Formal Development

Formal Adoption and Selection

The basic list of simple geometries is being superimposed with programmatic diagrams and architectural interpretations of the main theme in a series of iteration cycles, subsequently transferring the underlying typologies from abstract diagrams to an architectural design sketch.

Differentiation and Specialization

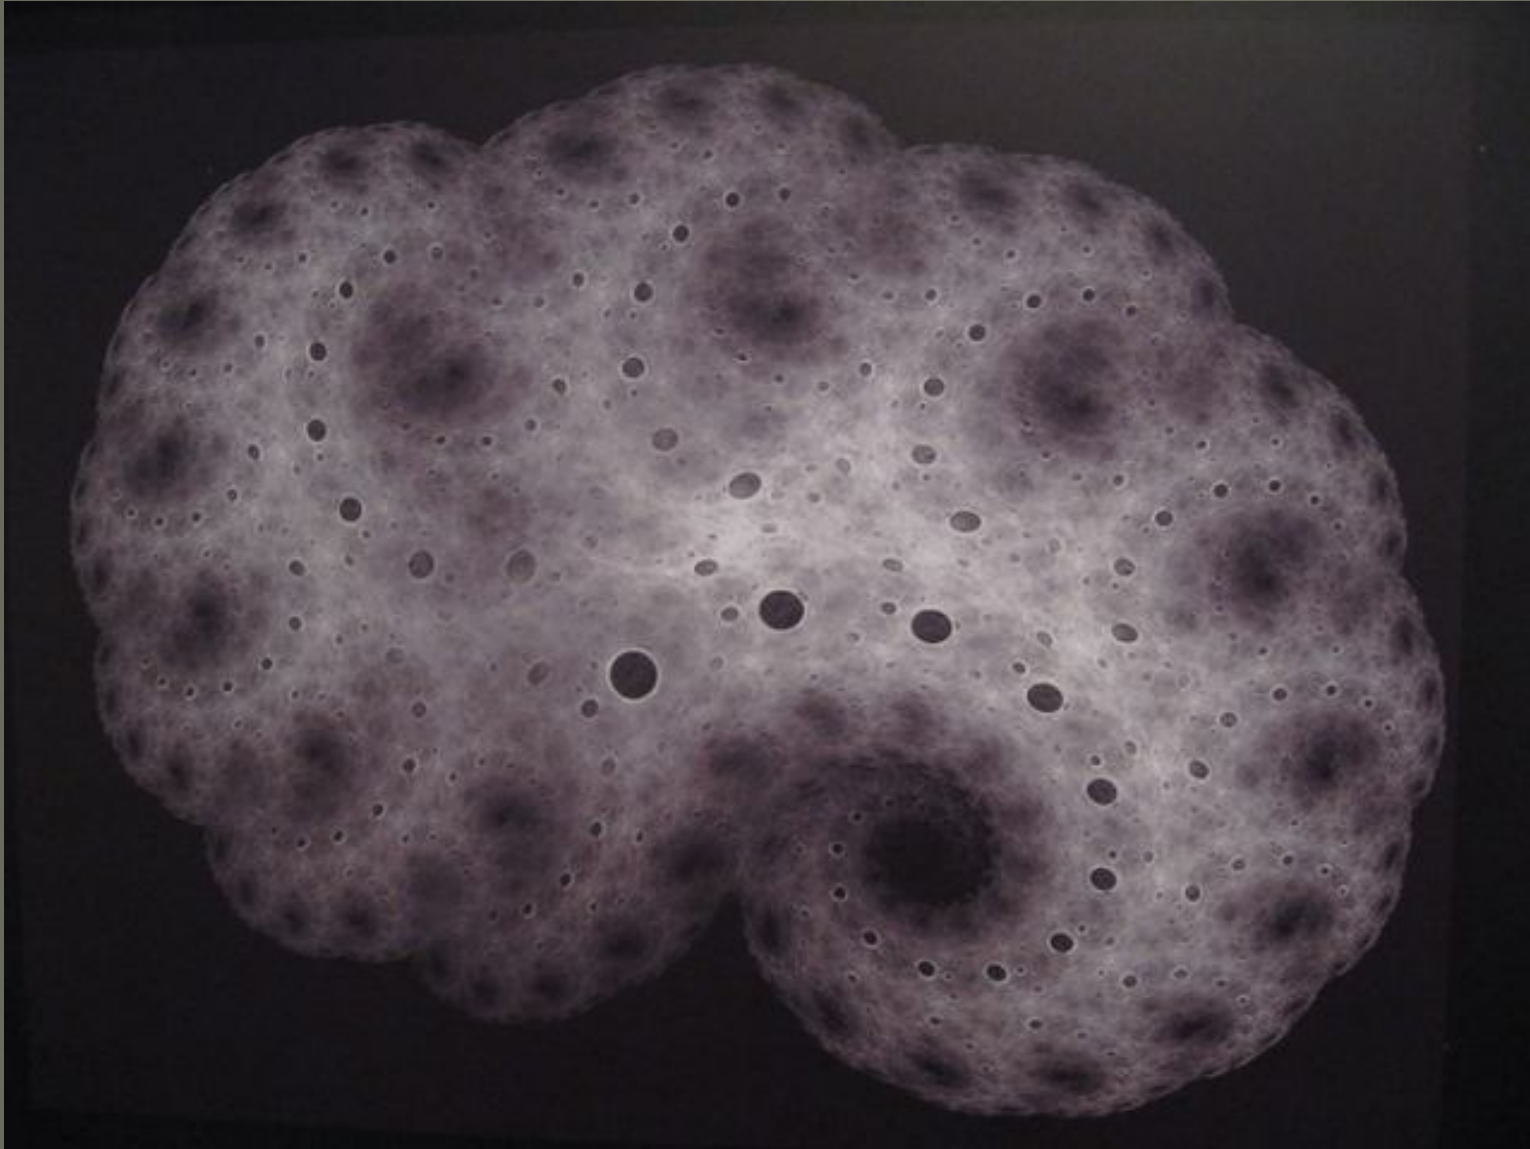

Basic components of the underlying biological analogy, stems, branches, leaves, veins, fruits, are translated into components of a building, giving a more resolved display of structural support, infrastructure connections, enclosed bodies and circulation spaces.

Interpretation and Refinement

The developed sculptural sketch is being refined, re-translated and aligned to the urban context. Secondary elements like facade structures and details are added according to the language developed.

SUPERFÍCIES E ARQUITECTURA

Desconstruído – Em tempo de pós-tudo, talvez um bom exemplo final seja o complexo The Ray and Maria Stata Center for Computer, Information and Intelligence Services, do famoso Instituto de Tecnologia de Massachussets, situado em Cambridge, nos EUA. Entregue em fins de 2004, consiste numa série de pequenos prédios, curvados e inclinados em ângulos bem artificiais. Custou US\$ 300 milhões e foi projetado por Frank Gehry, com apoio das firmas Cannon Design, Gail Sullivan Associates e dos arquitetos paisagistas da Olin Partnership.
