# Power Plant Application of Advanced Control Techniques

- Edited by **Pal Szentannai**
- Publisher: ProcessEng Engineering GmbH;
- Paperback
- 500 pages
- Edition: 1 (2010)
- Language: English
- ISBN-10: 3902655110
- ISBN-13: 978-3902655110
- **Price: 220 Euro** incl. 10% VAT and incl. shipping; **294 USD** incl. 10% VAT and incl. shipping.

About the book:

Why apply advanced control in power plants? Just for direct economic benefit! And also for ecological benefits as a result of decreased fuel consumption, emission and component replacement. This book introduces some successful cases where the admirable benefits of advanced control and strict requirements of power plant operation could meet.

Authors & chapters:

- **Pal Szentannai**, Introduction
- **João Miranda Lemos, Paulo O'Connor Shirley, Rui Neves da Silva and Bertinho Andrade da Costa,** Adaptive Predictive Control of Superheated Steam and Economic Performance
- **Vladimir Havlena and Daniel Pachner,** Model-Based Predictive Control of a Circulating Fluidized Bed Combustor
- **Jenő Kovács,** Advances in Coordinated Control
- **Wen Tan and Fang Fang,** Linear Control of Boiler–Turbine Units
- **Mika Ruusunen,** Advanced Combustion Power Stabilization Method for a Grate Fired Biomass Boiler
- **Alfredo Sánchez-López and Gustavo Arroyo Figueroa,** DMC and FLC for Steam Temperature Control
- **Enso Ikonen and Kimmo Leppäkoski,** Model-Based Multivariable Control of a Secondary Air System Using Controlled Finite Markov Chains
- **Antony J. Croxford and Mark A. Gilbertson,** The Control of Dense Gas-Fluidised Beds Through Pressure Measurement
- **Raul Garduno-Ramirez,** Fuzzy Gain-Scheduling Control and Loop Interaction Compensation for Variable Pressure Operation of a Thermal Power Plant
- **Ilhan Kocaarslan,** Application of Adaptive Control Concept in a 750 MW Coal Fired Power Plant
- **Bertinho Andrade da Costa and João Miranda Lemos,** Adaptive Temperature Control for a Solar Furnace
- **Jorge Henriques, Paulo Gil, António Cardoso, Paulo Carvalho, Herminio Duarte-Ramos and António Dourado,** Nonlinear Control Based on Affine Neural Networks: Application to a Solar Power Plant
- **Rainer Pickhardt,** Temperature Control of a Solar Power Plant
- **João Miranda Lemos, Luís Rato and Rui Neves da Silva,** Adaptive Control of Distributed Collector Solar Fields
- **Pedro Roncero-Sánchez, Vicente Feliu, Aurelio García-Cerrada and Xavier del Toro,** State-feedback, Predictive-integral and Repetitive Current Controllers for Active- and Reactive-power Control for Voltage Source Electronic Converters
- **Haritza Camblong and Gerardo Tapia,** Digital Robust Control of a Variable-Speed Pitch-Regulated Wind Turbine
- **Jorn Klaas Gruber and Carlos Bordons,** Regulation of the Air Supply in a Fuel Cell by Means of Model Predictive Control
- **Ertugrul Cam and Ilhan Kocaarslan,** Load-Frequency Control of Hydroelectric Power Plants: Fuzzy Logic Application
