INSULATION CORK-BOARD
The best known natural product for all purposes where:

- a low coefficient of thermal conductivity
- a low moisture absorption
- a high resistance to deformation
- a high incombustibility
- a stable structure
- an easy and rapid erection
- a low cost

are required.

All these advantages are invaluable for building construction, insulation of cold-rooms and, generally, for all purposes where a **FIRST CLASS INSULATING MATERIAL** is desirable.

Robinson's **INSULATION CORK-BOARD** (manufactured by the modern steam-baking process) stands unexcelled in its class.
