divorces increases the circle of people with previous marriages who re-enter the "marriage market" and create a family with a new partner. Thus, divorce allows individuals to decide whether they will create a new partnership or remain lonely. This presentation attempts to

review the long-term trends of remarriages in Lithuania through different decades of the 20th century. The research is based on the review of legal marriage and divorce registration procedures in the beginning of the 20th century in Lithuania and other available demographic data. Analysing the registration of legal civil marriages and procedures of divorces legalisation it is possible to argue divorce became an integral part of the Soviet legacy that strongly influenced choices of a modern person. The legalisation of the divorce helped the emergence of the remarriage demographic. In a long-term perspective, the number of remarriages has been increasing for both men and women, but men have more chances to remarry. Thus, it is obvious that gender and age are important factors determining the course of partnership history after divorce.

Does Fathers' Involvement in Childcare and Housework Affect Couples' Relationship Stability?

Norman, Helen; Elliot, Mark; Fagan, Colette

University of Manchester, United Kingdom
helen.norman[at]manchester.ac.uk,
mark.elliott[at]manchester.ac.uk,
colette.fagan[at]manchester.ac.uk

Understanding the conditions that lead to parental divorce or separation is important given the emotional, health, social, and economic costs for couples and their children. Empirical evidence shows that paternal involvement in childcare and housework has a positive effect on the quality and stability of the parental relationship (e.g. Pleck and Masciadrelli 2004; Hohmann-Marriott 2009; Schober 2012). However, 'involvement' is overwhelmingly treated as a singular phenomenon, which presupposes homogeneity in how the 'type of involvement' may influence the parental relationship. The implications of engaging in different types of domestic activity are rarely considered even though this may affect the parental relationship in different ways. To address this, our paper investigates whether paternal involvement in particular childcare and housework tasks affects the probability of relationship breakdown between parents. We use logistic regression on four sweeps of the UK's Millennium Cohort Study (2000-08) to predict parental relationship breakdown from nine months to seven years post-childbirth. We find that the amount of time a father spends alone, caring for the baby during the first year of parenthood is important for the longer term stability of the parental relationship. Not only does this have important social and policy implications, the results underline the importance of solo-paternal care during the very early stages of parenthood.

Who Cares? The Effect Of Post-Separation Life Course And Labor Force Dynamics On Co-Parenting

Claessens, Elke; Mortelmans, Dimitri

University of Antwerp, Belgium
elke.claessens[at]uantwerpen.be,
dimitri.mortelmans[at]uantwerpen.be

Until the end of the 20th century, child custody arrangements after separation typically continued the societally dominant and gendered pre-separation parenting division, with mothers taking up care for the children and fathers paying child support to compensate for their unequal share of childcare (DiFonzo, 2014; Vanassche, Sodermans, Declerck, & Matthijs, 2017). Since then there has been a significant rise in co-parenting after separation, reflecting the trend towards more socio-economic, work- and childcare-related gender equality during the relationship (Nielsen, 2013; Trinder, 2010). However, it remains unclear to what extent the organization of the pre-separation household dominates over important changes in the lives and labor force participation of parents after separation in choosing to co-parent. This study uses longitudinal Belgian register data to look into the largely unexplored – but potentially crucial – role played by post-separation dynamics in parents' life course and labor force participation in deciding to co-parent. While certain pre-separation characteristics remain predictive of having a co-parenting arrangement, our results suggest a societal trend towards co-parenting as the parenting norm. Although bargaining power in terms of income and pre-separation division of work are generally seen as arguments to obtain sole custody, we find no effect of a post-separation income increase on the probability of co-parenting. Furthermore, we see that increased time in paid work positively affects co-parenting probabilities, which is similar for men and women. As such, the investigated post-separation changes seem to be an indication of parents moving towards supporting and attempting to gain gender equal parenting after separation.

The Role of Emotions in Defining High Conflict Divorce

Pasteels, Inge

PXL University of Applied Sciences and Arts, Belgium
inge.pasteels[at]pxl.be

High conflict divorces have large impact on the well-being of ex-partners and children. However, clear indicators that distinguish high conflict divorces from other types of divorce aren't revealed yet. In this paper we try to define high conflict divorce and we explore the role of emotions in developing such definition as considered by different actors. First, we explore narratives about high conflict divorce of male and female divorcees and compare these narratives to those of mediators and other professionals in the domain of divorce and separation. Second, we use standardized measures to build a classification of divorces in order to define high conflict divorces in a more quantitative way. Finally, we compare narratives of divorcees with their scores on such quantitative

scales in order to gain insight in the validity of standardized measures. Qualitative data used for these analyses stem from 62 in depth-interviews with male and female divorcees, quantitative data are collected in the Divorce in Flanders project. First, results clearly show that the importance of emotions as external marker in order to define high conflict divorces differs between divorcees and professionals. Second, within the group of divorcees, the level of conflict experienced by the divorcee in his/her own divorce has a crucial impact on the relevance of mentioning emotions as an important element in defining and distinguishing high conflict divorces.

Temporary Employment and Work-Family Balance in Australia

Laß, Inga; Wooden, Mark

University of Melbourne, Australia
i.lass[at]unimelb.edu.au, m.wooden[at]unimelb.edu.au

In OECD comparisons, Australia stands out as a country with a particularly high share of temporary forms of employment, with one in three employees found in casual, fixed-term or temporary agency work. While it is often believed that temporary employment, and especially casual work, provides workers with more flexibility to balance work and private commitments, convincing empirical evidence on this issue is still scarce. This paper investigates the impact of temporary forms of employment on work-family balance, using longitudinal data from the Household, Income and Labour Dynamics in Australia (HILDA) Survey for the period 2001 to 2017. Specifically, we look at two different outcomes: (i) satisfaction with the flexibility to combine work and non-work commitments, and (ii) work-family conflict among parents. We compare results from pooled cross-sectional, random-effects and fixed-effects regressions. The bivariate analysis shows, for example, that casual workers are significantly more satisfied with their flexibility to balance work and non-work commitments than workers on permanent contracts. However, the effect reverses when worker and job characteristics, most importantly working hours, are controlled for. This result suggests that it is the close link of casual employment to part-time working hours, but not the casual contract type per se, that benefits work-family balance.

“ICTs And Professional Work: Activities And Perspectives Of Portuguese And Italian Women Who Live As A Couple And Have Children”

Di Giuseppe, Silvia

University of Lisbon, Institute of Social Sciences, Portugal
silviadigiuseppe13[at]gmail.com

The PhD project “Being online and offline: practices and representations of Portuguese and Italian women in the digital society” is a study on the daily lives of women in the digital society, in two southern European countries (Portugal and Italy). Specifically, the study is based on the representations and practices, in different domains of activity (professional, domestic and leisure) of employed women aged 25 to 49 of different professional groups and levels of education, who live as a couple and have children. The aim of the study is to determine how the new ICTs integrate into the daily lives of women, how they access, use and appropriate of ICTs in their activities, what meaning they attribute to them and how they combine them online and offline. How do women access and appropriate of new ICTs in their professional work? What meanings do they attribute to them? How do these practices facilitate the public-private life? Departing from semi-structured interviews to 44 Portuguese and Italian women, in our presentation we discuss the results of the content analysis regarding their access and uses of the new ICTs in professional work and their perspectives on the impacts they have in public-private life.

The Joint Influence of Family and Occupational Trajectories on Retirement Timing in Four European Countries: a Life Course Approach

Gauthier, Jacques-Antoine (1); Rossier, Thierry (1,2); Le Feuvre, Nicky (1); Wernli, Boris (3)

1: University of Lausanne, Switzerland; 2: Copenhagen Business School, Denmark; 3: Swiss centre of expertise in the social sciences, Switzerland
jacques-antoine.gauthier[at]unil.ch, thierry.rossier[at]unil.ch, nicky.lefeuvre[at]unil.ch, boris.wernli[at]unil.ch

An individuals’ status varies over time according to his/her relational history and to the constraints and opportunities available at the meso and societal levels (e.g. labour market regulations, occupational career structures, or social protection systems). Moreover, family and occupational careers don’t only depend on individual characteristics, but also on the household composition and profile of the spouse or partner. Previous research suggests that women’s occupational histories tend to be marked by family events, whereas this is seldom the case for men. In most countries, entitlement to a full pension is associated with a higher likelihood of early retirement, and with lower levels of poverty in later life. In contrast, when employment trajectories are

part-time or discontinuous this may lead to reduced pension benefits and hence broaden the range of potential retirement pathways (early, on-time or delayed), depending on family configurations and household resources. In this paper, we analyse the family history, occupational trajectory and individual characteristics of those individuals who retire early in particular national settings. Adopting a life course perspective, we use multidimensional sequence analysis combined with event history analysis: 1) to identify particular patterns of family and occupational trajectories during middle to late adulthood and 2) to show how these are associated with retirement timing in different national contexts. The study uses the retrospective data of the SHARELIFE survey from four European countries with contrasted welfare and gender regimes (Czech Republic, Italy, Sweden, and Switzerland). Preliminary results underline the ways in which gender intersects with educational and economic resources to produce an array of social exclusionary mechanisms in later life.

When the Career Window Closes at 40: Exploring the Intersection of Gender, Age and Family Building in the Business Sector

Halrynjo, Sigtona (1); Blair-Loy, Mary (2)

1: Institute for Social Research, Norway; 2: University of California, San Diego United States of America
sigtona.halrynjo[at]samfunnsforskning.no, mblairloy[at]ucsd.edu

Liberalization has increased the precarity of employment and shifted risk from broader institutions to individuals. In the past 40 years, this individualized competition has become more international and more intense. Liberalization’s impact on families varies by social class. Our research focuses on business elites. We draw on 38 qualitative interviews with executive search professionals in Norway and the U.S. as expert informants on the ways in which gender and family impacts careers and promotability. We find that to be viewed as promotable to the highest levels, managers need experience from operational positions. These jobs demand the longest hours and the most travel and thus risk increasing work-family conflict. Further, to cope with the uncertainty of future business needs, “high potentials” are getting younger. Companies want to recruit “young, dynamic and tech-savvy high potentials”, which means that the “career window is closing by age 40”. The ability to advance fast and gain exposure to new and challenging positions throughout one’s 30s is seen as signaling quality and devotion. However, the paradigm of “careers are built before 40” conflicts with “family building phase” and the career advice often given to new mothers: Stay in the job you know to maintain productivity without a time-consuming learning curve during pregnancy, parental leave and the toddler phase. Mothers who follow this advice to achieve some work-family balance, risk to be outdistanced and suddenly “too old to build a career”, as colleagues without child rearing duties move up the career ladders. We discuss the unintended career consequences of the intersection of gender, age and family building within the current paradigm of the business sector – and possible solutions for change.

RN13_05c | Families in the context of economic problems and crises I

What Challenge Do Family Transitions launch To The Work Context Today? A Mix Method Research in Italy

Mazzucchelli, Sara; Bosoni, Maria Letizia

Catholic University, Italy
sara.mazzucchelli[at]unicatt.it,
marialetizia.bosoni[at]unicatt.it

In the contemporary social context, family transitions become increasingly challenging and affect not only the family life but the whole social context and intertwine in particular with the work context. With the term transition we mean periods of 'crisis', resulting from an event that modifies in a very significant way personal and family life and requires a process of redefinition so that a new equilibrium can be found. Such transitions are often invisible, but inevitably impact on professional life. This topic was dealt within a broader research project "Ageless Talents" funded by Valore D. In the first phase (2017) a survey was carried out on a sample of 4962 women aged between 50 and 69: 73% of interviewed reports an event that significantly changed one's life, in particular separation / divorce, loss of a loved one, own illness or a family member. Starting from this data a qualitative survey was carry out aimed at understanding personal experiences, problems and motivations underlying personal and family transitions. Through the focus group methodology, we focused on the urgency of managing two emerging aspects: illness in the workplace (illness as a transition) and separations and divorces (separation or divorce as a transition). 11 companies associated with Valore D have joined, for a total of 42 over 50 workers from all categories: manager, executive, office worker, manual worker. The discussion, audio-recorded and transcribed, was analyzed using the content analysis and the Tlab software (lexical and correspondence analysis). We will present the results that emerged in the two different focus groups, also identifying the cultural and operational implications for the company contexts.

Anticipation And The Financial Consequences Of Relationship Dissolution For Women

Thielemans, Gert; Mortelmans, Dimitri

Universiteit Antwerpen, Belgium
gert.thielemans[at]uantwerpen.be,
dimitri.mortelmans[at]uantwerpen.be

Past research has consistently shown that, after divorce, women suffer the most financially. Although there are substantial cross-national differences, men are shown to lose little income or in terms of equalized household income,

even improve their situation after the dissolution of a marriage. Coping strategies to deal with this financial downturn include increasing employment and finding a new partner. On the other hand, recent findings have shown that the analyses of recovery time after divorce might be obscured due to anticipatory behaviour. If a significant amount of women in fact start coping with the financial consequences of an expected upcoming dissolution, then both recovery time after separation and the extent to which women are financially disadvantaged after divorce are likely underestimated. In this study, we analyse whether or not women who anticipated an upcoming dissolution suffered less financially than those who did not, both in terms of timing to recovery and magnitude of the downturn immediately after. On the one hand, we base this research question on earlier findings that have shown that women who expect an upcoming dissolution are more likely to increase their employment intensity before the factual separation, whereas those who did not react in a similar way, but only after the couple stops living together. On the other hand, women have been shown to recover financially after divorce, albeit using different coping strategies. We test the hypotheses that women who anticipate dissolutions by increasing employment have lower financial downturns and faster recovery times.

Influence Of The State Social Policy On Consumer Behaviour Of Family With Different Number Of Children

Sivoplyasova, Svetlana (1,2)

1: Institute of Social and Political Reserches Russian Academy of Scienses; 2: Moscow Aviation Institute (National Research University)
SVETLANKAMOS84[at]RAMBLER.RU

The family income level is a crucial factor of consumer behaviour. It depends on the number of able-bodied and employment family members. At the same time, standard of well-being depends on a common number of members including dependants mainly children. In this connection, there is an unbiased regularity: birth of regular child decreases standard of well-being of the family. In these conditions, the state incarnates the measures of support of family with children carrying for reproduction and well-being of population as well, thereby smoothing negative economic effect. It is considered to reach a positive effects of social-demographic policy it is necessary for the state to spend 2% of the budget. However, it's not quite clear, will this spending level allow to provide for life of dignity for families with different number of children? Spending for demographic policy have been increasing since 2007 in Russia. At this time, unique measures were implemented (for example, program of maternal capital, adopted child benefit and other). These measures represent enough large-scale payments. They affected consumer behaviour of families essentially. This study is based on analysis of statistics of Russia and other countries on scales of the state support of families, its part in structure of income and spending depends on the number of children. This study deals with estimation of correlation between reproductive choice and transformation of the models of consumer behaviour of population.

Lone Parent Families and Food Poverty in three European Countries: A Mixed Methods Approach

O'Connell, Rebecca

UCL, United Kingdom
rebecca.oconnell[at]ucl.ac.uk

In the years following the financial crisis of 2008 and subsequent so-called austerity measures in some countries, household food insecurity has risen in Europe overall, although there are differences between countries. Families with children - and lone parent families in particular - are vulnerable to poverty and household food insecurity, yet little is known about how food insecurity varies by family type across Europe, how it has changed over time or how different types of families manage food in the context of poverty. Drawing on a European Research Council funded mixed methods study of Families and Food in Hard Times (ERC grant agreement n° 337977), the paper brings together analysis of quantitative and qualitative data to address this gap. The study focuses on three European countries that are contrasting in relation to austerity, poverty and lone parenthood: the UK, Portugal and Norway. Analysing annual repeat cross sectional data from the European Survey on Income and Living Conditions (EU-SILC) for the years 2005 to 2016 it first examines the relationship between family type (lone parent vs. couple with children aged <18 years), income poverty and household food insecurity in the three countries. Drawing on qualitative interviews with parents (usually mothers) in each of the three countries it uses a case approach to analyse the challenges faced by particular families and the resources they mobilise to 'get by' in different contexts. It is suggested whilst there is a clear relationship between economic disadvantage and food insecurity, it is neither simple nor culturally universal. Hence a family social policy perspective that addresses the particular challenges faced by lone parents is vital to ensuring their health and social inclusion.

RN13_06a | Family dissolution and post-divorce families II

Men's Experiences of Gender (In)Equality as a Primary or Single Parent from the Perspective of Heterogeneity of Masculinities

Humer, Živa; Hrženjak, Majda

The Peace Institute, Institute for Contemporary Social and Political Studies, Slovenia
ziva.humer[at]mirovni-institut.si, majda.hrzenjak[at]mirovni-institut.si

Based on the policy analysis and individual interviews with fathers, who are granted the full custody of the child,

RN13 | Sociology of Families and Intimate Lives

conducted in 2018 in Slovenia, this paper explores men's experiences of gender inequality when they pursue parenting rights. First we critically explore the anti-feminist discourse of men's groups in claiming fathers' rights in order to contrast it with feminist and gender equality framing of involved fatherhood. Within this theoretical framework we analyze fathers' narratives about their experiences with the different state's institutions (social work agencies, courts, kindergartens, schools etc.) and nongovernmental organizations in the process of gaining fathers' rights and in the situations of being a single or primary parent. In the analysis we take into consideration heterogeneity of fathers in terms of their socioeconomic situation and sexual orientation, and point to the specific situations of marginalized masculinity (unemployed and poor fathers) and subordinated masculinity (gay fathers) in comparison with hegemonic masculinity (heterosexual, well-off fathers).

The Role of Professionals in the Negotiation of Joint Custody Arrangements in the Czech Republic

Fučík, Petr

Masaryk University, Czech Republic
fucik[at]fss.muni.cz

In the 2017 Czech version of the European Values Survey, we asked about the attitudes of the general public toward the phenomenon of joint custody. We then set up an adjacent qualitative project focused on the attitudes of specific groups of professionals who enter the process of post-separation negotiation of child custody arrangements. From a sociological point of view, the aim of the analysis is to explore the interferences between the general social constructions of childhood, gender roles, intensive parenting, and no-fault divorce on the one hand and the specific framing of the action of given professionals on the other. We focus in detail on the role of the professionals' attitudes in the negotiation of joint custody between parents. Two groups of respondents were interviewed, and their perspectives were compared: (1) professionals such as social workers, family counsellors, lawyers, judges, and psychologists and (2) parents with an experience of joint custody negotiation. We focus on the role of these professionals in the negotiation process according to their own narratives, definitions, and experiences, and we add and compare the perspectives of parents. Three topics are examined: (1) the mutual expectations of all actors and their coherence, clashes, and conflicts; (2) the construction of the best interests of the child and its variations among different actors; and (3) the hidden gender ideologies behind the construction of the image of equitable or child-centered post-divorce child-custody arrangement.

Growing Up In Multiple Families: Children's Perceptions And Definitions Of Post-Divorce Families

Bastaits, Kim; Pasteels, Inge

PXL University College, Belgium
kim.bastaits[at]pxl.be, inge.pasteels[at]pxl.be

Currently, children grow up in a variety of family constellations, especially after parental separation. So, old definitions of family like biological ties, location or time might not be sufficient to define those post-divorce families from children's point of view. Moreover, previous research has indicated that parental separation can lead to difficulties of defining family boundaries and feelings of boundary ambiguity with children. As such, we would like to investigate how children define their family, given all family transitions they experienced starting from the parental separation. Therefore, we conducted qualitative in-depth interviews combined with creative methods (i.e. children's drawings) of 39 children (8-18 years old) of separated parents (16 girls, 23 boys). 21 children reside in joint physical custody, 15 children stay with a residential mother and 3 children stay with a residential father. Results reveal the advantages (e.g. more stuff, new friends) and disadvantages (e.g. missing parent, moving stuff) of growing up in two households as well as ways to make this more convenient (i.e. flexibility, proximity & no conflict) according to children. Moreover, the drawings clearly indicate that children's views on their post-divorce family go beyond the classic idea of family as biological family. Next to drawing their biological parents and siblings, children also drew their stepparents, stepsiblings, halfsiblings, grandparents and even pets. Furthermore, almost all children drew all family members as one group instead different family groups in separate houses. This indicates that, although parents, researchers and social stakeholders may consider separated families as two different families, children still perceive this as one family: a family that goes beyond the borders of location, time and biological ties.

As Fair As It Can Be? Parental Divorce And Children's Constructions of Fairness

Kogler, Raphaela; Zuccato-Doutlik, Marlies;
Zartler, Ulrike

University of Vienna, Department of Sociology, Austria
raphaela.kogler[at]univie.ac.at, marlies.zuccato-
doutlik[at]univie.ac.at, ulrike.zartler[at]univie.ac.at

Parental separation and its consequences have been well-researched over the past decades. However, scholarly knowledge based on children's perspectives is still scarce. In particular, children's constructions about post-divorce custody and care arrangements are an under-researched issue. We address this research gap and ask how children living in different family forms (nuclear families, stepfamilies, single-parent families) construct and negotiate concepts of post-divorce fairness. Based on a participatory study with 60 8- to 10-year-old children in one rural and one urban Austrian region, we analyze children's concepts about post-divorce regulations. The study comprises focus groups, individual interviews and a wide range of participatory child-friendly methods like drawings, games, handicrafts or story-telling. Results show that fairness was the respondents' main category of reference. Children prioritized fairness for parents – in terms of equal time shares or equal numbers of children to care for – over child wellbeing. This stands in sharp contrast to legal regulations that clearly consider the best interest of the child as the ultima ratio. Children's conceptions were rich in detail and mainly aimed at improving parents' interests and living conditions. The respondents developed sophisticated ideas about strategies to establish fair conditions on different levels: (a) in legal and economic terms (e.g. legal regulations, separation of property), (b) regarding living conditions and time resources (concrete custody and residential arrangements), and (c) in terms of emotional aspects (e.g. strategies to reduce sadness). The impact of these findings for research on parental divorce and its consequences for children will be discussed.

The Invisible Plot Between Work And Family: The Couple Dimension As Reconciliation Mediator

Bosoni, Maria Letizia; Mazzucchelli, Sara; Donato, Silvia

Catholic University Of Milan Italy
marialetizia.bosoni[at]unicatt.it,
sara.mazzucchelli[at]unicatt.it, silvia.donato[at]unicatt.it

In the contemporary social context, where the transition to parenthood takes place later than in the past and the demand for flexibility and mobility at work are growing, the family and work domains are more intertwined. Thus, a sustainable balance is a priority for family wellbeing. Although reconciliation tasks are expected to be more challenging for young couple, with the first child, it would be wrong to consider senior workers without work-family balance responsibilities. This under investigated topic – senior workers work-family reconciliation – has been the object of a research project in Italy called “Ageless Talents - An observatory on the condition of over 50 employed women” funded by a company private association (Valore D) carried out in 2017 (wave 1) and 2018 (wave 2). In the presentation we will present results from wave 2 (2018), by an online survey on a sample of 12.746 workers (63,6% men and 36,1% women) aged between 50 and 70 (average age 55,30), employed in 34 companies in different sectors. As expected, almost all the respondents (79%) have children, often adolescents, and most of them has two children. A little but relevant group (14,5%) have grandchildren to care, too. Results showed that the work and family balance is challenging for over 50 workers: 60% of respondents say to have problems in reconciling family care and job. Through a cluster analysis it was possible to identify different groups based on the presence of reconciliation problems mainly at work, at home or on both dimensions. Multivariate analysis also highlighted how the couple is an important factor, in terms of relationship with the partner, trust and support. The presentation will further discuss these results.

Early Child-care Types and Parents' Well-being and Work-Family Balance

Heers, Marieke; Ryser, Valérie-Anne

FORS, c/o University of Lausanne, Switzerland
marieke.heers[at]fors.unil.ch, valerie-
anne.ryser[at]fors.unil.ch

A growing number of parents relies on non-parental child-care to enable them managing the simultaneous demands of work and family. Yet, evidence on the relationship between child-care arrangements and parental outcomes is lacking. Therefore, based on 16 waves of the Swiss Household Panel this study investigates (1) what child-care patterns, parental, non-institutionalized and institutionalized care, parents of 0 to 4-year-old children use; and, (2) how these arrangements relate to different domains of parents' subjective well-being (defined as life satisfaction, positive and negative affects) and work-family balance. The Swiss case is particularly interesting for studying how early child-care relates to different domains of parents' subjective well-being and work family balance, as child-care is limited in offer and costly. Results from multilevel models indicate that, compared to institutionalized and mixed child-care, grandparental care positively influences several dimensions of parents' subjective wellbeing and work-family organization. Namely, compared to the use of grandparent child-care, the use of formal and mixed child-care modes tend to decrease general life satisfaction, while mixed child-care modes tend to increase the negative affect. Falling back on relatives, institutions or mixed child-care modes decreases the positive affect. Finally, mixed child-care modes tend to increase the difficulty to combine work and family life. A potential explanation is that grandparental childcare is more flexible than the other arrangements. It has a less rigid character than institutional care and offers parents psychological relief and emotional support helping them to maintain a better overall quality of life.

The Association Between Childcare Use and Parental Mental Health Across Europe

Somogyi, Nikolett (1); Van Lancker, Wim (2); Van de Velde, Sarah (1)

1: University of Antwerp, Belgium; 2: KU Leuven, Belgium
nikolett.somogyi[at]uantwerpen.be,
wim.vanlancker[at]kuleuven.be,
sarah.vandevelde[at]uantwerpen.be

Parents across Europe make use of institutional childcare at very different levels when it comes to caring for young children (younger than three years old). Childcare choices are reflections of the combinations of welfare policies, cultural norms and economic situations (both at micro- and macro-levels). These all affect personal decisions regarding what type(s) of childcare to use: parental care, formal care via institutions, or informal care provided by family members. Drawing on identity theory, parents are likely to experience distress when they do not feel like performing their salient parental role well, that is in accordance with socially defined expectations. Little research examined how childcare choice correlates with parental mental health especially with taking into account the cultural and policy environment. Therefore, in this study, we examined how the use of formal childcare services or informal care may associate with parental well-being in dual earner couples, in the light of country-level variables. Our main resource was wave 2013 of the EU-SILC dataset and we applied multilevel modelling framework. The analysis found that in general, parents who use either formal or informal childcare report lower levels of well-being compared to parents who do not use any of these childcare types. The majority of the macro-level variables proved to be insignificant on the dependent variable. The results suggest that the impact of using formal childcare services on mental well-being has less to do with country-level policies or cultural values than with social status, family situation, and job characteristics.

Family Policy and Forms of Child Day-care in Selected European Countries

Kucharova, Vera; Nesperova, Olga

Research Institute for Labour and Social Affairs, Prague, Czech Republic
vera.kucharova[at]vupsv.cz, olga.nesperova[at]vupsv.cz

The paper focuses on use of childcare for preschool children in selected European states with different models of maternal employment. Comparative approach tries to relate care arrangements with family policy measures. Childcare policies and practices in post-communist countries are compared in the wider European context, i.e. with various European countries representing the principal types of welfare states and family policy strategies. An analysis is based namely on Eurostat data (EU-SILC) and OECD data from Family Database. The used methodology is based on sociological classification methods and scatter plots. Not only do we focus on parental leave schemes, parental employment and formal childcare,

but we also take into account informal childcare, which is crucial to the reconciliation issue in many countries. Our findings revealed that use of formal childcare is not straightforwardly related with neither length of paid parental leave, not maternal employment. Informal childcare, mostly provided by grandparents, is on weekly basis used for at least thirty per cent of preschool children in all post-communist countries under study except Bulgaria. However, similarly high levels of informal childcare were also found in the United Kingdom, Italy and Austria. Gendered moral rationalities based on cultural norms plays an important role in division of childcare in each European state.

RN13_06c | Families in the context of economic problems and crises II

The Intergenerational Transmission of Poverty in Underprivileged families

Schiek, Daniela

University of Duisburg-Essen, Germany
daniela.schiek[at]uni-due.de

This contribution deals with methodological arguments and empirical findings on the intergenerational transmission of poverty in families. In general, it is assumed that in these families there is socialization of specific attitudes and ways of life that result from and reproduce poverty, and which are also transmitted to the children. This implies that there is one-way influence between the generations and the idea that one is "born into" the family as a cultural entity. However, as Mannheim has argued, generations are constantly influencing each other and cultural transmission between them does not come without "communicative work" among the group concerned. Therefore, the cultural milieu of a family can be understood as the result of joint negotiations that can be "animated" and studied, even among adults. So, how do underprivileged families construct themselves as common destinies through "group work"? This was the research question of a qualitative study which was conducted from 2016 to 2018 in Germany and which was funded by the German Research Foundation. The methodology consisted of open intergenerational family interviews and sequential data analysis. A typology was formulated to abstract the results from the individual cases. The results show how heterogeneous the perspectives and action orientations in poor families can be and how much effort it takes for them to create – or to cancel – common ways of life.

Income Pooling and Relationship Quality of Cohabiting and Married Couples

Klusáček, Jan

Institute of Sociology of the Czech Academy of Sciences,
Czech Republic
jan.klusacek[at]soc.cas.cz

Research suggests that cohabiting people are more likely to report less relationship satisfaction than married couples. Marriage improves cohabitators' relationship quality; cohabitations that are not transformed into marriage within a few years experience especially low level of relationship happiness. Roles and expectations in cohabitation are not as clearly defined and broadly shared as they are in marriage; cohabitators must negotiate and actively devise norms. Incomplete institutionalization of cohabitation can lead to conflict and might undermine relationship quality. One of these negotiable norms is household income pooling. Studies in the past indicated that cohabiting couples are less likely to pool their income than married couples. A joint bank account promotes relationship commitment and it increases the costs of leaving the partnership. However, there are only a few studies investigating the importance of joint banking for relationship quality in cohabitation. The aim of this paper is to test the association between income pooling and relationship quality of cohabiting and married couples. The analysis was conducted using the data from the first wave of the Czech Household Panel Survey from 2015. The preliminary findings were indicating that cohabitators were much more often keeping separate accounts than married couples. According to the analysis, keeping separate accounts was the strongest predictor of thoughts about breaking up for both cohabiting and married people. Also, the participants who were not pooling their household income were more prone to having conflicts with their partners. Different income pooling strategies of cohabiting partners on one hand and married couples on the other might be one of the reasons for the overall lower relationship happiness of cohabitators.

Precariousness and Inequality in Families with Children in Spain

Moreno, Almudena (1); Pérez, Antonio Luis (1); Garriga, Anna (2)

1: University of Valladolid, Spain; 2: University of Pompeu Fabra, Spain
almudena[at]soc.uva.es, antonioluis.perez[at]uva.es,
anna_garriga_alsina[at]yahoo.es

Unemployment and job insecurity resulting from the economic crisis have had a great impact in countries such as Spain, especially in vulnerable families with children. The effects are different according to the family structure and the number of children. Analyzing the impact of the recession on the employment situation of those who are parents according to the type of family is of special relevance because the loss of employment and job precariousness has consequences for the wellbeing of their children, in the present (Kalil & Ziolk-Guest,

2005, Stevens & Schaller, 2011, Treanor, 2018) as well as in the future (Brand & Simon Thomas, 2014; Cueto, Rodríguez, & Suárez, 2017; Oreopoulos, Page, & Stevens, 2008; Oshio, Sano, & Kobayashi, 2010). Based on the question of how job insecurity has affected parents with children according to the family situation, this purpose of this study is analyze the evolution during the recession period and subsequent economic recovery, the precariousness of work in the families with children according to type of family, age, educational level and nationality of the parents based on the data from the Living Conditions Survey. The first findings obtained show an increase in labor inequality among the most and least vulnerable families such a single parent families. This has consequences on child wellbeing that will have to be investigated and put into context to define family and child policies that contribute to reducing social inequality.

Configuration Strategies of Social Bond in Greek Society. The Case of Family Bond

Pelekanos, Iakovos; Papadopoulou, Despoina

Panteion University Athens, Greece
ipelekanos[at]yahoo.gr, papadodes[at]gmail.com

Social bond is the basis of a society in order to keep solidarity and social cohesion. However, due to financial problems, social construction of social bond in the Greek society is in doubt nowadays. The fundamental Family bond changed drastically in the Greek society and it seems to be in a new way of configuration having lost its past habits. In this study, we examined the way of configuration of social bond in the Greek society. Specifically, the study examined the configuration strategies adopted by employees due to the flexibility of working relations in order to maintain social bond. In the current presentation we focus on the family bond. In Greece, family has traditionally been one of the main resorts for citizens, however this status seems to change the last decade. Here, we sought to answer what are the differences observed in the Greek family in time of crisis. In addition, we investigated whether the Greek family has limits to help their members. Moreover, we explored the future plans of young family members who face difficulties in the working field. We recruited 45 participants (21 females, MEAN age = 36) and conducted in-depth interviews. Our participants were employees in various working environments and-of varying family status. During the survey, we observed that family in Greece has lost their powerful. For example, in many cases we saw that family cannot assist their members due to the situation of financial, human and social crisis.

The Reasons of Remaining Childless in the Narratives of Women

Rapolienė, Gražina; Gedvilaitė – Kordušienė, Margarita

Lithuanian Social Research Centre, Lithuania
g.rapoliene[at]gmail.com, mgedvilaite[at]gmail.com

Modernization is seen in emphasis of individualization, individual choice, career orientations among women (Beck, Beck-Gernsheim, 2002; Giddens, 1991), as contraception allows controlling reproduction. But research points that cumulative contingencies (over time) and path dependencies (across domains as marriage and occupation) may lead to childlessness without explicit choice (Keizer, 2010; DeOllos, Kapinus, 2002). Based on semi-structured interviews with childless women aged 50-71 (N=21) collected in 2018 in Lithuania (scientific project Childlessness in Lithuania: socio-cultural changes and individual experiences in modern society, Lithuanian Research Council, contract No. S-MOD-17-3), the paper focuses on subjective reasons of final childlessness. As forms of childlessness conceptually often are defined as voluntary, physiological or determined by life course, in accordance to other research (Miettinen et al, 2015; Gray et al, 2013) our data suggests that the distinction is rather complicated. Among life course events, not finding a suitable partner predominates. For these women the possibility of becoming pregnant without long-term partner is unthinkable, and some of narratives illustrate lack of agency, stressing on fate or God's will. Some other interviews reveal complexity of life course events intertwined with other factors, such as out of marriage relationships, growing in one-parents' family, negative effects of upbringing, psychological factors, inheritable illness. For some women fertility was less important than other life choices. The cases combining physiological and life course reasons (such as late marriage and partner's infertility), reveal gendered nature of fertility behaviour: women-blaming discourse, passive men's role during infertility treatment, thus revealing influence of social environment on individual behavior.

One-child Families in the Context of the Two-child Family Norm

Dudova, Radka; Haskova, Hana; Pospisilova, Kristyna; Klimova Chaloupkova, Jana

Czech Academy of Sciences, Czech Republic
radka.dudova[at]soc.cas.cz, hana.haskova[at]soc.cas.cz,
kristyna.pospisilova[at]soc.cas.cz,
jana.chaloupkova[at]soc.cas.cz

Despite prevailing ideal of two-child family across Europe, many countries experience an increase in one-child families alongside the permanently childless. While there are studies on childlessness, one-child families have obtained less attention. Especially in countries where the norm to have a child remains strong, increase in one-child families is more profound. Taking the example of one of such countries, Czechia, we explore one-child families using mixed-methods research approach. Using Census data from 2011 and survey data containing partnership and employment trajectories we explore timing of first birth and characteristics of one-child families. Qualitative analysis of problem-centred interviews with parents of single child who planned to have more children aims at exploring their understanding of processes leading them to having one child. It depicts one-child family as a consequence of events and transitions and their timing in the linked life paths of both partners, and shows that normative ideals of parenthood and parenting as well as work-life balance issues contribute to changes in the intended family size to one child. Findings suggest the importance of external conditions, internalized norms and sequential childbearing decision-making for understanding the increase of one-child families.

Childbearing Postponement And Increasing Use Of Assisted Reproduction

Kocourkova, Jirina; Stastna, Anna; Sidlo, Ludek; Burcin, Boris

Charles University, Czech Republic
koc[at]natur.cuni.cz, anna.stastna[at]natur.cuni.cz,
ludek.sidlo[at]gmail.com, boris.burcin[at]gmail.com

Postponement of childbearing makes up one of the main reasons for the increasing use of assisted reproduction (ART) which, conversely, may well be one of the factors contributing to the increase in the female childbearing age. ART use widely varies among European countries. The Czech Republic belongs to the countries with relatively high proportion of children born following ART (3.5%). The first aim is to estimate the impact of ART on past and future fertility trends in the Czech Republic. Available data from the National Register of Assisted Reproduction showed that the importance of ART increased simultaneously with an increase in the TFR until 2009. According to forecast, an increase in the percentage of ART live births by 2050 can reach up to 12.2 % assuming an increasing percentage of smoothed and adjusted values of ART fertility rates and low variant of fertility development. The second aim is to estimate the economic cost of childbearing postponement with respect to the health care system. The Czech Republic has been facing increasing costs in the health care system due to the increasing number of women giving birth at older ages. We will specify all the costs using data from the largest Czech health insurance company. When the age-specific cost are calculated the public funding of live births following ART and naturally conceived will be compared.

Postponing Children: Social Practices and Ethics of Reproduction

Jamieson, Lynn; Lebano, Adele

University of Edinburgh, United Kingdom
L.Jamieson[at]ed.ac.uk, Adele.Lebano[at]ed.ac.uk

This paper explores the value of applying social practice theory to the study of fertility and considers whether the threat of climate change is refashioning an ecological ethics of reproduction. It draws on an interview study of women and men aged 30-35 recruited from cities in two low-fertility nations (Italy, Spain) and one less so (UK). Research participants have contrasting configurations of educational qualifications and employment security. A social practice theory approach adds another dimension to current explanations of low fertility. These include a focus on postponement in having a first child as a consequence of the particular difficulties for women of combining work and family life that are most acute in national contexts that continue to support traditional gender regimes rather than work to mitigate or remove the 'double burden'. The idea of different contexts providing different levels of support for the elements that enable postponement as a social practice is explored. Discussion includes reflection on the limited extent to which research participants have a sense of their children's future as

blighted by climate change and how this impacts on their own ethics of reproduction.

RN13_07b | Work-family balance and work-family conflicts III

Work-Family Balance Policies And Gender Role Attitudes: Evidence From European Countries

Crespi, Isabella (1); Israel, Sabine (2); Lomazzi, Vera (3)

1: University of Macerata, Italy; 2: GESIS – Leibniz Institute for the Social Sciences, Cologne, Germany; 3: GESIS – Leibniz Institute for the Social Sciences, Cologne, Germany
isabella.crespi[at]unimc.it, Sabine.Israel[at]gesis.org, vera.lomazzi[at]gesis.org

Gender equality is related to work and family issues because the traditional expectation that women will be responsible for their children can be a significant barrier to women's employment opportunities, contributing in the perpetuation of the gendered division of labor, power and roles. What is the effect of work-family balance policies, inspired by the gender mainstreaming perspective, on the individual support to gender equality? This study relies on the assumption that the context of opportunities provided by work-family balance policies affects the individual attitudes towards gender roles, considered as indicators of the individual support for gender equality. Compared to previous research, the study adopts a more articulated definition of opportunity structure, which includes the national income level and social norms on gender attitudes, measures of gender mainstreaming policies implemented at the company level (flexibility), and different work-family balance policies in support of the dual earners/dual caregivers family model (parental leave schemes, childcare provisions). The effects of these factors are estimated performing multilevel analysis. Gender role attitudes and micro-level controls are taken from the Eurobarometer for all 28 members of the EU, while the macro-indicators stem from Eurostat, European Quality of Work Survey, and OECD. Our results show that both institutional and workplace arrangements supporting the dual earner/dual caregiver family model increase egalitarian gender role attitudes by broadening the choice of men and women for care and paid work and a combination thereof. This is particularly true for the availability of formal childcare for 0-3 year olds, among the institutional factors, as well as the flexibility of the work schedule, among the work-place factors.

Motherhood and Fatherhood in the 21st Century - In Search of Orientation and a Consistent New Gender Order

Lück, Detlev; Dechant, Anna; Ruckdeschel, Kerstin; Diabaté, Sabine

Federal Institute for Population Research (BiB), Germany
detlev.lueck[at]bib.bund.de, anna.dechant[at]bib.bund.de,
kerstin.ruckdeschel[at]bib.bund.de,
sabine.diabate[at]bib.bund.de

This paper empirically investigates and theoretically reflects the current state of change of mother and father roles, identifying a conflict between diverging expectations for both, women and men. Analyses include fixed-effects regression, based on the two-wave panel-study "Familienleitbilder" (2012, 2016) in Germany. Theoretical reflections take Germany as a case study with similarities to several other late modern societies in Europe. After decades of decline of the male breadwinner model, still no consistent arrangement has been established that would, at the same time, be culturally accepted, institutionally supported and effectively allowing the reconciliation of paid work and care work for both parents. Subjective attitudes strongly favour a gender-equal division of responsibilities. At the same time, young adults perceive strong normative expectations to live up to gender roles of the mid 20th century: being full-time available for the child, as a mother, or providing enough income to support the family, as a father. Particularly for childless adults and young parents, the perceived expectations are overburdening and impossible to realise. This holding on to "old" expectations, while already welcoming "new" ones, is causing stress, frustration and disorientation. It is in line with and presumably mutually causally related to the institutional support that has expanded, but is still far away from allowing gender-equal forms of reconciliation. Following Birgit Pfau-Effinger's theory of gender arrangements, it can be assumed that the German cultural-institutional arrangement of organising paid work and care work is in transition and has not yet transformed into a new consistent model.

Designing Individual Parental Leave for Fathers-Promoting Gender Equality

Kvande, Elin Christine; Brandth, Berit

Norwegian University of Science and Technology, Norway
elin.kvande[at]ntnu.no, berit.brandth[at]ntnu.no

Family policy is seen to be one of the most active fields of social policy in Western welfare states (Daly, 2011; Matzke & Ostner, 2010), and incentives to draw men towards life courses with more care responsibilities are high on the agenda (Ray, Gornick, & Schmitt, 2010; Wall & O'Brien, 2016). Research on social policy in European welfare states has increasingly focused on the norm of individualization, implying that family policy is focusing on individual family members, especially when gender issues are on the agenda (Lewis 2001, Matzke and Ostner, 2010). Based on the long experience with having an individual fathers' quota as part of the parental leave system in Norway, the paper will analyze how this works in order to promote gender equality. The use of the father's quota over the years shows that it has been successful as a measure to get fathers to take parental leave. After the father's quota was introduced, there was a dramatic increase in the proportion of fathers who took leave the following years, from 4% in 1993 to 85% in 2000. The Norwegian experience with a special fathers' quota is that taking leave has become a norm for what men do when they become fathers. In order to understand why the quota works so well, the paper will address the following research question: How do the design elements of the fathers' quota work in order to promote gender equality? The paper is based on a qualitative interview study from 2011 and 2012 with Norwegian fathers who had used the fathers' quota.

RN13_08 | Family planning and fertility II

Prenatal Feminization Of Parenthood: An (Online-)Ethnography Of German Birth-Preparation Classes And Pregnancy Forums

Zillien, Nicole (1); Müller, Marion (2); Gerstewitz, Julia (1)

1: University of Giessen, Germany; 2: University of Tübingen, Germany
nicole.zillien[at]sowi.uni-giessen.de, marion.mueller[at]uni-tuebingen.de, Julia-Christine.Gerstewitz[at]sowi.uni-giessen.de

In our paper we analyze the transition to parenthood in Germany, where childcare still is primarily considered the responsibility of the mother and where – in comparison to other European countries – the rate of part-time working mothers is very high. We assume, that in the prenatal phase female parents-to-be are undergoing dramatic changes not only in their physical being but especially in their (self-)perception and social categorization. Therefore, in our qualitative analysis we focus on two established institutions in the prenatal phase: on birth-preparation classes (led by midwives) and pregnancy forums online (mainly consisting of posts by mothers-to-be). Our (online-)ethnography shows that birth-preparation classes and pregnancy forums highlight differences between men and women as well as between women and mothers, interconnect these differences with gendered attributions and legitimize them through naturalization. We can show, that in the classes as well as in the forums potential childbearing and breastfeeding abilities of women are “extended culturally” (Goffman 1977: 313). Overall both institutions imply the notion that the primary responsibility for a child naturally lies with its mother. Thus, communication in German birth preparation classes and pregnancy forums accelerate gendered attributions to parents as early as in the antenatal phase and thereby function as institutions strengthening a process of regendering and retraditionalization.

Defying the Norm of Ideal Parenthood – Single Mothers by Choice

Sevón, Eija Mirjami

University of Jyväskylä, Finland
eija.sevon[at]jyu.fi

Across Europe, countries are attempting to address the challenges facing women and men who want to form a family. Reproductive justice refers to individuals’ autonomy over the choice of whether to have a child and be a parent to that child. This ongoing study draws on this novel concept of reproductive

justice to address the questions, “Who is entitled to have a child?” and “How do the changing and contested meanings of children, childhood and parenthood contribute to the choice to have a child?” The study is a response to the call for a more comprehensive and integrated approach to the multifaceted issue of equality in the possibility to form a family. The heterogeneity, discrepancies and inequalities underlying family formation are addressed from the perspective of Finnish mothers who have chosen to bring up their children alone. The data comprise accounts produced in narrative interviews by self-identified single mothers on the possibilities and constraints they faced in choosing to have a child, and the value and the meanings they attribute to having a child and being a parent in Finland. The mothers’ personal narratives reveal diverse societal and cultural ambiguities and dilemmas related to wanting a child, making the decision to go ahead and form a family without a male spouse, the timing of motherhood, single motherhood as a selfish decision, the use of ART, and raising a child without the father.

Family Planning and Unplanned Postponement of Childbearing

Stastna, Anna; Slabá, Jitka; Kocourková, Jiřina

Charles University, Czech Republic
anna.stastna[at]natur.cuni.cz, jitka8slaba[at]seznam.cz, jirina.kocourkova[at]natur.cuni.cz

Childbearing postponement constitutes a key demographic change that has been experienced by most European countries. One of the countries that experienced the most dynamic changes in the age profile of fertility is Czechia. There is a vast body of literature dealing with the reasons for family planning to an older age, however, childbearing postponement can also be the result of failure of the original individuals’ plans. Research shows that in Czechia nearly a third of women who carried out the transformation of reproductive behaviour towards an older age pattern indicated that their first child was born or would be born later than they had originally planned. In this paper, the unplanned postponement of both first and second births is analysed since the two-child family constitutes the most common family model in Czechia. We analyse the reasons behind women postponing childbirth to later ages than originally planned and the effects of the various factors behind this unplanned postponement on the length of the birth interval. Employing survey data, we focus on the individual level of fertility postponement and the main emphasis is placed upon subjective interpretations. The Czech survey “Women 2016” (N=1257 women born 1966-1990) includes information on childbearing plans and timing, the subsequent realisation of these plans and reasons for timing plans not being fulfilled. Factor analysis is used to assess reasons for the unscheduled delay in childbirth and Kaplan-Meier survival curves are employed when analysing how the initial unplanned childbirth postponement influenced second birth timing.

Becoming a Mother in Adolescence: The Role of Social Inequality, Sexuality Education and Men

Tretjakova, Vaida; Šumskaitė, Lina;
Ubarevičienė, Rūta; Pociūtė-Sereikienė,
Gintarė

Lithuanian Social Research Centre, Lithuania
vaida.tretjakova[at]gmail.com, lina.sumskaite[at]gmail.com,
ruta.ubareviciene[at]gmail.com,
gintarei.pociutei[at]gmail.com

Adolescent fertility rate (AFR) in Lithuania is 2-4 times higher than AFR in the countries of Northern and Western Europe. Furthermore, there is a high degree of regional differentiation within the country – AFR is significantly higher in peripheral rural regions and lower in the municipalities of major cities. In this paper we aim to investigate the reasons behind the spatial differentiation of adolescent fertility and explore subjective experiences of teenage motherhood in peripheral regions of Lithuania. Following recent literature about the determinants of adolescent fertility (Lindberg et al. 2012; Santelli et al. 2017) we focus on the effect of structural socio-economic inequalities and sexuality education. Additionally, we examine the role men play in this process. We employ a mixed methods approach. Firstly, we apply mathematical-statistical geo-analysis on fertility data (vital statistics on births to mothers aged 15-19). Secondly, we analyse semi-structured interviews conducted in districts with high AFR: 20 interviews with girls who had their child(ren) in adolescence and 24 interviews with social workers, schools' representatives, public health specialists. Our analysis indicates that the state "fails" Lithuanian teenage girls in rural areas at every step of their transition to adulthood and motherhood: social and economic security of children is not insured (most teenage mothers come from socially and economically deprived families); sexuality education in schools is inadequate, often focused on engraining negative attitudes towards abortion; there is no special provision or support for teenage mothers after the child is born. Research project "Spatial differentiation of adolescent fertility in Lithuania: socioeconomic environment, the role of sexual education and individual experiences" (financed by the Lithuanian Research Council, contract No. S-MIP-17-115).

Pasts, Presents, Futures: Exploring Young People's Contraceptive Work in Sweden

Larsson, Marie Johanna

Lund University, Sweden
marie.larsson[at]soc.lu.se

Reproductive inequality persists as long as contraceptives are constructed as women's work, issue and responsibility. While certain aspects of contraceptive use have been explored, such studies tend to ignore many aspects of what it means to be a contraceptive user responsible for planning, implementing and negotiating contraceptive use in everyday-life; that is, doing contraceptive work. As such, my research aims to expand the understanding of what it means to be a contraceptive user, what this contraceptive work entails and how it is constructed and stratified by gender, sexuality, ethnicity/racialisation and other categories of difference. Drawing on my previous research, I suggest that contraceptive work might best be understood as a multi-faceted endeavour made up of several intersecting forms of work, namely: physical, practical, financial, social/relational, emotional and knowledge. Through this empirical study, which centres on young people's experiences of being contraceptive users in Sweden, I aim to one, produce a new theoretical framework for understanding the various and intersecting dimensions of contraceptive work and two, work towards the creation of a radically different, more equal and fair reproductive landscape.

From Childhood to Adulthood? Ethnic and Socio-Cultural Patterns and Results of Having Children at a Young Age

Szabó-Tóth, Kinga Dóra

University of Miskolc, Hungary
szabo.toth.kinga[at]gmail.com

In my paper I focus on the question of having children at a young age. I examine the phenomenon from a sociological point of view with a special focus on Europe. I analyze the ethnical dimension of this behavior, examine its reasons and individual and social consequences. I put a special emphasis on the consequences of having children at a young age (especially in segregated Roma communities) on the status of women. Having children is a step from childhood to adulthood and has a role in building an adult social identity but also contributes to the replication of poverty and exclusion. In order to analyze the phenomenon I apply the models developed by Coleman, Lewis, Kelly, Stack, Gyukits, Durst, Lazarsfeld, Gyenei, Husz and others. The research is based on 30 qualitative interviews with Roma women living in segregated environments in 5 settlements in the North Hungarian region and is complemented by additional fieldwork and focus group interviews. Besides the models already mentioned I also use the work of Lazarsfeld et al. (1929) on remedial strategies in Marienthal. By doing so, I present my results from a socio-political aspect as well – touching upon the social policies and dilemmas labeling certain behaviors and creating desired and expected behavioral patterns. Therefore my presentation focuses not only on the ethnic specificities of such behavior but also the resulting stigmatization in which having children at a young age leads to social exclusion. The Hungarian cases are compared to the behavioral patterns of having children in other Roma/Gypsy communities of similar socio-cultural status in other post-socialist countries (primarily Slovakia and Romania).

Heterogeneous Causal Effects of Early Fertility Timing on Mid-life Mental Health: Evidence from the 1970 British Cohort Study

O'Flaherty, Martin; Kalucza, Sara

University of Queensland, Australia
m.oflaherty[at]uq.edu.au, s.kalucza[at]uq.edu.au

A large literature documents detrimental consequences of early entry into parenthood, for the future life chances of parents and children. However, almost all studies assume that the effects under study are homogeneous, or at best acknowledge the potential for heterogeneity before proceeding to estimate average effects. The assumption of effect homogeneity is useful in simplifying the estimation problem, but is unlikely to hold in most practical applications in the social sciences – individuals differ in a great many ways, and it is therefore unrealistic to assume that they should all

respond in the same way to a given event or intervention. Small average effects fail to identify segments of the population where detrimental effects are large, while hiding segments of the population where early parenthood may be unproblematic. Understanding how the responses to alternative fertility timings differ within a population is imperative when planning prevention and intervention efforts, as it helps us better understand when and for whom early parenthood is an issue. Diaz and Fiel's (2016) recent work provides evidence that the effects of teen pregnancy are heterogeneous with respect to socio-economic outcomes in early adulthood, however no previous study has investigated heterogeneous effects of fertility timing on mental health outcomes. In this paper we use Bayesian Additive Regression Trees (BART) to model individual-level causal effects of early- and late- first births on mid-life mental health outcomes, drawing on data from the 1970 British Cohort Study. As a method for estimating causal effects from observational data, BART has a number of compelling advantages over commonly used competing methods, including the ability to estimate the full sample distribution of the conditional average treatment effects (CATE).

Parity Specific Fertility Transitions in Europe

Panova, Ralina

Federal Institute for Population Research, Germany
panovaralina[at]gmail.com

This study explores parity specific fertility transitions and individual sociocultural factors in ten European countries. It aims to identify the gender specific motivations for the birth of a first, second and third child. Following the Theory of Planned Behavior and Value of Children Approach, we assume sociocultural factors as crucial to discover the specific rationalities behind births of different order. Using panel data stemming from the Generations and Gender Survey (GGS), we analyze the transition to first, second and third child within a period of three years, based on men and women aged between 18 to 45 years old. The main explaining variables are attitudes towards children that are differentiated into anticipated costs and utilities of children as well as social norms. Multivariate analyses demonstrate that social pressure matters for all births and both sexes, which go in line with the previous research. Furthermore, our results show considerable gender effects as costs are relevant to men only when it comes the first child birth. For women on the other hand, subjective costs impact the birth of a second child significantly, which reflects the costs faced by women, particularly in deciding to have more than one child. While the first and second child is less influenced by intergenerational transmission, this social norm seems to be decisive for the birth of the third child, especially for men. Overall, this study provides new insights into the link between sociocultural factors on the one hand and formation and enlargement of families on the other. Further steps of this work of progress are the analyses of different countries and an attempt of country groupings in order to identify cross-national differences.

A Cohort Perspective on Traditional Gender Stereotypes in Countries of The Former Czechoslovakia: A legacy of Soviet-style Women's Emancipation?

Matejková, Alexandra

Slovak Academy of Sciences, Slovak Republic
alexandra.matejkova[at]savba.sk

The paper focuses on transformations in perception of gender-based roles of women in post-communist countries using the example of Slovak and Czech Republics. Women's employment and women's emancipation affect not only the labour market but family life as well. Eastern Europe, and the countries of the former Czechoslovakia in particular, have experienced several decades of high labor market participation of women. This was a result of a duty imposed on women - aimed at increasing the wealth of the countries - not of a choice directed at gaining economic independence. During communism, women in the former Czechoslovakia grew up in a situation where high labor market participation of women and two-career family was the norm. The emancipation of women was expressed not as a right to work but as a "duty to work". Becoming a housewife was not a real option. Against this background, we ask whether women socialized during communism have a different view on their gender roles and careers than women who grew up after its demise and whether this gap is diminishing 30 years after the fall of the Iron curtain. Our results, based on data from four waves of the European Values Survey, point out an interesting feature of the post-communist societies of the former Czechoslovakia – a turn to traditional values. Slovak and Czech women seem still fascinated by their traditional roles of a wife and a mother and have ambiguous attitudes towards their occupation and professional careers.

“His Illness, His Needs – This Is My Life” – Familial Ties and Women's Self-Exclusion

Taranowicz, Iwona Janina

University of Wrocław, Poland
iwona.taranowicz[at]uwr.edu.pl

In the past the family was a “community of needs” held together by an obligation of solidarity. Rather than individual goals and purposes, common goals and purposes were the most important. However, contemporary families are a

creation of individual choices and negotiation. The obligation to give support is not obvious, and commitment is negotiated. In Poland though, social pressure on family members and their obligations to give help and care is still strong. So if relatives are ill, is caring for them still a duty? The results of individual, semi-standardized interviews conducted with 67 family caregivers do not give a clear answer. The call of duty still exists, but it is the result of personal feelings and internal criteria, not social pressure. The outcomes show the importance of emotional ties; these are the main sources and the basic grounds for attention and caregiving. Empirical data confirm that women are the primary caregivers in families. Among this study's participants, 89,7% are women. Almost half of them claimed that their lives are subordinated to the ill relative, other claimed that the illness completely changed their lives. The illness limits their activities and eliminates them from different dimensions of social life, including the labour market. While such caregiving is an obligation, taking on that obligation is their choice. They do it for relatives whom they love. However the cost of this choice is huge, emotionally, socially, professionally, and financially.

Capturing a Changing Gender Dynamics: A Comprehensive Analysis of the Division of Household Labour in Post-transitional Croatia

Tomić-Koludrović, Inga (1); Puzek, Ivan (2); Petric, Mirko (3)

1: Institute of Social Sciences Ivo Pilar, Croatia; 2: University of Zadar, Croatia; 3: University of Zadar, Croatia
inga.tomic-koludrovic[at]pilar.hr, ipuzek[at]unizd.hr, mpetric[at]unizd.hr

The subject matter related to gender, care and work has remained relatively understudied in the successor states emerging after the breakup of socialist Yugoslavia (except for Slovenia, which has had a different post-succession trajectory). What evidence exists in other post-Yugoslav countries indicates that the participation of men in routine household labour has increased in relation to the socialist period. However, the indicators used so far have been rather crude and have resulted in primarily descriptive accounts. This paper represents an attempt to gear the discussion towards a more complex analysis within the family context, allowing for a better understanding of the changing gender dynamics in post-transitional Croatia. The analysis is based on data from a nationally representative survey conducted in 2018 within the Croatian Science Foundation funded project on gender modernisation (GENMOD - HRZZ 6010). Determinants of housework gender distribution were simultaneously analysed on the level of household members (i.e. individuals) and on household level using a hierarchical regression model. The findings strongly suggest that there are significant predictors of housework share both on the individual and the contextual level. The introduction of previously unused categories has revealed that men tend to engage in routine household work more on an “occasional” basis and that the same goes for women who increasingly perform traditionally “male” chores.

Convergence towards a Dual Earner Model? Contrasting changes in family-related attitudes and family policies across Europe

Braun, Simone; Hofäcker, Dirk

University of Duisburg-Essen, Germany
simone.braun[at]uni-due.de, dirk.hofaecker[at]uni-due.de

One aim of the “Europe 2020” agenda has been increasing women’s employment across Europe. Implementation of this aim rests on two basic preconditions: (i) the normative acceptance and (ii) the promotion of women’s employment through work-family-reconciliation policies. Our paper investigates how far European countries have progressed in meeting these dual challenges in a three-step design: First, using data from the International Social Survey Programme 1988, 1994, 2002 and 2012 for up to 22 European countries, it reconstructs long-term trends in the acceptance of women’s employment as well as the desired type (full- versus part-time). Aggregated results suggest that there has been a move from a traditional breadwinner orientation towards a dual earner model, though with cross-national variation in the speed and magnitude. Convergence in attitudes towards women’s employment thus is paralleled by persistent cross-national differences. Second, we decompose attitudinal trends by socio-demographic indicators including gender, age, education, employment and family status. Applying regression allows us investigating which nation-specific social groups have been the frontrunners and the laggards in the attitudinal trends. Third, we contrast attitudinal patterns with shifts in public reconciliation policies, such as child care services and family-related leave schemes, using institutional data sources. This systematic contrast allows us investigating whether countries where reforms in reconciliation policy have been most profound are also those where attitudes have changed most comprehensively. Are there countries where public policies actually “lag behind” manifest attitudinal changes? And, vice versa, are there countries where public policies have run ahead of rather modest changes in employment-related attitudes? The paper closes with a critical assessment of the promotion of women’s employment across Europe and potential challenges for its future convergence.

Increasing Rates Of Caesarean Section Influence The Current Generations Emotionally

Brock, Inés

MEU Multiversität - Studienzentrum der Diploma, Germany
inesbrock[at]hotmail.com

Birth is one of the most emotionally charged events in family life. Mother and child, father and siblings – they all were

RN13 | Sociology of Families and Intimate Lives

influenced by the manner in which the process of birth is experienced by each of them. Physiologically influenced power on the one hand and loneliness and powerlessness on the other hand. Mothers in delivery could get to know with both sides of behaviour in clinical settings. Especially the raising rates of caesarean section could cause a critical view of practises in hospitals. The individual perception indeed affects the emotions during being in labour and under giving birth. For the baby too it makes a difference how the birth is finished and how are the mother ‘s feelings meanwhile. There are many scientific results argue for the lifelong consequences and psychological effects on mother and child and also the complete family. And finally we do not know prospectively what impacts for the future generation will be expected. The paper collects the outcome of a qualitative case study with interviews of fathers and mothers. The favoured interest focused on further expectations that depends on experiences the infants have from a developmental point of view.

Procreative Boundaries: Gay Men Navigating Surrogacy

Norton, Wendy

De Montfort University, Leicester, United Kingdom
wnorton[at]dmu.ac.uk

Gay men are increasingly using surrogacy to create biologically related families, yet little is known about how the socio-cultural context shapes UK resident gay men’s experiences. These data are drawn from a wider exploratory, qualitative study based on an interpretivist epistemology. The study explored the factors that influence UK resident gay men’s desire and motivation for parenthood, why men choose surrogacy over other family building options and their experiences as they navigate the surrogacy journey. Semi-structured interviews were undertaken with 21 gay men who had undergone surrogacy arrangements in the UK, USA and India and 15 key stakeholders (surrogacy organisations, legal and regulatory agencies, and healthcare professionals). Data were analysed using thematic analysis informed by concepts of procreative consciousness, procreative responsibility and procreative boundaries to analyse gay men’s meanings and experiences as they pursue surrogacy. Gay men face unique challenges in family formation, many of which are largely absent for other intended parents accessing reproductive technologies. They need to navigate, a range of boundaries: social, relational, institutional, and legal, which constitute a series of potential barriers to achieving parenthood. A focus on procreative boundaries highlights the importance of the socio-cultural, confines within which procreative consciousness and responsibility are enabled, shaped and enacted. The presentation analyses these boundaries and discusses the ways in which dominant discourses of family and kinship accentuate existing inequalities and reproduce practices based on heterosexism and gender bias within the realm of surrogacy.

Parental Desires and Intentions of Czech Gay, Lesbian and Bisexual Men and Women

Vohlídalová, Marta; Maříková, Hana

Institute of Sociology Academy of Sciences of the Czech Rep., Czech Republic
marta.vohlidalova[at]soc.cas.cz, hana.marikova[at]soc.cas.cz

The desire and intention (DI) to remain childfree for life is still marginal among young people in CEE. Late modernity brought about noticeable changes in the private sphere, interrelated with diversification of relationship, parental and family models. Similarly, changes in the realm of sexuality have occurred, including changes towards partner relationship(s) of and parenting by non-heterosexual people. At the same time the parenthood has been constructed as fundamentally heteronormative, thus marginalizing family models that deviate from the dominant norm. In the CR, as well as in other CEE countries the aforementioned changes appeared much later than in the Western countries which are the object of the majority of LGBT research. While the same-sex partnerships, legalized 10 years ago in the Czech Rep., have become socially accepted in the country, the adoption of (step)children by same-sex couples hasn't been legalized yet and the heteronormativity regarding parenthood is still strongly promoted and accepted in the society. There are only a few studies of parental DI among LGB people with the view to understanding how they are shaped, what influences them in the context of CR. The paper focuses on conditions and factors influencing parental desires and intentions of LGB people in the context in the CR. It asks: What are the DI among the LGB population and what factors explain the different parental DI and attitudes toward parenthood among the LGB population? What are the main barriers and obstacles to parenthood perceived by different groups of LGB people? The findings are based on a unique survey on a representative sample of 400 LGB respondents aged 25–45 conducted in 2019 in the CR.

Sperm Donation, Fertility Treatments and the Constitution of Single Mothers by Choice

Lechtman, Zohar

Independent Researcher and Consultant, Zohar Lechtman, practitioner, Israel
zoharlechtman[at]gmail.com

Much of the work on single mothers by choice has focused on managing life as a new form of a female headed family. In this paper I ask if and how does the reproductive process involved constitute a gendered self that challenges traditional notions of single motherhood. Based on about forty in-depth interviews with Israeli single mothers by choice, and follow-up on social media, I suggest that conformity to hegemonic reproductive femininity allows single women to erode some aspects of hegemonic images of family and motherhood. Prospective single mothers by choice are the fastest growing clientele of sperm banks and fertility clinics in Israel, a society

known for its high demand for children, marital rates, and availability of reproductive technology. Interviews suggest that reproduction, fertility and infertility are central to the constitution of single mothers by choice as individuals and a group, and to distinguish themselves from other single parent families. The choice of donor on the one hand, and the sometimes long, demanding, and frustrating fertility treatments on the other, reinforce a sense of independent, proactive, successful single mother of successful family. Fertility treatments draw support and admiration from their immediate environment. Being sperm bank clients also serves as basis, thus far the only basis, for political organizing. Their experience is a source of legitimacy and power to erode hegemonic images of single womanhood and motherhood, but only within the limits of individualized commitment to reproduction.

Polish Fathers on Parental Leave. Motivations and Experiences

Suwada, Katarzyna

Nicolaus Copernicus University, Poland
k.suwada[at]umk.pl

The aim of this paper is to analyse the experiences of Polish fathers who decided to take at least two months of parental leave. In Poland the system of parental leaves is oriented on mothers. Only in 2013 gender-neutral parental leave was introduced. It is 32 weeks long and can be used after using 20 weeks of maternity leave. Yet the policy-makers did not decide to introduce any mechanism, for example "father's quota", enhancing men to actually take the leave. Consequently in 2016 only 1% of leave recipients were men. In this paper I concentrate on experiences of fathers who decide to take at least two months of parental leave and their partners. Their motivations and everyday life arrangements are described in the context of broader attitudes of Polish parents to an idea of gender-neutral parental leave and father's quota. My analysis is based on 52 interviews conducted with Polish parents with different social and economic backgrounds. Interviews were conducted in 2017 and concentrated on work-life balance strategies, yet some questions concern the issue of men's taking parental leave. There are 12 interviews conducted with fathers who were on the leave and their partners. The analysis shows that experiences of these men are highly positive, even though they need to struggle sometimes with negative comments from others, especially their employers or co-workers. They are still exceptions in a society, which generally do not understand the idea of fathers taking longer parental leave and perceive care work as women's obligations.

Researching Family Practices and its Generational and Gendered Dimensions with a Qualitative Multi-Method Design – Methodological Considerations.

Mikats, Jana

University of Graz, Austria
jana.mikats[at]uni-graz.at

Scholarly discussions and concepts in family research have shifted since the so-called “practice turn” (Schatzki et al. 2001) to the everyday life and the understanding of families as a quality or practice (Daly 2003, Morgan 1998). Although this approach has opened the perspective on overlaps with gendered and generational practices (Morgan 2011), scholars have not adequately interrelated family practices to childhood or gender studies (Helfferich 2017, Honig 2018). My project aims to examine family life from a broader perspective in order to acknowledge its generational and gendered dimensions. In this paper, I am going to firstly give insight on how these various aspects of family practices can be examined by a multi-method design and secondly point out the benefits and limitations of these approaches. The contribution draws on a fieldwork that I conducted with ten families (38 family members including 14 children, aged 4- 10) in Austria from March 2018 to February 2019. For data gathering, I applied a variety of qualitative methods and techniques: problem-centered interviews, auto-photography, socio-spatial network game and the observation of daily routines (shadowing). This multi-method design meets the different perspectives and needs of the involved participants. Furthermore, it allows capturing various aspect of everyday family life and the conceptual focus on family practices (and not solely on specific family members). However, the access to and the research of family life was a gendered process and partially controlled by adults (e.g. willingness and degree of participation). This consequently reflects in the data and must be under consideration in further research processes.

The Social Meaning of Time in Family with Children: The Case of Russian Large Families

Goleva, Mariia

Saint Tikhon’s Orthodox University, Russian Federation
m.goleva[at]mail.ru

The research represents an attempt to expand the dominant logic of time interpretation in family studies. In the majority of studies time is defined as a resource and a universal unit of measurement, as each action could be estimated in days or hours. [Becker 1965; Gershuni 2000; Barker 1999; Schultz 1986]. However, by analogy with the works of V. Zelizer on social meanings of money [Zelizer 2002; 2004], we can talk about the “multiplicity” of social time. Moreover, such interpretation presents in several sociological and anthropological studies in which numerous kinds of time were

described [Bryson 2011; Adam 1990]. In this work types of time, their contents and social meanings in family were considered on the example of large families: 17 in-depth interviews with parents who have many children were analyzed. The choice of parents with three and more children as an object of the research was determined by an assumption that time-related issues faced by all families with children appear brighter in large families. The interviews were conducted in Moscow, Vladimir and Arkhangelsk in 2016. As the result of the research, several meanings of time were identified: institutional time, gender (male and female) time, interpersonal (time for yourself; parental time; family time; children’s individual time), ethical time and a separate category “discourse of time” (it shows what informants say about time, mostly about their strategies of coping with unpredictability). Such view on intra-family processes contributes to a better understanding of the complex reality of family life.

In The Name Of The Father: Patrilineal First Names Transmission During The First World War

Coulmont, Baptiste (1,2); Todd, Nicolas (3,4)

1: Université Paris 8, France; 2: CRESPPA, CNRS, France; 3: Max Planck Institute for Demographic Research, Rostock, Germany; 4: Centre Roland Mousnier, Sorbonne Université, France
baptiste.coulmont[at]cnrs.fr, todd[at]demogr.mpg.de

The choice of first names is known to depend on family structure. The transmission of names from one generation to the next is higher in high density families, and on the contrary the choice of new names is linked to higher individualism. In the context of social disruption, first names can also inform on individual attitudes toward events. The First World War was a time of high family disorganization in France, characterized by the unexpected and hasty separation of couples followed by extreme uncertainty on male partner’s survival. Based on a genealogical dataset of 5,4 million records for individuals born from 1905 until 1925, we investigated the rate of patrilineal first name transmission during the conflict. We found that during the first year of the War the rate of patrilineal transmission nearly doubled for both male and female offsprings. Our exploratory analysis further suggests that this perturbation of the rate of transmission (1) occurred as soon as the future fathers left for combat, but before the first military engagements, (2) is correlated to the level of risk experienced by the father (higher for infantry compared to artillery, lower when the father was too old to be mobilized in a fighting unit), (3) is highest when the father died before the birth of his child, (4) is higher in areas where the war strongly impacted daily life (near the front line). A higher transmission appears then to be a reaction to unanticipated large-scale social perturbations and a reaction to localized family disruption.

Bringing Women on Board? 'Women-Friendly' Welfare States and Gender Balance in Top Jobs

Kowalewska, Helen

University of Southampton, United Kingdom
h.r.kowalewska[at]soton.ac.uk

Welfare states enable women's employment through the family policies they provide and the jobs they create. Hence, researchers, the press, and politicians hail Scandinavian societies as a gender equality 'paradise' and a role model for the UK due to their generous public sectors. Yet, Mandel and Semyonov (2006) identify a welfare state 'paradox': 'women-friendly' social policies also make it harder for women to progress to managerial roles. However, missing from existing research is a consideration of how welfare states shape women's access to the very top board and executive positions specifically. This distinction matters because women in top management are best placed to effect organisational changes (e.g. occupational childcare, sexual harassment training) that can help lower-earning women to reconcile employment and care and secure their financial wellbeing as well as their body rights (Kowalewska, submitted). To contribute to filling this gap, this paper analyses the relationship between women-friendly state interventions and gender balance in top-management positions across 17 OECD countries via a Qualitative Comparative Analysis (QCA). The latest data reveal that women's access to board positions is accelerating in the Nordics but stalling in liberal economies like the UK; hence, other factors (e.g. gender boardroom legislation) potentially 'offset' the negative effects of women-friendly policies on women's occupational advancement. QCA can illuminate if this is the case, as it treats cases as 'wholes', focusing on how conditions combine with each other in producing an outcome. Data will come from the International Social Survey Programme, the OECD, the World Bank, and Deloitte. In turn, the analysis can illuminate whether women-friendly state interventions always come at the price of women's access to the most powerful jobs.

Light and shadow in gender inequality policies. The case of the Italian Affirmative Action

Farina, Fatima (3); Carbone, Domenico (1); Dagnes, Joselle (2)

1: University of Eastern Piedmont Italy; 2: University of Turin Italy; 3: University of Urbino Carlo Bo Italy
fatima.farina[at]uniurb.it, domenico.carbone[at]uniupo.it, joselle.dagnes[at]unito.it

Among the changes that have affected the European societies in recent years, some focused on reducing the gender gap, specifically through affirmative action for the under-represented gender in the economic sphere as well as in politics. However, within the theoretical debate on gender quotas somebody considers them as a necessary instrument to promote the substantive representation of women. On the other part, it is the opinion of whom consider as not automatic this relation, both upstream – because of the selection mechanisms that favour women who already belong to élite groups – and downstream, because the mere physical presence of women does not exhaust the problem of gender representation. Moving from this scenario, the paper aims to contribute to the debate analysing the impact and the consequences of the introduction of affirmative actions for gender quotas in Italy both in the political and in the economic sphere. Nowadays, the law provision requires 40% of women in municipal councils and 40% of women candidates in political elections (but with no guaranteed representation among the elected), while 30% of women must sit on the board of directors in listed companies. Through two surveys that involved a total of over 600 women beneficiaries of the quotas, the paper investigates how the distance between formal and substantial gender representation is perceived and evaluated both in the political and in the economic sphere.

Gender Equality Standards In Debate In Time Of Economic And Political Restructuring

Constantin, Sandra Valerie; Togni, Carola

University of Applied Sciences and Arts Western Switzerland
(HES.SO), Switzerland
sandra.constantin[at]eesp.ch, carola.togni[at]eesp.ch

In the 1970s increased female participation in most European labor markets and the rise of new feminist mobilizations gave birth to debates about gender equality in social protection instruments and to the adoption of new global standards. Following Boltanski and Chiapello analysis, we will question this shift towards the integration of some of feminist claims - and their reinterpretation - regarding gender equality in social security and in which extend it could be apprehend as a means used by capitalist States to find a new legitimacy (2011). To access the point of view of employers, workers and governments – and its evolution over time - the findings rely on the analysis of archives of tripartite deliberations that have taken place inside the ILO since the 1970s, as well as on interviews conducted with some major actors who have participated in these debates. We will first highlight the difficult path followed by networks of actors (governments, employers, trade unions and feminist organisations) to eventually incorporate the question of gender equality in social security systems in the 2001 International labor conference (ILC) agenda. We will then point out that different understandings of equality have emerged at the ILO over time and among actors. Sometimes these conceptions overlap or even collide. We will see that the predominant understanding of equality in recent debates does not fundamentally call into question the gendered division of labor and the assignment of women to domestic work. It rather reflects changes of women's and men's position within the job market in a context of economic and political restructuring.

Fluidity And Consistency In Policy Discourses On Gender Equality

Negrea, Oana-Elena

University of Bucharest, Romania
oana.elena.negrea[at]gmail.com

Gender equality is more than a buzzword in feminist scholar circles, as it has become a public policy pillar, a development due partially to the increasing presence of gender mainstreaming in both academic (Behning and Pascual 2001, Walby 2001) and official discourses (European Commission, United Nations). Thus, it might be that doing one's gender is not only a personal matter, but also a true policy issue. Drawing on the specificity of policy documents, the present paper uses content analysis to identify, classify and connect different narratives on how men and women are scoring on various equality scales throughout time. Discussing both incidence and evolution of gender equality, such social documents could be depicted as methods of doing (in-)equality, depending on where the focus is placed. Although personal narratives of human kinds are fascinating to uncover,

official discourses also bring forth a worthwhile perspective when dealing with inequalities, differences and feelings of belonging. Given the wide variety of domains being assessed through such official sources (e.g. labour market, politics, health, education and so on), the configuration of (gendered) categories is depicted in a rather detailed manner. Moreover, when it comes to gendered relations, official documents show a factual, yet policy-driven outlook on interactions between men and women, on opportunities and barriers connected to gender equality. Our contemporary liquid society's main feature appears to be a constant reconfiguration of structures and social systems, which means personal accounts are inherently linked with policy discourses. In this context, understanding the official narratives on gender equality might be key in the bigger scheme of shaping and reformulating one's own gender narrative.

RN14_02 | Work History and women's progression

The Role of External Agents/Agencies in the Progression of Women in Employment: A Relational and Multilevel Perspective in the UK

Khan, Nosheen Jawaid

Newcastle University, United Kingdom
n.j.khan2[at]ncl.ac.uk

To improve gender equality in employment, the UK has embraced voluntary approach, laws, and workplace and welfare policies. To progress, there is a need for a 'collaborative approach' amongst various stakeholders. This study explores the role of organisations that operate to enhance women's participation and progression in employment by affecting the individual, work, or organisational outcomes: external gender equalities agents/agencies (EGEAs). It uses a Bourdieusian framework to examine the strategies of EGEAs affecting gender equality in relation to their specific context. Using a realist approach to gender equality, the study highlights how and to what extent these strategies impact practices at national, organisational, and individual levels. Part of ongoing PhD, the research is currently in the second phase, i.e. data collection and analysis. 35 semi-structured interviews will be conducted, and organisational documents analysed. To date, 17 respondents from 12 organisations have been interviewed, mostly in Northern England and Scotland. The preliminary findings provide a taxonomy of EGEAs based on their resources, approach, objectives, scope, activities and impact. Findings show that national and institutional contexts shape and differentiate EGEAs' objectives and strategies; and that EGEAs face a common challenge: a lack of an analytical approach in measuring the impact of their practices. By identifying best practices, the study aims to inform organisations that seek to progress women's career interests.

Sociological and Economic Reasons for the Decline In Market And Non-Market Work Among Females In Rural India

Dubey, Amaresh (1); Olsen, Wendy (2); Sen, Kunal (3)

1: Jawaharlal Nehru University; 2: Manchester University; 3: UNU WIDER
dubey.amaresh[at]yahoo.com,
Wendy.Olsen[at]manchester.ac.uk, sen[at]wider.unu.edu

We present a comparison of various determinants of female labour force participation in rural India, considering both market and non-market work by women. The sociological issues include whether the 'components' of a decomposition are additive, or overlay each other; and which factors are dominant for different types of women. Here, we decompose the changes in rural female labour force participation from 1983 to 2011/2012 using individual level data from the nationally representative National Sample Survey Employment and Unemployment Surveys. We show the size of the characteristics effect and the coefficients effect for three measures of women's work: first a narrow measure conforming to Western notions of labour markets; secondly a standardly defined 'medium' measure, and thirdly a 'wide' measure that includes subsistence activities. 72% of the decline in female labour force participation over 1983-2012 can be explained by the characteristics effect, and 28% by the coefficient effect. The reduction in women's participation was not caused by wealth, but by a change in the household labour status, with a decreased propensity to work most prominent among agricultural labourers and self-employed agricultural households.

The Gendered Division of the Labour Market and Occupational Transitions in Austria

Liedl, Bernd (1); Fritsch, Nina-Sophie (2); Paulinger, Gerhard (1)

1: University of Vienna, Austria; 2: Vienna University of Economics and Business
bernd.liedl[at]univie.ac.at, nina-sophie.fritsch[at]wu.ac.at,
gerhard.paulinger[at]univie.ac.at

The gendered division of the labour market is prevalent across Europe and has been a remarkably persistent characteristic of Western societies. In this context, female employees still tend to be overrepresented in service occupations or in health and social services, while men are more likely to be active in technical occupations. Alongside this stability, research highlights the growing importance of dynamics especially within the last years, accelerating the ongoing processes of flexibilization and deregulation. As a result, of these recent developments employment biographies are infiltrated by different episodes of career interruptions and occupational transitions become an indispensable demand. Against this

background, we endeavour to shed light on gender-specific labour market mobilities in Austria by contrasting occupational transitions where gender boundaries have been overcome or where still unimpaired. The Austrian welfare state is particularly interesting in this regard, since gendered division of the labour market is quite pronounced and flexibilisation reforms are gaining increasing relevance. Thus, we pursue the following research questions: How can we describe occupational transitions in Austria between 2007 and 2017? And which factors determine gender(un)typed occupational transitions? For our empirical analysis we use Austrian Micro Census data from 2008 to 2017. First, we describe the development of transitions to explore gender(un)typed specific trends. We then examine predictors of different occupational transitions using multinomial logistic regression models. First results indicate, that we can observe a decrease in occupational transitions in general, and among these transitions an increase of the share of gender-typical changes and a stagnation of atypical changes across gender-boundaries. Depending on the type of transition, our preliminary models suggest that gender has an effect on typical/atypical transitions.

Career Trajectories And Occupational Downgrading After Childbirth In The UK: What Are The Factors Associated With Women's Careers Stalling?

Harkness, Susan (1); Borkowska, Magda (2); Pelikh, Alina (2)

1: University of Bristol, United Kingdom; 2: University of Essex, United Kingdom
s.harkness[at]bristol.ac.uk, m.borkowska[at]essex.ac.uk, alina.pelikh[at]essex.ac.uk

This paper examines the employment trajectories of men and women up to five years following the birth of a child, and the ways that individual, family and pre-birth employment characteristics influence career outcomes. Evidence shows that across countries women with children suffer large pay penalties (Harkness & Waldfogel, 2003) and occupational downgrading is one potential explanation for this since the competing demands of work and families are greater in some jobs than others. Using 2010-2017 Understanding Society data, we examine what evidence there is that women – by opting out of employment, moving to part-time work or moving to lower status occupations- ‘downgrade’ their careers following childbirth. First, we use sequence analysis to produce a rich descriptive picture of the typical pathways by which occupational (up)downgrading occurs. Second, we examine how a broader range of job characteristics (working hours, sector, etc.) influence post birth outcomes. The results show that most change takes place 3 to 5 years after birth rather than immediately. Most women who return to work go back to the same occupation after childbirth but the longer the period since birth the more women tend to withdraw from full-time employment and switch to different occupations. Staying with the same employer is associated with lower risk of downward mobility but also with lower chances of occupational upgrading. Similarly, working in the public sector or in health or education industries is linked with the ability to maintain the same occupational grade but lower chances of up(down) grading.

RN14_03 | State Regulation of Equality

Regulating Women's Pay in Finland and the UK – From Equal Pay to the Gender Pay Gap

Conley, Hazel (1); Koskinen-Sandberg, Paula (2)

1: University of the West of England, United Kingdom; 2: Tampere University, Finland
hazel.conley[at]uwe.ac.uk, paula.koskinen-sandberg[at]tuni.fi

One of the central tenets of equality for women is their financial independence. Equal pay is an established principle in the European Union, but recent debate has focussed on the gender pay gap and how efforts towards equal pay are hindered by a lack of transparency in pay systems (European Commission 2014). Without transparency, there is a lack of information and awareness among employers, employees and their trade unions about the existence of possible pay gaps in the organisation. Gender pay inequality also intersects with other forms of inequality (e.g. age, ethnicity, disability). The issue is therefore important in relation to policy debates on intersectional inequality and how multiple forms of discrimination are regulated. Finland and the UK represent different forms of ‘welfare capitalism’ (Esping-Andersen, 1990), have different industrial relations structures and different records in relation to gender equality, but both states have taken an active role in regulating pay equality and, more recently, the gender pay gap and pay transparency. Drawing on an inter-disciplinary approach that combines socio-legal, industrial relations, politics and feminist research, the paper provides a comparative analysis of the legislation in both countries followed by a quantitative analysis of the data produced as a result. Finally, the paper contributes to debates on the role of the state, employers and collective organisations in achieving pay equality, intersectionality, reducing the gender pay gap and how pay transparency data might be used by women's groups and trade unions to pursue gender pay equality. Drawing on this analysis and discussion, the paper offers some conclusions on what we might expect for the regulation of pay equality in the future.

Why Do Councils Introduce Knowledge-building Activities to Promote Equality in Public Procurement? An Analysis of Decision-making in Scottish Local Councils.

Sarter, Katharina

University of South Wales, United Kingdom
katharina.sarter[at]southwales.ac.uk

Overcoming inequality and promoting a more equal society is one of the major challenges of contemporary societies. Public procurement, the purchase of goods, works, and services by public sector bodies, is an important part of government spending and government activity (Potoski, 2008). As an important part of states' activities, public procurement can also play a vital part in fostering equality (European Institute for Gender Equality, 2018; Sarter, 2015). While equality increasingly becomes a feature considered in public procurement laws, the implementation of equality sensitive public procurement remains under-researched. This presentation analyses equality sensitive public procurement at local level in Scotland. In Scotland, public authorities are required to consider equality considerations when purchasing. When doing so, public bodies have a considerable discretion. As a result, local councils in Scotland take different approaches to implementing the Equality Duties in public procurement, among which knowledge-building activities. Knowledge-building activities have been identified as particularly promising tools to foster equality as they may create innovation (Sarter, 2016). Focusing on knowledge-building activities, this presentation analyses the adoption of knowledge-building activities in local councils in Scotland. Taking a comparative approach, it sets out to analyse factors that facilitate local governments' decision to adopt knowledge building measures.

The Welfare Expropriation. A Case Study of Basque Country Welfare State from a Feminist Perspective

Lucas García, Jezabel; Bayón Calvo, Siro; Gómez García, Rogelio

Universidad de Valladolid, Spain
jezabelamparo.lucas[at]uva.es, siro.bayon[at]uva.es,
rogelio.gomez[at]uva.es

Women have had a late and unequal access to well-being throughout history. This communication attempts to conceptualize the expropriatory exercise that women suffer from their productive and reproductive activities in Western societies. In doing so, we explore the literature about women access to welfare in Mediterranean welfare states, as they give a secondary role to women: at home as unpaid, invisible and unrecognized care providers; and in civil society as subsidiary holders of social rights. Specifically, we try to develop a concept and dimensions of expropriation of welfare in Basque Country within the context of the great recession. Structural adjustment and austerity policies have amplified the negative effects on women because they increase their domestic responsibilities by cutting social programmes that had alleviated (never eliminated) some of this duties. The methodology consists on a case study in the Basque Country (Spain) based on the analysis of 21 in-depth interviews, 11 discussion groups and 56 observations of women and men in processes of social vulnerability, giving special emphasis on women's voices. All participants were selected using a purposive sampling method based on different profiles. Through this qualitative analysis, the testimonies of expropriation of welfare are evidenced, making visible women discourses of self-recognition, renunciations, sacrifices, and gender syncretism, among others. Finally, we make a proposal based on the generation of a socialization of care as an indispensable challenge to combat the expropriating socialization and to implement three fundamental principles that are manifested in the lives of women: equity, freedom and security.

Gender (In)equality In Business And Countries' Welfare Systems - Discussion From A Comparative Research On Women's Career Development Between Scandinavian Countries And Japan

Ishiguro, Kuniko

Tokyo International University, Japan
kuniko.ishiguro[at]gmail.com

This research discusses the issue of gender-(in)equality in business entities based on empirical research using qualitative methods focusing on life-history interviews. By comparing gender (in)equalities in Scandinavian companies and Japanese companies, the research found that gender equality is not merely about the advancement of women in the economy, but also encompasses much wider issues regarding perspectives on, and approaches towards, the meaning of work in one's life in the society, for men and women alike. The research also found that those perspectives and approaches within the society derive from government policies and initiatives towards welfare systems, and illustrate a stark contrast between Scandinavian countries and Japan. Data discussed in the research have been collected in Denmark, Norway, and Sweden (and Netherlands) during 2015 to 2018, and the research found that promoting gender equality necessarily requires welfare policies, reinforced by mutual agreement among business and labour. In addition, it further posits that despite the government's effort to promote gender equality, the masculine business culture prevalent in Japan ignores the humanity of employees, both men and women, and saps the energy of its people, as well as organisations and society. Consequently, those static organisations and the society lose the fundamentals of innovation and competitive power in the long run. While the persistence of Japan's masculine business culture has supported these de-humanised management practices, Scandinavian countries have successfully developed social and business culture sustained by welfare policies that appreciate both efficiency in business and humanity of working people.

RN14_04 | Public Services and Gender Equality

Gender budgeting in the Labor Market and in the Family - the case of Poland

Tomczyk, Justyna

Pedagogical University of Cracow, Poland
justynatomczyk1[at]wp.pl

My paper deals with the importance and role of gender budgeting (GB) in household, labor market and polish family life. The main thesis of the text speaks of the necessity to implement the GB assumptions for creating a household budget and the subsequent spending of budgetary funds. First and foremost, the point is that the economic function - related to spending, securing the material and living conditions and meeting the needs of the lower and higher order - is gender-related, sexually conditioned. The implementation of GB at the microstructural level seems indispensable in the process of family democratisation and equality of all its members because GB assumes a balanced distribution of financial and non-financial resources. It is a kind of subpolicy that applies to money (or their equivalent) and the way they are divided - so it covers the key issues that determine the condition and functioning of the family. The distribution of funds reflects the arrangements, hierarchies and relations between individual family members, and consequently establishes their positions, statuses, related roles and types of social relations. Thus, the family budget is not only an intra-family, personal and intimate affair, but also a matter of broad socio-political importance.

The Crisis in Care – Caring Against Crises: Professional Responses to Austerity Politics in Female Dominated Welfare Professions

Selberg, Rebecca Elizabeth (1); Mulinari, Paula (2); Sandberg, Magnus (1)

1: Lund University, Sweden; 2: Malmö University, Sweden
rebecca.selberg[at]genus.lu.se, paula.mulinari[at]mah.se, magnus.sandberg[at]med.lu.se

Capitalist crises, such as the current financial crisis, are also crises in the sphere of social reproduction, according to Fraser (2014). In the current phase of financialized capitalism, social reproduction is increasingly treated as a commodity. As many feminist- and gender scholars have showed, this has resulted in increased pressures on women's labour. During the last ten years, the Nordic countries and Sweden in particular have witnessed increasing levels of individual as well as collective forms of resistance challenging such processes of work intensification. Sociologist Göran Therborn identifies the public sector professions as one of three central actors that can pose a serious threat to the current economic and political tendencies propelling what Fraser calls the crisis of care. This paper has two aims. The first aim is to contribute to a feminist analysis of how the current phase of financialised capitalism shapes the sphere of care work in a Nordic context. The second aim is to analyse the potential of public sector care workers to mobilize against marketization, in a Polanyian sense. Through an analysis of both qualitative and quantitative data, the article explores worker agency in the framework of exit, voice and loyalty (Hirschman 1990), and illustrates some of the ways in which public sector employees draw on notions of equality and responsibility to patients and clients to resist the austerity regime.

'Participation, Influence and Voice' – Exploring Public Participation as 'Transformative' in the Context of the Public Sector Equality Duty

Clayton-Hathway, Kate Julie

Oxford Brookes University, United Kingdom
kclayton-hathway[at]brookes.ac.uk

In accordance with the Public Sector Equality Duty, public authorities must "... encourage persons who share a relevant protected characteristic to participate in public life or in any other activity in which participation by such persons is disproportionately low...". Descriptions of the Duty as 'transformative' equality position it as moving beyond previous conceptions of equality to encompass rights of participation. Such participation may include contributing to local authority and community decision-making, engaging with others in a range of social and civic settings and generally taking part in productive activities. Institutions covered by the Duty have a positive role to remove barriers, so those who need resources to achieve this can access them. This paper

explores the role 'participation' might play in increasing equality through the context of the Duty. It uses an empirical, socio-legal study based on policy and decision-making processes within a local authority, and a group of women service-users and local actors working in/with service provision. It considers participation from a range of perspectives, as supported by the Duty's mechanisms. Findings from the study show that, though these mechanisms clearly facilitated a range of participative activities they also created barriers, particularly when impacted by austerity measures. This discussion aims to further develop understanding of the context in which participation activities, as required by the Duty, might be better developed to foster transformative equality. By increasing knowledge of the mechanisms' strengths and weaknesses in this way, we can aim to deliver better, more 'transformative' equality outcomes.

Career Aspirations and Work-life Balance Strategies of Women in Protestant Ministry

Török, Emőke; Biró, Emese

Károli Gáspár University of the Reformed Church in Hungary, Hungary
torok.emoke[at]kre.hu, biro.emese[at]kre.hu

The ordination of women, introduced in Protestant churches around forty years ago, was an important step towards the emancipation of women in the church. Today in Hungary – depending on the denomination – a third/half of the ministers are women. Our research examines women in ministry as "working women", who hold a leading position in a traditionally male-dominated environment, and are confronted with problems characteristic of this situation (prejudices, compulsion to prove abilities, advancement, glass ceiling, difficulties of work-life balance). Our assumption is that churches show similarities to other male-dominated professional environments. However, we assume that a significant part of women in ministry will not identify the emerging difficulties as gender related issues, due to their own traditional perception of gender roles. We are exploring what family roles and division of labor characterize the female ministers' families. Tension can arise between the "emancipatory" role of being a minister and the traditional role being a wife/mother in a religious community; or between the modern female role and traditional religious values. Coordination between work and private life is also problematic. While they need to perform more than men for professional recognition, they, in accordance with their own values and the values of their environment, also want to fulfill their traditional female roles. Our assumption is that women in ministry tend to perceive the difficulties deriving from this situation as their own failure and not as structural problems due to the peculiarities of their profession. The first phase of our research started in September 2018 with 20 semi-structured in-depth interviews being conducted with female ministers; we are analyzing the transcripts with ATLAS.ti qualitative data analysis software.

The Role of Gender, Occupational Status and Family Responsibilities for the Association of Work Related ICT Use and Blurring Boundaries Between Work and Private Life

Rinke, Timothy; Entgelmeier, Ines

University of Duisburg-Essen, Germany
timothy.rinke[at]uni-due.de, ines.entgelmeier[at]uni-due.de

Digital communication technologies, such as computers, laptops and smartphones, promote the use of temporally and spatially mobile forms of work and increasingly transport employment-related tasks into the private sphere of life. The sociological discourse points to ambivalent consequences for employees, but so far, the impact of digital technologies on the working and living sphere has been little empirically examined for Germany. In particular, there are only a few quantitative studies available and past results do not allow to differentiate in detail for whom work related use of ICT can become a resource and for whom it can become a risk. We are going to examine the impact of work related ICT use on the demarcation of work and private life. In addition, in this analysis, we are taking into account person-specific characteristics such as gender, occupational status and family responsibilities. We conduct cross-sectional and panel data regression analysis with the data of the European Working Conditions Survey (EWCS 2015), the Socio-Economic Panel (SOEP 2006, 2011, 2016) and the BIBB / BAuA Employment Survey (2012). Preliminary results from cross-sectional regression analysis with EWCS 2015 shows that while for women and also for women in management positions the likelihood of leisure work is reduced by working with the computer, laptop or smartphone, this effect does not show for men. In addition, increasing computer use in the workplace improves the possibilities of reconciling the areas of life for women and men. For people in management positions, however, the compatibility decreases regardless of gender.

Work-life Balance Strategies among Hungarians Mumpreneurs from Romania

Geambasu, Reka

Babes-Bolyai University, Romania
geambasureka[at]gmail.com

In spite of promising trends of improving gender equality in the labour market, women still face a wide range of challenges throughout their working lives. Their access to male dominated sectors or management jobs has not increased, and are still more likely to work in lower prestige, lower paid jobs than men. Especially motherhood is associated with several disadvantages in the labour market. Entrepreneurship is commonly regarded as a means for compensating lack or limited access to labour market or higher level positions for members of minority groups. As a particular group within female entrepreneurs “mumpreneurs” form an increasingly

visible and proactive group. While mothers who embark upon entrepreneurial activities have existed before, the labelling, self-identification and the need for social organisation is nevertheless new. From a feminist point of view, however, mumpreneurship is one of the three tracks society offers mothers: full time motherhood, “leaning in” or mumpreneurship, while none of these really contributes to a more equal share of household tasks between men and women. In our paper we study the group of ethnic Hungarian mumpreneurs living in Romania. Among the members of a large and dedicated group an on-line questionnaire was conducted during the Fall of 2018 (N=224). In our paper we attempt to understand how mumpreneurs address work-life balance issues and whether the strategies they develop differ from those developed by other women entrepreneurs.

Actual Work-Life Balance and Wellbeing: A Preliminary Overview For The UK

Walthery, Pierre (1); Chung, Heejung (2)

1: University of Oxford, United Kingdom; 2: University of Kent, United Kingdom
pierre_walthery[at]yahoo.co.uk, H.Chung[at]kent.ac.uk

This paper presents a method for measuring the balance between distinct aspects of “necessary work” (Ransome et al 2007; Kurowska 2018) among parents of dependent children in the UK. This method relies on accounting for the amount of time spent caring for children relative to that spent in paid work and housework. The division between paid work, housework and caring for dependents has remained of particular concern among policy and research audiences, given its consequences for children and parents, whether in terms of career and inequality, wellbeing, or academic outcomes (Eurofound 2018). Work-life balance (WLB) has often been referred to as the the optimal balance one may experience between paid and unpaid work and has been extensively researched and its limitations. However, in social surveys so far, WLB has almost exclusively been operationalised as the perceived balance, overlap or spillover between paid and unpaid work by respondents. In this contribution we operationalise daily work-life balance as the daily proportion of time spent caring for dependent children relative to paid work and housework. The instrument is derived from time diary data collected in the 2015 UK Time Use Survey. We examine its patterns of association with wellbeing measured both as daily enjoyment of activities and life satisfaction. We also account for the extent to which respondents worked flexible and part-time schedules. Finally we distinguish between enriched vs routine care and primary vs secondary care (Craig and Mullan 2011). Consequences of this approach for the WLB literature and policies are discussed.

RN14_06 | Opportunity Structures

The Risks and Opportunities from the Transformation of Work in Public Transport for Women Workers: Evidence from Five Cities in the Global South Wright, Tessa

Queen Mary University of London, United Kingdom
t.wright[at]qmul.ac.uk

Women's jobs are affected in particular ways by the changes in work in public transport brought about by automation and digitisation, with further technological developments predicted to have dramatic impacts on the workforce. Jobs in ticket sales and fare collection, for example, are often undertaken by women, and are particularly vulnerable to automation. Yet much discussion of the future of work in public transport neglects gender, or considers women primarily as users of public transport rather than as workers. While trends in the transformation of work are affecting workers globally, this paper focusses on research conducted for the International Transport Workers Federation (ITF) in five cities in the Global South that have introduced or extended a public transport mode with significant implications for women's employment – Bangkok, Bogota, Cape Town, Mexico City and Nairobi. It considers the risks and opportunities for women's employment from changes in how public transport is delivered. Opportunities include the chance to move from informal work to new formal employment as new public transport systems are introduced, or to challenge occupational segregation by entering typically higher-paid driving roles. However the serious risks include job loss from automated fare payment systems. Furthermore the paper finds that violence and sexual harassment remain a common workplace occurrence for women transport workers. It finds that trade union actions are key to mitigating job loss through negotiated agreements, and provides examples of union mobilisation where women have played a key role in organising to defend jobs and transport services. Unions worldwide, though, need to do more to address sexual harassment and gender-based violence to attract and defend female members

Availability to Work and Job Search: An Analysis of Spanish Inactive Population from a Gender Perspective

Pérez de Guzmán, Sofía (1); Gallego, Margarita (1); Viego, Valentina (2)

1: Universidad de Cádiz, Spain; 2: Universidad Nacional del Sur, Argentina
sofia.perez[at]uca.es, margarita.gallego[at]uca.es, valentinaviego[at]gmail.com

Despite the increase in employment and the reduction of unemployment that has taken place in Spain since mid 2013, unemployment is considered to be the main social problem by more than two thirds of the population (Center for Sociological Research, 2018). The apparent mismatch between official statistics and population views is due to the existence of a "sociological unemployment" that remains hidden from official figures: individuals available and willing to work but not actively searching for a job are defined as non-active (ILO definitions). In order to formulate effective employment policies to integrate the economically inactive population that is available to work, it is necessary to know their circumstances and the barriers that hinder their incorporation into the labour market. The objective of this work is to delve into the characteristics of the "sociological unemployment" that remain hidden from labour force statistics in Spain, taking into account a gender perspective. Its evolution is analyzed in the last years in order to determine if (and how) the Great Recession has influenced the size of potential working force. Subsequently profiles are presented in terms of age, levels of education, nationality, trajectories with respect to job and, especially, gender and how they influence their attitudes towards job search. We carried out a statistical analysis based on the microdata of the Survey of Active Population.

Job Quality and Equality in Public Procurement: Proposing an Analytical Model (JoQuEPP)

Benjamin, Orly (1); Sarter, Katharina (2)

1: Bar Ilan University, Israel; 2: University of South Wales, United Kingdom
orly.benjamin[at]biu.ac.il,
katharina.sarter[at]southwales.ac.uk

Organizations in Acker's scholarship manifest as gender-neutral but reflect an assumed hierarchy. Likewise, public procurement procedures are perceived as gender neutral. The supposedly neutral economic transaction embedded in the procurement contract is in effect an economic transaction between an administrator, who focuses on costs, and a service deliverer, who focuses on profit or economic viability. Within this framework, the employees delivering (contracted) services allow the contract to manoeuvre the required work process. Yet, they do not participate in the formation of the contract. The employees and/or their representatives are not part of the contract design; beyond this, their concerns, related to job quality as much as those related to the service quality, are marginalized. Up until recently discussions of allegedly gender-blind procedures neglected the conditions that influence the likelihood that procedures would be understood as gendered and benefit female employees. Thus, an analytical model is needed for the investigation of these conditions. Our presented model aims at introducing public procurement of social services in ways that epitomize Acker's argument that organizations ignore attributes of gender/ethnic-racial and class, leaving the low-quality service operating jobs for the abstract, frequently replaced employees. The proposed JoQuEPP model analyses the conditions reinforcing the likelihood of introducing regulations regarding job-quality in public procurement as a form of enhancing job quality for female employees. The analytical value of JoQuEPP rests in its ability to maintain the complexity that characterizes the specific cultural, institutional, legal, and political context of each dimension: context, service, market, administrators and pressures. We examine cases from New Zealand, the Netherlands, Israel, Greece and Germany, allowing us to examine the process through which job quality was improved.

Class Experiences In The Household: Patterns Of Involvement Of Women From The Same Family Into Working Life

Hacısalıhoğlu, Elif

Trakya University, Turkey
elifhasal[at]yahoo.com

This study focuses on how the same class and household origins shape women's experience of paid work throughout and after the process of proletarianization. The study is conducted in the Eastern Black Sea Region, where women's paid work emerges in three main forms: the nature of the relationship with tea/land; work in public sector and work in private sector. The proletarianization process of women and their involvement in working life is discussed in relevant literature with respect to experiences following rural-to-urban and international migration, experiences in different sectors and positions in working life and solidarity and social struggle. This study will present the converging and diverging class experiences of working women from the same household, and subject to the same class and gender norms. The life stories of four women from the same family – which start within the household but extend beyond it – is examined within their relation to the transforming context of their life conditions under the socio-economic dynamics of Turkey. While in-depth interview and observation techniques are employed in the study, it also includes ethnographic elements, for the author of the study is a woman that comes from a family in the Black Sea region, and still maintains her connections with the region as well.

RN14_07 | Restructuring Labour Markets and Welfare States for Gender Equality

Women's Progression In Medical Careers Parallel Worsening Work Conditions. A Case of Gender Paradox? Findings from Italy

Gaiaschi, Camilla

University of Milan, Italy
camilla.gaiaschi[at]unimi.it

This paper investigates women's under-representation in senior positions among physicians. The analysis are based on a dataset of a thousand doctors in Italy working in five hospitals. Information were collected through an online survey with 49% response rate. The research shows that women's adjusted odds of promotion from the first to the intermediate level of the career ladder are 41% smaller than men's. No disadvantage is found from the intermediate to the final rank, suggesting that the vertical segregation is due more to a sticky floors mechanism than to a glass ceiling effect. Younger physicians experience no female disadvantage. Having children does not carry a penalty for women while a paternity premium persists. This study points out that positive changes towards equality are occurring. Nevertheless, two main aspects should be considered. First, the closing of the gap is largely due to women's different strategies to reduce the motherhood penalty, that is by not having children (for 39% of women surveyed), by anticipating childbirth during the specialty school (for the youngest cohorts), by reducing the leave (in private hospitals) and by outsourcing domestic work. However, if women have strived to reduce gender differences by becoming "more like men", men don't seem to have become "more like women", given that the sexual division of work remains strong. The second aspect sheds light on the existence of a paradox: no penalty persists in the youngest – most precarious – cohorts. No penalty persists in private hospitals, where atypical contracts make the rule. Where work conditions worsen and welfare benefits are low, women's disadvantages decrease. These findings call for the existence of a trade-off between gender and social equality.

Hegemonic Coupling Theory: Parsing Out Gender and Labor Biases to Better Analyze Stalled Progress

Bond, Erik Lawrence

Miyazaki International College, Japan
ebond[at]sky.miyazaki-mic.ac.jp

This project starts with the problem of the two-decade stall in the developed world's gender revolution. I apply Structural Equation Modeling (SEM) techniques to data from highly developed labor markets to advance both theoretical and quantitative modeling of refractory or "sticky" gender biases. I begin by quantitatively validating a novel dimension of bias hypothesized to exist at the intersection of gender and labor stereotypes. Using data from 29 OECD countries (N = 37,632) in the 2012 wave of the International Social Survey Programme, this work then asks, "How does modeling this novel dimension of bias enhance our understandings of refractory gender-labor biases?" Much research in this area treats liberal ideologies as a largely homogenous value set described as "Egalitarian," "Feminist," "Progressive," etc., and juxtaposed with a uniformly oppositional "Conservative" or "Traditional" value set. However, my project demonstrates that these umbrellas actually constitute heterogeneous sets of values that may vary widely in representation and configuration. I show that the novel attitudinal dimension constructed here varies significantly across national welfare regime, sex, labor status, and other criteria. I put forth a new theoretical framework—dubbed "Hegemonic Coupling Theory" (HCT)—which asserts that intersections of hegemonic statuses (such as masculinity and paid employment) reinforce and sustain biases independently of biases unique to either component status. I conclude with policy recommendations aimed toward capitalizing on these insights.

Measuring Gender Equality: Bringing Social Reproduction Back On A Par With Economic Production

Schmid, Caitlin

University of Manchester, United Kingdom
caitlin.schmid[at]postgrad.manchester.ac.uk

Feminist literature has long recognised the gendered division of labour as central to perpetuating gender inequality. Yet, gender equality indices continue to predominantly measure disparities within economic production while neglecting social reproduction. This paper offers an alternative conceptualisation for the measurement of gender equality in Europe, by taking account of social reproduction, giving equal emphasis to the gendered division of eldercare, childcare and housework. Expanding the measurement in this way better captures the multifaceted nature of gender inequality and provides a more comprehensive basis for European policy developments in which unpaid reproductive labour is recognised as the precondition of all economic production. The transition to post-industrial capitalism has seen an intensification of academic and policy debate on the potential for family models and welfare state regimes to reorganise economic production and social reproduction. Diverging opinions on which family model should be taken forward are rooted in contrasting conceptions of what gender equality constitutes and how to best bring it about. A strong case was made for the 'transformative approach', as it promises to deconstruct the gendered order itself, rather than policies ameliorating its consequences. It holds the potential of restructuring productive and reproductive institutions to dismantle the gendered division of labour. Despite this contribution, research measuring gender equality levels across countries has mainly focused on economic production (e.g. gender wage gaps, employment gaps). Only two out of 10+ indices include indicators of reproduction, yet do not conceptualise care or housework as labour but as activities alongside social or leisure activities.

Becoming Men and Woman in Precarious Conditions of Young Adults in Poland

Krasowska, Agata; Drabina-Różewicz, Aleksandra

University of Wroclaw, Poland
agata.krasowska[at]uwr.edu.pl, oladrabina[at]gazeta.pl

The paper is an attempt to capture the issues of establishing gender identity in the face of precarious work and life experiences of young workers in Poland. We will try to analyze the life experiences related to becoming a woman and a man in precarious conditions in the context of emerging adulthood (Arnett, 2000). Our analysis will focus on the cases from the basis of 63 narrative biographical interviews (PREWORK project). Using the biographical analytical paths indicated by F. Schuetze (2012) and the assumptions of the methodology of the grounded theory, we will try to highlight ways of shaping

and strengthening the socio-cultural dimensions of gender identity in the biographies. We will try to show the dimensions of the biographical entanglement of the experience of precarity in the period of early adulthood. This stage in life is the richest in changes and breakthroughs and it covers the age between 18 to 30 years old, which constitutes the framework of our research sample. We also want to reconstruct the process structures of the biography, revealing the areas of biographical work (Schuetze, 2012). In the analysis, we intend to refer also to theoretically and empirically developed conceptions that are part of the sociological discourse and research field focused on the topic of emerging adulthood in precarious conditions, such as: delayed adulthood syndrome, postponing social roles of adults, nesting at the family home. In case of gender relations we also want to capture social processes, discussed in the research field, such as: the relationship between productive and reproductive work, the division of roles in the household and the creating of a work-life balance between private life and professional work.

Women In Science. Research Collaboration In Italian Academia From A Gender Perspective

Bellotti, Elisa (1); Czerniawska-Szejda, Dominika (1); Guadalupi, Luigi (2)

1: University of Manchester; 2: IRAT CNR
elisa.bellotti[at]manchester.ac.uk, dominika.czerniawska-szejda[at]manchester.ac.uk, luigiguadalupi[at]gmail.com

The paper analyses and compares the networks of scientific collaborations of male and female scientists in the local system of public funding in Italian Academia. In specific, we look at 10 years (2001 – 2010) of the Italian Ministry of University and Research funding of Projects of National Interest (Prin) in all disciplines. In this dataset we observe the percentage of men and women funded in each discipline (over the total number of male and female appointed in Italian Universities), their academic ranks (full professor, associate professor, researcher), and their geographical location (North, Centre, South of Italy). We then select the top funded men and women across all disciplines and compare their collaboration networks, to see if women adopt different network strategies to their male counterparts. Previous studies suggest that women should have more constrained and hierarchical networks than men, while men are supposed to be more efficient and homophilous. Results show that while there is no significant difference in the structure of collaboration networks between male and female, men significantly prefer to work with other men in all the disciplines under analysis. Together with the finding that women are still under-represented in Italian Academia, that they occupy less prestigious roles and overall receive less money than male scientists, our results pose serious questions to the structure and organization of Italian academic system, where gender barriers are still very much in place, and men exclude women from scientific research either deliberately for strategic reasons, or unconsciously for stereotyped biases.

Explaining Policy Preferences: Women And Coalitions In The Labour Market

Cattani, Lorenzo

University of Bologna, Italy
lorenzo.cattani3[at]unibo.it

Gender is said to be an important predictor of policy preferences. Women should favour “investment policies” over “consumption policies” due to their more fragmented professional careers (Beramendi et al. 2016). Concerning labour market policies, women prefer active labour market policies (ALMPs) over passive labour market policies. With rising levels of female employment this could lead to higher spending for ALMPs due to a different structure of policy demand. However, among advanced capitalist economies there are no signs of convergence in terms of spending levels for ALMPs and important differences are still visible. These differences reproduce those between models of capitalism (Esping-Andersen 1990; Burroni 2016). While recent work focused on changes in the overall female employment rate across countries, little attention has been paid to the distribution of female participation among different professional groups. Beramendi et al. (2016) analyse how professional groups’ preferences for investment, consumption and weak or strong state intervention contribute to the creation of hegemonic coalitions that shape policy demand. However, no quantitative studies have been made to test their theoretical framework. This paper tries to explain why these differences still exist by providing data on how female employment has spread over professional groups. The paper will present evidence from EU-LFS micro-data on Italy and Sweden and it will show how women are more integrated inside the hegemonic coalition in Sweden than in Italy. It will also suggest the importance of female political mobilization as a variable to understand these differences in the future.

Gender Aspects of Welfare Receipt in Germany: Determinants, Exit Routes and Recidivism

Lietzmann, Torsten; Hohmeyer, Katrin

Institute for Employment Research, Germany
torsten.lietzmann[at]iab.de, katrin.hohmeyer[at]iab.de

The German system of basic income support for needy individuals capable of working (“unemployment benefit II”) aims at bringing the jobless back into work through job-search requirements and activation measures. Official statistics report substantial gender differences in reintegration rates: while about 30 percent of male recipients realise an employment integration, this holds for only 20 percent of female recipients. Despite the focus on employment integration, the benefit system is designed as a means-tested minimum income household benefit not only for unemployed individuals but for all individuals capable of working and their households. Therefore, important recipient groups are not only unemployed individuals but also low-wage or part-time workers, single parents, larger families and older individuals with health restrictions. Gender differences in benefit receipt

and employment integration can be caused by intra-household division of labour, care responsibilities or gender-specific activation and labour market structures. We analyse individual benefit recipients’ chances to exit from benefit receipt and recidivism with special attention paid to the routes that take recipients out of benefit receipt (with or without own employment) and gender differences. We use rich administrative data on benefit recipients (“Sample of Integrated Welfare Benefit Biographies”) to estimate hazard rate models for competing risks and that control for unobserved heterogeneity for exits from benefit receipt and the probabilities to return to benefit receipt. First results suggest that women leave benefit receipt slower than men with own employment but more often without own employment while there are no differences for returns to benefit receipt. The presence of a partner and children influence the exit-processes differently for men and women.

Single Parent Mothers - Abandoned And Controlled; A Comparative Intersectional Study Of The Impact of State Welfare and Employment Policies In The UK And Sweden

Cohen, Susan Eileen (1); Samzelius, Tove
(2)

1: University of Bristol, United Kingdom; 2: Malmö University,
Sweden
sue.cohen[at]bristol.ac.uk, Tove.Samzelius[at]rb.se

Whereas single parents in the UK in the late 20th century endured high rates of unemployment and poverty, effectively abandoned by the State, those in Sweden experienced the reverse. Many working on gender mainstreaming looked to Sweden for models of parent/care employment and welfare policies to effect structural change. Now however, both countries have experienced significant shifts. Under austerity in the UK single parents are more likely to be employed, yet trapped within a pernicious intersection of welfare and employment policies leaving families vulnerable to deprivation, so regulated and controlled they have little time to care for children. Those not in employment, are more likely to be sanctioned and made homeless, especially those with children under five. Now new patterns are emerging in Sweden in an increasingly unequal society. Since the late 1990’s fiscal crisis, and in spite of a history of gender equality policies, inequalities between single and dual-parent families have increased. Policies assume a ‘dual earner/dual carer family model’, with an ever-increasing blind spot to social and economic constraints experienced by single parents, especially new migrants. Swedish research studies now identify single mothers as disadvantaged, insufficiently safeguarded by the welfare system. Migrant single mothers are the most marginalized, abandoned on benefits for long periods of time, particularly vulnerable to absolute poverty. The impact of persistent intersectional inequalities by reason of class, gender and ethnicity places single parents on the margins in both Sweden and the UK. This paper considers how gender mainstreaming can, and must address intersectional discriminations.

Gendered Pathways of Social Exclusion – A Life Course Perspective on Exclusion from Social Relations in Later Life, and its Consequences for Health and Wellbeing

Wanka, Anna

University of Vienna, Austria
anna.wanka[at]univie.ac.at

Social exclusion is a multifaceted social problem with substantial disruptive consequences for individuals and society, and exclusion from social relations is one aspect of this phenomenon. Lack of social relations can significantly influence health and wellbeing particularly in later life. Even though women are said to have more resilient social networks, older women in particular face serious difficulties in maintain them: They are more often frail, widowed, have lower levels of education, have more often disrupted working careers, lower pensions, and less economic resources, as well as care obligations for children, elders and partners, which all set limitations to social embeddedness. Recent research indicates a key role of the welfare state, as large variation exists in social exclusion and the varying impact of gender across European welfare states. However, little is known about how precisely social policy influences the construction and outcomes of social exclusion across the life course of women. The paper presents and discusses first findings from the European project "GENPATH", in which gender differences in the prevalence and generation of exclusion from social relations across European countries, and consequences of this exclusion for health and wellbeing, are being analysed. The project follows a mixed-methods research design, including longitudinal analysis of the Survey of Health, Ageing and Retirement in Europe (SHARE) as well as biographical interviews in eight European countries.

South Asian British Muslim women and their later working lives in Greater Manchester

Ferdous, Sajia

Alliance Manchester Business School, The University of Manchester, United Kingdom
sajia.ferdous[at]manchester.ac.uk

This study explores the perceptions and orientations of South Asian British Muslim older women in Greater Manchester towards wage work. Using transnational intersectional and life-course approach, the study also examines the extent to which these perceptions are shaped by culture, society and religion and the extent to which these are the results of their UK labour market experiences. It further scrutinises how they perceive labour market opportunities and challenges and understand their positions in the UK labour market as South Asian British Muslim women. The study uses semi-structured interviews with South Asian British Muslim women living in Greater Manchester aged over 50 who are in low skilled occupations or unemployed/economically inactive, but, under pressure to find employment. This group is of particular importance because a key aspect of these women's needs for more flexible employment conditions has been consistently undermined, forcing many of them to accept poorer working conditions, lower rates of pay and lower status jobs, or, retire early altogether which to a large extent, are the results of persistent occupational segregation in the labour market and non-linear career paths throughout their life courses. In addition, with the changes in state pension age, these women are also being expected to extend their working lives and it is crucial to understand how they re-think/plan their work/career following such changes which will help to make sense of how things will play out for the Greater Manchester labour market in the context of ageing population. Key words: South Asian British women, older women, life-course, transnational intersectionality, gender (in)equality.

RN14_09b | Gender and Intersectionality in Labour Markets/Welfare States

Underemployment vs. Relocation: Coping Mechanisms of Palestinian Women in Israel with Patriarchal and Spatial Impositions

Meler, Tal

Zefat Academic College, Israel
talmeler12[at]gmail.com

In the past decade, rates of educated Palestinian women in Israel have increased. However, the corresponding increase in their rate of employment has been slower. The aim of the present study was to gain insight into the barriers that educated Palestinian women face in finding employment suitable for their training, the coping mechanisms they employ in their attempt to overcome these barriers, and factors that contribute to the selection of these coping mechanisms. Semi-structured interviews with educated Palestinian women revealed three coping mechanisms with the shortage of suitable employment: underemployment (working in low-paid, non-academic, involuntary part-time, temporary positions), retraining (in nursing or education), and relocation to southern Israel for employment. Barriers to suitable employment included lack of guidance, considerations unrelated to employment, limitations imposed by the patriarchal society, lack of patriarchal social networking, and poor contractual terms in training-related employment. These cultural and structural barriers represent the intersectionality of gender, class, and nationality, since they are related to the conservative nature of Palestinian culture and its extremely limited opportunity base, as well as the civil status and marginality imposed on Palestinians by political-economic processes. This study may help policymakers find ways to increase the percentage of Palestinian women working in their field of training in places with high prevalence of underemployment, and may also have implications on welfare policy that operates in the neoliberal context. Furthermore, this study underscores the importance of gender and intersectionality theories in the discussion of minorities in general and minority women in particular.

“Just Take It Off, Where’s The Problem?” The Neoliberal Logic Of Intersectional Labour Market Discrimination Against Women Wearing Headscarves

Schuster, Julia

Johannes Kepler University Linz, Austria
julia.schuster[at]jku.at

Muslim women wearing headscarves who are seeking employment in western labour markets face intersectional discrimination based on gender and religion. This intersectional dynamic not only leads to decreased chances of finding a job, it also implies that the women’s experiences of discrimination are not acknowledged as such but rather explained as their own fault. This presentation is based on a qualitative thematic content analysis of 600 online comments posted in response to an Austrian online news article that reported scientific evidence of labour market discrimination against women wearing headscarves. The analysis examines how the commenters articulate explanations for the women’s labour market problems and solutions to them. By identifying the main narratives within those comments, I argue that neoliberal understandings of employers’ and employees’ individual choices are used to legitimise discriminatory practices. This strategy enables commenters to avoid openly islamophobic and/or sexist arguments as they approve the practice of not hiring women wearing headscarves. While intersectionality theory, in particular Kimberlé Crenshaw’s approach, helps identifying how this discrimination of Muslim women wearing headscarves is erased from the discourse as a problem that requires political attention, a feminist critique of neoliberal labour market logics needs to be included in the analysis in order to explain why this erasure is successful.

Postcolonial Feminism, Intersectionality And The Lived Experience Of The British Born Black Caribbean Female Nurse

Brathwaite, Beverley Helena

University of Hertfordshire, United Kingdom
b.brathwaite[at]herts.ac.uk

As a PhD student I identify myself as a British born black Caribbean woman and nurse, therefore my need to find out how I and others like me identify themselves is the driver for this enquiry. There is a British colonial focus to my argument with a recognition of the historical and social relationship of British colonialism and the Caribbean through a postcolonial feminist lens. Intersectionality will also be utilised as a theoretical framework with which to see the gender and racial discrimination that occurs and the impact it has on being Black, of Caribbean heritage and female in Britain. This is what Crenshaw (2016) identifies as 'double discrimination'; the simultaneous impact of sexism and racism that Black women experience. Post-colonial feminism also acknowledges the multifaceted nature of the Black women's experience and how they are represented based on the oppression of colonialism and patriarchy, a 'double colonialization' (Holst Peterson and Rutherford, 1986). There is an obvious link between postcolonial feminism and intersectionality and to this end I scrutinise the importance that both play in examining the lived experiences of 5 BBBCFN who have been interviewed as my pilot study.

An Intersectional Analysis of UK Self-Employment in the Digital Era

Martinez Dy, Angela (1); Jayawarna, Dilani (2); Marlow, Susan (3)

1: Loughborough University London, United Kingdom; 2: University of Liverpool, United Kingdom; 3: Nottingham University Business School, United Kingdom
a.dy[at]lboro.ac.uk, D.Jayawarna[at]liverpool.ac.uk, Susan.Marlow[at]nottingham.ac.uk

Emerging research suggests women are driving the rapid rise in UK self-employment in the contemporary era, in which the digitization of work in a period of economic crisis and recovery has transformed self-employment patterns. However, little is known about how self-employment entry and exit is subject to the intersecting effects of gender and race in labour markets. This paper uses Office of National Statistics Labour Force Survey data to quantitatively analyse changes in patterns of self-employment participation between 2007 and 2017. While women continue to predominate in the rapidly increasing part-time self-employed population, there has been a decline in the numbers of self-employed men and White British people, and a notable increase in the numbers of self-employed British women of colour, with Black British female self-employment more than doubling since 2007. This speaks not only to the lasting impact of the economic crisis on public sector employment, traditionally a key employer for women of

colour, but also to the multi-dimensional inequality regimes in employment that constitute critical push factors into entrepreneurship for them. Contrary to typical expectations, the presence of young children is found to have a negative effect on female self-employment, except for single mothers, and women are more inclined to begin opportunity-driven as opposed to necessity-based businesses. These novel and surprising findings provide a theoretical and empirical foundation from which to explore how patterns of UK self-employment are changing in the digital age, and how intersectional structural forces contribute to the inflows and outflows of self-employment.

RN14_10a | Resistance is everywhere

Young Female Trade Unionists' Perspectives on Self-Organisation: Collective Contradictions

Ewington, Eve (1); Durbin, Susan (2)

1: Lancaster University, United Kingdom; 2: University of the West of England, United Kingdom
e.ewington[at]lancaster.ac.uk, sue.durbin[at]uwe.ac.uk

Today, most UK trade unions have implemented at least some gender equality strategies such as women's committees, separate spaces, reserved seats, or mentoring and learning programmes, reflecting a drive within trade unions to both widen their appeal to a more diverse workforce and to allow marginalised groups opportunity to voice their concerns and priorities. A driving force for such change comes from self-organisation within trade unions, but this has been criticised for its reliance on assumptions that certain social identities provide a platform from which collectives can be mobilised. To evaluate the extent to which self-organisation still plays a significant role in the promotion of gender equality, it is essential to consider the perspectives of a younger, perhaps more individualistic (Peetz, 2010) generation of trade unionists. Using qualitative data from two trade unions, this paper explores the attitudes of young women towards female-only spaces within their trade unions. The data suggests that unlike other social identities, female gender identity is a contested identity when it comes to collective organisation. Many young women, despite their own experiences of gendered disadvantage, question the ongoing need for female-only spaces, and suggest that such organisation is unfair if it excludes men. This, together with some negative perceptions of feminism in general, leads women to challenge female gender identity as a self-organising collective, with potential consequences for their representation in the face of challenges including the threat Brexit may pose to social rights and women's rights in the workplace. References Peetz, D., 2010. Are individualistic attitudes killing collectivism? *Transfer: European Review of Labour and Research*, 16(3), pp.383-398.

The Battle over Kindergarten Teachers' Wages: Outsider-Driven Deinstitutionalization of a Gendered Labour Market Practice

Koskinen Sandberg, Paula Hannele

Tampere University, Finland
paula.koskinen-sandberg[at]tuni.fi

In March 2018, Finnish media revealed that there was a secret agreement, a "wage cartel", on kindergarten teachers' wages between three municipalities in Finnish capital area. These municipalities had agreed on not to compete with each other over labour force with wage increases. At the same time, there had been a severe shortage of labor force in this sector. Kindergarten teachers are among the undervalued, feminized occupations of the public sector. The revelation made by the media resulted in public outrage, and the rise of a social movement called #NoPlayMoney. The social movement, initiated by an angry mother and entrepreneur, mobilized thousands of people in just a couple of days through social media. The work of the social movement has already resulted in wage increases in several Finnish municipalities. I utilize the idea of outsider-driven deinstitutionalization (Maguire & Hardy, 2009), and how it takes place by problematization of pillars that uphold an institutionalized practice, such as the legitimacy of paying feminized work of the public sector low wages based on historical developments and gendered labour market practices. As a methodology for the analysis, a narrative approach will be utilized. In addition, the analysis includes auto-ethnographic elements, since the author has been one of the active actors in the social movement. The data used in the analysis are media material from 2018 about the case, interviews of central actors (10 interviews) and the field notes collected by the author.

La Plataforma de Estibadoras de Algeciras. History of a fight

Aguado-Bloise, Empar

Universitat de Valencia, Spain
Teresa.Empar.Aguado[at]uv.es

The study of occupational segregation by sex is of great interest, especially when it focuses on the observation of entry barriers found by women in masculinized sectors and occupations. The transport sector is one of the most segregated in the EU in terms of gender, and although the participation of women in the sector is growing, its presence is still limited in comparison with other activities in the services sector. One of the occupations of this sector is the port stowage, a profession until recently exclusively of men. It is worth mentioning that until 2018 the Spanish port with the highest occupation in the sector still did not admit women, the Port of Algeciras. The platform "Mujeres estibadoras de Algeciras" was set up to fight and make visible this discrimination based on sex. This platform proposed having options to get a job in the stowage on equal terms with respect to men who joined the sector. The denunciations made by this

platform deserved the attention of the Andalusian Institute for Women and another institution. In this communication we try to capture the history of this struggle, from the constitution of the Platform to the entry of the first women in the sector.

RN14_10b | Women's Activism and Leadership for Securing Change

Women and Trade Unions in Sherry Area. From the invisible participation to the need of leadership

Bermúdez-Figueroa, Eva

Universidad de Cádiz, Spain
eva.bermudez[at]uca.es

This paper aims to expose the process of invisibilization of women participation in the labor movement and their obstacles and experiences in taking part in the unions, as an exponent of hegemonic masculinity. We will analyze the conclusions of research conducted in the South of Spain in the University of Cádiz (2017-047/P01-BRM-EBF) and financed by Electors Asociation Ganemos Jerez, Women in labor movement in Sherry Area (1960-2017), we make an effort to synthesize a long period of political and economic changes in a very concrete scenario in the south of Spain, with a deep tradition on self-management and autonomous unions in an industrial area of wine and shipyards (Foweraker, 1990). Taking intersectionality as a means of analysis we do find class differences inside work and also unions (Hebson, 2001). These women are representing different professional fields and sectors; some masculinized as the wine sector in Jerez or banking sector, some feminized professions as operators or family care, social work, teaching, and nursing. We will also make a distinction about women unionists and wives of man unionists in late Francoist dictatorship period, when women in Spain weren't plenty inserted in labor market and any union activity was prosecuted by the regime. We will pay attention to the obstacles, experiences, and representations of these women about the different perceptions of dynamics in unionism, daily union company life, glass ceiling, lack of balancing of family and union and work life, protest repertoires. We conclude paying attention to the future of unionism and their necessary changes to include women in the decision making and all the areas.

Dynamics and Consequences of Defeminisation of Care

Kanjuo Mrčela, Aleksandra; Bembič, Branko

University of Ljubljana Faculty of Social Sciences, Slovenia
aleksandra.kanjuo-mrcela[at]fdv.uni-lj.si,
branko.bembic[at]fdv.uni-lj.si

Analyses of defeminisation of professions have been pointing to obstacles and incentives for men for entering and staying in feminised professions (such as low wages and undesirable social status, positive and negative responses in social environment including social stigmatization of non-traditional masculinity etc.). This article aims to contribute to the analysis of dynamics of gender (de)segregation in the labour market by analysing the situation of men who are working in different occupations in the female-dominated provision of paid care. Our study is based on the examination of the statistical data and thirty interviews with male and female care workers and management representatives in seven care institutions in Slovenia (two care institutions for elderly, three kindergartens, institution for children with special needs, and an association providing personal assistance to the handicapped persons). We would present dynamics of change in care profession that has been defeminizing very slowly. We will build on newly developed occupation centred approaches in analysing occupational gender segregation that shows that different working experiences could be based not only on the gender of the worker but also the gender characteristics of the occupation – male-dominated, female dominated or mixed (Burchell et al., 2014). Our analysis is informed by Marxist conceptualisation of division of labour and feminist theorising of reproductive and unpaid labour. Our discussion and findings will contribute to the theorizing of interweaving of gender occupational segregation and gender equality and could serve as a basis for relevant policy recommendations.

All's Fair in Love and Labour? – The Gendered Discourses of Benefiting from Physical Appearance in Working Life

Kukkonen, Iida; Pajunen, Tero; Åberg, Erica; Sarpila, Outi

University of Turku, Finland
iltkuk[at]utu.fi, teaapa[at]utu.fi, ermaab[at]utu.fi,
oukasa[at]utu.fi

A multitude of studies illustrate that physical appearance affects recruitment and success on labour markets. Recent sociological discussion has drawn on theories of aesthetic capital (e.g. Anderson et al. 2010) and aesthetic labour (e.g. Mears 2014) to understand such inequalities and the ways in which they are gendered. These theories suggest it is crucial to take into account the social norms and power relations that allow, or even demand of some to develop and exchange their bodily assets for economic capital in various fields of working life. In a previous study we found women benefiting from physical appearance in working life are more disapproved of

than are men (Kukkonen et al. 2018). Hence, while women are expected to develop and maintain their appearance-related assets, actually benefiting from those assets may be socially sanctioned particularly for women. In this study, we explore the gendered normative discourses that govern profiting from aesthetic capital in working life. In particular, we are interested in how profiting from physical appearance is justified or sanctioned differently depending on gender constellations. Our data consist of 12 semi-structured group interviews where a total of 47 employees (17 male, 29 female, 1 non-binary) discussed appearance-related assets and norms in their fields of work. Our results shed light on how appearance-related discrimination and gendered labour practices are sustained, and raise doubts about physical appearance as a collectively sustainable means of social mobility for women.

Challenging Male Dominance: Critical Actors Building Critical Mass Through a Women's Mentoring Scheme

Durbin, Susan (1); Lopes, Ana (2); Warren, Stella (1)

1: University of West of England, United Kingdom; 2: Newcastle University, United Kingdom
sue.durbin[at]uwe.ac.uk, ana.lopes[at]ncl.ac.uk,
stella.warren[at]uwe.ac.uk

The UK aviation and aerospace industry is key to the economy and employment. It has become an important focus for the government's flagship industrial strategy. Despite its importance, the industry suffers a chronic skills shortage of engineers which could be partly addressed by the recruitment and retention of more women. One way to retain women in the industry is through support programmes, such as mentoring. The *alta* mentoring Scheme is a programme that was designed and launched throughout the UK aviation and aerospace industry, to address these problems. *alta* is based upon an ESRC/Industry funded project, to design and launch a mentoring scheme for female professionals throughout the industry to build a critical mass of women who could support one another across the industry. The paper explores the motivations and actions of key individuals who were central to the success of *alta*. It draws upon the testimonials of a number of critical actors (the founding partners of *alta*) and interviews with female professionals throughout the industry. It draws upon the theoretical lenses of 'critical actors' (Celis and Childs, 2008, 2012) and 'critical mass' (Kanter, 1977; Torchia, 2011) to gain insights from the perspectives of those who designed the scheme (critical actors) and the female professionals who were involved in its design and for whom it now operates (critical mass). While the 'critical actors' and 'critical mass' theories are usually treated as mutually exclusive, this paper argues that they are complementary constituents to an on-going interactive process to achieve the same end.

RN15 | Global, Transnational and Cosmopolitan Sociology

RN15_01 | Going Beyond Methodological Nationalism

The Challenge of a Global Sociological Imagination

Caselli, Marco

Università Cattolica del Sacro Cuore, Italy
marco.caselli[at]unicatt.it

Many sociologists, Ulrich Beck among the others, suggested that – due to globalization processes – we must go beyond methodological nationalism in studying societies. But, in practical terms, how is this possible? I think we still miss a convincing and final answer on this. In order to find it, we need a “global sociological imagination”. In the late ’50s, Charles Wright-Mills wrote that sociological imagination is “the vivid awareness of the relationship between experience and the wider society”. Starting from this, I think that global sociological imagination should be the vivid awareness of the relationships between personal experience, local dynamics, multi-local dynamics, sovranational dynamics, global dynamics and processes. Going further, we know that sociology studies (social) facts but, contrary to popular belief, facts don’t speak for themselves. So, we need sociological imagination, and now global sociological imagination, in order to understand these facts. We also know that sociology is looking for good answers but, before this, sociology needs good questions. So, we need global sociological imagination also to find good questions about our global society. This contribution reflects on how to go beyond methodological nationalism and on the questions we should ask in order to understand our contemporary global society.

Situating The Self: Towards A Global Sociology Of Migrancy And Identity?

Holley, Peter

University of Helsinki, Finland
peter.holley[at]helsinki.fi

Like much of sociological thinking, migration studies have for the most part, suffered from a methodological nationalist gaze according which to which core concepts such as society and culture are uncritically related to a national(ist) order of things and particular nation-state building projects. For those with an interest in migrancy, such a perspective often unwittingly positions those studied (i.e. migrants) as Others, members of predefined national communities, aliens in the particular locale in which they are studied. Rather than learning about the ways in which migrants understand themselves and experience their lives, we (social scientists/migration scholars) may end up reproducing epistemic violence by reifying the

perceived alterity of those whom we study. How, then, might we study migrancy without reproducing oppressive ways of knowing? Drawing on a ‘global power perspective’, this paper seeks to develop an active sociological listening through which we may study phenomena such as migrancy and its resultant identities, while remaining attuned to both the complexity of today’s society and the power asymmetries that impact upon individual and collective lived experiences. Rather than inadvertently reproducing the hegemonic discourses that result in the subjectification of those studied, this paper seeks to focus our gaze upon the ways in which individual actors make sense of and apprehend themselves in evermore interconnected world. This does not mean that national identifications and affiliations are rejected. Rather, they viewed as one of many possible ways of situating the self.

“Making Up People” Globally. Analyzing the Institutionalization of Global Categories of Difference

Mueller, Marion; Bennani, Hannah

University of Tuebingen, Germany
marion.mueller[at]uni-tuebingen.de, hannah.bennani[at]uni-tuebingen.de

In the last decades world society has been described as increasingly diverse and pluralistic. Simultaneously global norms have been established (e.g. equity and inclusion) by which international politics try to deal with these differences between people and create equal opportunities. Despite this global debate, sociological research about the construction and deconstruction of cultural distinctions drawn between members of a society (e.g. gender or race) stayed attached to the thinking of methodological nationalism and has focused mainly on local or national contexts. It seems that – at least implicitly – the assumption is made that globalization has no impact on the creation of differences between people. In our paper we want to ask about the scope of these differences and present the concept of “global categories of persons”. We assume that global categories of persons play an important role in the process of globalization: By describing people around the world as members of the same categories (e.g. as women or as person with disabilities) people can perceive themselves as members of a common world – even without direct contact to each other. So, we ask what kind of categories of persons in the realm of international politics and law have been established on a global scale up to now (e.g. “race”, “gender”, “persons with disabilities”) and which has not been successfully institutionalized yet (e.g. “poor people”).

Negotiating Home Culture: The Case Of Taiwan

Kang, Tingyu

National Chengchi University, Taiwan
tingyu.kang[at]gmail.com

This study examines how highly skilled emigrants negotiate the diasporic talent engagement policy discourses of their origin country. Many governments around the globe have sought to engage their diasporas as part of their development strategy in the global competition for talent. Current studies have identified various types of diasporic talent engagement policies. This includes the promotion of cross-border cultural bonding, the collection of diasporic information, and economic incentives, such as tax deduction. However, it is relatively less discussed regarding how diasporic individuals receive and negotiate these government practices of their countries of origin. This study is based on semi-structured interviews with Taiwan's diasporic talent in the technology sector. It explores how the Taiwanese government engages its highly skilled emigrants in the technology sector and how these emigrants negotiate these discourses. The findings suggest that the "ethics of diasporic talent" forms a central part of the policy discourses that seek to encourage highly skilled emigrants to relocate to their origin country. On the one hand, diasporic talent engagement policy discourses and practices nationalistically highlight the responsibility of diasporic talent to contribute to the economic triumphalism of the home country. On the other, filial piety and familialism is envisioned in these discourses and practices as a core ethic of young working emigrants. These emotion-ridden policy imageries are often challenged by the emigrants with a neoliberal rationality, calculating personal economic gains rather than emotional experiences. Some emigrants also challenge the imagined geographical boundaries of patriotism.

National and Regional Symbolic Boundaries among European Elites: A Qualitative Interview Study of Higher Officials of the European Commission

Drewski, Daniel

Freie Universität Berlin, Germany
daniel.drewski[at]fu-berlin.de

On the one hand, globalization and European integration processes have led to the emergence of transnational elite groups, such as professionals, experts and managers working in international organizations or multinational corporations. Many theories predict that, for them, the nation state as a frame of reference will increasingly lose importance. On the other hand, the countries and regions these elites come from continue to be different and unequal along a number of dimensions, for example, in terms of their culture, language, levels of socio-economic development, and political influence. In this contribution, I ask whether these factors are attributed to the individual level and converted into symbolic boundaries among European elites, thereby potentially contributing to the reproduction of material and symbolic inequalities along national and regional lines. To tackle this question, I have conducted qualitative interviews with 44 officials of the European Commission. The Commission unites officials from 28 (soon 27) different EU member states, and thus allows analyzing how Europeans from all countries and regions of the EU perceive and relate to each other. Furthermore, as a supranational organization, it is a "least-likely case" for the occurrence of national and regional symbolic boundary making, thus providing a conservative estimate of this phenomenon. In this contribution, I argue that, while "nationality" and "regional origin" do not constitute primary and explicit markers of symbolic boundaries among Commission officials, issues of "organizational culture", "working language", "professional values", and "influence and career chances", which are indirectly connected to their respective national and regional backgrounds, do continue to play a role for boundary-making among them.

Media-Related Practices And Civic Engagement Of A Transnational Audience During A Clash Of Geopolitical Interests

Vihalemm, Triin; Juzefovičs, Jānis

University of Tartu, Estonia
triin.vihalemm[at]ut.ee, janis.juzefovics[at]ut.ee

This contribution asks: what is the long-term impact of highly mediated geopolitical confrontation and misinformation operations on the media-related practices and civic identity of a transnational audience? The term transnational is understood as a set of individual practices in maintaining parallel social relationships with their societies of origin and of settlement (Basch et al 1994). Researchers have reported that migrants who are well integrated into the receiving society are the most transnational (Guarnizo et al 2003, Cela et al 2013). Transnational populations have diverging 'habitats of meaning' (Vertovec 2004, Hannerz 1996) accumulated in their multi-local life-worlds, which affect their social agency. Authors generally agree that transnational structures are actually liberating for the individual, as they provide a cultural basis for resistance (Levitt 2010, Lacroix 2014). We assume that, in the context of geopolitical confrontation, the transnational 'habitats of meaning', i.e. histories of local belonging, cultural geographies are in turbulence and therefore offer less support for individual agency. The empirical research was conducted among the Russian-speaking populations of Estonia and Latvia, who developed transnational media use practices during post-Soviet nation-building in the Baltic states. Their media menu combines Russian, local and occasionally Western sources, which is in sharp contrast to ethnic Estonians' and Latvians' local media menus and this has raised public concern about the impact of Russian propaganda. By using both quantitative research and a qualitative study, the authors will provide a typology of the media use strategies of the Estonian and Latvian Russian audiences and explain how these strategies interact with transnationalism and social agency.

On Friendship and Strangeness: The Everyday Encounters and Social Ties of Transnational Professionals

Devadason, Ranji Elizabeth

Keele University, United Kingdom
r.e.devadason[at]keele.ac.uk

This paper considers how transnational professionals cope with the condition of being or becoming a stranger when they arrive in a new workplace or country. In the Globalization of Strangeness, Rumford (2013) argues that our understanding of the figure of the stranger and strangeness requires an 'overhaul' in light of processes of globalization. People become estranged from those who would conventionally be their neighbours, as a result of globalizing processes; conversely, befriending strangers can be routinized through mobility. Questions about how mobility affects friendships,

relationships and families, as well as the enduring qualities that constitute character, have been raised by sociologists and other scholars of globalization. Yet social ties and strangeness tend to be separated – analytically and empirically – in sociological research. This paper attempts to draw them together through its empirical focus on in-depth interviews with corporate executives and UN-professionals who routinely cross borders for their jobs. In a practical sense, one needs to 'travel light' to be mobile. Arguably, under the project-oriented regime of new capitalism, time-delimited goals and flexible networks are valued over and above long-term endeavours and enduring connections. Whether making and maintaining friends provides a way of insulating transnationals from the disorienting (and short-term) consequences of mobility is a critical question here. Transnational actors' strategies for orienting oneself to unfamiliar settings are analysed in tandem with their social ties within and across borders.

Impact of Transnational European Practices on the Development of Individual Outlooks

Vdovichenko, Larisa

Russian State University for the Humanity, Russian Federation
vdlarissa45[at]yandex.ru

Europe, especially in recent years, has become a source for the development of many social practices that spread outside the EU. Many processes facilitated this: the creation of the European Union and its relations with other countries, the implementation of the mechanism of the Pan-European Conference on Security and Cooperation in Europe in the military-political, economic fields and in other areas, including the expansion of contacts between people from different countries. Because of the active use of these transnational values and practices, many of the existing barriers between the countries that signed the Helsinki Act were broken. This dramatically increased the flow of information, material things and people between countries using this mechanism of cooperation. Unfortunately, in recent years, these processes of reducing barriers and the spread of transnational practices have become obstructed by both the state administrations of a number of countries and by right-wing, nationalist and populist forces and movements. The purpose of my research is to study the effects of the spread of transnational European values and practices on the individual consciousness and public opinion of people living in Russia. After 1991, citizens of the Russian Federation began to visit the EU countries much more frequently, their economic and personal contacts, as well as information about European social practices, expanded significantly. How did this affect their worldview? The empirical database of the study includes the results of public opinion polls on these topics, as well as a content analysis of the media and the results of my author's research.

A Global Sociological Approach To The Problem Of A Devaluation Of The Humanities Within The University

Costa, Rosário Couto

University Institute of Lisbon (ISCTE-IUL), CIES-IUL, Lisbon,
Portugal
rosario.c.costa[at]gmail.com

The devaluation of the humanities is a social phenomenon that has been gradually spreading around the world in the last forty years. This paper constitutes an analysis of a finalized sociological research project which focused on this devaluation, and its main goal is to share some solutions that were found to handle the inherent complexity of a global sociological approach. Two main topics are covered – the authors that were selected to lay out the fundamentals behind the research, and the combination of methodologies that were used to make it possible. These choices facilitated an analysis and synthesis that are multidimensional in nature, allowing for the identification of ideas and actors that have been at the roots of this devaluation. The paper also seeks to demonstrate how a global sociological approach enables us to later conduct better local research. The case of The School of Arts and Humanities of the University of Lisbon is the current object of study due to its contrast with current trends of the devaluation of the humanities. In spite of the political guidelines that were identified as potentially problematic in the global study, a recent initiative can be clearly observed in this institution to promote and transmit the humanities and other non-specialized knowledge, to a great degree of student engagement and success. Finally, these two studies look to explore the potential influence of sociology in the public sphere, with the hope that they contribute in some way to a recognition of the value of studying the humanities.

The Transnationalization Of Lifeworlds In Europe – A Stimulus For Value Convergence?

Aplowski, Auke; Delhey, Jan

Otto-von-Guericke-University Magdeburg, Germany
auke.aplowski[at]ovgu.de, jan.delhey[at]ovgu.de

As a result of Europe's political unification, also its societies and citizenries have become more interrelated. As previous research has established, the chance of ordinary citizens of being involved in cross-border activities (individual transnationalism) largely follows two social gradients, an education gradient, and an – reversed – age gradient. My paper is interested in the consequences of unequal transnationalism for the cultural values endorsed by “cosmopolitans” (those groups with a high likelihood of individual transnationalism) and “locals” (those with a low likelihood). My assumption is that the widening of social lifeworlds that individual transnationalism implies has a socialization effect and thus impacts particularly on the values endorsed by the cosmopolitan group in society. Based on this assumption, two hypotheses are derived: (1) Within societies,

there is a value divergence between the cosmopolitans and the locals. (2) Between societies, there is a convergence of values among the cosmopolitans, but not among the locals. These hypotheses are put to an empirical data using the Schwartz Human Value Scale from the European Social Surveys (ESS) 2002-2016. The analysis involves three steps. The first step analysis which values are typically endorsed by cosmopolitans (defined as highly-educated, below 40 years old) and locals (defined as lowly educated, above 40 years old). The second step involves a trend analysis of value scores aggregated for these two groups, computing measures of sigma- and gamma-convergence. Finally, multi-level regression models reveal whether for the cosmopolitans in particular the nation state has lost its power to shape individual values.

Globalization and Citizenship Policies

Folloni, André (2); Petroccia, Sara (1);
Ferone, Emilia (1)

1: University Gabriele d'Annunzio, Chieti-Pescara, Italy; 2:
PUCPR, Brazil
andrefolloni[at]gmail.com, sarapetroccia[at]gmail.com,
emiliaferone[at]gmail.com

The aim of this proposal is the globalization processes, their interdependence and their global consequences and more in details, the triple helix among globalization, development and citizenship evolution policies. The definition processes of citizenship are more and more dependent on models, relationships and situations that occur and spread in different distant places. The privileged audience of citizenship narratives is not necessarily placed in the contexts of our material life and it not constitutes part of networks of our direct relations. Current global citizenships tends to fade the various types of borders among peoples and among members and lastly global citizenship seems to design the future towards the existence of a systemic planetary society, while, particularisms, secessionisms, bloody tribal strives, ethnic, racial, and religious intolerance abound as resonant reactions for the outer environment noise. Current history shows therefore a situation of paradoxical idea of global citizenships, which tends to dissolve various types of borders between peoples, stimulates or produces massive migrations, the mixing of cultures and traditions, and seems to project the future towards the existence of a planetary society, while, on the other hand, more and more particularisms, secessionisms, bloody tribal strives, and ethnic, racial, and religious intolerance abound. The common result of these opposing trends is an increasing identity recombination which leads towards common heritage of values, customs, ideals and commitments.

From Rights to Instruments: Reframing in Transnational Advocacy against Child Marriage

Ebeturk, Irem

WZB, Germany
irem.ebeturk[at]wzb.eu

Starting from the second half of 2000s, a global movement against child marriage emerged. Between 2013 and 2017, the UN passed four resolutions devoted exclusively to child marriage. In the “2030 Agenda for Sustainable Development (SDGs),” which is considered to be the bible of global development, child marriage is now defined as one of the major social and development issues of our times. Although, in the early 1990s, child marriage was discussed as an element of harmful cultural practices by the international community, it did not receive exclusive attention as it has more recently. Starting from the second half of the 2000s, there has been a global level attention and many advocacy groups took up the issue. How did child marriage come to be defined as a major global problem, after being a minor issue that only a few “activists” cared about? Drawing upon, 20 semi-structured interviews with key figures of the global movement and analysis of documents produced by INGOs, governments, activists, and IGOs, I argue that the success of the global movement against child in receiving attention and legitimacy can be explained by a shift in the framing of the problem. I emphasize differences in issue framing for two periods of the movement. The early movement, in the 1990s, focused on human rights framing, while the period after 2008 turned primarily to framing that depicts child marriage as problematic for economic development. I argue that, the shift from a “rights framing” to an “instrumentalist framing” is a case of “frame alignment process” (Benford and Snow 2000) and explains the success of the second period.

Theory as Practice: Enacting Global Models in Organising for Development in Tanzania

Green, Maia (1); Kontinen, Tiina (2)

1: University of Manchester, United Kingdom; 2: University of Jyväskylä, Finland
maia.green[at]manchester.ac.uk, tiina.t.kontinen[at]jyu.fi

Development research has shown how international development agencies promote global models of the kinds of social arrangements assumed to lead to positive change disseminated through financial transfers along vertical chain of contractors, implementers and recipients. Partners from the global South in this chain are tasked with demonstrating that global development models work in their particular, local contexts. This paper suggests that such global models form an

underlying theory of development that, in turn, becomes performative practice in the activities of development implementers in Tanzania. Our ethnographic work with the nationwide social welfare programme which provides grants to poor households and with local civil society organisations as they seek to gain donor-funding highlights the centrality of enacting, performing and demonstrating development social orders; including an emphasis on structuring particular kinds of tangible organisational forms or building a linkage between the claimed outcomes and the intervention. Civil society groups prioritise organising that adheres to template models of effectiveness and capability to educate those perceived as in need to change their behaviour. The local government departments charged with delivering grants to poor households make sustained efforts to incorporate beneficiaries in a visible narrative of economic transformation through individual agency. We argue, thus, that organising in the context of development is modelling work that aims to enact the globally prevalent theory concerning the kinds of social arrangements that bring about ‘development’. The process of organising is not confined to ‘organisational development’ but encompasses also those who the organisation claims to impact on.

The Creation And Spread Of The Concept Of Cultural Policy

Alasuutari, Pertti (1); Kangas, Anita (2)

1: Tampere University, Finland; 2: University of Jyväskylä, Finland
pertti.alasuutari[at]gmail.com, anita.kangas[at]jyu.fi

The paper discusses policy diffusion and the role international organizations play in facilitating the global spread of policy innovation. Our example of rapid diffusion is the institutionalisation of cultural policy in the 1970s. The development was triggered by UNESCO’s activities. We explore how cultural policy was established both as a concept and as an internationally standardised branch of public administration. Our data consists of 72 national reports prepared by the countries themselves and the reports of all expert groups and intergovernmental meetings on cultural policy, as well as resolutions of the UNESCO’s General conferences from 1966 to 1999. Applying Everett Rogers’ model of the diffusion process we study the order in which the member states from “early adopters” to “laggards” adopt the innovation (i.e., produce a report of cultural policy in their country), and we also discuss cross-national variation in the degree to which they adopt key concepts used in describing national cultural policy. The analysis shows that, as a consequence of long-term international collaboration within the UNESCO from the 1960s onward, member states’ governments throughout the world have established ministries, state departments and arts councils for culture and arranged the collection of cultural statistics. Academic research, education and publishing activities in this area have become institutionalized. There is remarkable isomorphism and conformism among national states in that, regardless of actual practices, you will find similar declarations about their missions in cultural policy. The analysis also shows that UNESCO connections had a decisive role in adopting the idea of cultural policy.

The Authority Of Science In Parliamentary Discourse: Variation Between Four Countries' Legislatures

Syväterä, Jukka

Tampere University, Finland
jukka.syvatera[at]tuni.fi

World polity theory research has argued that the worldwide authority of science is a prime example of how world culture shapes local decision-making around the globe. The evidence is extremely convincing when it comes to the worldwide expansion of science (including the proliferation of scientific organisations, higher education, and the production of science), but how all this expansion is reflected in actual national decision-making – for example, how politicians invoke the authority of science in political discourse – has not yet been systematically studied. In this study I examine parliamentary discourse on new legislation using data consisting of 576 transcription of parliamentary debates, distributed across four countries: Australia, Finland, Kenya, and the United States. To what extent are politicians' practices of enacting and contesting authority of science shared across borders? Naturally, these four countries cannot represent the entire world; however, each does feature a different combination of two important elements: the level of institutionalisation of scientific policy advice; and the level of public trust in science. If the similar modes of enacting the authority of science are used in all (otherwise so different) four countries, that could provide good reason to suppose that similar modes could be found in most other countries as well. There should be, however, national variation in the frequency and intensity of enacting authority, depending on how comprehensively a given country has already enacted models of rationalised governance, including expert-driven policy advice systems. The initial results from the ongoing study will be presented.

Rethinking Global Power: The Space of States

Atkinson, Will

University of Bristol, United Kingdom
w.atkinson[at]bristol.ac.uk

This paper proposes a novel sociological framework for understanding international relations. The starting point is Pierre Bourdieu's notion of field, denoting a system of domination and struggle in relation to a relatively autonomous principle of misrecognition, or capital. While originally deployed to understand national-level struggles among, for example, artists and state bureaucrats, some scholars (e.g. Gisele Sapiro, Frederic Lebaron, George Steinmetz, Julian Go) have since begun identifying transnational or even global fields. Building on some of these ideas, the paper makes the

case that there is a field, or space, of states in which state actors, controlling state resources (especially economic capital, military capital and cultural capital) are positioned. There are dominant and dominated states, and states with different compositions of capital, and state actors' feel for the game underpin so many global strategies, from trade deals and embargoes to war. This conception, for which there is some tentative statistical support, has the potential to overcome many of the limitations of existing theories of international relations and global power – from realism and constructivism to world-systems theory – while integrating some of their major insights.

The Conditional Cash Transfer Narrative: Construction Of A Global Policy Model

Heimo, Lauri Juhani; Syväterä, Jukka

Tampere University, Finland
lauri.heimo[at]tuni.fi, jukka.syvatera[at]tuni.fi

During the past two decades, more than 60 countries have implemented a conditional cash transfer (CCT) program, and by now, the 'CCT policy model' has been established as one of the most well-known policy brands worldwide. The prevailing CCT narrative begins from the notion that the CCT model was created domestically in Mexico and Brazil, from where the diffusion of CCTs began. The literature concerned with CCTs tends to take this narrative as a given and focuses on impact evaluations and prerequisites for CCT diffusion. This paper places this narrative under scrutiny by qualitative analysis of textual documents produced by relevant international organisations (IOs). We scrutinise the construction of CCTs by tracing its evolution into a recognisable model and a global policy trend. The results show that the prevailing narrative is overly simplified in downplaying the role of IOs in the creation of CCTs, and placing the origin of the policy model in Mexico and Brazil (whose CCTs were actually preceded by comparable programs set up in other countries). IOs such as the World Bank, the Inter-American Development Bank and the International Food Policy Research Institute have played a central role in the construction of the global policy model – as well as in upholding the CCT narrative. We argue that the editing of 'policy narratives' is a crucial part of epistemic governance through which IOs influence on the construction of global policy models when they strive to conduct the conduct of nation-states.

Science And Non-science In Political Reassurance Work: Trends In International Recommendations And The Justifications Used By OECD, 1961–2018

Rautalin, Marjaana; Syväterä, Jukka; Vento, Eetu

Tampere University, Finland
marjaana.rautalin[at]tuni.fi, jukka.syvatera[at]tuni.fi,
eetu.vento[at]tuni.fi

This paper explores the ways international policy recommendations have been justified, and whether these justifications have changed during the last six decades. Our investigation is inspired by the existing scientization scholarship according to which policy ideas and recommendations marketed by the international organizations are ever more often justified by references to scientific research. We test the idea of policy models and ideas becoming increasingly scientized in relation to the epistemic governance theory. The theory points to the fact that in the political reassurance work, whether national or international, actors make use of all kinds of authorities they believe to be shared among the audience members. Thus, in their attempts to convince actors resort to the authority of science but also to non-scientific elements such as different moral or ethical principles and actor identifications. In this paper, we investigate what kind of authorities have been invoked to motivate international policy recommendations, as well as change in these practices. As a case in point, we focus on the Organisation for Economic Co-operation and Development (OECD) and the policy recommendations put forward in its reporting. The data used in the empirical analysis consist of the Economic Surveys published by the OECD and covers years 1961–2018.

Rationality, Romantics and the Makings of a Global "Supermodel"

Vähä-Savo, Valtteri; Luomanen, Jari; Alasuutari, Pertti

Tampere University, Finland
valtteri.vaha-savo[at]tuni.fi, jari.luomanen[at]tuni.fi,
pertti.alasuutari[at]tuni.fi

Studies by world society scholars have brought to light the remarkable isomorphism between nation-states. The policies, practices and institutions of nation-states seem surprisingly similar across the world. Underlying this isomorphism some have posited a world cultural trend toward increasing rationalization. Calculative instrumental rationality, professionalization and managerial expertise are constantly expanding to new fields of activity. Shared understanding of rational behaviour helps to disseminate identical institutions worldwide. There is still room for romantic ideals and irrationality in the world culture, but their legitimacy is limited to the domain of expressive culture. However, there seems to

be at least one globally successful organizational model that does not fit well with this image of expanding cultural rationalization. Science and technology parks (STPs) have turned out to be extremely fashionable all over the world since the 1980s. Today, one can find several hundred STPs in the world, spread across countries such as the United States, China and Azerbaijan. STPs are surely tied to the calculative practices of profit-making in the business world, but the language used to promote and describe them seems to draw more on romantic ideals than the vocabulary of calculative rationality. Our data-set is comprised of parliamentary records and interviews regarding STPs in Finland and the United Kingdom. By analysing the root metaphors found in the talk concerning STPs, we examine how instrumental rationality and romanticism are mixed together and reconciled with each other in a way that helps to make STPs a global "supermodel".

RN15_08 | Local Experiences of Globalization

The Global Hair Trade and the Production and Circulation of Femininities

Högbacka, Riitta

University of Helsinki, Finland
riitta.hogbacka[at]helsinki.fi

The global hair trade is a multimillion business. Human hair is both a modern commodity available to all and a body part. In this paper I follow the hair as it is donated in temples in India to where it is used in the Global North and increasingly in Africa. In other words, the Global South is treated as a site of consumption in addition to a site of production. Through the experiences of the women involved it will be possible to delineate the meanings attached to hair and to being a woman in different social contexts but permeated by global ideals. How is hair seen by the women? What kind of (classed, racialised, or globalised) femininities is it linked to? How does the displaced circulation of hair connect and separate the different women? Theoretical ideas utilised come from feminist commodity chain analysis which focuses on "tracking globalisation" in people's everyday lives, experiences and imaginaries' (Ramamurthy 2004, 741; 2014) and from the insights of treating commodities as having social lives and cultural biographies (Appadurai 1986; 2013; Kopytoff 1986). The paper is based on recent thematic interviews with 30 black South African hairdressers and women using hair extensions and 36 white Finnish hairdressers and women users, and about 25 upcoming interviews with Indian women donating hair. The results will also shed light on bigger issues to do with multiple modernities and whether the modern in Africa is linked to global inequality (Ferguson 2006), as well as how globalisation is experienced locally.

The Educative Relation In Globalization. French Teachers Abroad And Educators In France

Beck, Sylvain

GEMASS (CNRS/Sorbonne, Paris), IRTS Normandie
sylvain_beck[at]yahoo.fr

This proposition proposes the articulation of two different professional groups in education: French teachers abroad and educators in social work in France (Paris and suburbs). The aim is to provide knowledge on cosmopolitanism against colonial spirit in global social policies in a neoliberal era. In one hand, French teaching involves universalistic spirit, spreading French culture and language in foreign country, for example in Morocco and UK where I interviewed sixty teachers, and observed for six months each. Fuzzy identities have been emphasized, considering the feeling of belonging by the scale of patria, the professional status, type of school (national or local), family situation, time spent in the host country, life courses and origins. But republican values are also graded by adaptation of pupils who live in local environment. As said Hulot, one interviewee who experimented teaching in Casablanca, London and Paris stressed cultural diversity: "It is the same curriculum and the same job but with cultural differences". Aurelien, another teacher in Casablanca, comparing experiences of teaching in France and abroad, notably in Parisian suburbs: "that's enriching, but all relations are enriching. There is no need to leave abroad to live that". These insights reminded me while I came back in France as teacher in social work. It appeared as a cosmopolitanism "at Home", crossing the boundaries of ordinary daily life. Alinsky named social work as 'social colonialism'. Spreading identities, space-time of migration and mobility, regarding the human ability of reflexivity and self-transformation, how I will argue that, following the project of a philosophical sociology (Chernilo, 2017) and a moral sociology, these emphasize a sociology of the relation with the world, like a resonance (Rosa, 2016).

From A Liquid Modernity To A Solid Community Work

Rossi, Giuseppina

University of Milano Bicocca, Italy
giusyred[at]gmail.com

Starting from a tribute to the thought of Zygmunt Bauman on globalization, the purpose of this proposal is to highlight the potential of intercultural mediation for local development. Freedom, rights, mobility, cultural consumption take shape differently in our multicultural cities depending on the personal experience of the subject. Globalization is a phenomenon experienced and perceived in a non-homogeneous way and the collective narration becomes a mosaic in which multiple points of view on reality seek to recompose themselves at the local level, at risk of new pressures and of producing social segregation. As Abdelmalek Sayad suggests (2002), the migratory phenomenon, in its binomial emigration-immigration, is a "total social fact", which involves society in all its aspects: social, economic, legal,

political. The main questions concern the cosmopolitanism of everyday life. How empowerment of local communities in terms of intercultural communication can help to concretely create the "imagined community"? How can we work on the desires and aspirations in a perspective addressed to the future? The aim of this contribution is to present good practices of intercultural mediation in Museums at European level (from Italy, France and Sweden). Considering that in an open city everyone is a "resident citizen" these projects want to give voice to those who usually live on the margins, proposing an unusual point of view, an unexpected encounter that can break a prejudice, a border, take care of the void of the "double absence" that migrant lives. These projects are based on the adoption of a narrative approach with art and creativity in order to fight stereotypes and to foster social inclusion, with a special attention to new minorities, refugees and asylum seekers.

Explaining The Backlash

Hurenkamp, Menno; Middendorp, Iris

University of Humanistic Studies, Netherlands, The
m.hurenkamp[at]juvh.nl, i.middendorp[at]juvh.nl

What do blue and pink collar workers make of globalization against the background of immigration, growing competition from for instance China or India and rising influence of multinational corporations? Existing quantitative research from a political science or economical perspective has it that people who experience direct consequences of global economic competition experience insecurity, both towards their own life as towards the capacity of democracy to solve their problems. They would therefore resist globalization and seek refuge in nationalism and / or populism. We use lived experiences of globalization to take a more sociologically informed look at this link. In a series of focus groups with Dutch workers (from different professional backgrounds but all working in lower paid jobs in strongly internationalized companies) we asked respondents to debate the pro's and con's of internationalization. We found that among this group, there is little evidence of a consistent backlash against globalization. Working people frame their interests in line with the interests of their company: globalization gave them work or saved their jobs. They do point to negative cultural effects of globalization, such as loss of familiar cultural codes and practices, and how their own company contributes to these losses. They are also ambivalent about government's capacities to tackle broader issues of (cultural) cohesion. But there appears to be little evidence to support a direct connection between having a lower paid 'globalized' job and supporting populism or nationalism. Hence, from a micro-sociological perspective, the backlash against globalization is found in sociotropic rather than egotropic motives.

RN15_09 | Everyday Europe: Evaluating recent research on social transnationalism and horizontal europeanisation

Social mobility and cross-border spatial mobility in Western Europe

Ciornei, Irina (1); Barbulescu, Roxana (2);
Varela, Albert (3)

1: University of Bern; 2: University of Leeds; 3: University of
Leeds
irina.ciorneii[at]gmail.com, R.Barbulescu[at]leeds.ac.uk,
A.Varela[at]leeds.ac.uk

Mobility studies argue that physical movement, within or across borders, constitutes a form of capital that can be 'cashed in' on higher social status alongside education, cultural transmission or social capital. Yet, how the type and timing of mobility affect life chances and status attainment remains insufficiently specified. In this paper we consider the broad spectrum of cross border spatial mobility, that ranges from weekend trips to long-term settlement in other countries. The analysis inquires the extent to which socialisation into mobility, that is, cross-border journeys during childhood and adolescence, impacts on future prospects of status attainment and emancipation from origin class. Preliminary results show that socialisation into mobility positively influences the status attainment of the lower educated, even more so than in the case of individuals with tertiary education. A tentative mechanism to be explored is the extent to which hyper mobile childhoods of the low-educated provide 'soft knowledge' that could compensate the lack of 'hard knowledge' acquired through education. In order to empirically test our hypotheses, we use the EUCROSS survey data collected across six European countries.

Everyday Europe: Evaluating Recent Research On Social Transnationalism And Horizontal Europeanisation

Teney, Céline

University of Göttingen, Germany
celine.teney[at]sowi.uni-goettingen.de

This presentation will work as a general discussion of the other papers presented in the panel by Ettore Recchi, Juan Diez Medrano and Irina Ciornei. The panel will be chaired by Adrian Favell. It will assess specifically the contribution of the recent published, collectively authored work, *Everyday Europe: Social Transnationalism in an Unsettled Continent*, Ettore Recchi, Adrian Favell et al (Policy / University of Chicago Press, 2019), to the now well developed field of research on 'bottom up' social transnationalism and/or horizontal Europeanisation, as a dimension of more general globalisation. This field has been

notably led by research based in Germany by sociologists such as Steffen Mau, Jan Delhey and Jürgen Gerhards. What insights does this research give to the political crisis in Europe, in particular the disjunct between the apparently dense evidence of highly Europeanised societal integration and the EU's ongoing political failures with building European 'identity' and legitimisation.

RN15_10 | Cosmopolitan Experiences

Everyday Nordic Cosmopolitanisms: Food Spaces and Intercultural Encounters in Danish Society

Kuruoglu, Alev Pinar; Woodward, Ian

University of Southern Denmark, Denmark
alev[at]sam.sdu.dk, iawo[at]sam.sdu.dk

Taking inspiration from scholars who argue there needs to be better understanding of social spaces that enable everyday interaction, participation, and intercultural dialogue within increasingly diverse European societies, this paper presents findings from ethnographic research in Denmark on how cultural differences are represented and negotiated in commercial spaces of food consumption. Research within literatures on multiculturalism and cosmopolitanism have recently migrated away from studying the institutional basis and discursive negotiations of differences. One important development has been a move towards an understanding of the embodied and practical dimensions of everyday social interactions where diversities are experienced 'on the ground'; in neighbourhoods, and in 'public' spaces such as streets, shops and shopping precincts, or workplaces. For this reason, we focus on how differences are represented, experienced and encountered using the case of food and drink consumption spaces. Food consumption, especially in commercial public settings, can be an important aspect of cosmopolitan taste portfolios but is also a particularly potent public carrier of feelings and practices of cultural belonging and civic inclusion. In the Danish context, food is an axiomatic domain of banal nationalism. Yet, class also matters and new food cultures may afford an exclusivist redefinition of public understandings of Nordic culture. We combine traditional ethnographic methodologies with spatial analysis techniques to explore the material-spatial encoding of inclusion in a selection of spaces of food consumption in Copenhagen. We reflect on methodological implications of the approach for studying diversities, and also on the meaning of cosmopolitanism in Nordic contexts.

Academic Experience Abroad: Autonomy and Sociability, Southern and Northern Style

Birindelli, Pierluca

Gonzaga University, International Studies Institute
pierluca.birindelli[at]gmail.com

Globalization studies underline the transnational standardization of education, in terms of both methods and curricular content. Comparative analysis of autoethnographical essays written by international master students at the University of Helsinki (North Europe) and the University of Florence (South Europe) permits detailed reconstruction of their academic experience. The two institutions share three crucial structural features: public, no tuition fees (at the time of the field work), non-English speaking countries. They also share the cultural emphasis on fostering students' autonomy. However, within a similar Bologna-type institutional organization, students' narrative accounts reveal sharp differences in their academic experiences precisely vis-à-vis the cultural value of autonomy. In Helsinki, it is up to the students to find all the relevant information and construct an autonomous learning itinerary; however, administrative staff and professors are ready to respond to students' queries. In Florence, autonomy is accompanied by chaotic academic organization. International students rely on peers and professors to find their way in the academic bureaucratic jungle. Here the lack of English proficiency is a key factor; the apparent linguistic glue of global academe is differently declined locally. Another marked difference is the organisation of students' sociability. The University of Helsinki fosters academic and social engagement through international students' associations, which act as an important bridge with city life and highly ritualistic Finnish society. Students' associations are totally absent in Florence. The thought/unthought interpenetration between University and social life produces a profoundly diverse academic experience that transcends obvious social and cultural differences between the two cities.

The Young Cosmopolitan Between School and 'Home': An Ethnography of Multiple Attachments

Rondinelli, Elisabeth

York University, Canada
rondine[at]yorku.ca

A major premise of the study of everyday cosmopolitanism is that as the horizons of social interaction stretch past the confines of local life, a person's attachments should become more diverse and their place of birth should no longer be the primary determinant of their sense of belonging and loyalty. Drawing on fieldwork with young students ages 16-20 who are enrolled in an international school in Europe, I examine the labour involved in accounting for and representing "home" at school. With a focus on young people who come from situations of political violence, I trace their efforts to provide

an account of home to an international group of interlocutors and within an institutional context that is characterized by the paradoxical imperative of being rooted but open. I argue that young people are torn between doing justice to their ideas about (and experiences of) home and the commitment to express allegiances beyond its particularities. I demonstrate that while allegiances appear in dense and overlapping ways, some are marked as problematic and thus subject to reprimand and censure.

Cosmopolitan Encounters in the International Workplace

Kobyshcha, Varvara

University of Helsinki, Finland, NRU Higher School of
Economics, Russian Federation
ko.varvara[at]gmail.com

A great body of research on intercultural communication in the workplace inherits the legacy of Hofstede's theory. They assume a national culture to be a homogeneous entity, clearly separated from the others, and predetermining how a person tends to behave in routine job situations. This paper adheres to an alternative approach based on the concept of 'everyday cosmopolitanism' and 'cosmopolitan encounters', which allows a more flexible and deeper understanding of how people make sense of Others' behavior, identity, and attitudes in practice. The paper is devoted to the case study of the middle-level managers of an international company who regularly communicate with their superiors and co-workers from the other offices (in central Europe, several African countries, Turkey and Russia) or with the international colleagues at their office. The fieldwork included 21 semi-structured interviews conducted in person at the Moscow office or online via Skype. In the presentation I will focus on two aspects of the study: 1. What triggers intercultural reflexivity or prevent it from developing in particular situations? Under which conditions do people provide 'national' explanations of how the Others behave? And when do they, on the contrary, insist on individual differences as the determinant factor of diverse behavior? 2. How people recognize and define "international" character of the company in relation to their national corporate cultures? How the idea of the "international" corporate space is manifested and perceived at the head office (the company's place of origin in Europe) and at the regional offices? Thus, I aim to explain various types of problematic cosmopolitan encounters that are constantly produced within the social space of the global business standards and common means of communication.

RN16 | Sociology of Health and Illness

RN16_01a | Health Technologies and Biomedicine

Quantification of Life, Digital Health and the “Endoptikon”: Are We Entering an Era of Algorithmic Discrimination?

Maturo, Antonio

Bologna University, Italy
antonio.maturo2[at]unibo.it

It is not a news anymore that several health insurances both in the US and in Europe require their members to share their health data via apps or fitbit. Indeed, by apps and other new technologies it is easy to collect the most intimate information about ourselves. Self-tracking may involve behavioral aspects (the steps we take or the hours of sleep, for example), physiological data (heart rate) and also data related to our mood. Even our pattern of consumption may be tracked through our credit card (and we can receive a warning if we spend too much on liquors being overweight). These technological advances call for some reflections related to social justice. Stemming from an heterogenous set of theories - Rose (molecular glance) Desrosiers (quantification of life), Morozov (technological solutionism), Rosa (acceleration of life), Clarke and Conrad (bio/medicalization of life) and Zuboff (surveillance capitalism) - I argue that new forms of discrimination can take place in the health sector based on the access to our most intimate data (endoptikon), then processed by algorithms based on predictive medicine. The virtual objectivity of numbers can act as a “legitimate” barrier to access to care where the denial of a treatment can be justified by a missed score. In this new contest, the agency of individuals will be emphasized and the role of social determinants underestimated.

Bacterial vaccine development in Benin, West Africa and Helsinki, Finland: anticipating the post-antibiotic world

Sariola, Salla

University of Helsinki, Finland
salla.sariola[at]helsinki.fi

Antibiotics have made it possible for people to live longer, healthier lives. Antimicrobial resistance (AMR), however, is an

increasing problem, and the World Health Organization has described it as the next big global health disaster. This concern has generated a quest for alternatives to antibiotics in order to survive the world where antibiotics are no longer available to cure common infections and prevent contamination during everyday operations. The ethnographic focus of this paper is a clinical trial of a bacterial vaccine conducted in Benin, West-Africa, and Helsinki, Finland, with multi-sited fieldwork during 2017-2019. The vaccine is presented as innovative technology that would circumvent the use of antibiotics in the treatment of diarrhea in the future. The case study demonstrates how the quest for alternatives to antibiotics not only pushes global health researchers towards new scientific discoveries, it also forces scientific communities to restructure their core practices regarding collaboration, research tools, ideas of evidence, efficacy, and expertise. Studying the vaccine as an emerging technology necessitates a post-human analysis that foregrounds the objects of the vaccine – the microbes. Therefore, for social scientists, the changes urge us to conceptualize microbes despite their metaphorical and methodological invisibility. Such analysis shows how microbes are vital and malleable, rather than stable and contained, and this liveliness captures the gist of the problem – given the magnitude of the changes ahead, a post-antibiotic world is nearly impossible to imagine.

Self-tracking And Health Promotion: Individual Versus Social Practices

Jelsoe, Erling

Roskilde University, Denmark
ej[at]ruc.dk

Self-tracking by means of digital and other devices is a way to obtain information about one’s own body through measurement. There may be different incentives for self-tracking, but generally they are aiming at self-improvement and self-reflection (Lupton, 2016). One important incentive is to improve healthy living. As such self-tracking can be understood as a particular approach to practicing health promotion. Self-tracking is practiced in a number of different contexts from the purely individual self-monitoring and measuring among healthy people to self-monitoring in institutionalized settings in the healthcare sector, in private companies’ health promotion programs or on private data sharing platforms. However, common to all these different contexts and ways to practice self-tracking is an emphasis on individual responsibility and self-management. This seems to be in agreement with a prevailing tendency in health promotion to focus on individual responsibility. Even more social forms of data management through data sharing on social platforms is very often characterized by individualized features such as self-presentation and gamification or profit oriented data sharing on private platforms. Alternative forms of community orientation connected with a more social concept of health promotion seem to be much less common. This presentation will provide an analysis of prevailing forms of self-tracking, based on a number of case studies, and the extent to which they resonate with more social and community oriented approaches to health promotion and identify barriers and contradictions associated with the present individualizing contexts for these activities.

Robotic Surgery: Staying with the trouble between STS and Sociology of Health

Agodi, Maria Carmela; Picardi, Ilenia

Università di Napoli Federico II, Italy
agodi[at]unina.it, ilenia.picardi[at]unina.it

Choosing to stay – with the inherent trouble - at the intersection between Sociology of Health and Science & Technology Studies, this presentation focuses on the meanings framing technoscientific processes in robotic surgery research and innovation. The empirical grounding of the contribution is in ongoing ethnographic research at the ICAROS Center on Robotic Surgery, located at the University of Naples, where engineers and surgeons are working together. The embeddedness of research at ICAROS in global technoscientific networks, on the one hand, and the belonging of surgical professionals working there within the local (and national Italian) Public Health System on the other, define a sort of double bind in the framing of Responsible Research and Innovation (RRI) in that Lab. Two sensitizing concepts – drawn from U. Felt's inspiring contributions to a critical consideration of RRI - have been guiding the research design: a) narrative frameworks, structuring narratives about research & innovation in a definite field; and b) researchers' epistemic living spaces, bounded by those narrative infrastructures. Identifying key elements in narrative frameworks within which the aims and the stakes of research in robotic surgery are defined is a key contribution to the understanding of convergences but also of apparent gaps and contradictions between health policy declared aims and research and innovation driving forces.

RN16_01b | Health Professions

The Challenge Of Interprofessional Care For Health Professions. Obstacles And Resistance In The Italian Case

Sena, Barbara (1); Cataldi, Silvia (2); Fusillo, Federica (2); De Luca, Enrico (2)

1: Unitelma Sapienza University of Rome, Italy; 2: Sapienza University of Rome
barbara.sena[at]unitelmasapienza.it,
silvia.cataldi[at]uniroma1.it, federica.fusillo[at]uniroma1.it,
enrico.deluca[at]uniroma1.it

In the field of health services, the issue of interprofessional care is becoming increasingly important as one of the most innovative solution to care problems of patients with complex diseases (WHO, 2010). These care problems require different specialized health professionals, able to treat in a comprehensive and personalized way therapeutic paths not

always having clinically predictable developments. However, an interprofessional approach is not simple to be implemented. It implies the reorganization of health services, usually based on traditional approaches to treatment, in a new way and the reconciliation of professional differences, often characterized by mono-disciplinary practices and conflicting visions. International research on interprofessional care also highlights the importance of specific training, both in the academic courses and in the implementation of interprofessional collaboration practices (WHO, 2013), in order to change the acquired routines by traditional intradisciplinary socialization processes (D'Amour et al., 2005). Starting from this premise, the paper presents the results of a research on interprofessional knowledge and attitudes of students, health professions, doctors and practitioners in the Italian healthcare context. The collection and the analysis of information was conducted within a multi-method approach through: 1) a survey on a sample of students and teachers of academic courses in health care; 2) a delphi analysis on different panels of healthcare experts 3) case studies of health services based on interprofessional organizations. The research is among the first in Italy on this issue. It aims to analyse the obstacles and resistances in academic, organizational, regulatory and professional fields, which slow down the development of interprofessional practices.

Cooperation in Multiprofessional Child Protection Groups

Sucherdt, Christoph

Universität Kassel, Germany
christoph.sucherdt[at]uni-kassel.de

The field of child protection is often described as a medicalized field. Many publications such as, for example, Fangerau et al. (2015) claim, that the push towards medicalization was enabled through the introduction of improved diagnostic methods to detect abuse and maltreatment. The consequence was an extending of medical definition in the field of child protection. But despite the improvement of medical diagnostics and further medical research the concrete practices of identifying abuse and maltreatment are bound to a high level of uncertainty. One progressively established way to deal with this uncertainty in hospital settings is the formation of multiprofessional child protection groups, where medical professionals work alongside the non medical professions like social work, psychology and nursing. In this paper, I will present findings from participant observation in a German child protection group and show how certainty is achieved within the multiprofessional setting. I will answer the question how the cooperation does function in practice and which roles the different professional perspectives play when dealing with the suspicion of abuse or maltreatment? How much power of definition has the medical perspective in this process? Fangerau, Heiner; Görgen, Arno; Griemert, Maria (2015): Child Welfare and Child Protection: Medicalization and Scandalization as the New Norms in Dealing with Violence Against Children. In: Bagattini, Alexander; Macleod, Colin (ed.): The Nature of Children's Well-Being: Theory and Practice. Heidelberg, New York, London: Springer.

Decision-making During Childbirth: The Challenges of 'Choice' for Midwives and Obstetricians

Annandale, Ellen (1); Beynon-Jones, Sian (1); Baston, Helen (2); Brierley-Jones, Lyn (1); Brodrick, Alison (2); Green, Jo (1); Jackson, Clare (1); Land, Victoria (1); Townsend, Susan (3)

1: University of York, United Kingdom; 2: Sheffield Teaching Hospitals NHS Foundation Trust; 3: Calderdale and Huddersfield NHS Foundation Trust
ellen.annandale[at]york.ac.uk, sian.beynon-jones[at]york.ac.uk, helen.baston[at]sth.nhs.uk, lyn.brierley-jones[at]york.ac.uk, alison.brodrick[at]sth.nhs.uk, jo.green[at]york.ac.uk, clare.jackson[at]york.ac.uk, v.land[at]york.ac.uk, susan.townend2[at]cht.nhs.uk

Health policy guidelines in the English NHS place considerable emphasis on patient choice and patient involvement in decision-making about their care. Nowhere is this more evident than in maternity care. In this paper we focus on the quandaries that healthcare professionals (HCPs) face in providing choice to women in two English NHS midwife-led Units. The analysis is based on in-depth semi-structured interviews with 20 HCPs (midwives and obstetricians) which is part of a larger study of decision-making in childbirth funded by the National Institute of Health Research (NIHR). We show how decision-making and choice are rendered contingent and complex by the contexts in which labour and birth take place. We explore the situations where HCPs feel promoting choice is more straightforward and those where it is more difficult. We focus particularly on the challenges of determining women's capacity to make informed choices (such as when in pain) and HCPs' preferred approach for women and their birth partners to take during labour and birth. Such challenges show that this often calls for women to flex between passivity and assertion and to embrace an open attitude to the changing and unpredictable clinical circumstances of labour and of birth. The consequences for women's engagement in decision-making about their care are explored.

Caring Profession and Emotional Regime of the Institution: Doulas' Institutional Work in Russian Maternity Care

Borozdina, Ekaterina

European University at St. Petersburg, Russian Federation
eborozdina[at]eu.spb.ru

Until recent, the role of emotions in maintaining and changing health-care institution has been largely neglected in social sciences. The 'agentic turn' in neo-institutional theory has led to reassessing the institutional dynamic as conditioned by behavior of situated actors who not only rationally navigate organizational rules, but also have feelings according and about these rules. This paper contributes to advancement of

the outlined approach by considering how emotions come into play in the process of institutional transformations of Russian maternity care. The research is focused on institutional work of doulas, the representatives of a caring profession whose quest for professionalization is intertwined with creating new institutional meanings and new emotional regime in Russian hospitals. The paper relies on the data from 25 semi-structured qualitative interviews with doulas from different Russian cities. Interviews have been conducted by the author in May – December 2018. The research aims to enrich our understanding of post-Socialist healthcare transformations. Changes in this field are typically considered in relation to the shifts in state policy, introductions of evidence-based medicine, and emergence of neoliberal patient-consumer. By employing the lenses of the sociology of emotions and neo-institutional theory I intend to conceptualize these changes also as changes in feeling rules of the institution that are induced by actors' efforts on the work-place level.

RN16_01c | Chronic Illness Embodiment

Boundaries of Chronicity: The Ambiguous Experience of Metastatic Breast Cancer

Greco, Cinzia (1,2)

1: University of Manchester, United Kingdom; 2: Centre for the History of Science, Technology and Medicine
cinzia.greco[at]manchester.ac.uk

In recent decades, metastatic breast cancer (MBC), the deadly stage of the disease in which malignant cells spread outside the breast, has seen several therapeutic innovations, which have changed its status. Although average survival time is still three years, some patients live for up to ten or fifteen years. Medical professionals and medical literature are increasingly defining MBC as a chronic condition. However, this definition is controversial as several medical professionals and breast cancer activists' groups think that the use of the term "chronic" dismisses the seriousness of the condition. In this presentation, I explore the epistemological and social "boundaries of chronicity" surrounding MBC. What makes MBC a chronic condition? And why do some actors consider this to be a problematic definition? In which ways and for what reasons do patients and medical professionals re-appropriate or reject this definition? Analysing the uncertain line between chronic and acute in the ambiguous case of MBC allows us to see how medical definitions can be used outside the medical context, and their impact on the social and emotional life of patients. Studying MBC is also a way of understanding how medical labels can play a role in helping patients to overcome the material and moral difficulties of illness (or hinder them from doing so). This presentation builds on data I have collected since 2012 in several studies focused on breast cancer and MBC in the UK, France and Italy. I have conducted participant observation in medical settings and more than 130 interviews with patients, medical professionals and breast cancer advocates.

“I Have to Know Where I Can Go”: Negotiations of Toilet Access in Everyday Life for People with Irritable Bowel Syndrome (IBS)

White, Lauren

University of Sheffield, United Kingdom
lwhite2[at]sheffield.ac.uk

Irritable Bowel Syndrome (IBS) is a common, long term bowel condition, characterised by symptoms of pain, constipation and/or diarrhoea, bloating, flatulence and urgency to use the toilet. Despite statistics demonstrating that up to 20% of the UK population live with IBS, there is little understanding of the social and everyday experiences of those who live with the condition. How individuals with IBS negotiate their symptoms in everyday life has had little attention in sociological studies. Drawing upon findings from 25 diary and diary-interview methods during my PhD research that has explored how individuals negotiate everyday life with IBS, I will examine how those with IBS experience and navigate toilet access when seeking to manage the symptoms of their condition, as part of participation in social life. In this paper, I will argue that toilets are increasingly a crucial social space and place for negotiating an irritable bowel. Findings demonstrate that toilets become a socially conscious feature of everyday life, demonstrated through toilet mapping and planning trips, negotiating access to toilet(s) and privacy in public social life for those living with IBS, as well as the knowledge of toilets influencing the physical and emotive nature of IBS. By illuminating this, this paper seeks to speak to the sociology of embodiment, namely the relationship between individual bodies and the social world. Moreover, it extends to offer reflections on equalities of mobilities and access to toilets and highlights them as an important feature in the constitution of our social environment.

The Role of Collective Efficacy in Long-Term Condition Management: A Metasynthesis

Vassilev, Ivaylo; Band, Rebecca; Rogers,
Anne; James, Elizabeth

CLAHRC, Wessex, University of Southampton, United
Kingdom

i.i.vassilev[at]soton.ac.uk, r.j.band[at]soton.ac.uk,
a.e.rogers[at]soton.ac.uk, ej1q07[at]soton.ac.uk

Social networks have been found to have a valuable role in supporting the management of long-term conditions. However, the focus on the quality and how well self-management interventions work focus on individualised behavioural outcomes such as self-efficacy. A gap therefore suggests a need for understanding the role of wider collective processes in self-management support. Collective efficacy presents a potentially useful candidate concept in the development and understanding of self-management support interventions. To date it has mainly been utilised in the context

of organisations and neighbourhoods related to social phenomena such as community cohesion. Drawing on Bandura's original theorisation this meta-synthesis explores how studies of collective efficacy might illuminate collective elements operating within the personal communities of people with long-term conditions. A qualitative meta-synthesis was undertaken. Timing of engagement with others, building trust in the group, and legitimising ongoing engagement with the group arised as central elements of collective efficacy. The two themes forming 3rd order constructs were related to the presence of continuous interaction and on-going relational work between members of the group. Collective efficacy can develop and be sustained over time in a range of situations where individuals may not have intense relationships with one another and have limited commitment and contact with one another. Extending this to the personal communities of people with long-term conditions it may be the case that collective efficacy enables a number of engagement opportunities which can be oriented towards assisting with support from networks over a sustained length of time. This may include negotiating acceptable connections to resources and activities which in turn may help change existing practice in ways that improve long-term condition management.

The dominant role of medical perspective in Autism Spectrum Disorder policy in Italy

Genova, Angela

Urbino Carlo Bo, Italy
angela.genova[at]uniurb.it

According to WHO data 1 in 160 children has an autism spectrum disorder (ASD) and beginning in childhood this tend to persist into adolescence and adulthood, being a chronic illness. Such illness has a high impact for quality of life of individuals and their family. Affecting children, ASD touch upon the more vulnerable and dependent part of society. ASD is one of the most serious child psychiatric disorders. The hallmark feature of autism is impaired social interaction. For several reasons coping with ASD is exceptionally difficult because of its disruptive antisocial behavior, such as inappropriate public behaviors. This paper investigates Italian policy for people with ASD applying critical discourse analysis to regulative policy documents in order to outline the controversial social construction of such disability between the social model of disability and the medical perspectives. Results bring to lights a divergent trend, two different approach: from one policy for ASD people fosters their social inclusion within independent life projects, but from the other policy supports specifically targeted residential services in the framework of medical perspective practices. Despite the ratification of Italian Parliament of the UN Convention on Rights of people with disabilities, Italian policy for people with disabilities are dominated by a controversial tensions between the biomedical model and the social model of disability. The issue is even more evident for ASD policy. This study contributes to the debate on disability social meaning through the study of Italian disability policy for ASD people within a European policy framework.

Alcoholics` Motivation To Attain And Maintain Sobriety Within Alcoholics Anonymous Support Groups

Bulumac, Lavinia

University of Bucharest, Romania
lavinia.bulumac[at]sas.unibuc.ro

While addiction is a significant social problem in Romania, there has been little research into support groups as an intervention in Romania, despite the growing number of Alcoholics Anonymous (AA) support groups. Although AA has been found to be effective in other countries, unfortunately in Romania it is little known, even among physicians. The purpose of this exploratory study, which is the first known study of twelve step programs in Romania, was to explore alcoholics' motivation to become sober and maintain their sobriety. The study specifically explores both the intrinsic and extrinsic motivation of AA attendees, as well as other factors, such as relationships, professional and economic status. This exploratory study used qualitative methods. Themes related to intrinsic motivations to become sober emerged as a much stronger theme among alcoholics who desired and maintained their sobriety than extrinsic factors. The most common intrinsic motivations were low self-esteem, dissatisfaction with alcohol consumption, an internal desire to change. Extrinsic motivations included family pressure on the individual to change and the recommendations of physicians. The extrinsic motivation turned into intrinsic motivation as alcoholics sobriety grew. The commitment theory (Rudy&Greil, 1987) can explain this shift in alcoholics' motivation since AA provides a solution to problems that they experience. Alcoholics get involved in AA, invest time and energy in AA activities, sacrifice their old identities in favour of new ones. They become committed to AA and to recovery. The findings suggest that those working in the area of substance abuse should pay more attention to the intrinsic motivations to change for alcoholics, as these appear to play an important role in becoming and maintaining sobriety.

Endorsers, Extenders, Transformers, and Critics: Taxonomy of Patient Representation in Health Care

Numerato, Dino

Charles University, Czech Republic
dino.numerato[at]fsv.cuni.cz

In October 2017, the Czech Ministry of Health introduced the Patients' Council. The top-down introduction of the patient's body followed a long-term, bottom-up campaign of patient organisations in the Czech Republic. The campaign called upon for stronger recognition of patients' voice in health care and reflected the processes of democratisation of health care in

contemporary societies. Against this backdrop, the paper analyses the public debate that surrounded the introduction of the Patients' Council in the Czech Republic. The main objective is to examine the plurality of patient representation in health care. The debate around the question "Who should represent patients?" is explored. More specifically, the following questions are addressed: Who represents the so-called 'empowered patient' in the Czech Republic? What is the relationship of the patient's voice towards the existing system of health care? What qualities, skills and capacities reinforce the legitimacy of the patient's voice? By addressing these questions, a taxonomy of patient representations is developed, and four ideal-typical modes of patient representation are identified: endorsers, extenders, transformers, and critics. These modes of patient representation represent different positions embraced by and expected from patients concerning health care. Various and even contradictory understandings of patients' role were not only embraced by actors outside of patient organisations (e.g. health-care professionals, politicians, policy-makers, representatives of pharmaceutical and insurance industries), but also by different actors within patient organisations. The data that underpin the analysis are drawn on the qualitative study carried out in the Czech Republic. The analysis of primary and secondary documents is complemented with observations and semi-structured interviews with citizens and policy-makers.

The Human Interest Economy: Making media cases out of patients

Thorbjørnsrud, Kjersti

Institute of Social Research, Norway
kjersti.thorbjornsrud[at]samfunnsforskning.no

This article explores how personal experiences of disease, communicated through human interest stories in the news and social media, have become an indispensable tool for health interest groups seeking attention, legitimacy, revenue and political impact. The practice of sharing personal experiences of illness in public is imbued with a strong ethos to fight stigma and create recognition and solidarity. At the same time, patient exemplars have become an increasingly vital narrative tool in today's reporting across a broad range of media outlets and platforms, linked to a general trend of personification in the current hybrid media landscape. Yet, the fact that the selection, dramaturgy and broadcast of patient stories are closely intertwined with basic commercial production interests of the media has received little scholarly interest. On the basis of 35 interviews with management and communications professionals in Norwegian patient interest groups and health movements, the article analyzes how these organizations strategically adapt to the generic human interest formats of the media, which favor certain diseases, victims and storylines over others. As providers of patient "cases" to the media, interest groups with easy access to patient stories with a broad and immediate audience appeal has an advantage in their strategic transactions with journalists, and will more easily succeed in gaining media attention to their cause than groups representing less captivating sufferers of illness. The article analyzes the features, hierarchies and dilemmas of this human interest economy, and discusses possible ethical dilemmas of a commodification of patients experiences.

The Anti-vaccination Robinsons – Invisible and Unrepresented Actors of Mainstream Vaccination Discourse in Poland

Świątkiewicz-Mośny, Maria; Polak, Paulina; Wagner, Aleksandra

Jagiellonian University, Poland
maria.swiatkiewicz-mosny[at]uj.edu.pl,
paulina.polak[at]uj.edu.pl, aleksandra.wagner[at]uj.edu.pl

The analysis of the Polish mainstream discourse shows a growing and ever more commented activity of anti-vaccination movements. The media roar about mortality, irresponsibility of non-vaccination and possible penalties for those refusing to vaccinate. Experts: doctors, academics and politicians, who participate in discussions aimed at showing the validity of vaccination, often refer to the anti-vaccination movements as using unscientific, unverified knowledge, lies and conspiracy theories. Those opposing compulsory vaccination are only visible only entangled actors, not active participants. Unrepresented and not given their voice, they are visible in public sphere through their practices. Such communities of practice are formed online, in forums and social media discussion groups, which become their desert islands. They develop practices, such as how to deal with penalties for non-vaccination or “immunize” children with infectious diseases (e.g. pox party). The link between those desert anti-vaccination islands and the mainstream discourse is constituted by associations and organizations (eg. “STOP NOP”), which declare that they are not opponents of vaccination, but demand reliable knowledge, the freedom of choice and reliable VSE registries and compensation system. They fight for visibility in healthcare using personal stories, creating the atmosphere of fear and danger. The study uses the theoretical context of communities of practice, epistemic communities and interest groups (Wagner, Świątkiewicz-Mośny, Polak 2018). It is based on the analysis of mainstream media discourse and Internet forums from 2009-2018, supplemented by official data and statistics on vaccination in Poland.

RN16_02b | Health Technologies and Biomedicine

Selective Technology Adoption in Diabetes Embodiment Processes

Ardissone, Alberto

University of Bologna, Italy
alberto.ardissone[at]unibo.it

This research investigated the increasing diffusion of mHealth devices, such as insulin pumps and sensors for glycaemic control, in diabetes management in one Italian Region. To assess their opinions and experiences with the choice and use of mHealth devices, this 2018 study included 50 people with diabetes (in-depth interviews) and 20 diabetologists (semi-structured interviews), engaged through local patients and professional associations and by snowball technique. The results were interpreted using the STS, phenomenological, and socio-material perspectives, which suggest that mHealth technologies are more than technical products. Indeed, they have a sociocultural foundation and contribute to an affective atmosphere, as such wearables represent an intimate daily encounter between humans and non-humans. The findings indicate that, despite recommendations from their diabetologists, people with diabetes tended to adopt a selective use of mHealth devices. The participants most often chose to wear or not wear these wearables for two reasons, always considered together: their capacity to keep their chronic condition under control within a pre-set range and their feelings and/or perceptions about each device. One explanation may be that, as they must be worn continuously in both public and private, wearing these devices might be a barrier to patients' sociality. Therefore, some patients used both technologies, while most used only one of them. Then, the results reveal that, going beyond the rhetorical presumptions of general satisfaction and management improvement, issues such as perceptions, meaning, atmosphere, and experiences, emerging in the encounter between people with diabetes and each technology, affect their possible adoption or rejection and the continuity of their usage over time.

Re-thinking Egg Donation in Europe: Expanding Practice, Extending Boundaries

Coveney, Katie (1); Hudson, Nicky (2); Culley, Lorraine (2); Herbrand, Cathy (2); Lafuente, Sara (3); Pavone, Vincenzo (3); Pennings, Guido (4); Provoost, Veerle (4); Weis, Christina (2)

1: Loughborough University, United Kingdom; 2: De Montfort University, United Kingdom; 3: Consejo Superior de Investigaciones Cientificas, Spain; 4: Ghent University, Belgium

C.M.Coveney[at]lboro.ac.uk, nhudson[at]dmu.ac.uk, lac[at]dmu.ac.uk, cathy.herbrand[at]dmu.ac.uk, sara.lafuente[at]csic.es, vincenzo.pavone[at]csic.es, guido.pennings[at]ugent.be, Veerle.Provoost[at]UGent.be, christina.weis[at]dmu.ac.uk

The expansion of the use of donor eggs in fertility treatment has been exponential. Whilst the majority of egg donation historically took place in the US, donor eggs are used in over 56,000 cycles of fertility treatment per year in Europe and a number of European egg donation 'hubs' have emerged, for example in Spain and Cyprus. Growth in the use of donor eggs in part reflects a changing profile amongst users of assisted reproductive technologies, including growing numbers of older women, male same sex couples, and those at risk from genetic conditions. An increasing number of egg donor 'intermediaries' such as egg banks and agencies have also emerged in the European context, reflecting a general shift towards an increasingly commercialised landscape around fertility treatment provision. Despite these changes, few studies have specifically considered their implications. Drawing on an ESRC-funded study on the economic, political and moral configuration of egg donation in the UK, Spain and Belgium, we suggest that changes in the ways egg donation is provided in the European context are worthy of increased attention. Data from policy mapping and interviews with policy stakeholders and professionals illustrate significant shifts in professional and commercial practice. These changes are reshaping the intersubjective, political and social boundaries involved in egg donation in novel and complex ways. We suggest that the expansion and diversification of its use has implications for the policy and regulation of egg donation in the European context.

NICE and Society: Health Technology Appraisal and the Cultivation of Social Relations

Benzer, Matthias

University of Sheffield, United Kingdom
m.benzer[at]sheffield.ac.uk

The paper presents a conceptual sociological examination of the UK National Institute for Health and Care Excellence's (NICE) approach to health technology appraisals, which inform its recommendations for the allocation of National Health Service resources in the UK. The paper draws on NICE's documents and on a 2005-2008 interdisciplinary debate about the ethics of NICE's activities. It is highlighted that, through the comparisons central to its approach, NICE arranges a competition in the production of health between different treatments used on their respective particular patient groups. In fostering a competition for differentiation in which patients are involved alongside their respective health technologies, NICE's approach resembles objectives for shaping social relationships often attributed to neoliberal politics. Yet closer scrutiny reveals that NICE's creation of positions for, and relations between, patients is simultaneously more problematic. Patients are inscribed in the position of creatures - rather than agents - of competition. In turn, a comparison between NICE's work and Max Weber's and Georg Simmel's sociological conceptions of the social relationship offers a critical perspective on the quality of the social relations NICE's approach supports in more general terms.

Exploring Physician Perceptions on the Transformation of Medical Practice within the Context of the Healthcare Reform in Turkey

Aktaş, Püren

Boğaziçi University, Turkey
purenaktas[at]gmail.com

Turkey's healthcare system has undergone a significant reform process in 2003 – the Health Transformation Programme (HTP), which achieved improvements in patient access to healthcare services through the introduction of universal coverage. For that purpose, the HTP brought new regulations on working conditions of physicians in order to address the problem of dual employment and shortages in service provision. Although the HTP achieved to improve patient access to healthcare services, new health workforce policies on physicians are criticized for their detrimental consequences on working conditions of physicians and their professional autonomy. Increasing stress, excessive workload, and limited work autonomy emerged as the new main concerns of physicians in Turkey with the HTP. The purpose of this study is to explore how medical profession in Turkey has changed within the reform process, and physician perceptions on the transformation of the medical practice in Turkey. In doing so, this study examines if the medical profession in Turkey is experiencing a process of de-professionalization.

“I Feel I Can Easily Go To Another Country Because Of Brexit, I Don't Feel Quite Settled As I Would Like To Be” - The Unsettling Of Migrant NHS Nurses And The Experiences Of Being ‘Othered’ In The Current Political Climate Of Brexit’

Spiliopoulos, Georgia (1); Timmons, Stephen (2)

1: University of Nottingham Ningbo China, China, People's Republic of; 2: University of Nottingham, United Kingdom
joy.spiliopoulos[at]nottingham.edu.cn,
stephen.timmons[at]nottingham.ac.uk

With this paper we present preliminary findings following a pilot study on retention and recruitment of migrant nurses post-Brexit. Drawing on the work of scholars such as Hall (1996; 2003), Solomos (2003), Wodak (2013) and taking critical/ intersectional approaches (for example, Davies, 2016; Yuval-Davis, 2006; 2011), we examine issues such as non-

belonging and ‘othering’, or what Wodak (2013) calls ‘normalization of exclusion’, as experienced in the everyday lives of the EU and non-EU nurses of our study. The NHS has been relying on migrant healthcare staff since its conception, however, the EU 2016 referendum caused dramatic disruption to recruitment processes, especially from EU countries. Using semi-structured interviews and thematic and narrative analyses, we present the participants’ uncomfortable feelings of non-belonging, in a more heightened, as experienced, xenophobic environment, in their workplaces and elsewhere. This is a highly mobile and skilled workforce which is increasingly being disenfranchised and seeking alternatives to long-term commitment to working for the NHS. Moreover, recently NHS England has sought to address issues of discrimination against its workforce based on gender, race, sexuality, and others. Good practices at a local level can have a detrimental effect in supporting migrant nurses, however, more needs to be done at local and national levels to ensure retention for EU and non-EU nurses alike. Our work adds to the literature on the mobility, settlement and contributions of migrant nurses (Adhikari and Melia, 2015; Isaksen, 2012), with a particular focus on the ongoing and disruptive to social cohesion nature of ‘Brexit’ negotiations. Keywords: Brexit; migrant nurses; othering; intersectionality.

The Quest for Social and Professional Recognition -from a French Midwifery Perspective

Thualagant, Nicole

University of Roskilde, Denmark
nicole[at]ruc.dk

Birth is political -previous research has demonstrated how birth is a contested space between professions (Johnson 2008). The role attributed to the profession of midwifery changes in relation to how maternity care is being organized as well as in accordance to the changing demands and expectations from birth-giving women (Benoit 2005, Lehn-Christiansen & Thualagant 2019). Scholars have also identified cultural differences between not only births but also the status of midwifery regarding birth (Wagner 2001). While midwives in Denmark have celebrated their 300th anniversary of midwifery, midwives in France are still in demand for a wider recognition. Embedded in a “highly medicalized” (Wagner 2001) birth culture, the French State launched a national action plan in 2004 in the quest for more “humanized” births. This action plan among other strategies, sets focus on the profession of “midwifery” as a profession leading to more “humane” births. Despite the effort behind the action plan, research illustrates that midwives in France are still fighting for not only a social but also professional recognition (Charrier 2011). With a twofold aim, this paper examines the rationale behind the latest intervention in 2015, where the state approved the project of “maisons de naissances”, i.e. houses for midwife-led births. Secondly, with a theoretical focus on the demand for recognition, this paper explores, based on midwives earlier experienced barriers to cooperation, how the new maternity structure of “maternity houses” is experienced regarding their demand for an enhanced social and professional recognition.

Economic Crisis and International Mobility of European and non-European health workers in the South-East of France: Citizenship, Gender and International Process of Health Inequalities Reproduction

Sirna, Francesca

CNRS EHESS, France
francesca.sirna[at]univ-amu.fr

The Present Contribution aims to analyse the Geographical and Social Mobility of European and extra-European Health Workers in the South-East of France (PACA) in the Context of the Global Social and Economic Crisis and the several convergent challenges that the French Healthcare System must face with. I propose a Comparative Analysis of Professional and Geographical Mobility of intra- and extra-European Migrants (men and women) in the Health Sector: 29 Biographical Interviews with Physicians have been done in several Urban Hospital Centres (HP, CHU). Is this a mobility of highly skilled professionals or a brain drain or a brain waste? What are the long-term consequences for the countries of origin and of settlement? How do the last decade reforms in the Health System (at the European, but also National and local level) affect French hospital organisation and the recruitment of Foreign Physicians? Those are some of the questions my contribution would tackle

RN16_03a | Disability

Counter-Configurations of Disability: The 'Inhabitable' Worlds of People with Down's Syndrome

Thomas, Gareth

Cardiff University, United Kingdom
thomasg23[at]cf.ac.uk

There is a growing presence of positive disability imaginaries being enacted through popular media and across widely distributed networks of people with shared experiences of disability. This proliferation of more optimistic and complex representations which celebrate 'diversity' and practices of self-making, community-building, and 'revolt' (Tyler 2013) may signal an important cultural shift in how people feel about, and experience, possibilities for reproducing a disabled child. Yet little research has addressed how parents of children with disability produce, experience, and/or resist configurations seemingly designed to enact a more positive, visible, and rounded portrayal of disability. Drawing upon theoretical contributions from sociology, disability studies, cultural studies, and STS, and initial findings of a UK study (interviews with parents of children with Down's syndrome and a textual analysis of cultural materials), I explore the formulation of new imaginaries of 'difference' which depart from narratives of

disability as tragic and pitiful, and promote notions of dignity and worth. Moreover, I consider how positive imaginaries of disability in cultural outlets (e.g. TV/film, newspapers, blogs/social networks) chime with, contradict, or complicate configurations of disability as an unvalued bodily state in reproductive biomedicine and UK welfare rhetoric and practices. I also unpack how parents navigate representations of current/imagined futures which, arguably, promote 'normalisation' practices and normative subject positions. In so doing, this paper shows how 'disability worlds' (Ginsburg and Rapp 2015) are made 'inhabitable' and/or 'uninhabitable' (Freidner 2015) at different moments.

Barriers in Social Relationships and Social Participation: the Experiences of Women with Disability

Koutsogeorgou, Eleni (1,2); Santoro, Monica (1)

1: University of Milan, Italy; 2: University of Turin, Italy
eleni.koutsogeorgou[at]unimi.it, monica.santoro[at]unimi.it

Aim: The aim of this study was to explore barriers in social relationships and social participation of women across and within three types of disability: sensory (deafness), physical (inability to move lower limbs), and mental (psychotic disorder) disability. Methods: Qualitative semi-structured interviews were conducted with 30 women – 10 per type of disability – aged 22-44, living in the metropolitan area of Milan (Italy), and having relative autonomy. Data were analysed using template analysis technique of thematic analysis. Main findings: According to the findings, women with disability face a variety of barriers related to their social and physical environment. Participants with mental disability reported that they have faced prejudice, discrimination, stigmatisation, and/or lack of empathy towards them from other people of the wider population. All participants with physical disability reported barriers related to numerous hindrances of the physical environment, while most of them had also experienced prejudice and mentality barriers towards them from persons of the wider population. Participants with sensory disability reported mostly barriers related to lack of resources for communication with people of the general population and having limited opportunities for employment compared to hearing persons. Additionally, from comparison across types of disability, various common patterns emerged, as well as that participants with mental disability had the lowest level of social participation, whereas women with physical disability the highest. Conclusion: It appears compelling to focus on the exploration of aspects of the social relationships and social participation of persons with disability, as the barriers they face in relation to these aspects are numerous and multi-faceted. The biopsychosocial model of health and disability could contribute towards the goal of full social inclusion.

Protests of Persons With Disabilities, Their Parents and Care Providers in Poland - Analysis of Press Releases

Sałkowska, Marta

Collegium Civitas, Poland
msalkowska[at]civitas.edu.pl

The aim of this paper is to describe the media image of protests (in 2014 and 2018) that caregivers and parents of persons with disabilities' held in the Polish Parliament. This protest was spectacular and controversial as protesters (including children and adults with disabilities) were literally living in the building. Their aim was to pay attention to their difficult situation and to obtain higher social benefits. The second protest (2018) has inspired a theatre drama "Revolution that has never happened" performed mainly by actors with Down's Syndrome. A sample of more than 120 press releases (main national printed media) was taken and analyzed using qualitative content analysis. Main areas of interests were: the way protesters were presented in the media, the media presentations of their motivations and their demands. The analysis shows that parents insisted on a higher social benefit. Surprisingly, the issues of work-life balance, reconciliation of professional and private roles were not discussed. This means that caregivers (mothers) fulfill traditional social roles and expectations. The protest was breaking a taboo. The border between public and private was blurred - care giving practices usually considered private were publically presented. This action confronted public opinion and politicians with everyday life of a family with a member with disability. It has also become political. The second protest gained more attention mainly because of the political situation in Poland. The analysis provokes questions about protests consequences – is it the beginning of an emancipation social movement or just an occasional action?

Studying in the Narratives of Disabled Students

Zakrzewska-Manterys, Elzbieta Stanislaw

University of Warsaw, Poland
ezakrzewska[at]isns.uw.edu.pl

The presentation will discuss the problem of disabled persons performing the social role of a student. I will analyse narratives as identity work. Narratives are framed in diverse contexts: trajectories of suffering in the meaning of Fritz Schutze, trajectories of identity and protective cocoon in the meaning of Anthony Giddens as well as transformations of identity including turning points and passing from one status to another as envisaged by Anselm L. Strauss. Subsequently, they are confronted with the concept of social personalities set forth by Florian Znaniecki in his book "Current people and Civilisation of the Future". I will show that a combination of Znaniecki's "typifying" conception with individualistic concepts of biographical method may be particularly fruitful in the research of unusual situations, one of which may be a disabled person performing the role of a student. The starting point is a report from research conducted on a sample of 60 persons -

University graduates who in interviews had recalled their academic years. On this base four interviews are presented, which exemplify the types of disabled students' "social personality", constructed according to Max Weber's conception of "ideal type". The types are distinguished as a result of analysis of all 60 interviews: "big child", "mentor", "self-reliant" and "hyperactive".

RN16_03b | Challenges for Health Care Organisation Breaking Boundaries for Studying Chronic Pain in Childhood

Hilário, Ana Patrícia

Instituto de Ciências Sociais da Universidade de Lisboa, Portugal
patriciahilario[at]gmail.com

While there is some work on children's experiences of postoperative pain or cancer-related pain, little has been said about how chronic pain in childhood is experienced and managed in the family context. Despite its worldwide prevalence, the condition is under researched and many children do not receive appropriate pain management. There is little understanding of the needs of children with chronic pain and the needs of their parents. Portugal offers an interesting context in which to explore this matter as it has been marked by a lack of knowledge on paediatric chronic pain and resources available to children with chronic pain. This study intends to provide another lens for understanding family experiences and management of chronic pain in childhood by listening to the voices of children, as well as those of their parents. The study will make an important contribution to social science research, as well as to specific knowledge on paediatric chronic pain by providing an insight into family experiences and management of chronic pain in childhood. A qualitative approach will be developed. A range of visual methods will be employed to address the research questions, and will be combined with interviewing techniques. Twenty children, aged 7-10 at the time of recruitment, who suffer from chronic pain together with their parents will participate in the study. This presentation intends to describe the challenges and opportunities of conducting research with children who suffer from chronic pain and their parents.

Using A Humanist Perspective To Overcome Nurse-Patient Barriers During Hemodialysis Sessions

m.antonini[at]ecolelasource.ch, chantal.cara[at]umontreal.ca, Sylvain.brousseau[at]uqo.ca, Jean.weidmann[at]heig-vd.ch, louiseoreilly324[at]gmail.com, t.bellier[at]ecolelasource.ch, e.boillat[at]ecolelasource.ch, vanessa.brandalesi[at]gmail.com, mario.konishi[at]heig-vd.ch, d.rouletschwab[at]ecolelasource.ch, Isabelle.Ledoux[at]USherbrooke.ca, Jerome.Pasquier[at]chuv.ch, p.delmas[at]ecolelasource.ch

In the last decades, the incidence of Chronic Kidney Disease has rapidly grown in Europe. End-stage kidney disease necessitates long-term kidney replacement therapy, the most widespread of which is hemodialysis. This is a strongly engaging therapy that obliges patients to spend three half-days per week in healthcare structures, often, for several years. Health assistance is mainly provided by specialized nurses, which professional identity implies a strong engagement in patients' life project. Nevertheless, previous research suggests that the large presence of technology-based treatments during the hemodialysis sessions could bring to dehumanizing practices that exacerbate nurses-patients' conflicts and have strong repercussions on both patients' and nurses' quality of life. To counter this tendency, preliminary research suggests that a training in humanistic nursing practices can provide the conceptual and practical instruments to efficaciously overcome nurses-patients' barriers and reinforce nurses' professional identity. To test this hypothesis, we have carried out a research based on an experimental design involving 10 hospitals in French-speaking Switzerland. Following a cluster randomized sample, 50 of the participating nurses have received a "educational intervention" in humanistic nursing practices while 46 have been assigned to the control group. A questionnaire on nurses-patients' relations and quality of life has been completed by both nurses and patients (N=105) before and after the training. Using the control sample as a baseline, we observe a significant improvement in nurses' quality of life and nurses-patients' relations. Our results show how a humanistic approach can improve healthcare quality and nurses' and patients' quality of life.

Class-related Inequalities in Utilisation of Health Care Services in Later Life: A Bourdieusian Approach

Paccoud, Ivana (1); Nazroo, James (2); Leist, Anja (1)

1: University of Luxembourg, Luxembourg; 2: University of Manchester, UK
spirovska.ivana.001[at]student.uni.lu,
James.Nazroo[at]manchester.ac.uk, anja.leist[at]uni.lu

While studies have found inequalities in the use of health care services between different socio-economic groups, the class-related mechanisms underlying this inequality need further investigation. This paper draws on Bourdieu's theory of economic, social and cultural capital to understand the effect of these capitals and of their structure on health care services and hospital use. Using data from the fifth wave of the Survey of Health, Aging, and Retirement in Europe (SHARE), with a representative sample of 30,782 individuals from 15 European countries, the goal of this study is to determine how each capital, and their overall distribution, is associated with the use of health and hospital services in later age. Our results show that inequalities in the use of health care services are sensitive to immaterial, socio-cultural factors and question the idea that only economic factors affect health care and hospital utilisation. Cultural capital was strongly associated with the higher use of health care and dentist services and social capital was found to have a protective effect on hospital admissions and on the length of hospital stays. In addition, we show that inequalities are rooted in the different distribution of forms of capitals that in turn create class-based health practices. Bourdieu's approach to capitals offers a valuable framework for research on inequalities in health care utilisation. The results can help improve our understanding of how different forms of capital (economic, cultural and social) can serve as important class-related determinants of health care and hospital service use.

Alternative Health Practices as a Channel for Social Criticism from the Early 1900s to Present Day

Vuolanto, Pia (1); Nurmi, Johanna (2); Rytty, Suvi (2)

1: Tampere University, Finland; 2: University of Turku, Finland
pia.vuolanto[at]tuni.fi, johnurm[at]utu.fi, sutury[at]utu.fi

Alternative health practices challenge western biomedicine, but they can also offer a channel for broader social criticism. Since the early 1900s, there have been connections between medical heterodoxies and broader social, cultural and political-economic movements. Alternative health practices have the potential to influence social change, be it in the form of civilization and cultural critique, or the critique of capitalism, working life or supranational pharmaceutical companies. This paper examines the connection between health and social criticism in alternative health practices from the early 1900s to the present day. We examine how and why alternative health practices have been and still are used as a channel for social criticism. We approach the subject through Finnish case studies placed in a larger European context of natural lifestyles and lifestyle movements where certain lifestyle practices are used to pursue changes, not just on the individual level, but also on the societal level. Natural lifestyles incorporate a broad and varying range of different health practices including natural remedies, alternative treatments, special diets and avoidance of pharmaceuticals such as vaccines. Advocates of a natural lifestyle in Finland have published several periodicals since 1910. We concentrate on three different periodicals during three periods: 1910–1930, 1950–1970, and 2000–2017. Analytically, we focus on the discourses of alternative health practices and the ways in which these discourses contrast with biomedical discourses and generate rhetorical boundaries of mainstream legitimate knowledge. Combining sociological and historical research, this paper is especially focused on the continuum between past and present, showing that the intertwining of health and social criticism is neither a contemporary nor historical phenomenon, but is deeply rooted in the structures of modern western societies.

RN16_03c | Donation and Death

Mix & Match: Constituting Racialised Communities in UK Stem Cell Donor Recruitment

Williams, Ros

University of Sheffield, United Kingdom
r.g.williams[at]sheffield.ac.uk

This paper presents a new Wellcome Trust-funded project starting in 2019 exploring minority ethnicity stem cell donor recruitment in the UK. Using ethnographic and digital methods to explore online and offline efforts by charities and individuals, the project investigates the role of race and notions of “mixed-race” in contemporary biomedicine. Stem cell transplants are an increasingly common cancer treatment option, but minority ethnicity and mixed-raced people in the UK—as in most of the global north—are far less likely to find matching stem cell donors than their white counterparts. A number of small charities and campaigns (generally led by people themselves racialized as minority ethnicity) seek to address this inequality by organising donor drives and using social media to encourage minority and mixed-raced people to register as stem cell donors. This paper presents pilot data, and foregrounds the theoretical notions of biosociality and biosocial communities as useful conceptual tools for critically unpicking the collectivising consequences of genetic technologies like those used to finding matches between patients/donors. It also presents the project’s innovative mixed-method approach, including charity ethnography, and multi-platform social media analysis of minority ethnicity stem cell donation campaigns. The paper describes the project’s aims to (i) explore how racial difference is mobilised to encourage potentially life-saving acts of donation within minority ethnicity communities, (ii) contribute to understanding how significant ethnic health inequalities are being addressed by small charities and individuals, and (iii) understand how race and notions of heredity are being enacted in a contemporary biomedical context.

Can a Case Be Made for Expanding Medical Aid in Dying in the United States

Zubizarreta, Cristina; Williamson, John B.

Boston College, United States of America
zubizarc[at]bc.edu, jbw[at]bc.edu

As a number of U.S. states are actively campaigning for the legalization of medical aid in dying (MAiD), questions regarding how to improve the existing legislation and develop improved legislative models have become of central concern. Discussions of whether and how to expand access to MAiD often ignore a number of important, but contentious issues. Our study examines evidence from a variety of jurisdictions where MAiD is legal to better inform debates and to foster the development of new, more efficacious legislation that could be replicated, with minor modifications, across the United States and European countries. We draw upon the legislation in relevant jurisdictions, quantitative empirical medical studies, and qualitative sociological studies in addition to 25 semi-structured interviews conducted with 11 healthcare professionals with experience providing MAiD, 10 representatives of organizations in support or opposition to MAiD, 3 bio-ethicists, and 1 end-of-life lawyer. Participants were located in the U.S. (Oregon, California, Vermont, Colorado), the Netherlands, Belgium, Switzerland, Colombia, Canada, Quebec, and Victoria, Australia. We find evidence suggesting that expanding legislation in the U.S. to include persons with some degenerative diseases or mental illnesses, and potentially mature minors, would be of benefit to many individuals seeking MAiD. Legalization of advance requests would expand access to individuals with dementia, while legalization of physician-administered MAiD would improve access for those who are unable to orally self-administer medication. The evidence suggests that for the foreseeable future the expansion of MAiD programs in the United States is most likely to proceed on a state-by-state basis.

“Why Didn’t We Do It”? Early-Life Loss And The Problem Of Post-Mortem Consent

Reed, Kate

University of Sheffield, United Kingdom
k.reed[at]sheffield.ac.uk

The National Health Service (NHS) estimates that one in six UK pregnancies will end in miscarriage. Furthermore, approximately 5,544 babies were recorded as stillborn or died within the neonatal period in the UK in 2016 (ONS 2018). Post-mortem can play a critical role in establishing why some pregnancies end prematurely and why babies might die during or after birth. But, research continues to highlight low consent rates as a cause for concern, an obstacle to the advancement of scientific knowledge, clinical governance and medical education. Questions surrounding the nature and meaning of informed consent have often been at the centre of sociological debates on research ethics. In the sensitive clinical arena of paediatric pathology, consent remains an extremely highly

charged emotive issue. This paper seeks to explore some of the problems associated with both taking and giving informed consent, drawing on data from a qualitative study on fetal and neonatal post-mortem. Although parents in our study found it difficult to consent to post-mortem, it was also not uncommon for them to experience feelings of regret later. While health professionals emphasised the significant value of post-mortem - particularly for bereaved families- they often found it too difficult to ask parents for consent at this traumatic time, often feeling inadequately trained. By exploring professional and parent experiences of the consent process this paper seeks to shed light on post-mortem decision-making, and also feeds into wider conceptual and ethical debates in sociology on the nature and use of ‘informed’ consent.

Mapping The Attitudinal Repertoires On Health-related Donation In Europe: A Multiple Correspondence Analysis

Gorleer, Sam; Bracke, Piet; Hustinx, Lesley

Ghent University, Belgium
Sam.Gorleer[at]UGent.be, Piet.Bracke[at]UGent.be,
Lesley.Hustinx[at]UGent.be

The debate on prohibiting compensation and payment of donors of bodily substances for security reasons has been raging for several decades. Due to limited research on public attitudes regarding the relation between donor safety and donor compensation/remuneration we shift focus towards the attitudes of both donors and potential donors themselves. More so, we consider whether these attitudes are related to other concerns such as the perceived risk of contracting diseases or fear for complications resulting from the medical procedure, and EU legislative support on donation (safety) policies. First, using Eurobarometer data of 2014, we map the attitudinal repertoires of European citizens on these issues using Multiple Correspondence Analysis (MCA). Second, we aim to explore how these repertoires are related to individual-level characteristics (socio-demographic information, donor status,...) and the national context. Our results indicate that the existing attitudes can be summarized by two unique repertoires. The first repertoire uncovers an attitudinal opposition between the (dis)approval of symbolic gifting (e.g. non-cash item rewards, refreshments,...) and compensation (e.g. compensation of transportation costs, receiving time off work,...). While the acceptance of cash payment for donors contributes substantially less to the formation of this first repertoire, it did, however, contribute strongly to the second attitudinal dimension. This second repertoire is mainly characterized by opposition between trust in the safety of transfusion, support for EU legislation and the (dis)approval of cash payment for donation. Both the individual-level characteristics and the national context appear to be highly relevant in explaining the variance in attitudes.

RN16_04a | Class, Gender and Ethnic Inequalities

Life Style and Health Inequalities

Gjernes, Trude

Nord universitet, Norway
trude.k.gjernes[at]nord.no

Finmark county in northern Norway has been overrepresented with health problems for many years. Mortality and morbidity rates have been higher compared to the rest of Norway. During the last decades, the situation has improved, however, a significant health difference between this county and the rest of the country remains. Differences also exist within the county. In a Sami inland municipality women live longer than Norwegian women in general and in a coastal municipality with mostly Norwegian inhabitants, males live shorter than Norwegian men in general. In this paper we use a qualitative approach to explore barriers against health improvement in selected municipalities and how inhabitants adapt their everyday life practices to reduce health inequalities. We focus on to what degree the population in those parts of the county are concerned about these differences, and what they do to change the situation. The study focuses on medically known risk factors, and on contextual and structural factors, such as material conditions, work conditions and cultural dispositions, that may cause or influence these inequalities. Data come from ethnographic fieldwork in three municipalities and approximately 40-50 interviews with men and women in two age groups. The theoretical framework is influenced by pragmatist approaches to action and interaction and poststructuralism. Preliminary findings suggest that those with the longest life expectancy seem to be most socially integrated, that many informants adapt their life styles to medically known health risks, and that local communities are developing material affordances that may be used for health promotion.

Social Inequalities in Multimorbidity Patterns in Europe: A Latent Class Analysis

Alvarez-Galvez, Javier; Suarez-Lledo, Victor; Gonzalez-Caballero, Juan Luis; Peralta, Juan Luis; Dueñas, Maria; Salazar, Alejandro; Lagares-Franco, Carolina; Almenara-Barrios, Jose

University of Cadiz, Spain
javier.alvarezgalvez[at]uca.es, victor.sanz[at]uca.es,
juanluis.gonzalez[at]uca.es, jluis.peralta[at]uca.es,
maria.duenasro[at]uca.es, alejandro.salazar[at]uca.es,
carolina.lagares[at]uca.es, jose.almenara[at]uca.es

Life expectancy has increased dramatically in all regions of the world over the last years. The average life expectancy in Western Europe was 79 years for males and 84 years for females in 2018. Consequently, the number of people suffering (or at risk of) long-term conditions, such as diabetes, heart

disease, musculoskeletal disorders, mental health conditions, or cancer is also rising rapidly. Multimorbidity can be defined as the presence of two or more chronic medical conditions in an individual and is one of the main challenges facing governments and healthcare systems around the world. This health condition is associated with a lower quality of life, increased disability, functional decline, higher healthcare utilization and fragmentation of care, complex treatment, and higher mortality. This study is aimed to identify the underlying determinants of social inequalities in multimorbidity. We used latent class analysis to identify multimorbidity subgroups with interdependent disease patterns using the European Social Survey. The statistical model was based on 13 chronic diseases: heart problem, high blood pressure, breathing problems, allergies, back or neck pain, muscular or joint pain in hand or arm, muscular pain in foot or leg, stomach or digestion related, skin condition, severe headaches, diabetes, cancer, and obesity. Specific multimorbidity classes with singular disease patterns were identified among different socioeconomic groups in the latent class analysis. The study showed that some disease combinations were more prevalent between different socioeconomic groups, which suggests that tailored public health strategies are needed to address social inequalities in multimorbidity.

Gradient Or Threshold? – Health Inequalities In And Around The Poverty Line In Europe

Karvonen, Sakari; Moio, Pasi

National Institute for Health and Welfare, Finland
sakari.karvonen[at]thl.fi, pasi.moio[at]thl.fi

Research on health inequalities shows considerable variation in health by socioeconomic position regardless of measurement. Further, a health gradient seems to frequent in most contexts. However, even though the health measurement has been based on relatively sophisticated indicators, SEP is often measured with rough estimates describing education, income or profession. Hence, the previous analyses have rested on stable and rather crude categorisations that do not allow for more nuanced societal dynamics. One reason for this is that health inequalities research has developed mainly independently of research on stratification and poverty. In research on stratification, poverty is analyzed as a multidimensional and dynamic phenomenon that a large part of population experiences during their life course. Poverty research has a long tradition of developing poverty thresholds. These are usually monetary thresholds that a household would need to have to be able to reach a level of living standards defined as adequate. The poverty threshold is a theoretical cornerstone of the field, however, one undisputed threshold has never been empirically found. Recently research has accumulated on how and why poverty deteriorates health due to long-term stress. Our aim is to reconcile the two research traditions and our hypothesis is that the connection between health and economic resources is not gradual in bottom of income distribution. Using EU-SILC data we test different income concepts, equalization scales and thresholds to find out is there a “Townsendian Point” in the distribution of economic resources below which health problems start to increase rapidly.

Socioeconomic Inequalities In Health-related Outcomes Of Green Spaces In The Brussels Capital Region: An Intersectional Approach

Rodríguez-Loureiro, Lucía (1); Casas, Lidia (2,3,4); Vanroelen, Christophe (1,5); Gadeyne, Sylvie (1)

1: Interface Demography, Department of Sociology, Vrije Universiteit Brussel, Belgium; 2: Centre for Environment and Health – Department of Public Health and Primary Care, KU Leuven, Leuven, Belgium; 3: Research Foundation Flanders (FWO), Brussels, Belgium; 4: ISGlobal, Barcelona Institute for Global Health, Spain; 5: Health Inequalities Research Group (GREDS), Universitat Pompeu Fabra, Barcelona, Spain
lucia.rodriguez.loureiro[at]vub.be,
lidia.casasruiz[at]kuleuven.be, cvroelen[at]vub.be,
Sylvie.Gadeyne[at]vub.be

Background: The evidence of the relationship between green spaces and self-perceived health is only moderate and the effect of socioeconomic inequalities on this relationship remains unclear. Additionally, an intersectionality approach has never been applied. **Objectives:** This study aims to examine the relationship between green spaces and poor self-perceived health in the Brussels Capital Region (BCR), examining whether patterns of association differ according to the intersection between age, gender, socioeconomic status and migrant background. **Methods:** Information on socioeconomic indicators, perceived green quality and self-perceived health has been collected from the 2001 Belgian Census. Quantity of green spaces has been obtained from the 2006 CORINE Landcover dataset at the statistical ward level. The study population comprised 682,598 persons. Multilevel logistic regression models at both the statistical ward and the individual level were conducted in order to obtain adjusted odds ratios (aOR) and their confidence intervals (95%CI) of the association between the quantity of green spaces, perceived green quality and poor self-perceived health. Models were first adjusted by air pollution concentrations, age, sex, socioeconomic indicators and migrant background. Interaction and stratification analyses were performed by age groups, gender, socioeconomic status and migrant background. **Results:** Quantity of green spaces had no effect on self-perceived health after adjusting by socioeconomic status. Interaction terms were not significant. We found a consistent negative association between good perceived green quality and poor self-perceived health. However, positive and significant interactions were found among lower-educated Moroccans, and no significant association with poor self-perceived health was found in this subgroup after stratifying by migrant background. **Conclusions:** The unexpected results could be produced by a specific distribution of spatial inequalities within the BCR.

Post-Trauma: Healthcare Practitioners' Social Media Use during Times of Political Tension

Popper-Giveon, Ariela (1); Keshet, Yael (2)

1: David Yellin Academic College, Jerusalem, Israel; 2: Western Galilee Academic College, Akko, Israel
arielapo[at]netvision.net.il, YaelK[at]wgalil.ac.il

The theoretical approach of context collapse and the notion of unintentional context collisions are of importance to scholars of social media. Israeli public hospitals are a particularly suitable venue for studying these topics, as they employ both Jewish and Arab practitioners, who care for both Jewish and Arab patients amid an ongoing violent conflict. In-depth interviews were conducted with 50 managers and healthcare practitioners (physicians and nurses), both Jewish and Arab, employed at 11 public hospitals in Israel. Findings show that despite hospital managers' instructions to avoid political discourse, it erupts nonetheless whenever the Israeli-Palestinian national conflict escalates. Fearing damage to professional relations and care of patients, political discourse spills over into social media (primarily departmental WhatsApp groups and practitioners' personal Facebook accounts), where political opinions are expressed mostly by Arab practitioners and stereotypical attitudes against Arabs are expressed mostly by Jewish ones. Reactions to the posts reverberate in the wards, disrupting the fragile relations among the mixed teams. Generally speaking, healthcare organizations are based on the ethos of neutrality. Consequently, political discourse in social media platforms is considered particularly sensitive and problematic, demanding specific policies for appropriate handling. Nevertheless, many of the legal and ethical issues associated with social media use in the health professions remain rather obscure. This study exemplifies the usefulness of the context collapse approach—focusing specifically on unintentional context collisions—in workplaces, especially healthcare organizations, that cope with these challenges.

The Valuation of Mental Health. Approaching Valuation Studies through the case of "Parity of Esteem" in England

Juan, Paola

Department of Anthropology, London School of Economics, United Kingdom
p.juan[at]lse.ac.uk

This paper explores the valuation of mental health based on the notion of Parity of Esteem between mental health and physical health, as recently adopted by the UK Government and the NHS England. How, and to what extent, has "mental health" come to count as being of value for the English authorities through the creation and use of the notion of Parity of Esteem? How has this value been legitimized and what does it mean in practical terms? Through such questions, this paper brings to light some critical points in the way Valuation Studies have been thought by scholars of the movement. It ultimately questions what the Parity of Esteem study of valuation reveals about theoretical and methodological assumptions made by scholars of the Valuation Studies movement. Subsequently, it seeks to identify the limitations of this perspective and consider if there is a way forward for the study of valuation from an anthropological and critical viewpoint. It first examines the place of Valuation Studies in the literature on value and takes up the study of Parity of Esteem on a theoretical level. It then explores the valuation process of Parity of Esteem through the Valuation Studies perspective, discussing, in particular, the use of standardized, quantifiable and technocratic language and the politics of knowledge in such operations, while inquiring into the subsequent limitations for Valuation Studies. It finally draws attention to several critical aspects of the study of valuation and the way it has been approached by scholars of Valuation Studies.

Fiddling While Rome Burns? Conducting Health Research When The NHS Is In Crisis: Implications For Health Sociology

Sheard, Laura

Bradford Institute for Health Research, United Kingdom
laura.sheard[at]bthft.nhs.uk

The NHS in the UK is said to be in crisis, with many areas of the health service struggling to meet increasing demand with fewer resources. The deepening of this crisis over the past few years has led to a lack of healthcare staff on the ground, with increased pressure on those who remain in clinical practice. Consequently, health research is becoming increasingly difficult to conduct. This is having a demonstrable impact on the conduct and findings of health research with an intended health sociological output/remit. I draw on both my own and other research teams' experiences in order to demonstrate that this difficulty is a near universal problem for the health services research community in the UK and is encroaching on

the health sociology community. In doing so, I discuss the idea that recruitment and engagement issues across differing clinical environments are, in the literature, often erroneously ascribed as being related to individual context or setting. Rather, I propose that these problems are actually writ large across nearly the entire whole system of the NHS. I offer both macro and micro level ideas for what can be done to alleviate the worst of this situation. Macro, urgently increase healthcare spending to improve the conditions under which NHS staff are working. Micro, health sociologists may need to employ more pragmatic, rapid methods to engage exceptionally busy healthcare staff. Throughout, I use the Great Fire of Rome as an allegory to understand the above situation.

The Institutional Agency Of Cancer Screening: Does It Matter For The Education Gradient In Cancer Screening Participation?

Willems, Barbara

Ghent University, Belgium
Barbara.Willems[at]UGent.be

Background: While there is a growing literature that examines how cross-national differences in health inequalities are related to variations in the provision of welfare across Europe, the study of inequalities in preventive healthcare use from this point of view is rather scarce. Also for cancer screening, it remains poorly understood why educational inequalities in cancer screening participation vary across European countries. In the current study, we draw on an institutional approach to identify which specific healthcare system factors and cancer screening policies affect the association between people's educational attainment and their participation in cervical, breast and colorectal cancer screening. Methods: Data from 16 EU-countries were obtained from two successive cross-sectional waves (2006-2009; 2013-2015) of the European Health Interview Survey (EHIS). Final samples consisted of 108,382; 57,445; and 114,260 individuals for cervical, breast and colorectal cancer screening, respectively. To estimate the logistic regression coefficients and cross-level interactions, a three-level multilevel design was applied with individuals nested within country-periods and countries. Preliminary results: People with higher levels of education have a higher probability to participate in cervical, breast, and colorectal cancer screening than their counterparts. The results highlight the importance of the institutional context, with this education gradient in cancer screening participation being significantly smaller in countries with an organised screening programme, high expenditures on social protection and healthcare as well as low levels of out-of-pocket-payment, income inequality and gender inequality. Conclusion: Health policy makers should be aware of the fact that in addition to service-specific policies, countries' broader institutional setting play a key role as moderator in the influence of educational attainment on preventive healthcare use.

Mindfulness: Secular or Religious (and why it matters)?

Arat, Alp

Cardiff University, United Kingdom
aratalp[at]gmail.com

Highly abstract yet deeply embodied notions such as mindfulness, presence, and stillness have gained considerable currency in modern western societies. Despite its ubiquity however, the mindfulness movement has so far garnered little attention from the social sciences. Our current understanding of this milieu thus remains dominated by research based on randomised controlled trials that are focused primarily on the health benefits of mindfulness practice alone. In an effort to expand our sociological appreciation of this contemporary trend, this paper will draw on a three-year project titled 'Mapping Mindfulness in the UK' (Leverhulme Trust) and present a social cartography of the people, places, and practices that constitute the mindfulness milieu today. Drawing on 400 survey responses and 30 interviews with UK-based mindfulness teachers, as well as ethnographies and focus groups with key stakeholders in the field, I will present original empirical evidence into (1) the social make-up of the people at the forefront of the UK mindfulness milieu; (2) how they define and engage in a fully committed mindful life; and (3) the extent to which they identify mindfulness as a secular or religious practice. Taken as a whole, I illustrate how mindfulness now offers a unique platform for a great deal of spiritual work in mainstream public institutions, and discuss the wider implications of such trends for the modern co-evolution of social movements in health and religion.

RN16_04c | Rethinking mental health

Colonial Psychiatry and the Movement for Global Mental Health: A Postcolonial Analysis

Cohen, Bruce Macfarlane

University of Auckland, New Zealand
b.cohen[at]auckland.ac.nz

Following recent calls from the Movement for Global Mental Health (MGMH) to 'scale up' mental health provision in the Global South (Patel et al. 2007; World Health Organization 2010), this presentation offers a timely socio-historical analysis of such medical expansionism over the past two hundred years. Applying postcolonial theory to the area of mental health, it will be forwarded that the contemporary arguments of the psychiatric professional for the extension of their enterprise are far from new. Instead, through a number of case studies (including those from India, North Africa, and Indonesia), it will be demonstrated that the claims made by the MGMH that there is an 'epidemic' of mental illness in the Global South, that western psychiatry has a 'moral imperative' to act, and that mental illness is a universal phenomenon with

well-established biological markers can all be found in the original ideas of colonial psychiatry. While emphasising the importance of understanding psychiatric ideology (rather than psychiatric practice) in the postcolonial space (Keller 2007; Pols 2006; Vaughan 1991), this presentation will demonstrate three constants over time: namely, a racialization of the populations of the Global South; a medical imperialism which claims a superiority of knowledge on mental distress; and the ability of Western psychiatry to pathologise resistance to imperialism and the expansion of capital.

Personal Perspectives on Service User Involvement – The Narrative and Identity Construction of Experts by Experience Working in Mental Health Services

Jones, Marjaana

Tampere University, Finland
marjaana.jones[at]tuni.fi

Personal narratives provide an important resource for individuals with lived illness experiences, offering a sense of control and an opportunity to re-frame past life events. As service user involvement has become an integral part of many developed health systems, these narratives have also been turned into resources used in the development of public services. Hence, it is not only important to study involvement from conceptual or practical implementation perspectives. The consequences of involvement should also be explored from the perspective of people with lived illness experiences. By analysing the stories of people who currently work as experts by experience within Finnish mental health and substance abuse services (n=13), we study the effects of involvement activities on personal narratives and on the construction of meaningful identities. We argue that involvement has the potential to support the construction of identities that are both temporal and hierarchical. The process begins with the re-discovery of skills, knowledge and self-worth and leads to experts by experience to become professionalised and politicised. The involvement process may also influence the personal stories people tell, enforcing the 'moving on' and quest narratives that portray the illness experience as a motivator for social action or change. Additionally, we suggest that the stories experts by experience share with health services and the public are not 'lay accounts' or ad hoc tales, but accounts constructed to serve specific purposes.

Socioneuroscience: Improving Health Through Advancing The Understanding Of The Relationships Between The Human Brain And Social Interactions

Racionero-Plaza, Sandra; Flecha García, Ramón; Torras, Elisabeth

University of Barcelona, Spain
racionero-plaza[at]uwalumni.com, ramon.flecha[at]ub.edu, etorras[at]ub.edu

In “Principles of neural science”, Eric Kandel (2013) stresses the immense power of social experience on the human brain, even affecting our genes, which are, in Kandel’s words, ‘servers of the environment’. Today research in neuroscience is being very fruitful in providing evidence about the influence of social factors in both the architecture and functioning of the brain. Such evidence challenges the idea that the social being builds upon his or her biology. From relevant studies such as Kandel’s, we can see the central role of sociology in neuroscientific research. Without the contributions of interactionist, communicative and dialogic sociology, current neuroscience cannot deeply understand plastic changes in the brain which result from complex social experiences examined by sociology, experiences which can either improve physical and mental health or worsen it in acting as physical and emotional barriers for individuals and groups. For example, how does violence in human relationships affect the brain, and then physical and mental health? And, more importantly, which are the characteristics of social interactions able to weaken neural connections created with the experience of violence, and instead to support the creation of new neural wiring which promotes good health and freedom in the individual and society? These are examples of what socioneuroscience (Puigvert & Flecha, 2018), an emerging branch of sociology, is concerned with. Socioneuroscience studies the relations between the human brain and social interactions, taking into account knowledge from all social sciences and the natural sciences. Such inquiry can aid tackling illness and achieving better health for all.

Reconceptualizing Research on Mental Health, Social Class and Working Life

Väänänen, Ari (1,2); Varje, Pekka (1)

1: Finnish Institute of Occupational Health, Finland; 2: University of Kent, United Kingdom
ari.vaananen[at]ttl.fi, pekka.varje[at]ttl.fi

Medical and psychological frameworks dominate the scientific understanding of mental health and occupational well-being. To grasp the mental health-related views, experiences and actions of people belonging to different social classes in working life and in cultures undergoing transitions, it is essential that social scientists construct and develop new frameworks for the study of mental health that provide less

clinical and more social and functional view of mental health problems in today’s societies. This presentation introduces three concepts that capture the core social and cultural components of mental health problems often missing in the mainstream scientific debates. First, it presents the concept of mental discomfort that includes inadequate or unwanted mental functioning perceived as problematic by individuals themselves and/or others such as work communities. Second, it aims to reformulate the role of workers’ agency in the construction of mental health by introducing the concept of workership. The different forms of workerships are manifested via ideals, expectations, norms and limits attached to the typical forms of being a worker. Social class participates in the construction of workership and has a key role in the formulation of socially relevant reactions and manifestations of mental discomfort. Third, the prism that captures workership is the concept of mental landscape. The mental landscapes of social classes are built in certain working conditions, organizational cultures, status positions, living environments, and institutional and social relationships. They influence the core challenges and action frameworks that characterize workership and the composition of mental health. Through these heuristic tools the presentation intends to craft a new social-class sensitive framework for the understanding of mental functioning in the context of rapidly changing working life and segregating social realities.

RN16_05a | Class, Gender and Ethnic Inequalities in Health

Ethnicity and Health Participation on Social Media: A Test and an Extension of Social Diversification Hypothesis

Rosenberg, Dennis; Mano, Rita; Mesch, Gustavo

University of Haifa, Israel
denrosen2[at]gmail.com, ritamano[at]research.haifa.ac.il,
gustavo[at]soc.haifa.ac.il

Ethnic inequalities in both general and health-related use of the Internet gained an extensive academic attention in the last decade. These studies usually tested the social diversification hypothesis, according to which disadvantaged minorities in a given society use the Internet to a greater extent than the advantaged groups in order to improve their position in the social structure of the society. However, health-related use of a specific segment of the Internet, namely social media, has not been extensively studied in both general and ethnic perspectives. The goal of this study is twofold: to both understand the effect of ethnicity on health participation employing social diversification hypothesis, and extend it by considering size of locality of the disadvantaged minorities. The sample consisted of social media users (N=803). The dependent variables of the study are health-related activities on social media and social media sites in which these activities are performed. Using logistic regression analyses, the results provide partial support the social diversification hypothesis. In addition, it provides partial justification for including the size of locality into the hypothesis. The results imply that the disadvantaged minorities residing in small localities use social media for health purposes to a greater extent than both their counterparts from larger localities and the advantaged group (Israeli Jews). This signals a great need for accessible health services of quality in small localities, where disadvantaged minorities reside.

Patient Participation In A Therapeutic Education Program (TEP) In Oncology And Social Inequalities: A Selection Linked To The Proximity Of Patient's And Caregiver's Disposition

Forté, Lucie; Gaborit, Emilie; Terral, Philippe

Toulouse 3, France
lucie.forte[at]univ-tlse3.fr, gaborit.emilie1[at]yahoo.com,
philippe.terral[at]univ-tlse3.fr

This paper addresses the issue of social and territorial inequalities in health by considering the cancer patients' recruitment into a therapeutic education program (TEP) aimed at empowering patients in the delicate management of home medication. It is part of a broader research project investigating the effects of a TEP program on the patient's care pathways and life courses. Here, we will focus on the question of the engagement in an TEP program by analyzing both quantitative (patient tracking files) and qualitative (interviews with patients and professionals, observation of "early educational diagnoses" and of TEP modules) data in order to understand why this program, which is supposed to have an inclusive recruitment strategy, recruits or discards certain patient profiles. The first step will look at the dispositions of the participants involved in the TEP program by analyzing their proximity/distance to the relationships to (1) knowledge, (2) body (3) and others mobilized by health professionals. An analysis in terms of social and cultural capital will help to understand the selection processes. In addition, we will analyze the social and territorial characteristics of the patients enrolled in this program in the light of the institutional conditions of its deployment. Indeed, during a "first educational diagnosis", some patients are strategically referred by professionals who identify them as corresponding to the target of this program, while others are excluded. The second stage of our paper will therefore examine the social and territorial characteristics which are likely to function as a filter in patient recruitment - this filter may vary from one professional to another and result from more conjunctural factors.

Barriers to Accessing Dementia Care by Minority Ethnic Groups in Norway

Czapka, Elzbieta Anna

Oslo Metropolitan University, Norway
elzbi[at]oslomet.no

Evidence suggest that in the Nordic countries elderly members of different ethnic minority groups underuse dementia services. Few older members from ethnic minority groups live in care facilities. There are significant barriers to accessing dementia services but they haven't been well studied in the Nordic context. This situation may lead to poorer dementia outcome and care for people from ethnic minorities. The paper presents the partial results of the study "Aging, dementia and the need for care". One of the aims was to identify the barriers to accessing dementia care experienced by the families with minority ethnic backgrounds in Norway. The empirical data come from semi-structured in-depth interviews with 1) the family caregivers to individuals with cognitive impairment/dementia from different ethnic minority groups, 2) key participants from formal/informal migrant networks and 3) caregivers/health personnel working in care institutions. The interviews were collected in Oslo and Akershus in 2017/2018. Thematic analysis was performed to identify barriers related to the use of Norwegian dementia care services. The results of the study show that minority ethnic groups in Norway experience several barriers to accessing dementia services. They include: language barriers, different help-seeking patterns, misconceptions about dementia and different cultural views on caregiving.

RN16_05b | Health Care Organisations and Policy

Sociology For Transdisciplinary Innovation: Useful R&D For Improving Intensive Care Units dynamics in 2019

Fabregat Cabrera, María Elena; Jareño Ruiz, Diana; Ruiz Callado, Raúl

University of Alicante, Spain
malena.fabregat[at]ua.es, diana.jareno[at]ua.es,
raulruiz[at]ua.es

In 2010, the doctoral thesis "The Intensive Care Units (ICUs) as social systems: social construction of time and its influence on communication processes", described the social structure of those relationships articulating the coexistence of relatives, patients and health professionals in this hospital service. The conclusions drawn a complex network of internal and external links, perceived differently by the groups of agents, which acts by conditioning the management of both information and communication processes. Being aware of the subjective perceptions of each group was revealed as a fundamental piece for promoting empathy within the system, reduce

tensions and achieve more effective communication strategies. The present paper updates those results, translating them to the 2019 reality and analysing the impact that massive introduction of mobile devices has generated in the social structures of ICUs. The characteristics of the service and the relative-patient needs have experienced significant changes and interpretative nuances in the relational system. The study details those modifications and the impact they produce on the subjective attribution of responsibilities in the communication-care process, drawing an analytical map that aims to be to be a useful tool to start planning humanization care policies from a comprehensive understanding of the social system involved. Agile Techniques of Social Research were implemented in the study, applying the User Centred Design and the Design Thinking approaches. The novelty of using this kind of methodological design, more common in business research than in the hospital and health sector, is the inauguration of a new way of doing research in the field in which the iterative approach gives real-time insight to researchers and the power to make decisions diligently.

Communication Within a Perinatal Center: Effectiveness Proposed and Barriers Experienced

Novkunskeya, Anastasiia

European University at Saint-Petersburg, Russian Federation
a.novkunskeya[at]gmail.com

The World Health Organization proposes the effective communication between both members of the multi-professional team and maternity care providers and women in labour as one of the key conditions for the positive childbirth experience of the latter (WHO 2018). The proposed principle puts a mother-to-be at the center of the model of care, and suggests the communication be providing the continuity of care, comfort, interest and all the information, patients require. This paper is devoted to the investigation of the way, different social actors are communicating in the context of a perinatal centre – a huge and complex maternity facility with multiple units, subdivisions, and health practitioners. In particular, it questions the possibility of effective communication and addresses the conflicts and boundaries emerging in it between different care providers and women interacting in this context. The research employs the qualitative data, collected within the joint project 'Medical interactions in the changing childbirth services: women's needs and professionals' opportunities' (2018) headed by Professor Anna Temkina (EUSP). The research materials consist of observations in the Perinatal centre, in-depth semi-structured interviews with the centre's workers and patients in prenatal and postpartum units, and the document analysis (official complaints, on-line reports in the Internet, orders, notes etc.). Preliminary findings of the research reflect on the mutual distrust of care providers and patients and the inability to overcome communicational boundaries in some cases.

Are Clinical Guidelines An Effective Means Of Achieving “Disruptive Innovation” In Healthcare? Lessons From A Recent NICE Guideline Controversy In The English NHS

Rushforth, Alex; Greenhalgh, Trisha; Wieringa, Sietse

University of Oxford , United Kingdom
alexander.rushforth[at]phc.ox.ac.uk,
trish.greenhalgh[at]phc.ox.ac.uk,
sietse.wieringa[at]kellogg.ox.ac.uk

The past three decades have seen the emergence of new logics of governance in healthcare systems that attempt to move from profession-centred models of clinical practice towards more “rational” and managerial models of care. Within this context, clinical guidelines are a central instrument of standardization. Whilst guidelines are often presented as neutral conveyers of research evidence, sociological research has found that competing political, economic and scientific arguments and interests shape their production and use. Recent research has surfaced a trend for hopeful, aspirational claims and visions linked to the inclusion of technologies within clinical guidelines. The argument is that through “evidence-based” guidelines, new technologies can be more rapidly and effectively introduced, leading to improved care and better patient outcomes. In this talk, we will consider whether clinical guidelines are indeed an effective means of introducing “disruptive” technological innovations into healthcare systems, thereby reshaping clinical practice. Drawing on extensive ethnographic data from an in-depth, multi-level case study of a controversial attempt to introduce technology-supported testing and precision medicine into asthma management in primary care in the English NHS, we will show how a “trailblazing” guideline did not initially achieve its intended radical impact on clinical practice. We will contextualise our findings within a wider literature review of the promises and pitfalls of guidelines as instruments for catalysing “disruptive” innovation in healthcare and suggest ways to improve the success of such initiatives.

Patient-Centeredness in European G7 Nations' Healthcare Regulation: Current Patterns and Future Directions

Ahmed, Humayun (1); Vukcevic, Jovana (1); Ahmed, Sohaib (1); Glisch, Sophia (1); Ahmed, Saleem (2,3,4,5)

1: University of Toronto, Canada; 2: Sindh Medical College, Pakistan; 3: College of Physicians and Surgeons of Pakistan, Pakistan; 4: Aga Khan University, Pakistan; 5: Jinnah Post-Graduate Medical Centre, Pakistan
humayun_21[at]hotmail.com, jovana.vukcevic[at]gmail.com, sohaib.ahmed1[at]hotmail.com, sophia.glisch[at]gmail.com, saleem.a.dareshani[at]gmail.com

Patient-centeredness has gained considerable centrality as a concern for regulatory bodies in recent years, following the acknowledgement that patients should be heavily involved in defining health care quality standards despite the importance of physician self-regulation. Organizations outwardly espouse such barrier-mitigating values and goals as transparency, informalization, physician accountability, and patient education. However, declared though these values and goals may be, our and others’ prior analyses suggest that the adherence of medical regulation to its stated quality standards is questionable throughout much of the developed and developing worlds, including G7 member states. Despite a superficial commitment to involving patients in their processes, regulatory bodies do not appear to deliver the patient engagement and patient-driven regulatory and conduct amelioration they publicly aspire towards. In order to propose policy and enforcement recommendations to improve current systems, this paper will first look at the current state of medical regulation in European G7 nations, including European Union member states. We will describe the standards publicly set by these states’ medical regulatory bodies, analyze the extent to which these standards demonstrate patient-centeredness, and evaluate the degree to which the regulatory bodies appear to comply with their own standards, with an emphasis on progression, hindrances, and trends. We will then recommend revisions to the formulation and enforcement of these standards, with the aim of mitigating the barriers and boundaries barring patient participation in health care quality standard definition, and fostering a true sense of belonging for patients within health care regulation.

RN16_05c | Health and Migration, Refugees and Asylum Seekers

Proximity and Gender Violence Against Refugees and Asylum Seekers. Health, Healthcare and Good Practice in the Milan and Brescia Areas

Lombardi, Lia

University of Milan, Fondazione ISMU, Italy
rosalia.lombardi[at]unimi.it

The proposed study focuses on the complexity of proximity and gender violence in a forced migration context. It explores the risks and difficulty of managing the several and different forms of violence, and provides an overview of the situation in the Lombardy region (specifically in the Milan and Brescia areas). The study discusses the results of a “mixed method research”, which includes a desk analysis on migration in Lombardy and on the reception system in Milan and Brescia: the latter is analysed through the approach and the policies adopted by the aforementioned areas. The study also analyses the consequences of violence on migrants’ health, and their access to healthcare and social services. The qualitative study, which was carried out during the implementation of two projects on proximity violence and on refugees and asylum seekers’ health, includes: ten in-depth interviews with institutional stakeholders and healthcare professionals; eleven interviews with representatives from anti-violence and reception centres; and a focus group involving public stakeholders and representatives from the social and healthcare services. This talk will discuss some theoretical approaches to violence against migrants, asylum seekers and refugees, with a focus on women and vulnerable people. It will also analyse social and healthcare policies in the Milan and Brescia areas. The results of the qualitative analysis highlight four key topics: 1. Migrants’ experience and violence dynamics; 2. Types and forms of violence; 3. Asylum seekers and refugees’ health and mental health conditions; 4. Good and bad practice in the refugee and asylum seeker healthcare system.

Communicative Constructions Of Refugees In The Treatment Of Tuberculosis

Schwertel, Tamara Pascale

Goethe-University Frankfurt, Germany
tamara.schwertel[at]outlook.de

This paper analyses the communicative constructions of refugees suffering from tuberculosis by the actors involved in the tuberculosis treatment process. I will show, that both the

trajectory of tuberculosis as well as the trajectory of migration matter in the treatment of tuberculosis and the construction of “refugees with tuberculosis”. I will demonstrate, how different constructions associated with a refugees’ integration capability as well as their ‘appropriated’ handling and ‘appropriated’ emotional reaction of having tuberculosis create different scopes of action for the actors involved. Moreover, these communicative constructions can be seen as an attempt to establish order in the treatment of tuberculosis. I will argue, that the intersection of these two trajectories migration and tuberculosis creates different regimes of order causing trouble and misunderstandings. Finally, I will provide an outlook for the potential of intersectional approaches in health research. The evaluation is based on eight problem-focused Interviews in all treatment phases. The inpatient treatment is represented by two senior physicians and a nurse. Three social workers were interviewed for the outpatient treatment. In addition, a tuberculosis expert and a public health officer of the health department were part of the sample. This sample represents an actual treatment cycle in Germany. The theoretical framework comprises symbolic interactionism added by Anselm Strauss’ concept of trajectories. For evaluation methods I use a triangulation of grounded theory and sequence analysis.

Mental Distress among Current Refugees: Assimilation or Stress-Proliferation?

Hans, Silke; Kuche, Coline

Georg-August-Universität Göttingen, Germany
silke.hans[at]sowi.uni-goettingen.de, coline.kuche[at]uni-goettingen.de

Mental Distress among Current Refugees: Assimilation or Stress-Proliferation? Among the many challenges associated with the large inflow of refugees into European countries in the past few years is the high level of traumatization and mental distress among refugees. This is a problem both for refugees themselves and for health services in the receiving countries: treatment opportunities are rare and it is reasonable to assume that mental distress goes along with other problems in the process of acculturation. However, it is still unknown to what extent this is indeed the case. While the theory of stress proliferation assumes that traumatizing pre-migratory experiences will lead to an accumulation of further mental distress and acculturative problems after migration, (sociological) neo-assimilation theory assumes that for many refugees, mental distress will decrease in the course of incorporation into the receiving society. Using representative panel data for asylum-seekers who moved to Germany between 2013 and 2016 (the IAB-BAMF-SOEP survey of refugees, N>4000), we analyze the development of mental distress among refugees over time in the course of their first months and years after migration. Findings indicate that (a) more than 20% suffer from moderate or severe mental distress, and 36% from mild distress; (b) negative experiences before and during migration (e.g. war, persecution, exploitation) go along with a higher level of distress. However, (c) mental distress decreases over time and (d) post-migratory explanatory factors (e.g. an insecure legal status, separation from family members), have a larger effect on mental distress than traumatization before or during migration.

The Well-being of Undocumented Migrants. Baseline Results of a Longitudinal Study in Geneva, Switzerland

Burton-Jeangros, Claudine; Duvoisin, Aline; Jackson, Yves

CIGEV-LIVES, University of Geneva, Switzerland
claudine.jeangros[at]unige.ch, aline.duvoisin[at]unige.ch,
yves.jackson[at]hcuge.ch

While the uneven distribution of health along different levels of socioeconomic resources has been well documented by health inequalities research, the association between objective resources and well-being assessments is not systematically linear. Indeed, in some groups of the population characterized as vulnerable, well-being is unexpectedly high compared to more well off groups. This suggests that variations in well-being evaluations reflect not only individual life circumstances, but also expectations which can, individually and collectively, vary over time and change across living contexts. This contribution aims at providing a better understanding of the articulation between objective resources and self-assessed quality of life thanks to an on-going study on undocumented migrants in Geneva, Switzerland. It is established that migrant workers who have no access to fundamental social rights experience important economic and social vulnerability. In March 2017, a 2-year pilot program for regularization has been launched in the canton of Geneva, which is hosting a large number of undocumented migrants (estimated to 13'000 persons). Using this program as a unique opportunity to assess the impact of a regularization policy, we initiated an interdisciplinary prospective study to document changes over time in the socio-economic and health conditions as well as the quality of life assessments of those workers. Along with a control group of undocumented migrants who do not meet the regularization criteria, quantitative and qualitative longitudinal data will be collected over four years. This paper will focus on quantitative quality of life assessments at baseline, taking into account the sociodemographic characteristics of the undocumented migrants and their levels of resources in different domains, and some comparisons with residents in Switzerland will be possible.

p.conde[at]uah.es, maria.sandin[at]uah.es,
manuel.franco[at]uah.es

Within the public health field, consumption of tobacco and alcohol are two of the main risk factors of different diseases in adult population. The aim of this research is to demonstrate that the neighbourhoods' socioeconomic status, as well as the social and physical environment, have influenced perceptions about the consumption of tobacco and alcohol. As a secondary objective, we have inquired into the effect that the economic crisis has had on perceptions of alcohol and tobacco consumption. Also we have looked into the influence that immigrant population has had on perceptions about alcohol consumption. This research is part of a project named "Urban environment and health: Qualitative approach in the Heart Healthy Hoods Study." In the research project, three neighbourhoods from Madrid with different socioeconomic statuses were selected: San Diego (low socioeconomic status), El Pilar (medium socioeconomic status) and Nueva España (high socioeconomic status). A qualitative analysis has been conducted about the perceptions that local people from each neighbourhood have with regards to the alcohol and tobacco consumption. Data was obtained from 36 semi structured interviews (12 from San Diego, 11 from El Pilar and 13 from Nueva España) and 29 focus groups (14 from San Diego, 11 from El Pilar and four from Nueva España). As preliminary findings we have uncovered: 1) Perceptions about normalisation of alcohol consumption; 2) The increase of alcohol consumption in public places such as parks; and 3) Different perceptions about tobacco consumption, for instance in the high socioeconomic status neighbourhood there is a strong stigmatisation of tobacco consumption, while in the low socioeconomic status neighbourhood there is a normalisation of the consumption of marijuana mixed with tobacco.

The Habituality of (Un)healthy Lifestyles: Milieu-Specific Socialization and the Stratified Obesity Pattern

Schaap, Julian; van der Waal, Jeroen; de Koster, Willem

Erasmus University Rotterdam, Netherlands, The
schaap[at]essb.eur.nl, vanderwaal[at]essb.eur.nl,
dekoster[at]essb.eur.nl

Cultural aspects of stratification may be very relevant for understanding the higher prevalence of obesity among the lower strata (e.g. Pampel et al., 2010). More specifically, two types of stratified behaviour could account for the stratified obesity pattern: food intake (e.g. Sato et al., 2016) and physical exercise (e.g. Engström, 2008). However, as advanced by Bourdieusian stratification analyses, stratified food and physical exercise preferences and practices are considered to be performed habitually, as they result from life-long, stratum-specific socialisation. The empirical sociological scrutiny of such habitual practices is, however, in its infancy. In the paper, we use Implicit Association Tests (IAT) in combination with surveys (n=1000, UK) to: 1) identify empirically the existence of different habitus among different social strata; and 2) determine their role in the stratified patterns pertaining to obesity. In a first step, we uncover whether a negative (positive) implicit association with healthy (unhealthy) foods can be especially found among the lower strata, as expected based on Bourdieusian theorising. Second, by associating the IAT scores with survey data on a respondent's current and childhood social conditions, we assess whether such a stratified pattern in implicit associations is based on stratum-specific socialisation or other cultural or material influences. Subsequently, in a third step, we consider whether those stratified IAT scores account for the population-wide stratified patterns in food intake, and in obesity, that have already been extensively reported by means of survey research – in other words: whether the habitus does indeed underlie those stratified patterns, as widely assumed.

Understanding Care: Vulnerabilities, Support and Interdependencies

Artiaga Leiras, Alba (3); Martín Palomo, María Teresa (1); Zambrano Álvarez, Inmaculada (2); Muñoz Terrón, José María (1)

1: University of Almería, Spain; 2: University Pablo de Olavide, Sevilla, Spain; 3: University Complutense of Madrid, Spain
alba.artiaga[at]ucm.es, tmartinp[at]ual.es, izamalv[at]upo.es,
jmterron[at]ual.es

This paper presents the results of the project “New forms of social and existential vulnerability, support and care in Spain”, funded by the Spanish R&D&I National Plan CSO2016-76179-R of the Ministry of Science and Innovation. The project is based on the qualitative research conducted in Spain by means of three discussion groups composed of particularly vulnerable social groups: family caregivers, young individuals in a situation

of precariousness and long-term unemployed individuals over 45 years. This paper focuses on the analysis of discourse of family caregivers and delves into the relationship existing between the experience of care and that of vulnerability and interdependency. In a broad sense, care, as defined by Joan Tronto and Berenice Fisher (1990:40), allows explaining the complexity of the discourses regarding the experiences of care, as well as enabling a better understanding of the different dimensions which shape care: emotional, moral and physical (corporal, material and temporal) (Martín Palomo, 2008; Martín Palomo and Krabel, 2016). The processes of interaction between those who give support and those who receive it are pierced by affection, bodies, suffering, satisfaction, physical effort and, ultimately, a diverse range of dispositions, many times in conflict with each other –especially concerning the tension between self-care and the care of others. This work intends to analyse how the body and emotions operate in the processes of interaction between caregivers and care-receivers in order to elaborate further on the subjective and material dimensions which promote vulnerability within care and on the impact this processes have on caregivers.

Obesity and Inequality in Europe: A Multi-Level Analysis of 20 European Countries

Andrade, Stefan Bastholm (1); Ditlevsen, Kia (2)

1: VIVE - The Danish Center for Social Science Research, Denmark; 2: University of Copenhagen
sba[at]vive.dk, kmd[at]ifro.ku.dk

The association between obesity and social inequality is well known. Yet, little is known about how other factors might affect the association. Analysing representative data from 20 countries from the European Social Survey, this paper contributes to the literature by showing how the association between body weight and inequality is mediated by individual and structural factors. Our multi-level analysis reveal significant cross-country differences in the association between inequality and body weight. These findings are mainly driven by institutional differences in the welfare states. The main conclusion is body size is not only an individual problem but also a matter of public spending on health.

RN16_06b | Mental Health: Styding Traditional and innovative approaches

“It Is a Different World In Here”: Collective Identification Among Psychiatric Inpatients And The Negotiations Of Social Boundaries At An Open and Acute Ward

Kessing, Malene Lue

University of Copenhagen, VIVE, Denmark
mkg[at]vive.dk

This paper explores interactions and unfolding relationships between inpatients admitted at respectively an open and an acute psychiatric ward in Denmark. Today's psychiatric hospital care remains a black box, 'with people being admitted and discharged, but where little is known about what happens to them while they are there' (Quirk and Lelliott 2001). While research has illuminated what characterises inpatients interactions, this paper examines how these interactions influence the inpatients understanding of self and affiliation with others. In doing this, I combine Barker's (2002) concept of 'collective illness identity' with Nelson's (1993) concept of 'epistemological communities' to draw attention to the inpatients collective identification and shared experiential knowledge. The analysis unfolds three aspects of the inpatients relationships. First, how the inpatients through bodily expressions and narrative accounts construct a collective illness identity, meaning that their understanding of self, and affiliation with others, is based on shared experiences of symptoms and suffering. Second, the ways in which the inpatients use their shared experiential knowledge to negotiate social boundaries at the ward. Third, how the inpatients reflections on the long-term potentials of the relationships established at the ward reveal a number of concerns related to their continuation. Centrally, the paper points to the potential and challenges that arise from the inpatients relationships and how their identification and social boundary work is embedded in a specific time and space. Empirically, the paper draws on 5 months of participant observation conducted at an open and an acute ward, and interviews with 14 psychiatric patients.

Revitalizing Disclosure: A grounded Theory Of Changing Beliefs In Mental Health

Brugmans, Johan

Erasmus University, Netherlands, The
johan.brugmans[at]home.nl

Closeness to patients in healthcare is essential but with certain restrictions. It is clear that health professionals keep a professional distance from the patient. Personal experiences do not belong on the work floor, an objective attitude fits best to patients. This assumption is in coherence with the biomedical model that is still dominant in psychiatry. Since several years, experts by experience are on the agenda of many mental health organizations. The formally educated health professional meets the expert by experience. Their education is different and with that his attitude towards disclosure. Personal experiences with mental challenges are an essential resource in their work. The interaction between these workers with different perspectives was the start of a three years of research based on the methodology of classic grounded theory (Glaser & Strauss, 1967) in two mental health organizations. In the end the substantive theory of revitalizing disclosure emerged. Revitalizing disclosure is a discovered pattern that emerged in a substantive area where health professionals have a professional standard about disclosure. This standard seems to be losing ground and has to be renewed that is what revitalizing disclosure is. The old assumption about disclosure will be challenged (Alvesson & Kärreman, 2011). The theory of revitalizing disclosure offers workers in mental health organizations the insight in a process which can help them to grow as a professional and human being. It is helpful to know how to support organizations who want to change their focus on a more recovery-oriented care with experts by experience as a crowbar (Bracken & Thomas, 2005). Keywords: Revitalizing disclosure, expert by experience, mental health, classic grounded theory.

“No More Mechanical Restraint in This Ward”. An Ethnography of Change in Two Acute Psychiatric Wards

Gariglio, Luigi (1); Cardano, Mario (1); Ferrero Camoletto, Raffaella (1); Rossero, Eleonora (1); Maina, Giuseppe (1); Algostino, Alessandra (1); Zagrebelski, Vladimiro (2); Caredda, Marta (2); Pardini, Cristina (2); Imperato, Maria Grazia (3); Carezana, Claudio (3)

luigi.gariglio[at]unito.it, mario.cardano[at]unito.it, raffaella.ferreroCAMOLETTO[at]unito.it, eleonora.rossero[at]unito.it, giuseppe.maina[at]unito.it, alessandra.algostino[at]unito.it, v.zagrebelsky[at]gmail.com, marta.caredda[at]uniroma3.it, criapardini[at]gmail.com, mariagrazia.imperato[at]unito.it, claudio.carezana[at]gmail.com

In 1978, the organization of psychiatric care changed radically in Italy because of the entry into force of the so-called “Basaglia Law” (180/1978) and the following shutdown of the asylums. Ever since, small acute psychiatric wards enter into the picture and community care become standard in the Italian NHS. Although Franco Basaglia ‘the man who closed the asylums’ used medications and neuroleptics, he bluntly resisted and then refused mechanical restraint in his day-to-day psychiatric practice, thereby showing that a non-restraint psychiatry was possible also in Italy. Nowadays, however, the big majority of Italian acute psychiatric ward still use mechanical restraints with different justifications; only few wards adopt a strictly “no-restraint ward” policy; yet, others are in the process challenging their own wards organizations and clinical practices in an effort to abolish mechanical restraint in their ward. This presentation focuses on two acute psychiatric wards that are actively engaging in dismissing the practice of mechanical restraint. It intends to shed light on the differences between the two processes of becoming a non-restraint ward. Each of the two cases have been proactively engaged in the change for some times with different degree of success. The paper will focus on the heterogeneous ways in which the multiplicity of actors involved in the process of change challenged, resisted and or contributed, more or less actively, to the goal of dismissing mechanical restraint, as well as, the intended and unintended consequences they faced as result.

RN16_07a | Mental Health and inequality

Men’s Experiences Of Help-Seeking For Mental Distress

Vickery, Alexandra Yvonne

University of Bristol, United Kingdom
alex.vickery[at]bristol.ac.uk

In the context of health, particularly mental health, the dominant narrative is that men are more reluctant to seek help for problems in living than women. Men are three times more likely to commit suicide than women (ONS, 2016) and studies suggest that men do not seek help on account of a perceived threat to performing ‘hegemonic’ masculinity that limits emotional expression and vulnerability (Addis and Mahalik, 2003). They also put forward that men have fewer, and more ineffective coping strategies than women. This paper reports findings from doctoral research that explores men’s coping and management of distress, with particular focus on help-seeking practices. Between 2016 and 2017, 40 semi-structured interviews were carried out in South Wales, UK, with men from different ages and social backgrounds, recruited from the general public and mental health support groups. Analysis demonstrates distinct gendered characteristics of men’s help-seeking and coping behaviour. Hegemonic masculine discourse is evident in men’s help-seeking practices as they discuss barriers to do with manly self-reliance, shame of vulnerability and lack of insight into mental distress symptoms. Yet the majority of participants had actually attempted to seek out professional support for their mental distress and so cultural barriers and hegemonic discourses could be perceived as excuses rather than barriers in their accounts of mental health help-seeking. Findings thus indicate that men can and will seek help when it is needed and points to a focus in future research on what men do differently in the management of their mental health.

Group-Focused Enmity, Knowledge And Acquaintanceship: How Do They Influence Stigma Towards People With Schizophrenia?

Hackl, Elisabeth; Moosbrugger, Robert

Johannes Kepler Universität, Austria
elisabeth.hackl[at]jku.at, robert.moosbrugger[at]jku.at

Heitmeyer (2007) defines the concept of “Group-Focused Enmity” as willingness to marginalize and exclude not only individuals but groups as a whole. Group-Focused Enmity is seen as a result of rising disorientation. Being in a precarious position leads to more Group-Focused Enmity to compensate for a lack of societal recognition which goes along with a higher readiness to discriminate weak groups (e.g. people with disabilities, non-established people, etc.). Contact hypothesis (Allport 1954) suggests that contact with members of a certain group may reduce prejudice. Congruently – regarding people with mental illnesses – increasing interpersonal contacts as well as knowledge are most commonly used anti-stigma strategies (Corrigan et al 2001; Gronholm et al 2016). We therefore ask 1. Which influences can be found on Group-Focused Enmity especially against people with mental illnesses? 2. How is Group-Focused Enmity related to stigmatizing people with schizophrenia? 3. How does general knowledge about mental illnesses and acquaintanceship with people suffering from mental illnesses affect this relation? We use survey data among the Austrian population out of the project “Monitoring Public Stigma Austria 2018” to approach these issues. Literature Allport, G. W. (1954). The nature of prejudice. Oxford: Addison-Wesley. Heitmeyer, W. (Eds.) (2007). Deutsche Zustände. Folge 5. Frankfurt: suhrkamp. Corrigan P.W., River L.P., Lundin R.K. et al. (2001). Three strategies for changing attributions about severe mental illness. Schizophr Bull 27:187–195. Gronholm et al. (2016). Interventions to reduce discrimination and stigma: the state of the art. Social psychiatry and psychiatric epidemiology 52 (3): 249-258.

Ethnic Minorities, Mental Illness Stigma and Health Care: Stigma as Deflection

Kapadia, Dharmi

The University of Manchester, United Kingdom
dharmi.kapadia[at]manchester.ac.uk

Mental illness stigma is damaging. In the UK, we see a proliferation of the idea of greater mental illness stigma in ethnic minority populations. The thesis is that ‘culturally’ there is more stigma in these communities due to religious, spiritual or traditional beliefs about mental ill-health. These explanations are abundant amongst people suffering with mental illness, and also amongst family members, health professionals, and charities working with ethnic minority groups. What has been missing in the field is a consideration of how mental illness stigma operates alongside racialisation (or race stigma). There has been no theorisation of how

discriminatory treatment that ethnic minority people are subject to, works in conjunction with mental illness stigma to exacerbate health outcomes. Instead, there has been an inflation of the idea that greater mental illness stigma in ethnic minority populations accounts for a lot of the disparities we see in access to talking treatments, recovery rates, use of crisis mental health services and detention under the Mental Health Act, with ethnic minority groups faring worse on all of these outcomes. This inflation of the impact of mental illness stigma in ethnic minority communities without corresponding research evidence, is potentially dangerous, as it deflects attention away from the structural health service problems that need to be addressed. This paper uses data from the Adult Psychiatric Morbidity Survey to critique assumptions of higher levels of stigma for ethnic minority people, and discusses a new direction for mental illness stigma research in ethnic minority populations.

“Life Stories And Mental Health Of Unemployed People Over 45 Years Old. Longitudinal Study”

Herrera Belzunces, Júlia

University of Barcelona, Spain
juliaherrera.210[at]gmail.com

The aim of this ongoing investigation is to shed light on the life stories of 10 unemployed people aged 45 and over and the changes and challenges they have faced for two years. Taking a longitudinal perspective, the objectives are three. First, investigate how their life stories have changed in this period focusing on life events, employment changes and self-esteem. Secondly, to deepen into the differences between women and men’s discourses and, strategies for overcoming unemployment and its implications. Thirdly, to study which mental health implications have had unemployment situation to them. The three hypotheses of the research are: (a) The personal situation of the subject has improved in two years thanks to finding a new job or because of the normalization of his or her living condition. (b) Women show a better professional and labour adaptation, so they are more likely to find a faster solution than men. (c) Despite the improvement in economical and material terms, the mental health of the subjects has been deteriorated because they haven’t been diagnosed and treated. In order to respect the subjects and the nature of the theme as much as possible, the methodological approach is qualitative. It is based on open interviews with script and discourse analysis made with the computer program Atlas.ti. The first results will be discussed with the respondents in order to enrich the present research with their feedbacks and to get solid conclusions for future investigations.

RN16_07b | Social Inequalities

The Secret Drama at the Patient's Bedside—Refusal of Treatment Because of the Practitioner's Ethnic Identity

Keshet, Yael (1); Popper-Giveon, Ariela (2)

1: Western Galilee College, Israel; 2: David Yellin Academic College, Jerusalem
yaelk[at]wgalil.ac.il, arielapo[at]netvision.net.il

Patients' refusal of treatment based on the practitioner's ethnic identity reveals a clash of values: neutrality in medicine versus patient-centered care. In Israel, patients of the two ethno-national populations, the Jewish majority and the Arab minority, are treated in the public healthcare system by both Jewish and Arab practitioners against the background of the violent Israeli-Palestinian conflict. The research objective was to examine the views of Israeli patients and healthcare professionals regarding patients' refusal of treatment because of the practitioner's ethnic identity. A mixed methodology was used, consisting of a phone survey of a representative sample (N=760) of the Israeli population, comprising both Jews (N=505) and Arabs (N=255) and fifty in-depth interviews with 10 managers and 40 healthcare professionals, Jewish and Arab, employed at 11 public hospitals. The survey showed that about 30% preferred to be treated by a physician of their own ethnicity, and around 4% reported that they had refused at least once to be treated by practitioners on the grounds of their ethnicity. The interviews revealed that most refusal incidents recorded are unidirectional: Jewish patients refusing to be treated by Arab practitioners. Refusals are usually directed towards nurses and junior medical staff members, especially if recognized as religious Muslims; they are often initiated by the patients' relatives and occur more frequently during periods of escalation in the conflict. The structural competency approach can be applied to increase awareness of the role of social determinants in shaping patients' ethnic-based treatment refusals and to improve the handling of such incidents.

Corruption, Population Health and Migrant-related Health Inequalities. A Multilevel Study of 35 European Countries

Delaruelle, Katrijn

Ghent University, Belgium
katrijn.delaruelle[at]ugent.be

In this paper, I investigate (a) whether a relationship exists between national levels of corruption and citizen's overall health, and (b) whether this relationship differs between

natives and migrants. Drawing on data from seven waves of the European Social Survey (2004 – 2016; N = 296,195) for individuals aged up to 75 years old living in 35 European countries, I apply a two-level multilevel model (i.e. individuals are clustered within country-years) combined with country- and year-fixed effects. The results indicate that higher levels of perceived societal corruption are related to poorer overall health. Moreover, this association is found to be stronger among natives than among first- and second-generation non-EU migrants. In sum, the study underlines the importance of corruption as a contextual risk factor for poor overall health. Future studies, however, should devote special attention to why the host population is more vulnerable to the health consequences of perceived societal corruption.

Cervical Cancer (over-)Screening In Belgium: Cross Sectional Trends In Social Inequalities

De Prez, Vincent

Ghent University, Belgium
vincent.deprez[at]ugent.be

Objective Many women take Pap smears outside the three-yearly cytological screening interval and outside the 25-64-year-old recommended age-range. We approach this kind of deviation from the medical norm from a medicalization perspective. By charting the social composition of Pap smear uptakers and its evolution over time in Belgium, we aim to shed light on the social determinants of over-screening as medicalization of preventive behavior, and how these are mediated by the governmental limited-reimbursement initiative that was implemented in 2009. Methods Data from 15455 women from five waves (1997-2013) of the Belgian Health Interview Survey are used. Over-screening is operationalized as the deviation from screening recommendations in a twofold manner, namely based on the frequency of screening (3-yearly intervals), and the age of the target population (25-64). Logistic regressions are performed. Results Pap smear uptake increased from 69,5% in 1997 to 72,9% in 2013. Among the screening women, the proportion that was screened within the last year remained stable around 68% between 1997 and 2008, but declined significantly to 52,4% in 2013. Pap smear uptake is higher for women aged 30-50, having a high educational degree, and having high household income. These socio-economic indicators are not related to over-screening. Over-screening is highest in Brussels. Conclusion The women who get over-screened are a shrinking proportion in a generally growing group of women who get a Pap smear. Higher educated women are more susceptible to the medicalization of their preventive behavior and show more norm compliance. The limited-reimbursement initiative was successful.

Never and Under Cancer Screeners among Women Living in Switzerland: How are inequalities shaped over time?

Jolidon, Vladimir (1); Cullati, Stéphane (1,2); Burton-Jeangros, Claudine (1)

1: Institute of Sociological Research, University of Geneva, Switzerland; 2: Department of General Internal Medicine, Rehabilitation and Geriatrics, University of Geneva, Switzerland
vladimir.jolidon[at]unige.ch, Stephane.Cullati[at]unige.ch, Claudine.Jeangros[at]unige.ch

Background: Research has evidenced inequalities in cervical and breast cancer screening which persist over time. Comparing "never-screeners" and "under-screeners" may shed light on further determinants of inequalities. Objectives: This study aims to explore non-screening prevalence of cervical and breast cancer over time in Switzerland. It distinguishes never from under screeners to investigate how associations with socioeconomic and family structure inequalities have changed between 1992 and 2012. Methods: Data from 31'800 women aged 20-70 and 11'388 women aged 50-70 from the Swiss Health Interview Survey (1992-2012), a national cross-sectional survey conducted every 5 years, was analysed. Weighted prevalence ratios of never and under Pap smear and mammography were estimated with multivariate Poisson regressions, adjusting for socioeconomic, sociodemographic, healthcare consumption and health status variables. Results: Preliminary findings suggested that, between 1992 and 2012, never and under Pap smear screening prevalence remained stable at 15.8% and 9.0% respectively, while never mammography screening prevalence decreased from 57.5% to 34.0% and under mammography screening from 42.4% to 35.7%. Women with higher education and income were less likely to never screen for Pap smear. Partnership reduced both Pap smear and mammography probability of never screening over the studied period, but was not associated with under screening. Having children only reduced Pap smear never screening. Discussion: While never screening was independently associated with socioeconomic and family structure factors, this was not the case for under screening. Comparing never and under-screeners throughout the analysed period evidenced the role of family structure in cancer screening inequalities. This research suggests that never and under screening need to be tackled with different healthcare policies and a stronger focus on never-screeners may contribute to reducing inequalities.

RN16_07c | Migration and Health

Equality and Equity in Norway's Health Policy

Mehrara, Lydia

Nord University, Norway
lydia.mehrara[at]nord.no

This presentation addresses the issue of health provisions for migrant mothers in Norway asking the question: "what are the wider implications of Norway's decentralized approach to addressing reproductive and maternal health needs of migrant and refugee women across the country?" This PhD topic uses a qualitative case study approach focusing on maternal health clinics to illustrate the effects of Norway's health policy. Norway has adopted a decentralized approach to the governance of its universal health service provisions in order to ensure equal access across the country. The change in the population composition of Norway is relatively recent. This has required that service provision be suitable for, and accessible to people who are not ethnic Norwegians and come from many different cultural and linguistic groups. However, given the different patterns of migrant settlement across the country, health care initiatives taken to address specific population needs, such as migrant women's health needs, can vary greatly across Norway in terms of availability, scope and quality. This study will examine the extent to which universal provisions meet the needs of diverse groups in two particular and different settings. The research project will apply a policy analysis framework with roots in post-structuralist, social-constructionist, and feminist theory. My objective for this conference paper is to present my project and its methodology for which feedback will be welcome.

Patriarchal Cultural Models And Migrant Women's Sexual And Reproductive Health.

Urpis, Ornella; Delli Zotti, Giovanni

University of Trieste, Italy
ornella.urpis[at]gmail.com,
giovanni.dellizotti[at]dispes.units.it

The contribution examines of gender disequilibrium, generated by patriarchal cultural models present in many migrant communities, on women's sexual and reproductive health. The patriarchal family structure is still the paradigm of human relations in many countries of the world and in migratory processes loyalties to the traditional model often remain unchanged. Differentiated relations and power imbalance between the sexes remain undisturbed in the new social context, and tend to crystallize even more, being justified by the preservation of tradition. Migration dynamics intertwine with the marriage strategies of families and/or communities, and the preservation of traditional practices, such as forced marriages and genital mutilation, becomes functional to maintaining the boundaries of identity. The analyzed data concern admissions as well as access to outpatient services and these data are crossed with statistics and estimates on foreign presence in the territory in order to verify two main underlying working hypotheses. First, due to higher birth rates, incidence of migrant women among patients of the hospital greater exceeds the foreign presence on the territory; in addition, it deals of a differential access, since foreign women with some ethno-national backgrounds are more reluctant to resort to gynecological and pediatric services. In addition to the results of the statistical analyses, the results of in-depth interviews and field observation will be presented, helping to understand the nature of the phenomenon and to outline good practices and guidelines that allow dealing with it effectively, together with indicators of sexual and reproductive health that allow monitoring the evolution of the phenomenon over time.

Multidimensional Determinants of Migrant Women Health. A case study on female Moldovans in Italy

Vianello, Francesca Alice; Zaccagnini, Federica

University of Padua, Italy
francescaalice.vianello[at]unipd.it,
federica.zaccagnini[at]unipd.it

A large body of literature agrees that migrants' health conditions are influenced by few causes (IOM, 2016; Marcelli, 2015; Vianello, 2018). Among these we can mention: job's conditions in the host country, health behaviour, modality of the migratory process and current migratory conditions, life's condition in home country before emigration. However, the studies on migrant women health are focused mainly on sexual and reproductive health (e.g. Keygnaert, 2014; Adanu, 2009; He et al., 2012; etc.), while limited are those focusing on their

migration and working conditions. The paper aims to fill this gap, analysing the multidimensional determinants of migrant women health. We base our analysis on the case study of Moldovan female migrants, residing in Padua city, who are employed in a handful of jobs related mainly with care and domestic work (in particular elderly and sick individuals care). Through a Survey research on female Moldovan workers in Padua (Italy), we analyse the current women health conditions, considering three possible concurrent causes: 1) risks and save environment at work, 2) access to health prevention services including those focused on female sexual and reproductive health, 3) illness and disease occurrences in home countries before the emigration.

RN16_08 | Mental Health: Discourses on depressions and other forms of suffering

Help Seeking in Mental Distress: the Role of Institutional and Sociocultural Contexts in Spain

Doblytė, Sigita

University of Oviedo, Spain
sigita.doblyte[at]gmail.com

Social, economic and health costs of persistent mental distress that takes forms of depression or anxiety disorders are increasingly burdening individuals and societies in Europe. This has been particularly the case after the onset of the financial crisis whose consequences were extremely detrimental in Southern Europe, in general, and in Spain, in particular, with significant increases in prevalence rates of mental disorders. Nonetheless, over-medicalisation of mild symptoms is also well documented. All of this creates more demand for services and, as a result, more pressures on the healthcare systems. Therefore, this paper examines how institutional, cultural and social contexts in Spain impact access to care and healthcare seeking in mental distress and how mental healthcare-seeking practices consequently influence functioning of the treatment system. The analysis employs data of 21 semi-structured qualitative interviews with healthcare providers and users of services who suffer from depression or anxiety disorders conducted in Spain between 2017 and 2018. Drawing on the theoretical approach of Pierre Bourdieu, I analyse how the interplay between objectified structures (such as the market or medical technology) and embodied structures as habitus shape medical practice and gradually change enactment of institution. I also intend to reveal how it results in genesis of the social field as a whole where human suffering is professionalised and interpreted as medical rather than social, consequently leading to over-dependence on healthcare services and goods.

Networks of Depression – a Biographical Narrative Interview Analysis

Sik, Domonkos

University Eötvös Loránd, Hungary
sikdom[at]gmail.com

Following previous research aiming at establishing connection between social distortions described by contemporary critical theories (such as Habermas' or Bourdieu's) and depression (Sik 2018 - <https://doi.org/10.1177/1368431018760947>), the presentation aims at empirically reconstructing those network features, which enable and stabilize mood disorders. Depression is understood as a specific form of social suffering, which appears in network constellations characterized by the parallel lacking of security, reinforcing feedbacks, positive collective representations and control. In order to empirically identify such constellations, biographical narrative interviews (Rosenthal 2004 - <https://doi.org/10.4135/9781848608191.d7>) were analysed in three steps (n=10, the interviewees were selected from people diagnosed with depression or living in marginalized or deprived position, in Hungary). First, narrative data were reinterpreted as features of various network ties: this enabled the evaluation of the depressive potential of each social relationship. Secondly, life phases were reinterpreted based on the proportion of distorted and complementary ties: this enabled the evaluation of the depressive potential of each life phase. Thirdly, the dynamics of life phases were analysed from the perspective of enablers and obstacles of transforming depressive network constellations. Such analysis not only provides a sociological explanation of the emergence and recovery from depression (as a result of the dynamics of various micro and macro networks), but also highlights new horizons for both critical theory and emancipatory praxis. Depression as social suffering emerges mostly in those constellations, where both the micro and macro patterns of communicative or instrumental networks create insecurity, negative collective identity and helplessness. Accordingly, breaking such homogenous patterns of distortion have a chance of decreasing the level of social suffering, thus overcoming depression.

Determinants of Social Distance towards Schizophrenia, Depression, and Alcoholism

Moosbrugger, Robert; Hackl, Elisabeth

Johannes Kepler University, Austria
robert.moosbrugger[at]jku.at, elisabeth.hackl[at]jku.at

Using survey data from the project "Monitoring Public Stigma Austria 2018" among the Austrian population we explore the following questions: a) What are determinants for desired social distance towards people suffering from a mental illness? b) Are there differences according to the type of disorder - specifically concerning schizophrenia (n~1000), depression and alcoholism (n for both ~ 500; split in questionnaire)?

Discrimination experiences – public or structural – are leading to negative consequences for people suffering from a mental illness (Millier/Schmidt/Angermeyer et al. 2014). Beside exclusion i.e. in the housing and labour market, research has pointed to tendencies of the social environment to avoid people with mental illnesses. "Social distance scales" inform about the willingness to uphold social contacts to persons with deviant psychological conditions. Based on studies in Austria (Grausgruber et al. 1989) and following Martin et al. (2000) influencing factors on social distance are seen in the nature of the problem (behaviour), causal attributions, perceived dangerousness and the treatability of the disease. Desired social distance is probably as well differing according to sociodemographic characteristics and in some studies also dependant on personal contacts to persons suffering from the illness. The paper presents the results of a comparative research between Italy and Pakistan on the role that social media and the mainstream media can have in people with Multiple Sclerosis highlighting the cultural differences and homogeneities and socio-economic context related to the disease. In particular, you will investigate: a) what MS storytelling is told by the mainstream media (Peruzzi, Volterrani 2016) and what improves in the awareness of people with MS, 3) the impact of open and closed communities built ad hoc and participated in social media on people with MS (Volterrani, 2018) for the improvement of care and specialized medical / patient relationships, 4) analysis of the role of the media and social media in the prevention of some of the most common problems among people with Multiple Sclerosis (Volterrani, 2017). The methodology of the research utilized the use of in-depth qualitative interviews with Italian and Pakistani women with Multiple Sclerosis placed respectively in the Punjab region and in the Sicily region and an online participant observation analysis in the open and closed communities on the MS in Italy and Pakistan

Between The Private And The Public: Discursive Strategies Of Epistemic Communities, Communities Of Practice And Interest Groups In Search Of A Better Position In The Polish Healthcare

Polak, Paulina; Wagner, Aleksandra; Świątkiewicz-Mośny, Maria

Institute of Sociology, Jagiellonian University in Krakow, Poland
paulina.polak[at]uj.edu.pl, aleksandra.wagner[at]uj.edu.pl, maria.swiatkiewicz-mosny[at]uj.edu.pl

The healthcare field could be perceived as a space of competition between various actors fighting for power and positions. In the last years, we could observe the attempts of emancipation of actors occupying marginal or dominated positions, who tried to undermine the most basic rules governing the healthcare field. We will use the concept of three types of discursive formations – epistemic communities, communities of practice and interest groups – in order to present an analysis of different discursive strategies and goals of such dominated actors, observed in the Polish healthcare field. Our study encompassed three distinct groups in the time of their most intensified activities: resident doctors in the midst of their protest for increase in wages and improvement of health services; potential users and supporters of medical marijuana fighting for its legalization; and the anti-vaccination movement and its climax with the bill aimed at abolition of compulsory vaccinations for children. We will look at these groups through the lens of their discursive strategies, including public visibility of their discourse, types of knowledge they produce, resources they use and the way they validate themselves or try to be legitimized. Using data gathered in our discourse analysis, we will show the dynamics of these three groups, proving the empirical usefulness of the analytical distinction between epistemic communities, communities of practice and interest groups.

Risking Your Life: Gambling Trajectories and Health And Social Consequences In Italy

Scavarda, Alice (1); Beccaria, Franca (1); Jarre, Paolo (2); Rolando, Sara (1)

1: Eclectica snc, Italy; 2: ASL TO3, Piedmont
scavarda[at]eclectica.it, beccaria[at]eclectica.it,
pjarre[at]aslto3.piemonte.it, rolando[at]eclectica.it

Gambling is a growing phenomenon in Italy. It jeopardises family resources and social relationships and threatens mental health of problem gamblers, increasing social and health inequalities. Moreover, it is associated with a high degree of perceived stigma, which seems to prevent gamblers to access treatment. Most of national studies, however, are large scale surveys, unable to represent meanings and motivations of players, as well as disentangle complex issues such as cultural, social, economic and political factors boosting the risk of negative consequences of gambling. The paper produces the findings of a qualitative study, based on 62 in-depth interviews to recreational and problem gamblers. The main aim of the study is to analyse gambling trajectories and to identify both risk and protective factors related to problem gambling and barriers to addiction services. The focus on patterns of behaviours is useful to highlight the role of structural factors, such as economic issues, gambling supply and regulation. The latter includes national and local formal rules, in particular the recent regional law aimed at reducing the number of electronic gambling machines (EGM). Risk perception and significant life events explain the variability of gambling careers, but the interviews suggest that the external factors such as gambling market strategy and labour market conditions impact on trajectories, producing specific pathways. The boundaries between addiction and recreational gambling are blurred, since it is a complex and fluid behaviour, with non linear trajectories.

Non-participation and Disengagement in Personalised Medicine: Patients' Accounts and Methodological Reflections

Chekar, Choon Key (1); Cunningham-Burley, Sarah (2); Kerr, Anne (1); Swallow, Julia (1); Ross, Emily (2); Chowdhry, Sue (2)

1: The University of Leeds, United Kingdom; 2: The University of Edinburgh, United Kingdom
c.k.chekar[at]leeds.ac.uk, sarah.c.burley[at]ed.ac.uk,
e.a.kerr[at]leeds.ac.uk, j.e.swallow[at]leeds.ac.uk,
emily.ross[at]ed.ac.uk, s.chowdhry[at]ed.ac.uk

The participatory turn in healthcare encourages patients' and the public's engagement with research and trials, so, in turn, has the potential to exclude rich accounts of non-participation and disengagement. Drawing on an ethnographic study of cancer patienthood in the genomics era in the UK, we explore non-participation, rejection, exclusion and reservations

concerning genomic medicine in the public sphere as expressed by a range of social actors and groups. We capture the particular social and cultural contexts in which disengagement and resistance are generated. Refusal or inability to engage with genomic medicine can result from contested priorities, such as health equality or preventive medicine and a commitment to other forms of care. Not every patient can or wants to craft their own treatment pathways, and we reflect on what it means to opt-out, be excluded or feel left behind by 'personalised' forms of care. We argue that these practices present an important counterpoint to the dominant tropes of personalisation as enhanced care by virtue of more precise health information. We suggest that healthcare practices in the genomic era involve other kinds of care and personalisation which need to be incorporated into scholarly engagement with biomedical innovation. We also reflect on the extent to which our research methodology and ethnographic practice have contributed to these inclusions/exclusions and silencing of particular voices, experiences and encounters in our research as discussed in relation to the wider context and constraints of the NHS ethical review process in the UK.

RN16_09b | Health Behaviour

The Influence of Social Network on Health Behavior in South Korea

Lee, Myoung-Jin

Korea University, Korea, Republic of (South Korea)
leemj[at]korea.ac.kr

Compared with previous research on smoking, this paper mainly concerns the relationship between emotional labor and smoking. This paper also aims to investigate whether negative emotions and social support influence the causal relationship. In this study, emotional labor, a key independent variable, is composed of four sub-factors: work involvement, the autonomy of working hours, work feelings, and facing customers. Additionally, to verify this hypothesis, we have analyzed the mediating effects after inputting emotions, the interaction effects from interpersonal support, and independent variables. The results show a direct relation between lower work involvement and smoking due to negative sentiments, in addition to the effect of autonomy of working hours. The lack of social support was also found to affect smoking in interactions with a low-work involvement. Thus, the intensity of emotional labor affects smoking, and psychological factors are involved in the causal relationship. We suggest that emotional labor induces stress-related negative emotions and promotes smoking, and smoking can be reduced by an environment of social network.

Social Capital And Undergraduate Students' Adoption Of Health Promotion Policies In Their University: A Case Study In Greece

Spyropoulou, Dimitra; Ifanti, Amalia A.

Department of Educational Sciences and Early Childhood Education, University of Patras, Greece
dspypoulou[at]upatras.gr, ifanti[at]upatras.gr

In this empirical case study, we aim to analyse research data from a sample of undergraduate students about the adoption of health promotion policies according to their social capital. A quantitative survey was carried out in a sample of undergraduate students on their fourth year of study in the School of Humanities and Social Sciences of the University of Patras, Greece. Research data were collected with the use of an anonymous questionnaire during the spring semester of the academic year 2017-2018. The results of this study have provided us with important information on the health promotion policies that the University provides, as well as how students adopt these policies according to their social capital. We examined the social capital through the concept of social cohesion, i.e.: trust and reciprocity, and how it affects students' health promotion. The findings of our study suggested that the social capital of undergraduate students greatly affected how they adopted these policies. More specifically, the main factors affecting the way students adopt health promotion policies in the place of their studies revealed to be the following: gender, living conditions, number of friends in the University, social interactions and trust towards family members, friends and the community of the University. Summing up, the students of our sample proved that there was a strong connection between social capital and health promotion policies. Our research indicates that students need to create a strong social capital into their University. In order to achieve this, universities could help their students develop their social capital, as for example by creating ties between University staff and students, and also promote social interactive activities into the University community.

Interpretative repertoires of immunization in Romania

Toth, Cosmin

University of Bucharest, Romania
paulcosmin[at]yahoo.com

The proposed research presentation aims at shedding new light on the issues of children immunization in Romania by focusing on the discourses that animate private decisions and public debates. I have approached the vaccine refusal and hesitancy subject from a Discourse Analysis (DA) perspective, in order to identify the detailed and multiple discursive resources that are available for parents and other stakeholders to justify the rejection, postponement or acceptance of vaccines. The analytic unit of discourse analysis and discursive psychology that I have used is the "interpretative repertoire" defined as: "building blocks speakers use for constructing

versions of actions, cognitive processes and other phenomena" and also a "restricted range of terms used in a specific stylistic and grammatical fashion" (Wetherell and Potter, 1988, 172). The repertoires are usually associated with certain key metaphors and "will often be signaled by certain tropes and figures of speech". Interpretative repertoires support ideological claims representing "recurrently used systems of terms used for characterizing and evaluating actions, events and other phenomena" (Potter and Wetherell, 1987, 149). Thus, the present research aims to analyze and show: 1. The main pro- and anti- vaccine repertoires that are mobilized in the online environment in Romania (in Romanian language); 2. The extent to which the main repertoires that circulate in the online environment in Romania are reflected in the discourses of the parents that have to make a decision or have recently made a decision on the matter of immunization.

RN16_10a | Care

Virtuous Care: The Spatial Organisation of Care in Residential Homes for Older People

Johnson, Eleanor Kate

University of Bristol, United Kingdom
eleanor.johnson[at]bristol.ac.uk

It has been suggested that the privatisation of residential care for older people has resulted in a dualistic market. Here, residential homes at the lower end of the market drive down costs in order to attract local authority purchasers of care. Residential homes at the higher end of the market, on the other hand, attempt to compete on quality, tailoring their services to meet the needs and demands of older people who purchase their own care. Drawing upon an ethnographic study of two distinctly priced residential homes, this paper examines how divergence in the costing of care has altered the manner in which residential care work is organised. The research found a marked difference in the manner in which space was used in the two homes. In the higher cost home, clear symbolic boundaries concerning the management of personal care activities and their resulting waste products were enforced. In the low-cost residential home, on the other hand, little was done to establish boundaries between different areas, tasks or matter. This paper considers how the preservation of symbolic boundaries in residential homes acts to maintain not only hygiene standards but also more immeasurable qualities - dignity, respect, privacy - which are vital to the care of older people.

Caring For Children During The Cancer Journey: An Analysis Of Cancer Blogs

Gibin, Marta

University of Bologna, Italy
marta.gibin2[at]unibo.it

In the process of identity redefinition that a disease like cancer involves (Bury, 1982; Charmaz, 1991), the challenges encountered during the cancer journey force women to, at least partially, rethink their gendered role of caregivers (Devault, 1991; Gerstel and Gallagher, 2001), in order to focus on self-care. Women facing cancer need to renegotiate their gendered identities within the constraints of gendered role expectations and gendered divisions of labour (Sulik, 2007), in a society where they are considered as the main individuals taking care of family and children. Through a thematic analysis of cancer blogs written by women with young children, the purpose of this research is to examine how women with cancer experience the tensions and transitions from care giving to care receiving identities, in relation to their role as mothers. How do they balance expectations, including their own, about putting the needs of their children first, with the heightened need to care for themselves? The research provides a focus on their double vulnerability: as cancer patients and as mothers who may not know how (or even if) to discuss their illness with their young children. These women's double vulnerability exposes particular features of the constraints of the sex/gender system and how gender inequality is experienced in everyday life. Independently of the coping strategy they adopt, mothers with cancer can feel guilty about taking time for themselves and there is always the risk that they overlook their own needs. Support by other family members and the healthcare/volunteering system is needed.

Findings highlight how staff create a careful choreography or 'place ballet' (Seamon and Nordin 1980) to segregate patients, and engage in 'boundary work' (Mesman 2009), monitoring and guiding patient pathways. Patients also carefully manage their own pathways, in order to maintain social and spatial distance between themselves and 'risky' people, objects and spaces. These strategies involve engagements with the built environment – spacing out chairs, finding a 'safe' place to sit, opening windows, wiping down surfaces – 'reordering' the environment to manage the threat of contagion, through strategies of 'separating, tidying, purifying' (Douglas 1966 p.3). Yet the built environment can also constrain these efforts, illuminating a disconnect between rapidly evolving clinic practice, and the intractability of the built environment. We also explore tensions between a choreography of segregation and a 'choreography of care' (Martin 2016).

Buildings, Bodies and Bugs: Constructing Spatio-temporal Boundaries in the Cystic Fibrosis Clinic

Buse, Christina (1); Brown, Nik (1);
Nettleton, Sarah (1); Martin, Daryl (1);
Lewis, Alan (2)

1: University of York, United Kingdom; 2: University of Manchester, United Kingdom
christina.buse[at]york.ac.uk, nik.brown[at]york.ac.uk,
sarah.nettleton[at]york.ac.uk, daryl.martin[at]york.ac.uk,
alan.lewis[at]manchester.ac.uk

This paper explores the management of cross infection in cystic fibrosis clinics, and how staff and patients construct temporal and spatial boundaries to manage risk (Lowton and Gabe 2006). We also draw attention to the role of the built environment in mediating or constraining these strategies and assess the potential for staff and patients to reconfigure their environment. These issues are explored drawing on data from an ongoing AHRC funded study (PARC) comparing three UK cystic fibrosis clinics using qualitative methods including graphic interviews, walking interviews and ethnography.

The use of Complementary and Alternative medicines (CAM) by Breast Cancer Patients-bridging the gap in communication

Sharma, Kavi (1); Simcock, Richard (2); Almeida, Joana (3); Gabe, Jonathan (4); Anderson, John L (5)

1: University Hospital Coventry and Warwickshire NHS Trust, Brighton and Sussex Medical School; 2: Brighton and Sussex University Hospital NHS Trust; 3: University of Bedfordshire,; 4: Royal Holloway, University of London; 5: Brighton and Sussex Medical School
kavisharmadr[at]yahoo.com, richard.simcock[at]bsuh.nhs.uk, Joana.Almeida[at]beds.ac.uk, J.Gabe[at]rhul.ac.uk, J.Anderson[at]bsms.ac.uk

The study attempts to improve communication between cancer patients and Healthcare professionals (HCPs) in regards to the use of Complementary and Alternative Medicine (CAM) in the UK. Research has shown a gradual and steady increase in the acceptance of CAM by patients over the years. CAM is popular in patients suffering from life-threatening diseases like cancer; especially in women with breast cancer. Authors in Europe and North America have reported this prevalence rate to be as high as eighty percent, with a majority of participants using CAM concurrently with conventional medicine. Considering the possibility of harmful interactions, it is important that patients and HCPs share effective communication in regards to CAM use. However research to date suggests that up to 77% of patients do not confide about CAM use to their HCPs. This lack of communication may threaten the fabric of patient-doctor partnership. In this study, the prevalence of CAM use in U.K breast cancer patients was explored, focusing on the Knowledge, Attitudes and Practices (KAP) of women using CAM. Participants were recruited from two cancer clinics (110 women) to participate in an interview-administered survey. A sub-set of 10 women were also invited to take part in semi structured interviews and a focus group. The study estimated a prevalence rate of CAM use for the last 12 months at 85% (95% CI: 75-95), with the majority of participants using multiple CAM modalities concurrently with conventional treatment. This paper presents the survey results and those from the Interviews and focus group. The discussion will include rationales for CAM use and possible ways to enhance communications about CAM use between patients and health care professionals.

RN16_10b | Risk - Donation - Mental health

Third Party Reproduction And Being An Egg Or Sperm Donor: The Vision Enabled Through A Sociology Of Personal Life

Nordqvist, Petra

University of Manchester, United Kingdom
petra.nordqvist[at]manchester.ac.uk

In recent decades, reproductive medicine has become a widespread global phenomenon. Within the field, donor conception, and the use of donated eggs, sperm or embryos from a third party, plays a key role. Despite the importance of those individuals who donate, there has been scant research exploring their experiences. Seeking to contribute to the growing, albeit still small, body of research on donors, this paper advocates bringing the process of donating into dialogue with a sociology of personal life. It suggests that important new insights about the donor experience can be achieved by utilising this theoretical perspective. The paper applies a broad framework of a sociology of personal life to demonstrate that the decision to donate reverberates within donors' everyday lives and relationships, and explores, primarily theoretically, how it is that acts of donation bring such issues into play. To this end, the paper examines in more detail three ways in which donating interacts with dimensions that are integral to personal life: 'living' genetic connectedness; relationality; and the intimate body. Ultimately, the paper shows that a sociology of personal life can reveal and begin to address new, unexplored questions for this field that demand greater scholarly attention.

The Gift Of Data

Raivola, Vera

University of Eastern Finland, Finland, The Finnish Red Cross Blood Service
verar[at]student.uef.fi

Voluntary blood donation has been promoted as the “gift of life to a fellow stranger”, as Richard Titmuss (1970) famously argued in his comparative study of private and public blood economies. Still today, the public discourse is focused on praising donors for their altruistic, gratuitous decision to give blood, and emphasizing the different perspectives on risks and value related with donated blood between the donor (low) and recipient (high). Donors’ personal interests i.e. “selfish motives” are considered risks factors for a healthy blood supply system. So what happens when blood donors are also asked to gift their blood and personal information to biobank research? At the time we conducted interviews and focus groups with blood donors, the Finnish Red Cross Blood was about to launch the Blood Service Biobank (BSB). The plan was to recruit volunteers to “extend their help to science”, so in practice, to give broad consent for the BSB to collect their blood samples and other health and register data for the use of future research. These users can be also international or privately funded research organizations. Our focus was understand how blood donors’ viewed the forthcoming BSB and the following datafication of blood to match with their interests. Study participants were offered a scenario about genetic risks and other health related data on blood donors becoming discovered by biobank research. We were interested to see how such development might be reflected on their expectations about risks and values related to blood donation. We were also interested in how well do these interpretations fit with the promotional discourse of altruistic gift relationships and claims for disinterest?

Beds or Meds? The Changing Societal Responses to Mental Health Problems in Affluent Democracies, 1960-2003

Olafsdottir, Sigrun

University of Iceland, Iceland
sigruno[at]hi.is

Societies increasingly rely on medical solutions to solve a wide array of problems. Classic theories of medicalization give almost exclusive power to the medical profession as defining and responding to health problems, while newer theories have begun to acknowledge other factors. Yet, current theories and research center on the U.S.. This paper moves research on medicalization into a comparative perspective by looking at the medicalization of mental health in 20 affluent democracies from 1960-2003. It uses three macro-theories to understand processes of medicalization, specifically globalization, the welfare state, and theories of profession. Using data from the OECD and the Yearbooks of International Non-Governmental Organization, I test hypothesis of macro-level effects on medicalization of mental health, captured by two indicators (institutionalization and reliance on psychiatric medication), that undoubtedly put mental health problems under the medical jurisdiction. The findings clearly show that all three macro-level factors have the potential to both support and counter medicalization. Regarding globalization, membership in public INGOs decreases medicalization whereas membership in professional INGOs increases medicalization. The welfare state both supports and counters medicalization. The welfare state as a whole facilitates deinstitutionalization, but public spending on health increases both reliance on institutions and medication. Finally, professionals follow global trends regarding deinstitutionalization but protect their professional power by guarding their exclusive right to prescribe medication. The findings clearly show important links between medicalization, globalization, the welfare state, and professions.

RN17 | Work, Employment and Industrial Relations

RN17_01a | European Social Dialogue

Visible and Invisible Hands in the Transnational Wage Setting in Europe Toal, Aaron Jason Jake

Durham University, United Kingdom
aaron.toal[at]durham.ac.uk

This paper addresses the question how in Europe a common transnational strategy among industrial relations actors and cooperation between actors can evolve over time and what the consequences are. More specifically, if a common transnational strategy and cooperation is beneficial not only for industrial relations actors themselves, but also for the economy and society, is a common strategy evolving by itself on basis of existing formal and informal institutional channels of interactions over time or do we need new institutions, rules and incentives from 'outside'? And if new institutions and rules are needed which of them are politically feasible and realistic? In other words are the mutual benefits sufficient so that national actors can pull themselves towards a common strategy or, in the case of Europe, do national actors need to be pushed by European 'authorities'? In any way a common strategy among national actors is a question of transnational coordination between actors which only works under certain conditions. On basis of results of a current research project and of previous case studies the prerequisites and conditions for transnational coordination between actors are identified and integrated in a micro theoretical model of action and interaction. With this approach, different formal and informal institutional channels of interactions are analysed in order to explain how a European 'system' of industrial relations can be established and maintained over time.

Regulation At Work: From Europe To The Shop Floor. The Case Of Telework In Belgium

Ajzen, Michel; Léonard, Evelyne

UCLouvain, Belgium
michel.ajzen[at]uclouvain.be,
evelyne.leonard[at]uclouvain.be

In 2002, European social partners signed the European Framework Agreement on Telework with the aim to define general guidelines for the UE 27 countries (Larsen et Andersen, 2007). While some countries transposed the European measures into 'soft law', other member states negotiated those measures in terms of regulations, obligations, standard rights and decisions (Eurofound, 2010). A large body of literature questions the effects of 'multi-level governance' or of non-legally binding commitments included in EU agreements on national-level social dialogue and on companies (e.g. Ertel et al, 2010; Léonard, 2008; Weber, 2010). However very little is known about the effects of a 'European autonomous agreement' on lower levels, and particularly on actual practices on the shop floor (Deakin and Koudiaki, 2008; Prosser, 2011). This paper examines to what extent a European-level agreement affects practices within companies. More precisely, it analyses the diverse social processes by which norms at play are interpreted, re-interpreted, transformed, avoided or simply forgotten (Reynaud, 2004), at different levels where actors interact, from the European level to the shop floor. Our aim is, precisely, to highlight social dynamics that occur from the negotiation of teleworking practices to their effective uses. This, in turn, questions the capacity of macro-level players to set up norms that have efficient impact at work. In terms of empirical work, we draw upon qualitative data (108 interviews) gathered in two companies located in Belgium. Research results highlight local re-regulation of the work activity such as time arrangements, workspaces relocation or work organization.

Multi-National Enterprises and European Social Dialogue After Enlargement – Opportunism In Asymmetric Relationships

The integration of Central and Eastern European (CEE) countries into the European Union (EU) in 2004 has increased the level of heterogeneity and competition within it. Greater competition arises from the imbalance between economic and social standards in established Western European member states compared to CEE countries. In the absence of sectoral structures for social dialogue in many CEE countries, the capacity to fight regime competition and to mitigate downward pressures on social standards at the national level is limited. This study examines the role of multi-national companies in transnational social dialogue aimed at establishing social standards and counteracting downward pressures on wages and working conditions in the EU. In the past, where cooperation occurred between social actors, it was strongly motivated by economic self-interest. This paper examines the role played by heterogeneous actors in the old and new member states since 2004 and their motivation to cooperate or compete with each other over the potential “losses” and “gains” of European social dialogue outcomes. Acknowledgement The research for this paper was financially supported by the European Commission, DG Employment, Social Affairs and Inclusion. Call for proposals: Improving expertise in the field of industrial relations. Project VP/2016/0092 (2016-2018).

Representativeness Of Social Partners In The Public Sector

Kerckhofs, Peter

Eurofound, Ireland
peter.kerckhofs[at]eurofound.europa.eu

The public sector can be distinguished from the private sector, in certain aspects of working conditions and industrial relations settings. The standard concepts, on which the representativeness of trade unions and employer are based, come from the private sector context. This paper aims to explore how representativeness is conceived differently in the public sector. In 2017, Eurofound already published a representativeness study for the central government administration. In the course of 2019, data is being collected for representativeness studies for the education sector, the hospital and health care sector, local regional administration,

and social services. Combining the experience from conducting the central government administration study, with a first analysis of the preliminary findings from education, hospitals, local regional administration and social services, will allow to present differences and particularities of how representativeness is conceived in public sectors, in general terms. These reflections will be embedded, in a literature review on industrial relations specificities from the public sector. Furthermore, there will be focussed in this paper on how the employment setting in local regional administration, can affect the representativeness of trade unions and employers, in this specific public sector.

RN17_01b | Labour Market Segregation I

Explaining Low Employment Rates of Migrant Women: A Qualitative Study on Labour Market Trajectories of Moroccan women in Belgium

Elloukmani, Sara; Ou-Salah, Loubna

University of Antwerp, Belgium
sara.elloukmani[at]uantwerpen.be,
salah[at]uantwerpen.be

loubna.ou-

For the past years, Belgium has been confronted with the one of the lowest employment rates for migrant women. Although previous research has identified several explaining factors regarding the level of labor participation of women with a migration background, we argue that qualitative research on this subject is lacking. Subsequently, this study aims to provide insight in the perceptions, motivations and experiences of Moroccan women with regard to their labor market trajectories. More specifically, we conducted 40 in-depth interviews with both first and second generation Moroccan women living in Belgium. First, our results show that second generation Moroccan women perceive their precarious position on the labour market as a consequence of the difficulties they were confronted with during their educational career. Secondly, in the case of first generation women, the search for employment was hindered by factors such as limited knowledge of the language, information concerning the labour market and day care possibilities. Whereas for second generation women, the headscarf often was considered an import threshold. Finally, we note that migrant women use different strategies to cope with the experienced obstacles in finding work. We conclude this paper with an overview of several policy recommendations.

Labour Market Penalization and Segregation of Immigrants across Europe

Avola, Maurizio (1); Piccitto, Giorgio (2)

1: University of Catania, Italy; 2: University of Bologna, Italy
mavola[at]unict.it, giorgio.piccitto3[at]unibo.it

The debate on ethnic penalty in the labour market, both in terms of employment status and occupational attainment, has been particularly intense in Europe in recent years (Kogan 2006; 2007; Heath, Cheung, 2007; Pichler, 2011; Reyneri and Fullin, 2011a; 2011b; Ballarino and Panichella, 2015; 2018). The analysis proposed here emphasizes, alongside the micro-individual dimension, the macro-institutional one, considering the national or supra-national level (welfare regimes, models of capitalism, regulation systems) as relevant in determining extent and characteristics of ethnic penalty. In particular, it can be traced to two different models: in Central-Northern Europe immigrants suffer from a double penalty in comparison to natives, in terms of chances of being employed and having a good job; in Southern-European countries, instead, employment chances are similar between natives and immigrants, but the latter are still more penalized in terms of job quality. However, when adopting a territorial analysis approach, some studies show a high variability of the ethnic penalty model according to the local labour market structure (Avola 2015a; 2015b). In this perspective, this study aims at verifying the generalizability of these findings exploring the relevance of some characteristics of the labour market at regional level. We conduct the analysis on the Eurostat LFS, focusing on all EU regions (NUT2 level), and estimate a three-level hierarchical multilevel model (Luke 2004) in order to detect to what extent the variance of ethnic penalty in terms of employment chance and job quality is due to the local context (labour market structural effect) or, following a comparative political economy approach (Esping-Andersen 1990; Ferrera 1996; Hall, Soskice, 2001; Burroni, 2016), it is linked to the national or supra-national level (macro-institutional factors effect).

"For the Africans, the skin color is still there" - The Influence of Origin, Ethnicity and Ethnic Networks on the Labor Market Integration of Refugees in Germany

Seidelsohn, Kristina (1); Hirsland, Andreas (2)

1: Freie Universität Berlin, Germany; 2: Institute for Employment Research, Germany
kristina.seidelsohn[at]fu-berlin.de,
Andreas.Hirsland[at]iab.de

In the aftermath of 2015, European labor markets are challenged by the integration of a large number of refugees from different origins. In advanced industrial societies, paid work is a prerequisite for a non-marginal social status and a

key source for personal recognition (Honneth 1996). Although deeper and systematic knowledge about successful and sustainable mediation of refugees in work is still hardly available, initial research indicates that refugees show a strong orientation towards employment despite varying educational biographies due to the situation in their respective countries of origin (Brücker et al. 2016, p.1). Considering these different starting points, the present paper deals with the question of how refugees of different origins, educational backgrounds age and gender can make use of formal and informal capital types and resources (see Bourdieu 1984; 1989) achieved in their respective countries of origin in order to gain access to the German labor market. How do different refugee groups open up opportunities for social integration and recognition through labor market integration respectively what hindrances do they face? Based on exemplary case constellations in different regions of Germany drawn from an ongoing comparative qualitative study it will be discussed how origin, ethnicity and ethnic networks moderate these adaptation processes. The paper triangulates views of different groups of refugees and of labor market-related actors. Thus, subjective strategies of refugees are related to the role institutions and structural factors play in the occurrence of different positionings and inequalities between different groups in respect to labor market and social integration.

Labour Market Segregation And Social Assistance Beneficiaries Working For "Benefits"

Maas, Roland

Liser, Luxembourg
roland.maas[at]liser.lu

The purpose of this paper is to contribute to a better understanding of the effect of lack of representation at the workplace of social assistance beneficiaries in Luxembourg working for compulsory public works. As the role of trade unions and staff delegations is to represent and negotiate working conditions for employees, as well as to defend their rights at the workplace, the lack of workplace representation of social assistance beneficiaries working for benefits increases the risk of segregation for this sub-group. The aim of the paper is twofold: First, we analyse the role of Luxembourg's social partners within the framework of Luxembourg's neo-corporatist industrial relations system compulsory staff representation in structures with at least 15 employees and existing collective agreements concerning their coverage of specific sub-group. Second, we analyse how the experienced lack of workplace representation increases the risk of segregation and how it affects the self-perception and environment of an already stigmatised population group. In a qualitative framework, the first part uses content analysis of documents published by social partners (opinion to bills, press releases, statements) as well as of eligible collective agreements. In the second part, we link the results of the document analyses to the analyses of biographical and semi-structured qualitative interviews with the concerned sub-group. Our preliminary findings suggest that the absence of representation at the workplace by collective actors reinforces the experienced segregation of beneficiaries, which impedes equal handling at the workplace.

Does the Labor Market Policy Need Financial Innovations? Social Impact Bonds as a Potential Force for a Positive Change in Employment Activation

Necel, Richard

Adam Mickiewicz University in Poznań, Poland
necel[at]amu.edu.pl

The scientific debate on financial innovations in labour market policy is moving from normative approach towards realistic applying optimal strategies for their implementation. In this speech, I present the SIB as a new mechanism for financing social services. I focus on active labor market policy as the sphere of application of this mechanism. The speech is divided into three parts. The first part I explain the normative assumptions of SIB two main issues arise. First, that Social impact bond is a mechanism, which aim to achieve social outcomes on a pay-for-success basis. Second, public entities should not be the only one to bear responsibility for the outcomes of the social tasks, but non-governmental organizations and private entities cooperate and participate in performing public administration tasks. In the second part I present the possibility of applying the social impact bonds mechanism to finance social economy tasks. The proposed mechanism is to enable more effective employment activation of people benefiting from social employment – from employment and economic point of view. In order to show the potential benefits, in particular the mechanism of social impact bonds was described and its specification for the needs of the social economy in Poland was made. The presented solution indicates the appropriateness of solution in the task, organizational and financial dimensions. In the three part I synthesises the main arguments and aims to open a critical analysis of the model, where weaknesses and remedial strategies are shown.

Organization and Labor Regulation in Small Scale Firms in Italy

Fortunato, Vincenzo (1); Bellini, Andrea (2)

1: Università della Calabria, Italy; 2: Università di Firenze, Italy
vincenzo.fortunato[at]unical.it, andrea.bellini[at]unifi.it

The socioeconomic literature at international level (Barrett and Rainnie, 2002; Ram and Edwards, 2003; Edwards et. al 2006; Hanna and Walsh, 2008; Mallet and Wapshott, 2017) highlights the centrality of small and medium enterprises (SMEs) within the ongoing restructuring processes in European countries, underlining profound geographical differences both in quantitative and qualitative terms. This is particularly true in the case of Italy where small or micro enterprises represents the great majority in the Italian production system. Despite the centrality of small firms, few empirical investigations at local level tried to clarify the various models of production and work organisation as well as the types of labour regulation adopted in different territorial contexts. The proposed paper, based on a national research project, focuses attention on micro and small scale firms in four Italian regions (Lombardy, Tuscany, Abruzzo and Calabria) representative of three macro-areas of the country. Starting from the main features of the firms in those areas, the aim of the paper is therefore to deeper understand the relations between small and micro enterprises and the external context, by considering its main elements such as the productive system, the organization of the companies, the role of local institutions including collective organizations and industrial relations actors. As far as methodology is concerned, the paper is based on data from a quantitative survey of a large representative sample of 2.320 firms in the private sector (Made in Italy, High and Low skill sectors), selected from the wider database of the Italian companies (AIDA). In addition, more than 60 qualitative in depth interviews have been carried out to employers, union and business associations' leaders, representatives of bilateral organizations.

Education & Job Activities in the Process of Achieving Adulthood. The Case of 30-year-old Poles

Dziedziczak-Foltyn, Agnieszka Ewa;
Grotowska-Leder, Jolanta

University of Lodz, Poland
agnieszka.dziedziczak[at]uni.lodz.pl, leder[at]interia.pl

Transition from youth into adulthood is characterized today with increasing complexity, fragmentation and differentiation (Walther et al. 2001). The adolescence stage means living with one's parents and concentration on formal education, while the stage of late adolescence (Galland 1990; Cavalli i Galland 1995) is the time of work experiments, including taking short-term, odd or part-time jobs, re-organisation of living conditions and partner relations. In line with the concept of emerging adulthood as a stage in life (Arnett 2000), it is the time when professional ambitions of young people start to take shape and their awareness of the importance of a professional career and competences grows, but so does the uncertainty of employment, risk of unemployment and inflation of vocational qualifications. Completed adulthood (Bendit 2006) is achieving in the second part of the third decade of life but also frequently around the 30th year of one's life. It is the time when young people make decisions on finding a relatively stable job, on living together and formalizing their partnerships through marriage, and on maternity. The paper presents research results of the project "Public policies for completed adulthood in Poland" (2015-2019), financed by the National Science Centre of Poland. We answer four main questions: What were the relations between education and job activities? What was the professional career of young adult Poles? When, what and why did they undertake job activities? Who supported them in these decisions and how? The empirical analyses are based on 6 focus groups (FGI) and 40 individual in-depth interviews (IDI) with 30-year-old inhabitants of Łódź (the third largest city in Poland) and Zduńska Wola (a small town in the province of Łódź).

The Atomic Field of Labour - Research Report on the Construction Workers of the Nuclear Power Plant in the Light of Bourdieu Theory

Łoś, Iwo Tomasz

University of Warsaw, Poland
iwo.t.los[at]gmail.com

I will present the results of the sociological field research that I conducted throughout 2009-2019 among the Polish workers hired at the construction site of the Olkiluoto nuclear power plant in Finland. The research consists of my direct in-depth structured interviews with the workers (crane operators, electricians, carpenters, electricians, foremen) and is based on the Pierre Bourdieu's qualitative research methodology of analyzing the social fields and on his theoretical concept of the "twofold truth of labour" (from the Pascalian Meditations). According to Bourdieu, the experience of labour is stretched between the two extremes: the scholastic, symbolically rewarding work and the conveyor belt type of work done primarily for the economic reasons. What is often at stake is the margin of freedom that ultimately strengthens engagement/commitment, which can lead to higher efficiency but also exploitation and it creates a risk of faults or sabotage. The Olkiluoto case study shows that also the temporary construction workers are subject to such dynamics and pressures. While working in the surprisingly precarious conditions (despite the welfare state of Finland and the official, state driven investment) they on the one hand confess about the difficulties (insurance not paid by the employer, too much pressure, serious industrial conflicts etc.) but on the other express commitment and engagement to solve the technical difficulties by any means – some of which means hiding the faults in the very construction (wrong welding, wrong cables put etc) from the eyes of the controllers. They are exploited yet remain creative and committed thus dragged into the twofold pressures. I broaden the theoretical scope by referring to texts of labor focused sociologists Arlie R.Hochschild and Beverly J.Silver.

RN17_02a | Perspectives of Intrinsic and Extrinsic Work

Rethinking Situated Learning: Participation and Communities of Practice in the UK Fire and Rescue Service

Brooks, James; Grugulis, Irena; Cook, Hugh

Leeds University, United Kingdom
j.brooks1[at]leeds.ac.uk, i.grugulis[at]leeds.ac.uk,
h.s.t.cook[at]leeds.ac.uk

Studies reviewing the links between structure and skills tend to focus on experienced workers. But while there is consensus on the damaging effects of removing experienced workers, little has been written on the impact of taking out novices. The assumption seems to be that the loss of inexperienced workers is a minor inconvenience, with few consequences for the wider group. This paper challenges the assumption that novices' role in communities of practice (CoPs) is not significant. Novices change the dynamics of CoPs in two ways: first, by simply being there. Because novices need to gain skills, established members of the community are required to demonstrate, model or teach those skills, explicitly articulating taken-for-granted assumptions, remembering important incidents to recount and developing their own praxis through dialogue. Second, while novices may be inexperienced in the work of the CoP, they are not devoid of knowledge and their perspectives actively contribute to work practice. So learning through participation is multi-directional and more complex than previously assumed. Such a finding fits far better with the informal dynamics of a CoP than the idea that learning flows hierarchically, only in one direction and only for the duration of the novitiate. The paper draws on a case study of a Fire and Rescue Service. The research involved 12 focus groups with 58 fire fighters, 14 semi-structured interviews and seven months' of ethnographic observations of Red Watch and the senior management team.

Young People Imagining the Future of Work

Lähde, Miia Pauliina; Honkatukia, Päivi

University of Tampere, Finland
miia.lahde[at]tuni.fi, paivi.honkatukia[at]tuni.fi

Contemporary discussions on the future of the work often saturate around technologisation, digitalization, instability and risks. Future working life is claimed to be highly competitive with many traditional jobs and tasks disappearing. Yet, at the same time, the so-called labour market citizenship seems not to lose its central position as an indicator of a competent and productive citizenship and good life. In the paper, we explore how young people relate to this question which is highly topical for them as they are soon to enter working life. We report findings from ALL-YOUTH project (www.allyouthstn.fi)

in which Finnish young people's (aged 16-25) views of and aspirations for the future, sustainability and the different aspects of participation are studied. Drawing on data from participatory research workshops in different educational settings, we explore young people's orientations to the future of work. Despite the uncertainty of the future, young people in our study were mainly confident that technological advances will create new opportunities and enough work for everybody. According to our data, work is powerfully defined as an individual's responsibility and a source of wellbeing in terms of social and economic wealth and meaningful life. Drawing on our research findings but acknowledging the current political, economic and ecological challenges to work as a provider of wellbeing, we contemplate possibilities for alternative collective visions of good citizenship, taking seriously the interconnectedness of wellbeing, meaningful life and sustainable social practices.

The Outcomes of Increasing Managerial Control in Academic Work: A Case from Social Sciences in Turkey

Atalay, Selin

Izmir Bakircay University, Turkey
la_celina[at]hotmail.com

As neoliberal policies take effect throughout the world, the delivery of higher education is changing rapidly. The rise in student numbers together with cutbacks in public expenditures have been problematic in the delivery of this service. The result is the restructuring of academic work. We can refer to the intensification of academic work through the increase in outer control. Academics who have experienced a greater level of autonomy in the past are being controlled through various forms of mechanisms such as performance assessment, technological tools and student satisfaction surveys. We can talk about a global trend towards the transformation of higher education and academic work. However, academics in different countries with varying degrees of resources and different higher education legacies have their unique experiences. Turkey as a labor intensive country has begun its restructuring journey in 1981 with the establishment of Higher Education Council (YÖK) and the establishment of foundation (private) universities. We can talk about the privatization and commodification of higher education in Turkey. In order to understand the results of these developments, semi structured in-depth interviews have been conducted with 28 academics working in social sciences departments of 17 different institutions located in the cities of Istanbul and Izmir. 'Labor Process Theory' has been the framework in the preparation of interview themes and questions. It was seen that the experience of alienation together with superficiality in academic endeavors were the outcomes of the increase in managerial control. This paper aims to engage in a dialogue on the changing nature of academic work, to discuss the challenges Turkish academics are facing and to voice the experience of Turkish academics.

The Workplace Challenges And Opportunities Of Supporting Employees Who Balance Employment With Unpaid Care

Cook, Mandy

University of Sheffield, United Kingdom
mandy.cook[at]sheffield.ac.uk

How people who combine work and unpaid care can be supported in the workplace has become more important than ever before (Clancy et al., 2019). This paper will explore the challenges and opportunities facing businesses who have existing, well-established company-led initiatives designed to add value to their business by supporting working carers. Aligning to the core themes, challenges and opportunities highlighted in the UK industrial Strategy (2017), which sets out the government's plan to create an economy that boosts productivity and earning power throughout the UK, this new knowledge will then be used to explore future developments in working carer support in sectors of key importance for the Strategy (small and medium sized businesses, employers in regions with low skills/productivity). It makes business sense for employers to support carers (of a disabled, seriously-ill, or older loved one). Rapid growth in the number of people with caring responsibilities, especially among older workers, means that to thrive, businesses must adapt to the needs of their employees who are carers. Organisations that do not support carers risk difficulty in recruiting/retaining skilled workers and/or organisational disruption and productivity losses caused by staff absence, employee stress and high turnover (Carers UK, 2013). This paper draws on qualitative research conducted in the UK, involving 25 expert and stakeholder interviews with members of the Employers for Carers (Carers UK) forum in England and Wales, organisations recognised as a Carer Positive Employer in Scotland, and representatives of business, and industry organisations, as well as four industry placements. As part of a multi-national, multi-disciplinary, Sustainable Care research programme, this paper will also make comparisons with initiatives in Europe and beyond.

RN17_02b | Labour Market Segregation II

Is crowdwork sex-blind?

Sauerborn, Elgen

Europa-Universität Viadrina Frankfurt (Oder), Germany
sauerborn[at]europa-uni.de

In the platform economy, crowdwork is a distinctive form of work that excludes face-to-face interactions between crowdsourcers, workers and platforms. Due to this anonymity, gender attributes and stereotypes technically could become obsolete. However, studies show that a gender pay gap can also be found here and that the increasing flexibility associated with crowdwork may also lead to a higher risk of precariousness, especially for women. These aspects are rarely

addressed in public and media debates about digital forms of work and, in particular, crowdwork. However, depictions of crowdworkers are by no means completely gender-neutral, but gender emerges rather implicitly or is latently present in these discourses. This paper uses two empirical approaches to illustrate how gender is shaped in public discourses and self-descriptions of crowdworkers: First, the results of a discourse analysis of German newspaper articles provide information about how gender is discursively produced in debates about crowdwork. For instance, some representations of crowdworkers contradict traditional concepts of a masculine breadwinner and depict crowdworkers as dissatisfied secondary wage earners. Data from interviews with crowdworkers then show to what extent these discursively constructed images are reflected in self-attributions and how gender-specific aspects influence the motivation and implementation of crowdwork. The combination of these methods contributes to a comprehensive picture of the extent to which new and progressive forms of work such as crowdwork influence gender stereotypes and resolve or reproduce inequalities. This leads to a better understanding of whether and, if so, how new digital jobs can affect gender inequalities in the labor market.

Transitions to Vulnerable Employment in the Great Recession: The Case of the UK and Switzerland

Orsholits, Dan (2,1); Studer, Matthias (1,2)

1: University of Geneva, Switzerland; 2: NCCR LIVES
dan.orsholits[at]unige.ch, matthias.studer[at]unige.ch

The Great Recession had a significant impact on labour markets in most of Europe and North America. While most of the focus has been on the rise in unemployment, comparatively little research has focused on the consequences of the Great Recession in relation to vulnerable forms of employment. Vulnerable employment is treated as a latent state in which workers may be at risk of being denied their rights, or exploited by their employers. This state is measured using multiple indicators of workers' objective employment situation (such as type of employment contract, union representation, wages, or working hours) in order to establish a typology of different forms of vulnerable or non-vulnerable employment. Using longitudinal panel data from the UK and Switzerland and latent transition analysis, we create a classification of types of employment. We show that during the Great Recession, individuals became more likely to transition to vulnerable employment indirectly through experiencing unemployment. Notably we find that, after experiencing unemployment, women and younger individuals were more likely to end up in vulnerable employment in both Switzerland and the UK. While individuals in secure forms of employment were unlikely to transition to vulnerable employment or unemployment, in the UK – contrary to Switzerland – this was not the case for individuals with lower levels of education as they were more likely to transition to vulnerable employment than other educational groups.

Equal in Everything but the Paycheck? Gender Pay Gap among Students and Graduates of First-, Second-, and Third-Cycle Studies in Poland

Bożykowski, Marek (1); Jasiński, Mikołaj
Karol (1); Zajac, Tomasz Zbigniew (1);
Chłoń-Domińczak, Agnieszka (2)

1: University of Warsaw, Poland; 2: SGH Warsaw School of
Economics, Poland
mbozykowski[at]uw.edu.pl, mikolaj.jasinski[at]uw.edu.pl,
t.zajac[at]uw.edu.pl, achlon[at]sgh.waw.pl

The gender pay gap is a well-known social phenomenon that has attracted significantly more attention in recent years. It has become an important part of the public discourse. British requirement for companies to report the data on gender pay gap among their employees is but one example of this trend. However, in Poland, where the overall gender pay gap is reported to be relatively small compared to the other Western societies, the gender pay gap has not been diagnosed thoroughly yet. In this presentation we demonstrate the results of analysis of gender pay gap among students and graduates of first-, second-, and third-cycle studies in Poland. Data in the study come from the Polish Graduate Tracking System (ELA system). ELA combines administrative records from the POL-on system (a register of students and graduates) and the Social Insurance Institution on the entire population of recent students and graduates in Poland. We do not stop on reporting the rate of the gender pay gap. Previous research suggest some of the differences can be associated with the structural factors and are not a result of discrimination. In our analysis we focus on the characteristics of students and graduates associated with the level of gender disparities in the labour market performance. We are particularly interested in the role of the field of study and the sector of economy.

RN17_02c | Symposium: ‘From education to employment: Transitions to employment among University students and graduates.’

Stepping Stones Or Trapdoors? Paid And Unpaid Graduate Internships In The Creative Sector

Scott, Peter John (1); Hunt, Wil (2)

1: University of Portsmouth, United Kingdom; 2: University of
Warwick, United Kingdom
peter.j.scott[at]port.ac.uk, w.hunt[at]warwick.ac.uk

Current theory on graduate internships is based on the assumption that, paid or unpaid, they improve the employability of interns. Employing data from a survey of UK creative and mass communications graduates, surveyed two to six years after graduation, this article examines the impact of graduate internships on subsequent job prospects. While paid internships do lead to better pay and increased chances of having a creative or graduate-level job, unpaid internships do not, and actually lead to lower pay in the short to medium term. Findings contribute to theory by challenging the ‘stepping stone’ view of unpaid internships and much policy discussion about these. Results reinforce, with enhanced specificity about the role internships play in socio-economic reproduction, those theories that characterise the graduate labour market as a ‘positional’ hierarchy of opportunities rather than a labour market that is essentially meritocratic in nature

Ethnicity and employability: Comparing the outcomes of Albanian and Italian graduates from Italian universities

Manitiu, Dorel Nicolae; Galeazzi, Silvia

Inter-University Consortium AlmaLaurea, Italy
dorel.manitiu[at]almalaurea.it, silvia.galeazzi[at]almalaurea.it

Higher education is seen by many young people as an important pillar of developing their knowledge and successfully entering the labour market. Not all graduates have equal chances of acquiring a 'good' graduate job. Graduate outcomes can vary by ethnic groups. In Italy, the proportion of Albanian graduates has been the most numerous among foreign graduates, 12.9% in 2017, there are questions about whether their employment outcomes differ from their Italian peers. This study looks at recent graduates' employment outcomes, focusing on Albanian citizens graduates in Italy, using AlmaLaurea dataset. The AlmaLaurea survey on Graduates Tracking (2017 survey) has involved a population of 630,000 graduates in Italian universities, (interviewed at 1,3 and 5 years from graduation). We will compare outcomes such as type of work, activity sector, earnings, etc. Albanians employment rate (second-level graduates) at one year from graduation is 70.8% (73.9% for total population); at five years from graduation, the employment rate improves at 85.6% for Albanians and at 87.3% for the total graduates; the unemployment rate decreases during the time and goes from 16.5% at one year from graduation to 7.8% at five years from graduation (in line with all second level degree graduates). Albanian graduates who remain and work in Italy, are 72.0%; the study finds that at 5 years after graduation are less advantages in terms of earnings, 1.337€ net per month (compare with 1.428€ of general graduates, but they have a permanent employment contract more than their colleagues: 65.2% compare to 54.6%.

The Role Of Internships In Enhancing Graduate Labour Market Transitions In The UK And Italy

Pedrini, Giulio (2); Tzanakou, Charikleia (1);
Luchinskaya, Daria (1); Cattani, Luca (2)

1: University of Warwick, United Kingdom; 2: University of
Bologna, Italy
giulio.pedrini3[at]unibo.it,
charikleia.tzanakou[at]warwick.ac.uk,
D.Luchinskaya[at]warwick.ac.uk, luca.cattani[at]unibo.it

In the last two decades, education to work transitions have become more turbulent and uncertain. The role of work experience during and after education in facilitating access to work and enhancing labour market outcomes has been debated in academic and policy literature (e.g. Holford, 2017; IPPR, 2017). Internships during undergraduate study are widely recognized as a way of gaining relevant work experience and as a route into employment. However, not everyone benefits equally. Using two longitudinal graduate surveys, AlmaLaurea for Italy and Futuretrack for the UK, we analyse access to and employment outcomes (getting a job, wages and perceived skills match) of doing an internship during undergraduate study, focusing on gender and social class. Preliminary results for both Italy and the UK suggest that access to internships tends to be affected by social class rather than gender, but the effect is small, and that there is variability across subjects. Regarding outcomes, in Italy, doing an internship increases the chances of finding a job after graduation but dampens wages and skills matching outcomes. In the UK, doing an internship is also positively associated with being in work after graduation, and, in contrast to Italy, with higher wages, and high perceived skills match in one's job. Our comparison of Italy and the UK explores how different labour market regimes affect transitions to employment, contributing to the theoretical understanding of the three worlds of human capital formation (Iversen and Stephens, 2008) and raises policy questions about unequal access to internships.

How Does Social Disadvantage Affect Students' Strategies For Becoming An 'Employable Graduate'?

Okay-Somerville, Belgin (1); Allison, Ian (2); Luchinskaya, Daria (3); Scholarios, Dora (4)

d.scholarios[at]strath.ac.uk

A successful transition from University to work, and particularly one which conforms with the prevalent neoliberal discourse of the 'employable graduate', generally depends on students being able to engage in pre-employment activities, such as internships and voluntary work, goal-directed job search, and active networking. These positive transition strategies may be impaired, however, by individuals' social disadvantage. This study expands on existing research by focusing on how different facets of social disadvantage - social background, University type and financial strain - affect students' transitions strategies. We focus on a sample of students from STEM subjects in two Scottish universities (pre- and post-1992) to control for some of the known labour market related determinants of graduate employability (e.g. demand for skills, visibility of career routes). We find that University type is the most significant factor for engaging in positive transition strategies, and that social class is not significant when controlling for these other factors. This lends support to the institutional explanation of how social disadvantage affects employability (e.g. Boden and Nedeva, 2010; Brown, 2004): perceived higher reputation and relative advantage of pre-1992 universities increase students' access to elite employers, influential networks, etc., facilitating successful transitions to employment. However, there may be an indirect social class effect on transition strategies that remains an issue for further research. Our research has practical implications for universities, employers and policymakers to help disadvantaged students gain the experiences required for successful transitions to work, and reduce anxiety and perceived barriers to achieving such transitions.

To Get Or Not To Get A Yearly Pay Increase – And Other Peculiarities In Performance Based Pay Raise In Sweden

Ulfsdotter Eriksson, Ylva (1); Adolfsson, Petra (2)

1: Dept. of Sociology and Work Science, University of Gothenburg, Sweden; 2: Dept. of Business Administration, University of Gothenburg, Sweden
ylva.ulfsdotter_eriksson[at]sociology.gu.se,
Petra.Larsson[at]handels.gu.se

Most employees in Swedish organizations, public as well as private, are covered by collective agreement stressing individual and differentiated wages. Individually set wages are especially salient in the yearly salary review, and most organizations use some sort of performance appraisal system to evaluate employees' contributions against the background of a number of performance appraisal criteria. The basic justificatory norm in performance based pay is to reward those who have performed the best. That is, high scores or evaluation points would lead to a higher markup. However, analyses of 48 qualitative interviews from a multiple case-study conducted in four large organizations in Sweden, show that the link between performance and pay raise is not that straightforward and that there is a lot of peculiarities going on. This paper discuss how employees, managers, HR personnel and union representatives reason about pay raise. It describes and explains why a high performer may get zero Swedish kronas in pay raise in order for colleague to have a more substantial raise, and also how the amounts in the yearly pay raise relates to the wage setting managers control span and the regulations set out in the collective agreements and "the mark".

Pressures To Perform? A Comparative Analysis Of The Role Of National Institutions On Performance Appraisal Practices In Hospitals In Europe

Stroleny, Alexandra Elizabeth

University of Greenwich, United Kingdom
A.E.Stroleny[at]greenwich.ac.uk

In recent decades, public sector hospitals across Europe have been under increasing pressures to perform both more efficiently and to higher quality (OECD, 2015; Lindlbauer et al., 2016). This paper examines how these wider pressures translate into performance appraisal systems used for general nurses, the largest occupational group in healthcare, in Germany and the Czech Republic. Drawing on institutional theory and the notion of institutional hierarchy (e.g. Amable, 2003; Morgan, 2007), it investigates which national institutions have the strength to mediate these pressures and whether this produces distinct appraisal systems across these countries. The research adopts a mixed-method comparative case-study design. Detailed fieldwork was conducted in two public hospitals in each country which involved 86 interviews with nursing and managerial staff, the collection of documentary evidence and survey data (n=500). This was supplemented by 21 interviews with a range of national stakeholders from trade union, professional and employer organisations. In total, 107 semi-structured interviews were conducted. The findings confirm the varied impact of key national institutions on appraisal. Despite suggestions that the strength of German industrial relations institutions is eroding, in the German public-hospital sector institutionalised workers' voice via the works council still plays a fundamental role and leads to more employee-friendly, developmental appraisal systems. In the Czech Republic, the lack of influential employee representation institutions and external requirements from hospital accreditation bodies leads to control-orientated appraisal systems with a focus on evaluation.

Declining Gender Differences in Low-Wage Employment in Germany, Austria and Switzerland

Fritsch, Nina-Sophie; Verwiebe, Roland; Liedl, Bernd

Vienna University of Economics and Business, Austria
nina-sophie.fritsch[at]wu.ac.at,
roland.verwiebe[at]univie.ac.at, bernd.liedl[at]univie.ac.at

Research on European labour markets confirms that women's earnings fall below men's. This difference is generally known as the gender wage gap. Despite the increase in women's human capital, climbing female labour force participation rates and adapting employment careers between the sexes, this imbalance remains surprisingly marked within recent decades. Although there is a vast amount of studies concentrating on the gender wage gap, differences in low-wage employment between male and female employees are less well studied. The present paper wants to add to the literature by analyzing gender-specific patterns of low-wage development in a long-term perspective (1996 - 2016). It takes a closer look at the process of labour market flexibilization whilst particularly focusing on gender in three Central European countries – Germany, Austria and Switzerland. We pursue the following research questions: How has low-wage employment in Germany, Switzerland, and Austria developed over the last 20 years? Which gendered patterns can be addressed and what impact emanates from the diversified composition of the labor markets? Our empirical analysis is based on available data sets for those three countries (GSOEP, ECHP/SILC, SLFS) for the period between 1996 and 2016. Our results indicate that, that low-wage quotas are increasing in all three countries and female employees face higher risks to fall beneath the low-wage threshold. Nevertheless our analysis also reveals, that differences between the male and female workforce are declining over the time period. Moreover, we apply decomposition analysis in an attempt to include alterations on the labor market when evaluating the narrowing gender gap. In general, the composition of labor market was cushioning a yet stronger increase in in-work poverty rates especially in Germany.

Motivating and Demotivating Effects of Performance Appraisals – Performance-based Pay in Swedish Public Sector Organisations

Larsson, Bengt; Ulfsdotter Eriksson, Ylva; Adolfsson, Petra

University of Gothenburg, Sweden
bengt.larsson[at]socav.gu.se,
ylva.ulfsdotter_eriksson[at]sociology.gu.se,
petra.adolfsson[at]handels.gu.se

During the classic “Swedish model”-era wages and wage-increases were largely defined in central national collective agreements and coordinated tariffs, under the general principle of “equal pay for equal work”. During the last three decades wage setting has been decentralized and the local space for individual differentiation through performance-based pay systems has gained ground – particularly in the public sector and for white-collar workers. This paper studies to what extent line-managers and employees believe that the performance based pay system as such are beneficial for employee motivation and for the overall performance of their unit and organisation; and what factors that affect whether employees find the salary talk and performance appraisal to be motivating or demotivating for themselves. Empirically the paper is based on employee surveys (n 4313) in three big public sector organisations in Sweden: one municipality, one regional hospital and one state agency. Theoretically, the paper connects theories of motivation to an institutional logics approach. The main results are that less than 50% of the respondents believe performance pay to be motivating, but that line-managers think so to a higher degree than regular employees; and that experiences of being motivated or demotivated are explained by different factors. A general tendency was that increased motivation correlated with the usage of relevant performance criteria, the quality of the appraisal talk, and the preparations by the employee. There were, however, also important contextual and organisational differences, explained by institutional logics.

RN17_03b | Worker Participation, Industrial Democracy and Labour Relations

Participation in the Norwegian Model

Bragtvedt, Stian

Nord universitet, Norway
stian.bragtvedt[at]nord.no

In 2013 The Economist hailed the Nordic countries as the future of capitalism. Research has shown that where workers have a high degree of autonomy in problem solving, firms tend

to be more innovating. In Norway the national context is characterized by a high degree of cooperation between employers, trade unions and the state. This cooperation has contributed to a proliferation of organizational forms where teams of workers have a relative autonomous status, and a high degree of freedom to solve problems as they see fit. My research explores what norms and conventions regulate this autonomy, and how the class compromise on the national level affects class compromises on a local level. I draw on Michael Burawoy’s characterization of work as having a political and ideological dimension in addition to the economic dimension. And I aim to understand how worker participation is connected to class at the level of the firm. I am currently in the process of data collection, which is done by a combination of participant observation in two Norwegian industrial firms, as well as interviews. Preliminary analysis suggests that worker participation takes diverse form, that can be understood both by the framework of Lean-manufacturing or socio-technical systems. At the conference I aim to present a further analysis of how the class compromise on the firm level is connected to the Norwegian neo-corporatist model, and that this has consequences for worker participation.

Works Councils and Firm Specific Forms of Participation in German Establishments

Ellguth, Peter; Kohaut, Susanne

Institute for Employment Research, Germany
peter.ellguth[at]iab.de, susanne.kohaut[at]iab.de

Social dialogue at company level covers a wide range from board level participation to direct forms of employee involvement at the workplace. In cross-country comparisons, Germany is generally discussed as an example of a highly regulated system of industrial relations with institutions provided with far reaching legal rights. Here especially the German works councils are a prime object of (international) research. Far less is known about firm specific forms of interest representation (round tables, spokes persons etc.) without legal backing (also present in German establishments) and the interplay of the two settings. We use longitudinal data of the IAB establishment panel to answer the following question: Is a distinct legal framework necessary, if an institutionalized social dialogue and employee representation at company level is wanted that has an impact on personnel policy or do firm specific solutions suffice? What role can those institutions play in the future of company level social dialog? Firstly, we examine the stability of both institutions and possible substitution effects by following the individual establishments over time. Secondly, we identify determinants of the existence of works councils resp. alternative forms of representation. Finally, we ask if firm specific employee representation can be seen as functional equivalents of works councils or rather as part of a strategic personnel policy. Looking at labour turnover, and wages we analyse the effects of those alternative means of employee representation. We adopt a regression approach with instrumental variables to explicitly model selection to the different regimes and control for endogeneity.

Is Italian Social Movement Unionism the effect of a partial Toyotism? The FIAT-Chrysler case

Chesta, Riccardo Emilio

Scuola Normale Superiore, Italy
riccardoemilio.chesta[at]gmail.com

When Sergio Marchionne became the AD of the FIAT Italian automobile industry, he accelerated a managerial revolution that was put in place in the company from the beginning of the 1990s, inspired by the Japanese Toyota's principles. Taking Hajime Yamashina as a consultant from the University of Kyoto, FIAT introduced the World Class Manufacturing, therefore restructuring several plants all along the country. The adaptation of few selected Toyota's principles to the Italian context changed not only the workers conditions but also challenged the Italian system of industrial relations. However, the "team leaders" and the organization through "working teams" are just few aspects of Toyotism that were introduced in this managerial innovation. Participatory practices were only marginal if compared to Toyota's philosophy. Furthermore, the dismissal of the Italian national collective contract and the introduction of the New Co. explicitly tried to challenge the role of trade unions in the Italian manufacturing system. It is possible to state that this Italian way of Toyotism accelerated technological control while marginalizing participation and union power. The restructuring of FCA from 2004 to 2018 is indeed an important unit of analysis to raise few hypothesis on how partial Toyotism or "Top-down Toyotism" produced the rise of a new social movement unionism phase in the Italian industrial relations. The case is relevant also to see the potential effects of globalization pressures on this sector of Italian industry.

Radical Democratic Citizenship at Work in an Adverse Economic Environment: The Case of Principled Workers' Co-operatives in Scotland

Zauseder, Andreas

University of Aberdeen, United Kingdom
r02az16[at]abdn.ac.uk

Worker co-operatives generally embrace democracy in their ownership and decision-making structure. However, there is a wide spectrum in the actual realisation of this structure. The variation essentially depends on the political and economic context of the co-operative; the workers' motivation for joining and working in a co-operative; the sector they operate in; the number of workers; and the principledness of pursuing an ethical agenda. This informs the extent to which workers' co-operatives can be considered a political undertaking. Only a closer sociological exploration into specific workers' co-operatives can help to reveal the very political characteristics of some of them. This contribution draws on an ethnographic study of three principled workers' co-operatives operating in a most adverse economic context, the UK capitalist market

economy. The completely flat organisational hierarchy, equal wage policy, and the strong ethical policy position these co-operatives on the radical side of the co-operative landscape in the UK. This study explores the struggle of the co-op members to maintain radically democratic structures, thereby revealing how such worker co-operatives become a political project actualised on a daily basis. Then by recognising politics as practiced at and through radical democratic and strictly ethical work places, the findings of this research provide reasons to rethink citizenship. The political practice of democratic grassroots movements such as radical worker co-operatives becomes a reference framework for understanding active citizenship. Taking the perspective of radical worker co-operatives, this article outlines an urgently needed conceptualisation of radical democratic citizenship at work.

RN17_04a | Work and Employment: Behaviour and Perceptions

Trust Relationships in Employment Relationships

Brandl, Bernd

Durham University, United Kingdom
bernd.brandl[at]durham.ac.uk

Trust between employers and employees and their representatives, i.e. in the employment relationship, is usually seen in literature as beneficial for the efficacy of their interaction. The beneficial role of trust between the employee and employer side on the efficacy of their interaction is rooted in the beneficial role of trust in negotiation and bargaining situations in general. Although literature contains a reasonable amount of theoretical and empirical research on the reasons why trust can be high or low (or somewhere in-between) in different countries and companies relatively few stylized and generalizable facts have emerged because the majority of analyses focused on case (e.g. single company or country) studies. Furthermore, previous literature concentrated on trust from the employee side in the employer side, i.e. on trust in management, but very little research can be found on trust in the other direction, i.e. on trust of the employer side in the employee side. Even more scarce is research in mutual trust. On basis of a unique, large and comprehensive matched employee/employer data set which covers trust relationships at establishment level between the employer side, i.e. the management, and the employee side, i.e. employee representatives, this article not only gives an overview of how trust between the two side differs in different companies in different European countries, but also provides a systematic analysis of the factors which determine trust in the employment relationship.

Relevance of Cooperative Work Environments for Social Creations

Joanpere, Mar; Morlà-Folch, Teresa; Mara, Liviú-Catalin

Universitat Rovira i Virgili, Spain
mar.joanpere[at]urv.cat, teresa.morla[at]urv.cat,
liviucatalin.mara[at]urv.cat

Several studies focus on creativity and innovation in the context of organizations, paying special attention to different work environments. Throughout this communication, authors present the relevance of the dialogic leadership in a specific work environment such as cooperatives, a type of leadership that creates social alternatives and achieves social impact. E. O. Wright described this process as 'Real Utopias' (2010). This research is analyzing the role of leadership in the organizational context of Catalan housing cooperatives. For this purpose, authors present the results of a case study including one housing cooperative in Barcelona (Spain). On the one hand, this study looked at the implications that dialogic leadership should have regarding the participation and democratization of the institution. On the other hand, the study focused on the social impact and the social innovation generated by the cooperative. The analysis and discussion, from a communicative perspective, gives us the opportunity to put the emphasis of research on the transformative aspects, and moreover, to highlight those elements that can be transferred to other work environments. To sum up, this study presents dialogic leadership capable of overcoming housing challenges and providing innovative responses that promote community engagement and access rights to housing. At the same time, this way of organization is capable to engage with the housing challenges and overcome it with innovative solutions.

The Effects of Organizational Commitment on Emotional Labor of Restaurant Workers

Vidicki, Vladan

Faculty of Philosophy Novi Sad, Russian Federation
vladan.vidicki[at]ff.uns.ac.rs

Organizational commitment refers to the positive attitudes that an employee feels about the organization as a whole or to some of its members. Most often, a worker who is dedicated to the organization expresses a stronger degree of emotions than one who feels a high level of job satisfaction. Because of the role that emotions play in dedication, it seems interesting to consider the relationship between organizational commitment and emotional labor as a process by which workers are expected to manage their emotions in accordance with the organizational rules and goals. Therefore, this research starts with the question how the types of organizational commitment (high/low commitment to the workgroup/manager) affect the different levels of emotional labor (surface acting, deep acting, and suppression)? Emotional labor is most common in the service sector, and has become somewhat of a standard for employers to seek

emotional management skills from their employees. Therefore, this paper focuses on the emotional labor of restaurant workers who are in direct contact with clients. A quantitative research approach has been applied, and the data has been collected by structured questionnaire. Given numerous, already existing studies on relations between job satisfaction and emotional labor, this research aims to take a step forward and to determine the effects of deep commitment to the organization or some of its members in the exploitation of personal feelings for business purposes.

Matching Job Preferences with Job Qualities for Job Satisfaction: How Institutions matter for Matching Across 24 Countries

Berglund, Tomas (2); Esser, Ingrid K (1)

1: Stockholm University, Sweden; 2: Gothenburg University, Sweden
tomas.berglund[at]socav.gu.se, ingrid.esser[at]sofi.su.se

Sustainable working lives in modern economies warrant a good match in the labour market, not only on education and skill, but also in relation to valued working conditions. Matching on job quality, its effect on employees well-being at work, and how labour market institutions may account for country-differences in such matching, however remains uncharted grounds in comparative research. Firstly, this study aims to describe employees' work values, job qualities and their matching in 24 OECD countries. It proposes a novel approach to job quality, simultaneously addressing eight central extrinsic and intrinsic dimensions. Secondly, it assesses the effects of matching for job satisfaction. Thirdly, it examines how institutions relating to the labour market explain cross-country differences in (mis)match. For multi-level analyses, survey data from the ISSP Work Orientation module of 2015 were combined with contextual data reflecting institutional dimensions expected to influence both availability of quality jobs and the matching process. Results show how vast majorities value multiple dimensions of work, but how job qualities are scarcer, especially in Eastern Europe. Furthermore, matching on job qualities – especially intrinsic qualities – was found independently conducive to job satisfaction, i.e. in addition to effects of numerous job qualities. Lastly, matching was found more accurate in countries with higher degree of worker organisation and corporatist structures – especially for intrinsic matching, and also, but with a weaker association, in countries with a lifelong learning profile, more extensive active labour market training programs and more generous unemployment protection – institutions that allegedly contribute to both availability of quality jobs and the matching process itself.

RN17_04b | Employment Relations and Labour Market Network Perspectives

Agency and Networks – What is it that Long-term Unemployed Need and What is it that Employers Want?

Hirseland, Andreas (2); Kerschbaumer, Lukas (1)

1: Management Center Innsbruck, Austria; 2: Institute for Employment Research, Germany
Andreas.Hirseland[at]iab.de, lukas.kerschbaumer[at]mci.edu

In Germany, long-term unemployed did not benefit from the prospering labor market in the same extent like short term unemployed. Especially if accompanied by other impediments such as low-level education, poor health, 50+, immigrant status, motherhood or engagement in care for other relatives, long-term unemployment turns into a main obstacle for finding regular employment. Almost two thirds of all welfare recipients have multiple impediments, which hinder a successful transition from welfare back to sustainable and sufficient employment. The panel survey "Labor market and social security" (PASS; ~15,000 respondents in ~10,000 households), carried out by the Institute of Employment Research (IAB), shows that their chance to get back to work tends to fall to nil. Only 66 cases of such unlikely transitions were identified. In a sequential-explanatory mixed-method study, the very scarce "success stories" of unlikely transitions from long-term unemployment to work were explored by qualitative interviews with a focus on biography, accompanied by qualitative network techniques in order to get a more detailed insight of relevant actors involved in the processes which promote the transition from welfare receipt to employment. We look at the process-relevant actors on a diachronic as well as synchronic way. We came to understand, that a more differentiated look on the quality of the relations is more important than the quantity, density and distance of the actors. Relating to Granovetter, we can show that Weak Ties are important for the transmission of information (network) but Strong Ties help to translate that information into action (agency).

Social-networks as a Double-Edged Sword: Working-class Young Women and Occupational Segregation in Contemporary Delhi

Sahai, Garima

University of Cambridge, United Kingdom
gs563[at]cam.ac.uk

Most studies on social-networks and employment see networks to be purely positive; as a form of capital that is crucial for entry into jobs. Such a view of social networks, however, has been predominantly based on men's (occupational) lives and the role that social-networks play therein. This paper explores the role of social-networks in young women's occupational decisions and its implications for occupational segregation. Specifically, it asks, how do social-networks influence young women's entry into non-traditionally female jobs? In so doing, this paper focusses on young women in Delhi, India who belong to a low socio-economic class. It draws on 56 semi-structured interviews I conducted with such young women in Delhi over 9 months – from August 2017 to May 2018 -- as part of my PhD study. Young women, living in slums, on account of classed and gendered constraints, are expected to stay mostly in and around the home and are not as embedded in social networks. Examining what non-embeddedness means for young women's occupational outcomes, this paper suggests that perversely social-networks both ease and constrain the entry of these young women into non-traditional training. On the one hand, the non-embeddedness in networks means that women don't care about the approval of the wider networks. Not affected by the constraining effects of networks they are able to enter new forms of labour and non-traditional occupations. On the other hand, non-traditional occupational opportunities are inherently niche and less well known. Not having access to information that networks crucially provide in informal economies prevents non-traditional occupations from being a part of their information and occupational choice set.

Employee Voice and Organisational Engagement

Menara, Barbara (1); Ruck, Kevin (2); Welch, Mary (3)

1: University of Central Lancashire, United Kingdom; 2: PR Academy, Maidstone Studios, Kent, United Kingdom; 3: University of Central Lancashire, United Kingdom
bmenara[at]uclan.ac.uk, kevin.ruck[at]pracademy.co.uk, mwelch2[at]uclan.ac.uk

Employee engagement is recognised as important for organisational effectiveness and a factor in achieving innovation and competitiveness. Despite the importance of engagement, relatively little research has yet been done on communication and engagement. This paper aims to contribute to knowledge in this area by providing insight on internal communication and organisational level employee engagement. The paper reports the results of a study exploring associations between aspects of internal communication and organisational engagement. Taking an employee-centric approach, the paper investigates employee satisfaction with opportunities to exercise their voice, and assesses employee views on the quality of senior management receptiveness to employee voice. The paper aims to address gaps in the literature by exploring potential associations between employee voice and organisational engagement. A questionnaire was used to gather data from 2066 participants in five UK-based organisations. The questionnaire used in the study was designed to explore satisfaction with upward employee voice and senior management receptiveness. It also enables exploration of the relationship between upward employee voice, senior manager receptiveness and emotional organisational engagement. A significant and positive relationship was found between upward employee voice and emotional organisational engagement; and between senior manager receptiveness and emotional organisational engagement. Regression analysis suggests that the majority of the employee voice variables included in the study predict emotional organisational engagement.
