

1º Seminário Anual em Anestesiologia Veterinária SAVE 2018

14:30h-16:30h- Grupos de estudos e discussão de protocolos anestésicos em cães e gatos. (C. Lavrador, D. Ferreira, L. Ribeiro)

O objetivo desta sessão, baseada em www.vasg.org, é sensibilizar para as várias opções existentes na área da farmacologia anestésica. Não há combinações farmacológicas perfeitas, nem fármacos perfeitos. Apenas deverá haver um conhecimento vasto da farmacologia anestésica por parte do médico veterinário, para que possa ser ajustada às necessidades de cada animal, em cada momento.

O formando deverá rever os conceitos gerais de farmacologia anestésica propostos no ponto 1º, e aprofundá-los nos pontos 2º e 3º.

No ponto 4º é proposto um estudo dirigido às particularidades associadas às afecções clínicas mais comumente observadas durante procedimentos anestésicos de rotina.

No ponto 5º, é proposto um desafio aos vários grupos, e que sugiram um protocolo anestésico que aborde as necessidades específicas de cada caso clínico.

1º Familiarizar com os grupos de fármacos mais importantes

2º Explorar, mais detalhadamente, os fármacos mais comumente usados

Pretende-se o estudo e discussão das características gerais da lista de fármacos indicado na caixa, que devem ser agrupados de acordo com o seu grupo farmacológico. Estes fármacos devem ser a base para o proposto no ponto 5º.

- Alfaxalona
- Bupivacaína
- Buprenorfina
- Cetamina
- Dexmedetomidina
- Diazepam
- Etomidato
- Fentanil
- Isoflurano
- Lidocaína
- Medetomidina
- Meloxicam
- Metadona
- Midazolam
- Morfina
- Piroxicam
- Propofol
- Sevoflurano
- Tiopental

3º Familiarizar com anestesia locorregional, e fármacos comumente utilizados em medicina veterinária

5º Discussão de casos clínicos

Serão propostos casos clínicos distintos a cada grupo de trabalho, e solicitado proposta para abordagem anestésica farmacológica.

As propostas serão, posteriormente, discutidas em conjunto por todos os elementos na sala.
